LANDING GEAR: Retractable tricycle type, with single wheel and oleo-pneumatic shock-absorber on each unit. Hydraulic actuation, controlled electrically. Emergency free-fall extension. Main tyres 24×7.7 (16 ply) tubeless; nose tyre 18×4.4 (10 ply) tubeless. Nosewheel, which is steerable by rudder pedals, retracts forward; mainwheels retract inward into fuselage. Goodyear wheels and tyres; Aircraft Braking Systems brakes.

POWER PLANT: Two Pratt & Whitney Canada JT15D-5 turbofans, each rated at 13.19 kN (2,965 lb st) for take-off and 13.17 kN (2,900 lb st) max continuous. Nordam thrust reversers standard on 400XP, but not fitted to T-1A. Fuel in two wing tanks, each 822 litres (217 US gallons; 181 Imp gallons), and six fuselage tanks totalling 1,162 litres (307 US gallons; 256 Imp gallons); total 2,806 litres (741 US gallons; 618 Imp gallons), of which 2,775 litres (733 US gallons; 610 Imp gallons); usable in 400A and 400XP. Military versions have optional pressure refuelling of two wing and four fuselage tanks for T-1A pressurised total of 2,949 litres (779 US gallons; 649 Imp gallons), of which 2,918 litres (771 US gallons; 642 Imp gallons) usable; and 400TX pressurised total of 3,047 litres (805 US gallons; 670 Imp gallons), of which 3,017 litres (797 US gallons; 664 Imp gallons) usable. 2,998 litres (792 US gallons; 656 Imp gallons). One refuelling point in top of each wing, and one in rear fuselage for fuselage tank, capacity 1,158 litres (306 US gallons; 255 Imp gallons). (T-1A, single-point refuelling.) Oil capacity 7.7 litres (2.0 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Crew of two on vertically and horizontally adjustable reclining seats with five-point safety harnesses; T-1A has seats for trainee pilot, co-pilot/instructor and observer. Improved interior introduced 1996, featuring redesigned trim panels, enhanced acoustic panels and vibration-damping engine mounts.

Standard 'centre club' layout of 400A seats eight passengers in pressurised cabin. Of these, seven are on tracking, 360° swivelling, reclining seats: four in facing pairs, two forward-facing and one aft-facing; each with integral headrest, armrest and shoulder harness. Fold-out writing table between each pair of seats. Private flushing lavatory at rear with sliding doors and optional illuminated vanity unit and hot water supply. With seat belts, this compartment can serve as eighth passenger seat.

Interior options for up to nine passengers; these include substitution of carry-on baggage compartment for one of the forward centre seats, and hot and cold service refreshment centre with integral stereo entertainment system. Independent temperature control for flight deck and cabin heating systems standard. In-flight telephone optional. Tailcone baggage compartment with external access. Optional four passenger seats in main cabin of T-1A. The 400T has an aft club arrangement with swivel chairs.

SYSTEMS: Pressurisation system, with normal differential of 0.63 bar (9.1 lb/sq in) maintaining sea level cabin environment to 7,315 m (24,000 ft) and 2,286 m (7,500 ft) cabin environment to 13,715 m (45,000 ft). back-up pressurisation system, using engine bleed air, for use in emergency. Hydraulic system, pressure 103.5 bar (1,500 lb/sq in), for actuation of flaps, landing gear and other services. Each variable volume output engine-driven pump has a maximum flow rate of 14.76 litres (3.9 US gallons; 3.25 Imp gallons)/min, and one pump can actuate all hydraulic systems. Reservoirs, capacity 4.16 litres (1.1 US gallons; 0.9 Imp gallon), pressurised by filtered engine bleed air at 1.03 bar (15 lb/sq in). All systems are, wherever possible, of modular conception: for example, entire hydraulic installation can be removed as a single unit. Stick shaker as back-up stall warning device.

AVIONICS: Rockwell Collins Pro Line 4 as core system.

Comms: VHF-422C radio and RTU-870C tuning units. CDU-5000 control display unit. Dual TDR-94D Mode S transponders. L-3 Communications FA2100-1-20-00 voice recorder. Artex C406-2 ELT. Dual DB System 430 audio systems.

Radar: TWR-850 weather radar.

Flight: FCS-850 flight control system. Dual ADC-850D air data computer/altitude encoder, FMS-5000 flight management system, VIR-432 nav receiver, DME-442 and AHC-85E AHRS. Single ALT-55B radio altimeter, ADF-462 and GPS-4000A. TCAS-4000 TCAS II. Honeywell Mk V EGPWS.

Instrumentation: EFIS-871 152 × 178 mm (6 × 87 in) primary flight display screen for pilot and co-pilot, plus third PFD-871 multifunction display for pilot. Dual SDU-640D sensor display units for backup instruments.

Approach	91.7 EPNdB

HAWKER 800 and 850

JASDF designation: U-125

TYPE: Business jet.

PROGRAMME: Derived from the de Havilland/Hawker Siddeley/British Aerospace 125, which was built in the UK from 1962 onwards, progressing through Srs 1 to 3 and 400 to 700. Prototype Srs 800 first flew (G-BKTF) 26 May 1983; type certificate gained 4 May 1984 and Public Transport Category C of A on 30 May 1984; FAA certification 7 June 1984; Russian certification May 1993; Canadian certification (800XP) awarded in third quarter of 1997. Adopted Hawker nomenclature when programme purchased by Raytheon in 1993, at which time some 850 aircraft had been sold in 44 countries.

Final assembly of Hawker 800XP gradually transferred to Wichita; first US-assembled aircraft flew on 5 November 1996, being N297XP, the 297th Series 800; second (N1105Z; No. 301) followed on 24 November 1996; transition complete with flight of last UK-assembled aircraft, No. 337, 29 April 1997; FAA production certificate awarded to Raytheon in May 1997. One thousandth 125/Hawker series aircraft, an 800XP, was delivered as the 'Millennium Hawker' to Gainey Corporation of Grand Rapids, Michigan (N984GC), October 1998. Winglets available as option on new aircraft, or as retrofit, from 2003.

CURRENT VERSIONS: **800:** Original version superseded by 800XP in late 1995; 275 built in main series, of which last delivered December 1995. Follow-on manufacture exclusively for Japanese military contracts.

800XP: (XP=eXtended Performance) Announced March 1995, when prototype (G-BVYW, modified from 800) completed; this and preproduction 800XP used in development programme, culminating in CAA and FAA certification on 28 July 1995; first delivery (to Green Tree Financial of St Paul, Minnesota) October 1995 after public debut at National Business Aviation Association Convention in Las Vegas during previous month.

Changes from 800 included Dee Howard thrust reversers as standard; increased weights; vortillons replacing wing fences; re-geared aileron servo tab; addition of Mach trim system; and 38 litre (10.0 US gallons; 8.4 Imp gallon) TKS de-icing fluid tank. Initially fitted with Honeywell SPZ 8000 avionics as standard. Collins Pro Line 21 fitted to c/n 258541 and as standard from 258554, delivered 2002 onwards. Superseded by Hawker 800XPi.

800XPi: Improved version, announced at the European Business Aviation Convention and Exhibition in Geneva 18 May 2005 and available from mid-2005. Features Rockwell Collins integrated flight information system (IFIS) and Pro Line 21 communication, navigation and surveillance (CNS) suite as standard, plus an upgraded cabin that includes

1040394

Hawker 850XP company demonstrator *(Paul Jackson)*

LED lighting; new tailoring for cabin seats and divan; redesigned and larger forward baggage area; flush-fitting galley doors with invisible hinges; FAA-approved latches on all cabinetry; Collins Airshow 21 cabin management system with LCD touch-screens at each seat and one on each divan armrest; 38 cm (15 in) video monitors recessed into cabin bulkheads; and improved cabin sound system. Superseded by Hawker 850XP, although designation remains current for aircraft of customers specifying omission of winglets on their 850s.

800SP: Winglet modification of 800/800XP devised by Aviation Partners Inc and shown at NBAA Convention, Orlando, Florida, September 2002; available from early 2003. Height 107 cm (3 ft 6 in); 7 per cent consequential drag reduction translates into M0.03 speed increase (18 kt; 33 km/h; 21 mph) and range extension of 180 n miles (333 km; 207 miles).

800FI, SM, RA and SIG: Special missions versions; produced as required.

U-125A: Modification undertaken by KAC for Japanese military service.

850XP: Announced at NBAA Convention, Orlando, Florida, 9 November 2005. Replacement for 800XPi from c/n 258750 onwards. Hawker-designed winglets increase range by 4 per cent, or 100 n miles (185 km; 115 miles); decrease time-to-climb by up to 8 per cent. Further features include increase of scheduled maintenance interval from 300 to 600 hours and LED position lights in winglets. Pro Line 21 and Airshow 21 equipment of 800XPi retained. First delivery 15 March 2006 to CES Wholesale Grocers, following FAA certification on 28 February 2006. *Detailed description applies to this version.*

Hawker 750 and 900XP: *Described separately.*

CUSTOMERS: Refer to table. Total 792 Series 800/800XPs/XPis/850XPs delivered by 30 September 2006. Largest contract for 125/Hawker placed in May 1997 when Executive Jet Inc ordered 20 800XPs, followed in September 1998 by order for a further 20, plus 16 options for NetJets fractional ownership scheme; deliveries between 1997 and 2004; further eight ordered in December 2003 for delivery from that month until 2005, and a further 20 ordered in June 2004 for delivery 2005–07 to NetJets Europe. Recent customers include National Air Service (NAS) of Jeddah, Saudi Arabia, which ordered 14 in November 1999 for its NetJets Middle East fractional ownership programme, five of these being delivered in 2000, including the first (HZ-KSRA) at the Farnborough International Air Show on 24 July 2000, and three per year thereafter until 2003; Hainan Airlines of China, which took delivery of one aircraft on 19 July 1999; and Talon Air of Rochester, New York, which ordered an 800XPi for delivery in September 2005. Contender for US Navy Undergraduate Military Flying Officer Training System (UMFOTS) requirement, for which 16 aircraft are required initially.

Notes: Data do not include 20 Dominie T. Mk 1 navigation trainers (125 Srs 2) delivered to the RAF in 1965 (10) and 1966 (10).

COSTS: 800XPi USD13.45 million; 850XP USD13.65 million (2006).

DESIGN FEATURES: Classic small business jet; sweptback wing mounted below cabin floor; podded engines on rear fuselage sides; and high tailplane.

Improvements of baseline Series 800, compared with earlier 700 variant, include curved windscreen, sequenced nosewheel doors, extended fin leading-edge, larger ventral fuel tank, and increased wing span which reduces induced drag, enhances aerodynamic efficiency and carries extra fuel; outboard 3.05 m (10 ft) of each wing redesigned.

In XP version, TFE731-5BR-1H turbofans boost performance, including 14 kt (26 km/h; 16 mph) increase in cruising speed at 11,800 kg (26,015 lb) at 11,890 m (39,000 ft); 225 kg (496 lb) payload increase with eight passengers; 15 to 23 per cent reduction in time to cruising altitude, to reach 11,280 m (37,000 ft) in 23 minutes at maximum take-off weight in ISA + 10°C conditions; and enhanced take-off performance. Other improvements include installation of vortillons in place of wing fences, permitting lower V-speeds and reducing drag; enhanced TKS de-icing system with increased fluid capacity; improved high-energy brakes; restyled cabin interior to maximise use of available volume; and improved environmental control system; and redesigned interior, with increased headroom by relocating oxygen dropout units to sidewall panels, and 12.2 cm (4.8 in) extra width at shoulder level by sculpturing sidewall panels around fuselage frame. Interior further improved in 1998 — see Accommodation paragraph.

Wing thickness/chord ratio 14 per cent at root, 8.35 per cent at tip; dihedral 2°; incidence 2° 5′ 42″ at root, −3° 5′ 49″ at tip; sweepback 20° at quarter-chord; small fairings on tailplane undersurface eliminate turbulence around elevator hinge cutouts. Tailplane sweep 20°, fin 54° 20′, both at quarter-chord.

FLYING CONTROLS: Conventional and manual. Each control surface with geared tab; port aileron tab trimmed manually via screw-jack. Hydraulically actuated four-position double-slotted flaps; mechanically operated hydraulic cutout prevents asymmetric flap operation; upper and lower airbrakes, with interconnected controls to prevent asymmetric operation, form part of flap shrouds and provide lift dumping. Fixed incidence tailplane. Flap positions 15, 25 and 45°.

STRUCTURE: All-metal. One-piece wings, dished to pass under fuselage and attached by four vertical links, side link and drag spigot; two-spar fail-safe wings, with partial centre spar of approximately two-thirds span, to form integral fuel tankage; single-piece skins on each upper and lower wing semi-spans; detachable leading-edges; fail-safe fuselage structure of mainly circular cross-section, incorporating Redux bonding.

LANDING GEAR: Retractable tricycle type, with twin wheels on each unit. Hydraulic retraction: nosewheels forward, mainwheels inward into wings. Oleo-pneumatic shock-absorbers. Fully castoring nose unit, steerable ±45°. Dunlop mainwheels size 23×7–12 (12 ply) tubeless tyres. Dunlop nosewheels size 18×4.25–10 (6 ply) tubeless tyres. Dunlop triple-disc hydraulic brakes with Maxaret anti-skid units on all mainwheels. Minimum ground turning radius about nosewheel 9.14 m (30 ft 0 in).

POWER PLANT: Two 20.73 kN (4,660 lb st) Honeywell TFE731-5BR-1H turbofans, mounted on sides of rear fuselage in pods designed and manufactured by Northrop Grumman. Dee Howard TR5000BR thrust reversers. Integral fuel tanks in wings, with combined capacity of 4,818 litres (1,273 US gallons; 1,060 Imp gallons). Rear underfuselage tank of 882 litres (233 US gallons; 194 Imp gallons) capacity, giving total capacity of 5,700 litres (1,506 US gallons; 1,254 Imp gallons). Single pressure refuelling point at rear of ventral tank. Overwing refuelling point near each wingtip.

ACCOMMODATION: Flight deck crew of two. Dual controls standard. Seat for third crew member. Executive layout has forward baggage compartment, forward galley comprising automatic coffee maker, microwave oven, and miscellaneous storage. Seats swivel through 360°. Seating for eight passengers, with club four seating at the front of the cabin, three-place settee on the right side rear cabin and single seat opposite. Airliner style lavatory at rear with external servicing as standard. Maximum seating for 14. Cabin equivalent altitude 2,286 m (7,500 ft) at FL410. Interior options include differing seating layouts; microwave oven; entertainment system including CD player and video LCD screen. New interior introduced at National Business Aviation Association Convention at Las Vegas, Nevada, in October 1998 features oval internal window frames, additional sidewall lighting and restyled side panels and work tables.

SYSTEMS: Honeywell air conditioning and pressurisation system. Maximum cabin differential 0.59 bar (8.60 lb/sq in), maintains sea level cabin environment to 6,767 m (22,200 ft).

Oxygen system, capacity 1,500 litres (396 US gallons; 330 Imp gallons), standard, with dropout masks for passengers. Hydraulic system, pressure 186 to 207 bar (2,700 to 3,000 lb/sq in), for operation of landing gear, mainwheel doors, flaps, spoilers, nosewheel steering, mainwheel brakes and anti-skid units. Two accumulators, pressurised by engine bleed air, one for main system pressure, other providing emergency hydraulic power for wheel brakes in case of main system failure. Independent auxiliary system for lowering landing gear and flaps in event of main system failure.

DC electrical system utilises two 28.5 V 12 kW engine-driven starter/generators and two 24 V 23 Ah Ni/Cd batteries. A 24 V 4 Ah battery provides separate power for standby instruments. AC electrical system includes two 1.25 kVA static inverters, providing 115 V 400 Hz single-phase supplies, one 250 VA standby static inverter for avionics, and two engine-driven 208 V 7.4 kVA frequency-wild alternators for windscreen anti-icing. Ground power receptacle on starboard side at rear of fuselage for 28 V external DC supply. Honeywell 36-150 W APU. TKS liquid system de-icing/anti-icing on leading-edges of wings and tailplane. Engine ice protection system supplied by engine bleed air. Kidde-Graviner triple FD Firewire fire warning system and two BCF engine fire extinguishers. Stall warning and stick pusher system fitted.

AVIONICS: Collins Pro Line 21 as core system.

Comms: Dual Collins VHF-422C com with 8.33 kHz frequency spacing; dual TFR-94D transponders; Collins HF-9000 HF com with Coltech CSD-714 Selcal; dB Systems Dual Model 700 cockpit audio system; Universal Avionics CVR-120 cockpit voice recorder; and Artex C406-2 satellite-capable ELT, all standard. Second HF-9000; Honeywell Airborne Flight Information System, and Magnastar C2000 terrestrial-based flight phone or Universal Avionics Aero M or Aero I satcom phone, all optional.

Radar: Collins TWR-850 colour weather radar with turbulence detection as standard.

Flight: Dual Collins FMS-6000 flight management systems; dual AHC-3000 quartz AHRS; dual ADC-3000 digital air data systems; FGC-3000 AFCS; dual GPS-4000A; dual VIR-432 VOR/ILS/marker receivers; ADF-462; dual DME-442; ALT-4000 radio altimeter; TCAS-4000 TCAS II (Change 7 compliant); MDC-3000 maintenance diagnostic system; and SafeFlight AoA system, all standard. Second ADF-462, and L3 Communications F1000 FDR or JAR-OPS compliant Honeywell FDR with Teledyne FDAU, optional.

Instrumentation: Four 203 × 254 mm (8 × 10 in) active matrix LCDs for PFD, MFD and EICAS functions; and Meggitt Avionics Mark II secondary flight display system, standard. Options include 3-D mapping for MFDs; Goodrich WX-1000 lightning detection system with display on AMLCDs; Collins CDU-6200 graphics capable display; and Airshow 400 or Airshow Network cabin display systems.

DIMENSIONS, EXTERNAL:

Rudder	1.32 m² (14.20 sq ft)
Horizontal tail surfaces (total)	9.29 m² (100.00 sq ft)

WEIGHTS AND LOADINGS:

Basic operating weight	7,407 kg (16,330 lb)
Max payload	962 kg (2,120 lb)
Payload with max fuel	812 kg (1,790 lb)
Max fuel	4,536 kg (10,000 lb)
Max T-O weight	12,701 kg (28,000 lb)
Max ramp weight	12,755 kg (28,120 lb)
Max landing weight	10,591 kg (23,350 lb)
Max zero-fuel weight	8,369 kg (18,450 lb)
Max wing loading	365.5 kg/m² (74.86 lb/sq ft)
Max power loading	306 kg/kN (3.00 lb/lb st)

PERFORMANCE:

Max operating speed (VMO) at FL290 with ventral tank empty	335 kt (620 km/h; 385 mph) IAS
Max operating Mach No. MMO)	0.80
High cruising speed at FL370	448 kt (830 km/h; 515 mph)
Intermediate cruising speed at FL410	428 kt (793 km/h; 493 mph)
Long-range cruising speed at FL390	402 kt (745 km/h; 463 mph)
Stalling speed in landing configuration at typical landing weight	92 kt (170 km/h; 106 mph)
Max rate of climb at S/L	945 m (3,100 ft)/min
Rate of climb at S/L, OEI	143 m (470 ft)/min
Time to FL390 at MTOW	20 min
Max certified altitude	12,497 m (41,000 ft)
Service ceiling	11,887 m (39,000 ft)
Service ceiling, OEI	5,730 m (18,800 ft)
T-O balanced field length at MTOW	1,533 m (5,030 ft)
Landing run at MLW	808 m (2,650 ft)
Range with six passengers, NBAA IFR reserves:	
at max cruising speed, FL370 to FL410:	2,111 n miles (3,909 km; 2,429 miles)
at intermediate cruising speed, FL390 to FL410	2,350 n miles (4,352 km; 2,704 miles)
at long-range cruising speed, FL390 to FL410	2,598 n miles (4,811 km; 2,989 miles)
g limits	+2.73/–1.0

OPERATIONAL NOISE LEVELS:

T-O	79.3 EPNdB
Approach	93.3 EPNdB

HAWKER 900XP and 750

TYPE: Business jet.

PROGRAMME: Announced on eve of NBAA Convention, Orlando, Florida, 16 October 2006; further development of Hawker 800 series. Service entry in early 2007, replacing Hawker 800.

Derived from the de Havilland/Hawker Siddeley/British Aerospace 125, which was built in the UK from 1962 onwards, progressing through Srs 1 to 3 and 400 to 700. Prototype Srs 800 first flew (G-BKTF) 26 May 1983; type certificate gained 4 May 1984 and Public Transport Category C of A on 30 May 1984; FAA certification 7 June 1984. Adopted Hawker nomenclature when programme purchased by Raytheon in 1993, at which time some 850 aircraft had been sold in 44 countries.

Final assembly of Hawker 800 gradually transferred to Wichita; first US-assembled aircraft flew on 5 November 1996, being N297XP, the 297th Series 800; second (N1105Z; No. 301) followed on 24 November 1996; transition complete with flight of last UK-assembled aircraft, No. 337, 29 April 1997; FAA production certificate awarded to Raytheon in May 1997. One thousandth 125/Hawker series aircraft, an 800XP, was delivered as the 'Millennium Hawker' to Gainey Corporation of Grand Rapids, Michigan (N984GC), October 1998. Winglets available as option on new aircraft, or as retrofit, from 2003.

CURRENT VERSIONS: **750:** Shorter range version with TFE731BR engines; based on Hawker 850XP but without winglets and with ventral fuel tank replaced by externally-accessed baggage space.

900XP: Longer range version with TFE731-50 engines and winglets; compared with Hawker 800XP has 250 n miles (463 km; 288 miles) further range.

CUSTOMERS: Launched with orders from NetJets for 18 Hawker 900XPs and 30 Hawker 750s; NetJets Middle East for eight Hawker 750s; plus one 900XP for Voyager Jet Center of Pittsburgh.

COSTS: USD11.95 million Hawker 750; USD13.95 million Hawker 900XP (both 2007).

DESIGN FEATURES: Intended to compete with Cessna Sovereign, Gulfstream G150, Learjet 45 and Cessna Citation XLS by offering two products derived from core Hawker 800.

Sweptback wing mounted below cabin floor; podded engines on rear fuselage sides; and cruciform empennage. Hawker 900XP has Hawker composites winglets sized to provide performance improvements while not affecting airframe inspection schedules.

Wing thickness/chord ratio 14 per cent at root, 8.35 per cent at tip; dihedral 2°; incidence 2° 5'/ 42″ at root, 3° 5'/ 49″ at tip; sweepback 20° at quarter-chord. Tailplane sweepback 20°; fin 54° 20' (both at quarter-chord).

FLYING CONTROLS: Conventional and manual. Actuation by cables, push-pull rods and mechanical linkages. Secondary control system provides mechanical trim through tabs in each elevator; port aileron and rudder.

Each aileron extends from approximately two-thirds span to wingtip (750) or winglet root (900XP) and are both mass- and aerodynamically balanced. Each aileron supported by three hinges, with inboard hinge locating the aileron laterally.

Double-slotted flaps hinged on two external fixed arms below the wing and extend from fuselage side to approximately half of semi-span; flaps hydraulically operated with one actuator per side and interconnected by cable system to ensure symmetrical operation. Flap actuation by main hydraulic system, backed by independent fluid supply from the auxiliary hydraulic system in the event of main system failure. Flap has four positions: 0°, 15°, 25° and 45°.

Airbrakes on the top and bottom surfaces of wing, forward of flaps, each attached to rear spar by two hinges. Airbrake selector is interconnected with the input lever to the flap control unit; during landing roll, with flaps selected 45° (landing), lifting the airbrake selector and moving it rearwards into the 'lift dump' position automatically lowers the flaps to a 75° angle and also opens airbrakes further.

Rudder bias system comprises two air powered struts between fuselage and rudder torque tube quadrant to provide an automatic application of rudder bias to counteract asymmetric

Hawker 750 shorter-range version of 900XP *(Paul Jackson)* 1158773

thrust. Engine bleed air system is interconnected to the struts so that each engine supplies air to opposing sides of the strut positions; imbalance within the pistons will bias the rudder to appropriate side.

STRUCTURE: All metal. Fuselage is semi-monocoque of high strength aluminum-copper alloy, with appropriate use of steel and other materials, consisting of three main sections: unpressurised nose; pressurised flight deck and cabin: and unpressurised rear.

Hinged radome of composites, forward of nose gear bay, housing weather radar; nose section also contains auxiliary hydraulic system and some avionic components.

Pressure cabin, comprising flight deck and passenger compartment, has skin supported by transverse frames and longitudinal stringers. Both Redux bonding and riveted jointing employed. All aperture surrounds and seam joints are reinforced to ensure low stress levels. Wing attachments of high tensile steel which connect to heavy duty fabricated frames at front and rear spars. Rear underside of Hawker 750 fuselage incorporates Nomex honeycomb baggage compartment.

Wing structure consists of the port and starboard wings and a centre section.

Wing box incorporates front and rear spars, ribs and wing skins. Fabricated centre spar extends for two-thirds of span. Front spars, rear spars and ribs machined from aluminum-copper alloy billets. Wing skins are single contour milled panels, reinforced by bonded closed section stringers; skin terminates at root rib and incorporates eight detachable panels for maintenance and inspection. Bottom skin extends to the aircraft centerline and incorporates six access panels, plus small detachable panels to permit maintenance. Top skins and stiffeners of aluminum-zinc alloy; bottom skins and stiffeners from aluminum-copper alloy. On Hawker 900XP, metal wing leading edge continues along entire polished leading edge of the winglet providing seamless interface; position lights, along with the conventional strobe assembly, are integrated within the contour of the winglet leaving the external surface of the winglet uninterrupted.

Wing centre section of wing ribs and five machined beams; front and rear beams form continuation of front and rear wing spars. Integral fuel tanks extend from each side of centre line rib to within 0.63 m (25 in) of wing tip. Each tank sub-divided into six anti-surge compartments. Tanks are sealed with Thiokol. Attachment to fuselage by four high tensile steel vertical links located at intersection of root rib and front and rear spars. High-tensile steel side stay link at forward port position and shear spigot on rear spar, along aircraft centreline. Centre-section is dished on its top surface to allow the entire wing structure to pass beneath the fuselage.

Fuselage aft of pressure dome consists of skin supported by transverse frames and longitudinal riveted stringers. Engine main attachment points are located at each end of a fabricated beam mounted transversely on fuselage. Aft attachment is mounted on reinforced frames. Fin structure attaches to four heavy-duty frames in rear fuselage.

Empennage of vertical stabiliser and a fixed incidence horizontal stabiliser. Main (below tailplane) fin structure incorporates front and rear spars, ribs and skins, stiffened by Redux-bonded stringers, and is bolted to rear fuselage structure. Overfin is self-contained unit of mixed metal/glass reinforced plastic; has three main fixing points to the horizontal stabiliser.

LANDING GEAR: Tricycle type; retractable. Oleo-pneumatic struts with twin wheels on all legs; mainwheels retract inboard into wingroots; nosewheel forward into fuselage. Hydraulic actuation; all units enclosed by mechanically and hydraulically actuated doors. Emergency extension by auxiliary hydraulic system handpump. Mainwheels size 23x7-12 (12 ply) tubeless tyres; nosewheels size 18x4.25-10 (6 ply) tubeless tyres. Nosewheel steering mechanically actuated by hydraulically operated pilot's handwheel. Maximum steering angle is 45° each side; free rotation for towing. Minimum ground taxying radius about nosewheel 9.14 m (30 ft 0 in). Meggitt power brakes on mainwheels; hydraulic system power is used to operate caliper-type disc brakes via Maxaret anti-skid units.

Skid under wing and (where installed) ventral fuel tank, enclosed within a fairing. Underwing section of beryllium-copper rubbing strip and light alloy pivoted arm, faced with a beryllium-copper pad. Ventral tank skid section consists of a light alloy pivoted arm and beryllium copper pad. Both skid pads supported on energy absorbing metal honeycomb.

POWER PLANT: *Hawker 900XP:* Two Honeywell TFE 731-50R turbofans. Each engine flat-rated to 20.73 kN (4,660 lb st) from nominal 22.24 kN (5,000 lb st); maximum continuous thrust 20.73 kN (4,660 lb st); cruise thrust at FL400 and M0.8 typically 4.96 kN (1,116 lb st). Target-type thrust reversers, hydraulically operated. Engine synchronizer automatically synchronizes the speed of either the fan or the turbine of the 'slave' engine to that of the 'master' engine. Closed loop fire detection system. Accessory gearbox on lower side of the engine's intermediate case is driven from the high pressure (N2) spool to power accessories for engine and aircraft systems.

Fuel system provides independent supply to each engine. Integral fuel tanks in wings, with combined capacity of 4,819 litres (1,273 US gallons; 1,060 Imp gallons), plus rear underfuselage tank of 882 litres (233 US gallons; 194 Imp gallons) capacity; total capacity of 5,701 litres (1,506 US gallons; 1,254 Imp gallons). System has both a wing-tank to wing-tank transfer capability and a cross-feed capability from either wing tank to one or both engines; also transfer from the ventral tank into either or both wing tanks. Gravity- and a single-point pressure refuelling/defuelling.

Hawker 750: Generally as for Hawker 900XP, except engine version and omission of ventral fuel tank. Two Honeywell TFE731-5BR turbofans, each 20.73 kN (4,660 lb st); wing fuel tanks only, combined capacity 4,819 litres (1,273 US gallons; 1,060 Imp gallons).

ACCOMMODATION: Two pilots and eight passengers, plus one cabin attendant, in standard layout; optionally up to 12 passengers. Certified for two-pilot operation. Front windscreen is single curvature, with forward and rear side panels of double curvature. Rear side panels can be opened. Front windscreen and forward side panels are electrically heated.

Eight-passenger layout features five individual seats, plus three-place divan, latter with hinged doors to two Kydex tubs used for cushion stowage. Passenger seats capable of side-tracking and reclining; inboard seat rails supported on continuous beams each side of aisle; each outboard seat rail is mounted on a continuous member attached to fuselage side. Cabin includes lavatory at rear.

Cabinetry consists of large galley on forward port side, next to door. Access to TKS pump/filter is under galley. Opposite entry door is baggage compartment. Executive writing tables at each individual seat position stow in sidewall panels. A 110 V AC outlet in a recessed box with sliding cover is provided at the centre seat positions on each side. Additional baggage compartment at rear of cabin, starboard side, extends into an area behind lavatory mirror. Lavatory features flushing toilet with external servicing; metal plated wash basin; 110 V AC outlet; and smoke detector.

Hawker 750 has unpressurised, but heated, ventral baggage compartment with external access.

Six cabin windows each side. Windows are fail-safe design of stretched acrylic and dry air 'sandwich' construction. Inner pane is capable of sustaining full cabin differential pressure in the event of outer pane failure. Outward opening, spring-counterbalanced,drop-down door with integral airstairs on port side of the fuselage, forward of wing. Emergency exit on starboard side, over wing, incorporates passenger window.

Cabin max pressure differential of 0.59 bar (8.55 lb/sq in) provides 2,285 m (7,500 ft) environment at max operating height of 12,495 m (41,000 ft).

SYSTEMS: Honeywell 36-150[W] APU provides air conditioning and electrical power independently of engines or ground power units; capacity 28 V 300 A; approved for in-flight operation up to 9,145 m (30,000 ft). Starter/generator and generator control unit are interchangeable with those of aircraft's engines.

Main hydraulic system, approximately 207 bar (3,000 lb/sq in), powered by two pumps, one on each engine; reservoir capacity approximately 9 litres (2.4 U.S gallons: 2.0 Imp gallons). Provides power for landing gear, flaps, airbrakes, nosewheel steering, brakes/anti-skid, stall prevention and thrust reversers. Auxiliary hydraulic system for landing gear extension and flaps is hand operated and, when selected, independent of main system.

Electrical power from two 28.5 V DC engine-driven starter generators, one on each engine. Two 24 V DC, 23 Ah sealed lead-acid batteries for engine starting and emergencies; 28V DC external power receptacle starboard side of fuselage. Third starter/generator, driven by APU, is available. Each generator output supplies its own busbar; bus-tie contactor, controlled by voltage protector, enables these busbars to be joined together after generator power is available. Automatic splitting of the two busbars occurs when the busbar detection unit detects an under/over voltage. Either generator is capable of supplying both busbars. AC power from two static inverters, 115 V, 400 Hz AC, with an apparent power rating of 1,500 VA each.

Pressurisation and environmental systems use engine bleed air. Air conditioning pack incorporating a three-wheel air cycle machine is employed. Independent cockpit supply from starboard engine provides additional heat for crew's feet and for demisting the windscreens, while also serving as emergency pressurisation supply.

Oxygen supply for crew and passengers in two 750 litre (26.5 cu ft) cylinders in the rear equipment bay; additional oxygen capacity optional. Quick-donning emergency masks for pilots; emergency supply for passengers through drop-out mask units and one supplemental outlet; masks are delivered automatically if cabin altitude rises above 3,660 m (12,000 ft).

Ice protection system allows flight through continuous and intermittent icing and is available with one engine inoperative. Rotary ice detector is fitted on port side of nose; TKS anti-icing fluid system protects leading edges of wing and tailplane; hot air from final stage of engine compressor used for anti-icing in nacelle inlet cowling. Air is bled from two stages of engine compressor to provide supplies for nacelle inlet cowl anti-icing and pressurisation and environmental systems. Ram air ventilates area of cowling surrounding engine compressor stages between front and rear firewalls. Anti-icing of windscreens and forward side panels provided by electrically conductive transparent film heating layers. Electric heating of two pitot heads, forward static plates and each rudder bias strut.

Maintenance diagnostic system includes MDC3110 computer. Majority of avionics LRUs can perform self-monitoring functions and are capable of reporting any failures to the MDC3110. Selection of the MDC to diagnostic mode is not accessible in flight. Maintenance information can be viewed on aircraft's MFDs on ground, or may be downloaded to diskette.

Collins flight director/autopilot provides automatic three-axis control, drawing data from dual attitude heading reference systems (AHRSs) and dual air data computers (ADCs). With the AHRS systems monitoring the autopilot system, the autopilot is considered to be fail passive, having no adverse effect on aircraft controllability if inadvertently disconnected. Automatic flight guidance system (AFGS) provides an integrated fail-passive three-axis autopilot with flight guidance operations, automatic pitch trim, yaw damper, and Mach trim. System consists of two identical FGC-3000 flight guidance computer modules (FGCs), three primary servos, a pitch trim servo, and FGP-3010 flight guidance panel. System controlled through FGP-3010 panel. Mach trim is engaged automatically and requires no pilot action.

AVIONICS: Rockwell Collins Pro Line 21 integrated avionics system. Integrated avionics processor system (IAPS) is central feature; located in nose compartment; serves as housing for a number of modules; also provides for lightning and HIRF (high intensity radiated fields) protection and data concentration/distribution. Modules in the IAPS are used to control flight guidance/autopilot, flight management, and maintenance diagnostic functions.

Comms: Dual Collins CNS VHF-4000 digital VHF; and in Hawker 950XP only, HF-9000 HF, including Coltech CSD-714 SELCAL decoder. Radio equipment controlled through keyboard operation on either of two CDU-6200s; single CTL-23C COM/NAV backup tuner on copilot's side console. dB Systems dual audio system with Model 700 audio amplifiers and six speakers. Artex C406-N SAR-type ELT. Universal Avionics CVR-120 (2 hour) cockpit voice recorder.

Radar: Collins TWR-850 turbulence detection weather radar. RTA-858 receiver/transmitter antenna with controls integrated with Pro Line 21 display system. Detects and displays precipitation-related turbulence up to a 50 n miles (93 km; 58 miles); returns can be displayed on any of the four main displays.

Flight: Dual digital Collins ADC-3000 air data computers with functions including provision of data for RVSM. Dual ARC-3000 attitude/heading computers; Collins NAV-4000/4500 digital navigation receivers with ADF display on PFD and MFD; dual Collins DME-4000 DME; dual Collins TDR-94D solid-state enhanced surveillance (including flight ID) diversity transponders with dual antennas. Collins ALT-4000 radio altimeter. Collins TCAS-4000 TCAS II; Honeywell Mark V EGPWS. Dual Collins FMS-6000 flight management systems, including two CDU-6200 control display units, two FMC-6000 flight management computers and two GPS-4000As simultaneously processing transmissions of up to twelve GPS satellites.

Instrumentation: Four 203 x 254 mm (8 x 10 in) active matrix liquid crystal displays, comprising two AFD-3010 PFDs and two AFD-3010E MFDs. Engine indicating system (EIS); single flight guidance panel (FGP); two control display units (CDUs) for FMS and communication/navigation radios. Display system controlled by two DCP-3020 display control panels. Meggitt Mark II secondary flight display system, with emergency batteries, incorporates independent air data unit and displays attitude, altitude, airspeed, heading, course deviation and glideslope deviation information. Electronic charts, enhanced map overlays, graphical weather (optional) and three-dimension FMS mapping (optional) can be displayed on both MFDs; system includes single FSU-5010 file server unit and dual CCP-3000 cursor control panels Engine indicating system (EIS) has four DCU-3001 data concentrator units (DCUs), two interfaced with each engine.

EQUIPMENT: Lighting includes rotating beacon on top of overfin; white tail light on the top rearmost section of the fuselage. Tail floodlights in lower surface of horizontal stabiliser illuminate vertical stabiliser.

DIMENSIONS, EXTERNAL:

Wing span: 900XP	16.56 m (54 ft 4 in)
Wing chord, mean	2.41 m (7 ft 11 in)
Wing aspect ratio: 900XP	7.7
750	7.1
Length overall	15.60 m (51 ft 2 in)
Height overall	5.51 m (18 ft 1 in)
Fuselage max diameter	1.93 m (6 ft 4 in)
Tailplane span	6.10 m (20 ft 0 in)
Wheel track (c/l of shock-absorbers)	2.79 m (9 ft 2 in)
Wheelbase	6.41 m (21 ft 0½ in)
Door (fwd, port): Height	1.32 m (4 ft 4 in)
Width	0.69 m (2 ft 3 in)
Height to sill	1.07 m (3 ft 6 in)
Emergency exit (overwing, stbd): Height	0.91 m (3 ft 0 in)
Width	0.51 m (1 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin (excl flight deck): Length	6.50 m (21 ft 4 in)
Width: max	1.83 m (6 ft 0 in)
at floor	1.30 m (4 ft 3 in)
Max height	1.75 m (5 ft 9 in)
Floor area	5.11 m^2 (55.0 sq ft)
Volume	17.1 m^3 (604 cu ft)
Baggage compartments:	
forward; 900XP	0.95 m^3 (33.4 cu ft)
750	0.87 m^3 (30.6 cu ft)
rear: 900XP	0.46 m^3 (16.1 cu ft)
750	0.47 m^3 (16.7 cu ft)
pannier: 750	0.91 m^3 (32.0 cu ft)

AREAS:

Wings, gross: 900XP	35.40 m^2 (381.0 sq ft)
750	34.75 m^2 (374.0 sq ft)
Ailerons (total)	2.05 m^2 (22.10 sq ft)
Airbrakes: upper (total)	0.74 m^2 (8.00 sq ft)
lower (total)	0.46 m^2 (5.00 sq ft)
Trailing-edge flaps (total)	4.83 m^2 (52.00 sq ft)
Vertical fin	5.81 m^2 (62.50 sq ft)
Horizontal tail surfaces	9.29 m^2 (100.00 sq ft)

WEIGHTS AND LOADINGS:

Basic operating weight: 900XP	7,448 kg (16,420 lb)
750	7,348 kg (16,200 lb)
Max baggage weight: forward	113 kg (250 lb)
rear	66 kg (145 lb)
pannier (750)	227 kg (500 lb)
Max usable fuel weight: 900XP	4,536 kg (10,000 lb)
750	3,856 kg (8,500 lb)
Max T-O weight: 900XP	12,700 kg (28,000 lb)
750	12,247 kg (27,000 lb)
Max ramp weight: 900XP	12,755 kg (28,120 lb)
750	12,301 kg (27,120 lb)
Max landing weight (both)	10,591 kg (23,350 lb)

Max wing loading: 900XP	358.8 kg/m² (73.49 lb/sq ft)
750	352.4 kg/m² (72.19 lb/sq ft)
Max power loading: 900XP	306 kg/kN (3.00 lb/lb st)
750	295 kg/kN (2.90 lb/lb st)

PERFORMANCE:

Max operating speed (VMO) at FL290	310 kt (574 km/h; 357 mph) IAS
Max operating Mach No. (MMO)	0.80
High cruising speed at FL370 (both)	447 kt (828 km/h; 514 mph)
Max certified altitude	12,497 m (41,000 ft)
T-O balanced field length; 900XP	1,533 m (5,030 ft)
750	1,433 m (4,700 ft)
Landing run at MLW (both)	808 m (2,650 ft)
Range with four passengers, NBAA IFR reserves:	
900XP	2,850 n miles (5,278 km; 3,279 miles)
750	2,100 n miles (3,889 km; 2,416 miles)
g limits	+2.73/-1.0

HAWKER 4000

TYPE: Business jet.

PROGRAMME: Design started in 1993; initially thought to have had preliminary designation PD1000Y, but now known to have been PD376; briefly identified as Horizon 1000; announced at NBAA Convention, Orlando, Florida, 19 November 1996; full-size cabin mockup exhibited at NBAA Convention, Dallas, Texas, September 1997. First production wing delivered to Wichita from Fuji Heavy Industries in December 1998; first three fuselage sections mated in October 2000 and mated to wing on 16 January 2001. Prototype (c/n RC-1/N4000R) rolled out 17 April 2001; first flight 11 August 2001; second aircraft (c/n RC-2/N802HH) first flew 10 May 2002; public debut (c/n RC-3/N803HH) at NBAA Convention, Orlando, Florida, 10 September 2002; three aircraft had completed 1,400 hours of test flying by August 2004, fourth aircraft (c/n RC-4/N804HH) first flew 28 April 2004, and following certification undertook a six-month operational evaluation to validate and 'de-bug' systems. Provisional FAA certification granted 23 December 2004, followed by handover of first customer aircraft (RC-5/N805HH) to Jack DeBoer. Deletion of name announced on eve of NBAA Convention at Orlando, Florida, 8 November 2005, aircraft becoming Hawker 4000. FAA certification achieved 21 November 2006.

CUSTOMERS: More than 30 ordered by August 2004, spilt approximately equally between US and International customers, including 27 for Raytheon Travel Air. By November 2006, only five aircraft (including prototypes) had gained individual airworthiness certificates.

COSTS: USD18.2 million (2004).

DESIGN FEATURES: All-new design sharing only slight family resemblance with the BAe 125-derived Hawker 800 and (discontinued) 1000. An 'advisory council' of business jet operators assisted RAC in defining the aircraft, a major requirement being a flat-floor stand-up cabin. Conventional swept-wing, T-tail design with small 'overfin' housing antenna for optional satellite communications system. Wing of supercritical, aft-loaded aerofoil section designed using computational fluid dynamics (CFD) techniques; CFD also used to design area-ruled aft fuselage to minimise engine nacelle drag and to reprofile Hawker 1000-based nose section.

Wing sweepback 28° 22' at 25 per cent chord; dihedral 4°; tailplane sweepback 33° 30' at 25 per cent chord; fin sweepback 45° at 25 per cent chord.

FLYING CONTROLS: Supercritical section ailerons and elevators, manually operated via pushrods and cables. Pitch trim via electrically actuated, variable incidence tailplane; geared trim tabs on ailerons, fly-by-wire hydraulically powered rudder with boost for asymmetric thrust. Electrically signalled, hydraulically powered, three-segment spoilers on upper surface of each wing augment aileron roll control; outboard and middle panels provide roll and speed brake functions, with maximum deflection 35°; lift dump function provided by all spoilers at 60° deflection. Four-segment, electrically controlled and powered double-slotted flaps, deflections 0, 12, 20 and 35°. Dual controls standard.

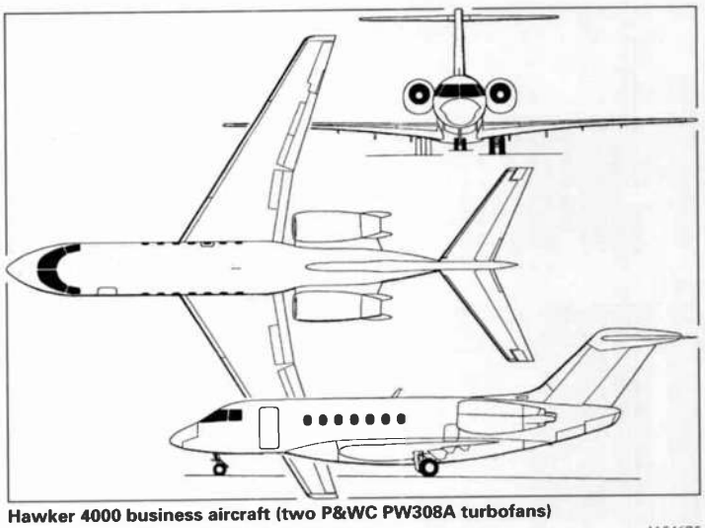
STRUCTURE: Fuselage of graphite/epoxy laminate and honeycomb core sandwich; 25 mm (1 in) thick shell is formed by Cincinnati Milacron Viper automatic fibre-placement machines over aluminium mandrel in three sections: nose, centrebody and tailcone, including dorsal fairing and engine pylons mated using aluminium splice plates in a Nova-Tech Engineering Inc fuselage automated splice tool which automatically seals the joints and installs some 1,800 hi-shear fasteners. Wing, designed using CFD, has a supercritical aerofoil and is manufactured by Fuji Heavy Industries at Utsunomiya, Japan, as a complete unit including all systems, integral fuel tanks and leading-edge bleed-air anti-icing, and shipped to Wichita for final assembly. Horizontal stabiliser is of light alloy, two-spar construction with graphite/epoxy composites sandwich skins; vertical stabiliser has three alloy spars and graphite/epoxy composites sandwich skins.

Risk-sharing partners include: Eaton Corporation (hydraulic system); Fokker Elmo BV (wiring harness); Fuji Heavy Industries (wing); Honeywell (avionics integration); Meggitt Avionics (fire and overheat protection and standby instrumentation); Messier-Dowty (landing gear); Moog (flight controls and flap actuators); Pratt & Whitney Canada (propulsion system); Smiths Industries (fuel system); and Hamilton Sundstrand Corporation (utility systems management integration).

LANDING GEAR: Retractable tricycle type by Messier-Dowty; landing gear electrically signalled and hydraulically actuated, with free-fall emergency extension system; twin wheels on each unit. Trailing-link suspension on main units, which retract inwards; nosewheel forwards. Steer-by-wire nosewheel, maximum deflection 70°, with disconnect for towing. Mainwheel size 26x6.6 (14 ply), nosewheel size 18x4.4 (10 ply). Hydraulic carbon disc brakes with digital brake-by-wire and electric anti-skid systems.

POWER PLANT: Two pod-mounted Pratt & Whitney Canada PW308A turbofans with FADEC, each flat-rated at 30.7 kN (6,900 lb st) at ISA + 20°C. Nordam target-type thrust reversers. Fuel in two integral wing tanks, maximum usable capacity 8,251 litres (2,180 US gallons; 1,815 Imp gallons). Single point fuelling/defuelling; gravity filler ports in top of each wing.

ACCOMMODATION: Crew of two, plus eight passengers in double 'club four' arrangement on reclining and side tracking seats, each pair having stowable writing table. Observer's seat on flight deck optional. Two closets and a galley immediately aft of flight deck; lavatory and flight accessible (via secondary pressurised bulkhead up to FL410) baggage compartment at rear of cabin with external door on port side aft of wing. Accommodation is air conditioned and pressurised (FL60 equivalent altitude) and includes Airshow entertainment system. Door on port side aft of flight deck; single plug-type emergency exit on starboard side over wing; Four-panel windscreen; seven cabin windows per side.



Hawker 4000 business aircraft (two P&WC PW308A turbofans) *(Paul Jackson)* 1154675

First Hawker 4000 delivered to a customer, N805HH *(Paul Jackson)* 1133717

SYSTEMS: Digitally controlled pressurisation system, maximum pressure differential 0.68 bar (9.80 lb/sq in), maintains a sea level cabin environment to 7,693 m (25,240 ft) and a 1,830 m (6,000 ft) cabin environment to 13,715 m (45,000 ft). Engine bleed air anti-icing for wing leading-edges and engine inlet lips; electromagnetic expulsive de-icing of tailplane, none on fin leading-edge; electrically heated pitot and static masts, AoA and TAT probes; windscreen anti-icing and demisting and cabin window demisting via electrically conductive transparent film embedded between panels. Automatically controlled electrical power generation and distribution system (EPGDS) comprises two high-speed, variable frequency, engine-driven AC generators, one APU-driven AC generator and two 43 Ah lead acid batteries. AC/DC external power receptacles standard. Two independent hydraulic systems, operating pressure 206.85 bar (3,000 lb/sq in), for normal and emergency landing gear operation, braking, thrust reversers, spoilers, rudder, nosewheel steering and emergency electrical generation. Two-bottle oxygen system, total capacity 4,080 litres (144 cu ft), with quick-donning diluter-demand masks for crew and auto-deploy constant flow masks in overhead boxes for passengers. Tailcone-mounted Honeywell AE-36-150(HH) APU approved for in-flight operation from sea level to 10,670 m (35,000 ft) and for main engine starting from sea level to 7,925 m (26,000 ft).

AVIONICS: Honeywell Primus Epic lightweight modular avionics system based on Virtual Backplane Network architecture, which combines the cabinet-based modular capabilities of Honeywell's 777 AIMS system with the aircraft-wide network capabilities of its Primus 2000 system and built-in maintenance recording with portable access terminal. The system has 'point and click' capability via two Cursor Control Devices (CCDs) which include touchpad, numeric control and on-screen 'soft keys'. Voice Command will be a future option for some Epic functions.

The Horizon's avionics system provides functions which Raytheon states have never previously been offered in a super-mid-size business jet, including digital circuit breaker control, automatic refuelling control, and full-authority autothrottle. All avionics boxes are installed in a cabinet behind the co-pilot's seat, in an environmentally controlled, pressurised area with easy access for maintenance.

Comms: Dual VHF comms; single Collins HF-9000 HF with Selcal; dual Mode S Diversity transponders; dual audiophone/interphone/PA systems; airborne telephone.

Radar: Primus 880 colour weather radar.

Flight: Primus Epic AFCS and FMS with integrated performance computer; dual VHF nav VOR/LOC/GS/Markers; dual DME; dual IRU; dual GPS; EGPWS; TCAS II; solid-state FDR and CVR.

Instrumentation: Five 203 × 254 mm (8 × 10 in) colour, active, flat panel LCD screens comprising two PFDs, two MFDs and one EICAS, plus two smaller multifunction control and display units (MCDUs).

DIMENSIONS, EXTERNAL:

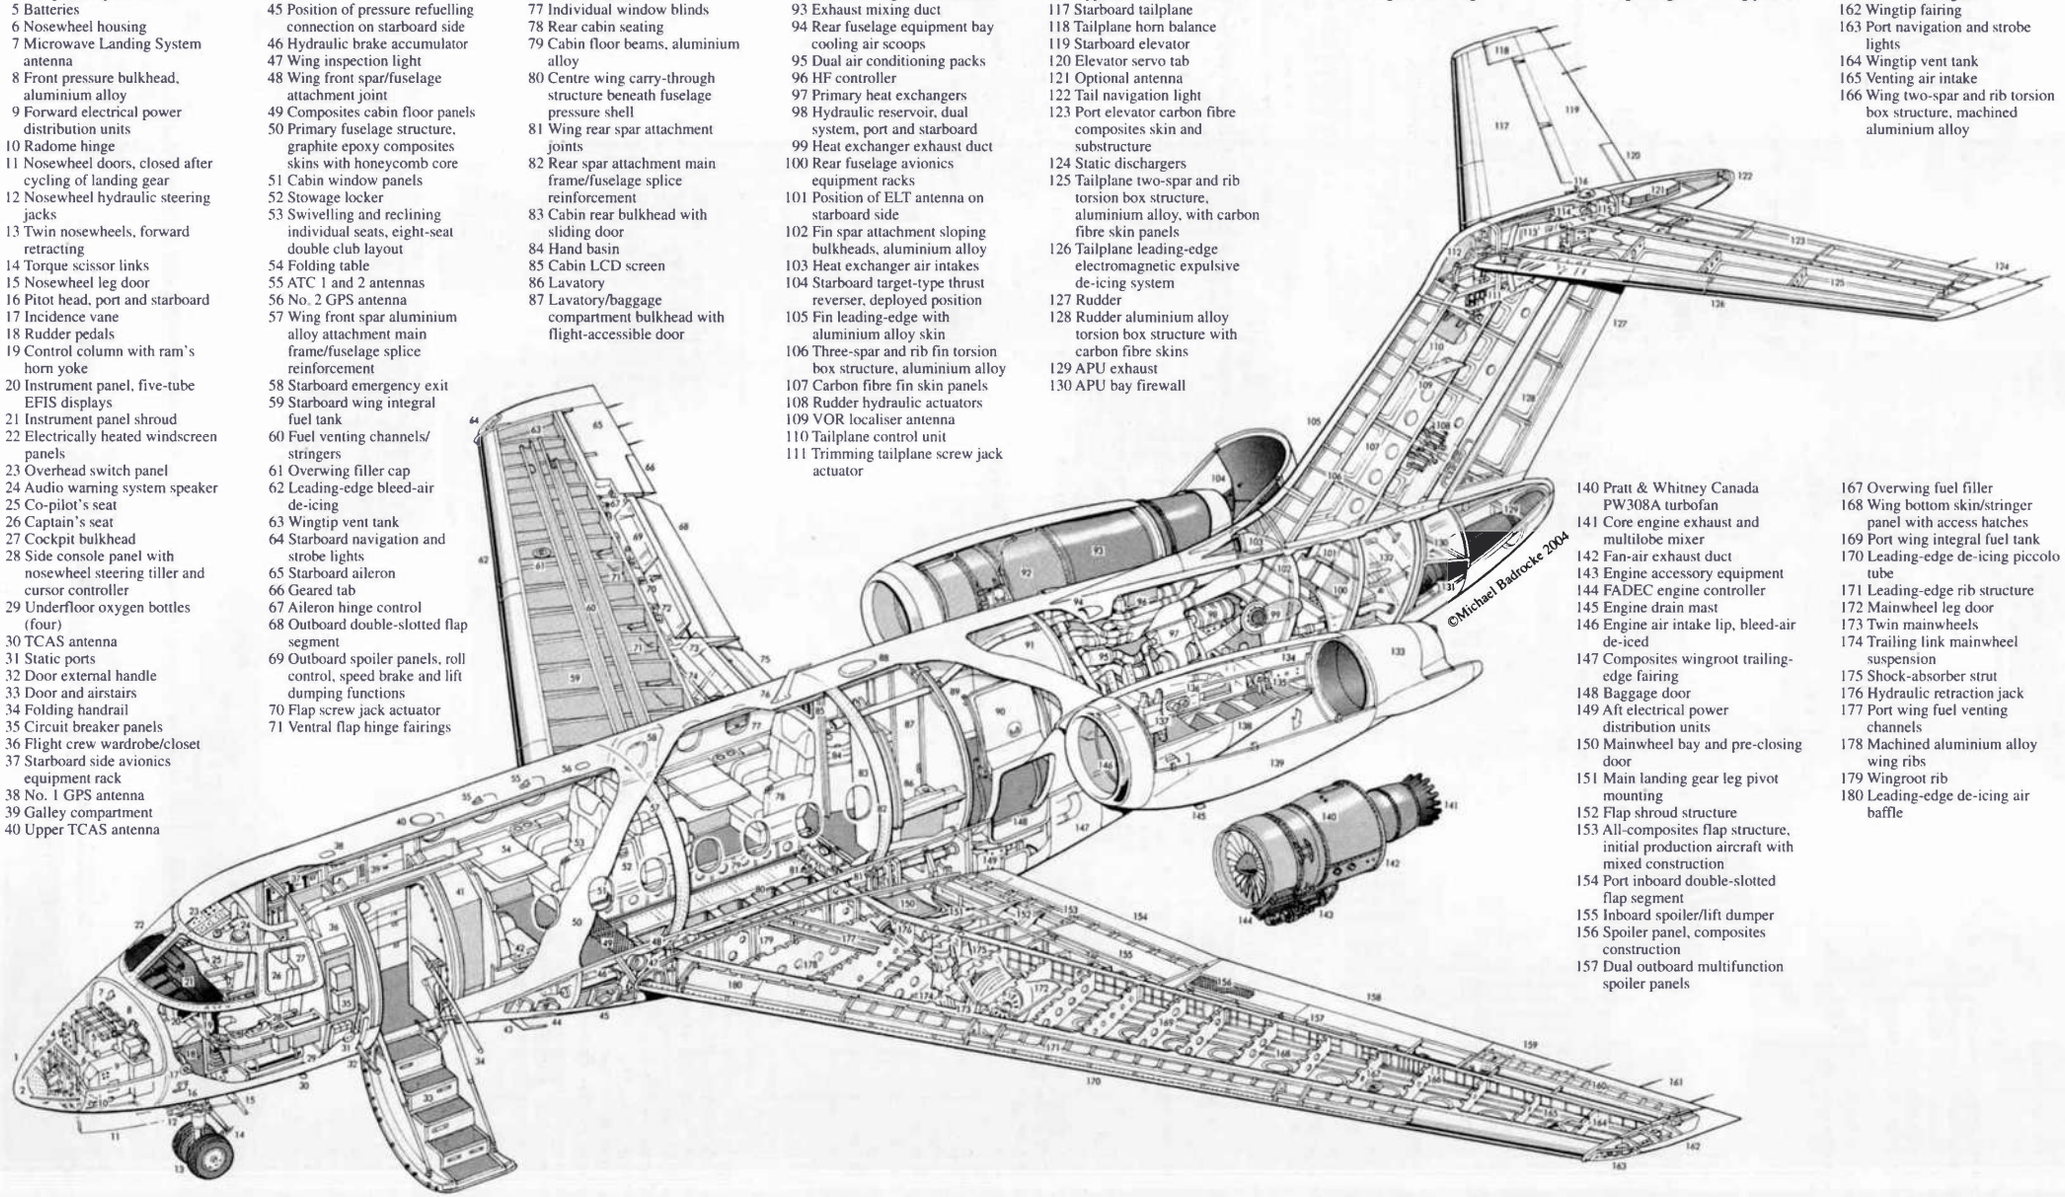
168 Wing bottom skin/stringer panel with access hatches
169 Port wing integral fuel tank
170 Leading-edge de-icing piccolo tube
171 Leading-edge rib structure
172 Mainwheel leg door
173 Twin mainwheels
174 Trailing link mainwheel suspension
175 Shock-absorber strut
176 Hydraulic retraction jack
177 Port wing fuel venting channels
178 Machined aluminium alloy wing ribs
179 Wingroot rib
180 Leading-edge de-icing air baffle



Basic operating weight (incl crew) ..... 10,194 kg (22,475 lb)
Max fuel weight ..... 6,622 kg (14,600 lb)
Payload with max fuel ..... 837 kg (1,845 lb)
Fuel with max payload ..... 5,761 kg (12,700 lb)
Max T-O weight ..... 17,010 kg (37,500 lb)
Max ramp weight ..... 17,100 kg (37,700 lb)
Max landing weight ..... 15,195 kg (33,500 lb)
Max zero-fuel weight ..... 11,340 kg (25,000 lb)
Max wing loading ..... 344.8 kg/m^2 (70.62 lb/sq ft)
Max power loading ..... 277 kg/kN (2.72 lb/lb st)
PERFORMANCE (provisional):
Max operating Mach No. 0.84
High cruising speed at FL410 ..... M0.82/470 kt (870 km/h; 541 mph)
Intermediate cruising speed at FL410 ..... M0.78/447 kt (828 km/h; 514 mph)
Long-range cruising speed at FL450 ..... M0.75/430 kt (796 km/h; 495 mph)
Approach speed ..... 132 kt (244 km/h; 152 mph)
Time to climb to FL370 ..... 13 min
Max rate of climb at S/L, OEI ..... 176 m (576 ft)/min
Max certified ceiling ..... 13,716 m (45,000 ft)
Service ceiling ..... 13,076 m (42,900 ft)
Service ceiling, OEI ..... 8,534 m (28,000 ft)
T-O field length ..... 1,375 m (4,510 ft)
Landing run ..... 730 m (2,395 ft)
Range, two crew, 544 kg; 1,200 lb payload, IFR NBAA reserves:
at M0.82 ..... 3,011 n miles (5,576 km; 3,465 miles)
at M0.75 ..... 3,207 n miles (5,939 km; 3,690 miles)

HELIO

HELIO AIRCRAFT LLC

6487 Wilkinson Drive, Prescott, AZ 86301
Tel: (+1 928) 717 1069
Fax: (+1 928) 717 0999

PRESIDENT AND DIRECTOR: Jon W Dwight
VICE PRESIDENT, RESEARCH AND DEVELOPMENT, AND DIRECTOR: David D Maytag, Jr
PRINCIPAL AND DIRECTOR: James Turrell
VICE PRESIDENT, BUSINESS DEVELOPMENT: Samuel Haviland
VICE PRESIDENT, ENGINEERING: David R Ellis

Messrs Dwight and Maytag formed Helio Enterprises Inc in 1992 in order to acquire assets of the previous Helio company, including FAA Type Certificates for all Helio aircraft, significantly the Courier and Stallion. Both have performed a substantial amount of work towards re-introducing the Helio aircraft, including market studies, engineering work, manufacturing feasibility studies and strategy.

Helio completed its first round of funding in August 2004. The Helio Aircraft team is working with its fleet of Helio Courier and Helio Stallion aircraft to develop prototypes which will incorporate all-new instrument panels and avionics, new quality interiors, new rugged tricycle landing gear and a new power plant for the Courier. In October 2004, manufacturing business, Helio Aircraft (formerly Alliance Aircraft Group) completed the purchase of a Helio Courier H-700 and a Helio Stallion HST-550A (N550HZ), both to be used as prototypes for new productions.

The Stallion is being used for installation of an all-new interior, new 'glass' instrument panel and, eventually, new tricycle landing gear, while the H-700 Courier will serve as a platform for improvements including a new firewall-forward engine package and reversion to the H-295 style of conventional landing gear. Several 224 to 298 kW (300 to 400 hp) geared engines of both Avgas and Diesel types are being evaluated. Interior and landing gear improvements of the new Stallion will also be introduced. Helio also owns a Courier H-800 (N400HE) that is currently flying with a 294 kW (394 hp) VOKBM M-14PF radial which is being tested for potential use in Helios that are sold to Eastern Europe, CIS and China where this engine is readily accepted.

Helio Aircraft acquired three Type Certificates from Helio Enterprises on 13 October 2005, comprising 1A8 (issued 5 August 1953) for Model 391/700/800 Courier, 295/395 Super Courier, 250 Courier II; A2EA (issued 11 June 1963) for Helio 500 Twin; and A4EA (issued 26 August 1965) for HST-550/550A Stallion (military AU-24A). Previous (and attempted) production runs of Helio aircraft were described in *Jane's All the World's Aircraft* up to and including the 1987-88 edition.

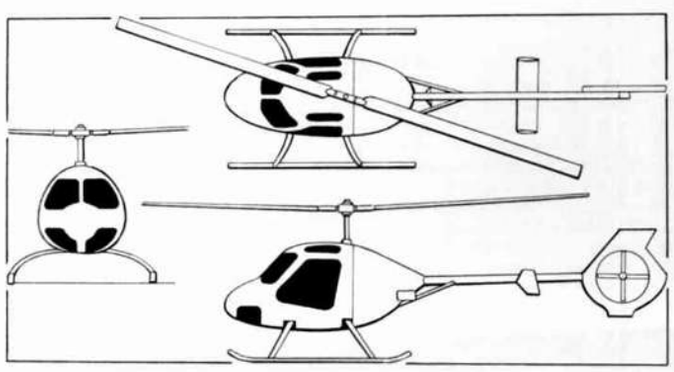
Tel: (+1 757) 723 19 38
e-mail: hx1wasp@yahoo.com
Web: www.helowerks.com
PRESIDENT: Anthony D Peña
VP ENGINEERING: Robert J Pegg

HeloWerks was formed to develop and market the HX-1 Wasp light helicopter. Also offers JFS-100 turbine as alternative power plant for ASII Ultrasport 496 light helicopter.

HELOWERKS HX-1 WASP

TYPE: Two-seat ultralight helicopter kitbuilt.
PROGRAMME: Prototype (N636WP) registered 1 February 2006; received FAA flight approval in Experimental category on 1 March 2006 and first flew on unspecified date around that time. Exhibited at Sun 'n' Fun, Lakeland, Florida, 4 to 10 April 2006. Production then scheduled to begin in 2007 as kitbuilt, with flyaway version to follow.
COSTS: Kit USD70,000 including engine and tax (2006).
DESIGN FEATURES: Pod-and-boom configuration employing 'infinite life' main and tail rotor systems from ASII Ultrasport 496 light helicopter. No drive belts. Cabin size and payload comparable to Robinson R22. Two-blade, teetering-type main rotor with conventional swashplate. Main and 90° transmission gearboxes have oil pumps and coolers; ratios 4.18:1 and 1:1 respectively. Tail rotor speed 6,000 rpm.
Quoted kit build time 350 hours.
FLYING CONTROLS: Conventional and manual.
STRUCTURE: Monocoque pod of glass fibre and Nomex honeycomb with moulded doors, windows and hatches. Metal tube tailboom with composites tailplane, fins and rotor surround 'ring tail'. Main rotors of carbon fibre D spar with undirectional glass fibre and honeycomb filling aft of spar, plus carbon fibre trailing-edge; tail rotor similar.
LANDING GEAR: Skid type; fixed. Foam core carbon fibre cantilever spring legs with tubular metal skid.



HeloWerks HX-1 Wasp *(James Goulding)* 1159816

POWER PLANT: One Garrett JFS-100-13A turboshaft rated at 67.1 kW (90 shp) in prototype, with increase scheduled to 93.2 kW (125 shp) for production version. Fuel in two tanks attached to rear of cabin bulkhead, combined capacity 76 litres (20.0 US gallons; 16.7 Imp gallons).
DIMENSIONS, EXTERNAL:
Main rotor diameter ..... 7.01 m (23 ft 0 in)
Tail rotor diameter ..... 0.71 m (2 ft 4 in)
Length of fuselage, excl ring tail ..... 5.79 m (19 ft 0 in)
Height overall ..... 2.51 m (8 ft 3 in)
Skid track ..... 2.13 m (7 ft 0 in)
DIMENSIONS, INTERNAL:
Cabin max width ..... 1.24 m (4 ft 1 in)
WEIGHTS AND LOADINGS:
Weight empty ..... 318 kg (700 lb)
Max T-O weight ..... 544 kg (1,200 lb)

HeloWerks HX-1 Wasp prototype flying with engine cowling removed ***(Paul Jackson)*** 1037979

PERFORMANCE (provisional):
Max level speed ..... 98 kt (182 km/h; 113 mph)
Normal-cruising speed ..... 70 kt (129 km/h; 80 mph)
Hovering ceiling: IGE ..... 2,440 m (8,000 ft)
OGE ..... 1,220 m (4,000 ft)
Service ceiling ..... 3,050 m (10,000 ft)
Range with 10% reserves ..... 110 n miles (204 km; 127 miles)

HENSLEY

HENSLEY AIRCRAFT INC

2440 Winding Creek Boulevard, Suite 204, Clearwater, Florida 33761-2556

CORPORATE ADDRESS:
18300 Minnetonka Boulevard, Suite 204, Wayzata, Minnesota 55391
Tel: (+1 701) 662 56 65
e-mail: info@hensleyaircraft.com
Web: www.hensleyaircraft.com
CEO: Robert Hensley
CORPORATE ADMINISTRATOR: Susan Kinkle

The H-1 Wolf is Hensley's initial offering with final funding for construction and testing of the prototype put in place during 2003. The company's manufacturing plant is under construction at Grand Forks, North Dakota, and is scheduled to be completed by end 2005. In July 2004, the company had four employees and was planning a further increase by early 2005.

On 22 June 2005 a separate company, Hensley Aerospace, was formed to develop and market the H-2, a certified, twin-engine amphibian.

HENSLEY H-1 WOLF

TYPE: Four-seat kitbuilt twin.

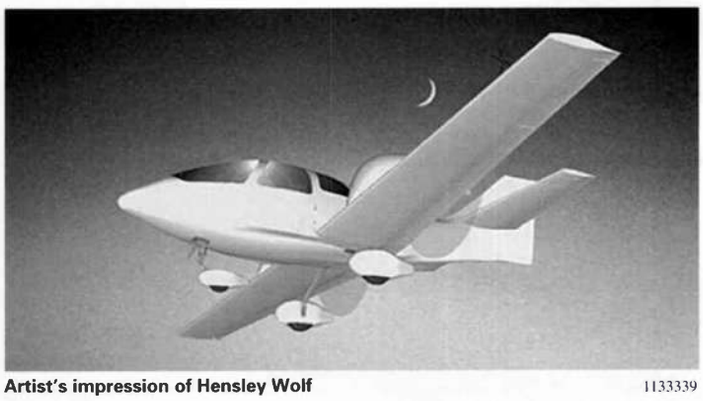
PROGRAMME: Design began in 1991, initially as part-time venture. Construction of prototype started in 1998; exhibited, unflown, at AirVenture, Oshkosh, July 2001; maiden flight then scheduled for December 2001 and kit deliveries for second quarter of 2002; this has slipped and first flight had not taken place by October 2003. In June 2004 the first Centurion power plants were delivered and a first flight before the end of 2004 was expected, although not, apparently, achieved. Registrations N447HC, N447HM and N447HN were reserved for first three aircraft in 2004, but allowed to lapse. No further progress reports by late 2005, except for change to Eggenfelner conversion of Subaru engine.

CURRENT VERSIONS: **Wolf:** Baseline version.

Wolf GT: Possible future higher-powered, long-range version, with two cabin doors and increased MTOW.

CUSTOMERS: First aircraft sold October 2001. No further information received.

COSTS: Wolf USD99,900 including engines (2005).



Artist's impression of Hensley Wolf 1133339

DESIGN FEATURES: Intended as manoeuvrable twin, able to operate into remote, short airstrips; affordable; easy to build and maintain.

Low-drag fuselage; constant-chord, low-mounted wings, with winglets; pusher engines located close inboard and above wings.

Wing section VH-1 Twin Turbo, purpose developed by Jeff Viken for high lift, low drag laminar flow.

FLYING CONTROLS: Conventional and manual. Fowler flaps immediately outboard of engines. Horn-balanced rudder and elevator.

STRUCTURE: Composites throughout.

LANDING GEAR: Tricycle type; fixed. Mainwheels, 6.00-6, on aluminium sprung legs; trailing-link nosewheel, 11×4.00–5, with rubber-in-compression suspension. Hydraulic brakes on mainwheels. Speed fairings on all wheels.

Wolf GT will have retractable landing gear.

POWER PLANT: Initially, prototype was due to be powered by two Quantum Powermills engines (based on Honda VTEC) with pusher propellers and dual fuel system with baseline aircraft having 101 kW (135 hp) Q-135s; this changed in second quarter 2003 to two FADEC-equipped 101 kW (135 hp) Thielert Centurion turbocharged Diesel engines driving three-blade constant-speed MT propellers, and in 2005 to two 123 kW (165 hp) Eggenfellner four-cylinder liquid-cooled supercharged engines with same propellers. Initial fuel capacity 189 litres (50.0 US gallons; 41.6 Imp gallons); later changed to 379 litres (100 US gallons; 83.3 Imp gallons), optional 303 litre (80.0 US gallon; 66.6 Imp gallon) tank can be added.

ACCOMMODATION: Four persons in two pairs of seats. Door, port side. Dual sidestick controls. Two doors on GT version.

SYSTEMS: Dual electrical system.

AVIONICS: Chelton Electronics EFIS system coupled with Garmin radios and TruTrak autopilot under consideration.

DIMENSIONS, EXTERNAL:
Wing span ..... 10.34 m (33 ft 11¼ in)
Wing chord: at root ..... 1.34 m (4 ft 4¾ in)
at tip ..... 0.82 m (2 ft 8¼ in)
Wing aspect ratio 9.6
Length overall ..... 6.78 m (22 ft 3 in)
Height overall ..... 2.68 m (8 ft 9½ in)

DIMENSIONS, INTERNAL:
Cabin max width ..... 1.22 m (4 ft 0 in)

AREAS:
Wings, gross ..... 11.15 m² (120.0 sq ft)
Horizontal tail surfaces (total) ..... 2.87 m² (30.86 sq ft)
Vertical tail surfaces (total) ..... 2.04 m² (21.98 sq ft)

WEIGHTS AND LOADINGS:
Weight empty ..... 953 kg (2,100 lb)
Max T-O weight: standard fuel ..... 1,360 kg (3,000 lb)
optional fuel ..... 1,587 kg (3,500 lb)
Wing loading: standard fuel ..... 122.1 kg/m² (25.00 lb/sq ft)
optional fuel ..... 142.4 kg/m² (29.17 lb/sq ft)
Power loading: standard fuel ..... 5.53 kg/kW (9.09 lb/hp)
optional fuel ..... 6.46 kg/kW (10.61 lb/hp)

PERFORMANCE (estimated):
Normal cruising speed at FL80 at 75% power ..... 173 kt (321 km/h; 200 mph)
Stalling speed ..... 54 kt (100 km/h; 62 mph)
Max rate of climb at S/L ..... 579 m (1,900 ft)/min
single engine ..... 152 m (500 ft)/min
T-O run ..... 239 m (785 ft)
Landing run ..... 206 m (675 ft)
Range: standard fuel ..... 1,303 n miles (2,414 km; 1,500 miles)
optional fuel ..... 2,259 n miles (4,184 km; 2,600 miles)
g limits ..... +6.0/–3.0

HENSLEY H-2

TYPE: Twin-engine amphibian biplane.

PROGRAMME: Announced 2005; final design details not released by end 2005. FAA certification will be sought. Patents were filed in 2004 for certain design criteria. A single-engined turboprop cargo version is also envisaged. However, no further information received by October 2006.

COST: Estimated project cost USD50 million.

DESIGN FEATURES: Available in turbofan, turboprop and Diesel variants. Design will eliminate a symmetrical thrust and offer increased sea-state stability. Extensive use of carbon graphite.

POWER PLANT: Choice of engines will include Pratt & Whitney PW600 turbofan; 231 kW (310 hp) Thielert Centurion Diesel; and 503 kW (675 shp) P&WC PT-6 turboprop.

ACCOMMODATION: Seating for 14 is envisaged within a pressurised cabin.

All data provisional.

DIMENSIONS, EXTERNAL:

Wing span	12.80 m (42 ft 0 in)

PERFORMANCE:

Max cruising speed: propeller versions	175 kt (324 km/h; 201 mph)
turbofan	300 kt (555 km/h; 345 mph)
Stalling speed, flaps down	61 kt (113 km/h; 71 mph)
Range with max fuel: turbo diesel	2,259 n miles (4,184 km; 2,600 miles)
turbofan and turboprop	1,216 n miles (2,253 km; 1,400 miles)

PRESIDENT: Robert Gaither

Higher Class Aviation purchased the US Light Aircraft Corporation in 2005 and took over production of the Hornet kitbuilt.

HIGHER CLASS HORNET AND SUPER HORNET

TYPE: Tandem-seat lightplane/kitbuilt.

PROGRAMME: Design began in 1991 and construction of Hornet prototype in 1992; first flight June 1993. Winner of 15 awards at Copperstate, Oshkosh and Sun 'n' Fun between 1993 and 1999. Qualifies under FAR Pt 21.191 as 51 per cent experimental kit. Super Hornet added to range in 2005.

CURRENT VERSIONS: **Hornet:** Original kitbuilt version; no longer marketed.

Super Hornet: Introduced in 2005; intended to be LSA compliant but not achieved by end 2006. Now sole version marketed.

Data apply to this version, unless otherwise specified.

CUSTOMERS: Total of 58 of both versions flying by November 2005.

COSTS: Super Hornet kit USD22,000, including engine; USD49,995 ready to fly (2006).

DESIGN FEATURES: Kit has 400 parts, including 7,500 factory-installed rivets. Quoted build time 300 hours.

FLYING CONTROLS: Conventional and manual. Electrically operated flaps with maximum deflection of 30°. Horizontal stabiliser trimmed electrically. Mass-balanced elevator.

STRUCTURE: Fabric-covered fuselage of 3 cm (1.25 in) 6063-T8 aluminium tube with tapered-base tubular longitudinal structure. Fabric-covered dual-spar wings with single bracing struts.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring cantilever mainwheel legs with 15 cm (6 in) Goodyear Airspring pneumatic suspension on mainwheels and 7.5 cm (3 in) Airspring on nosewheel; hydraulic brakes on mainwheels with aluminium Hegar wheels and 15x6-6 Cheng Shin tyres; nose tyre 13x5-6.

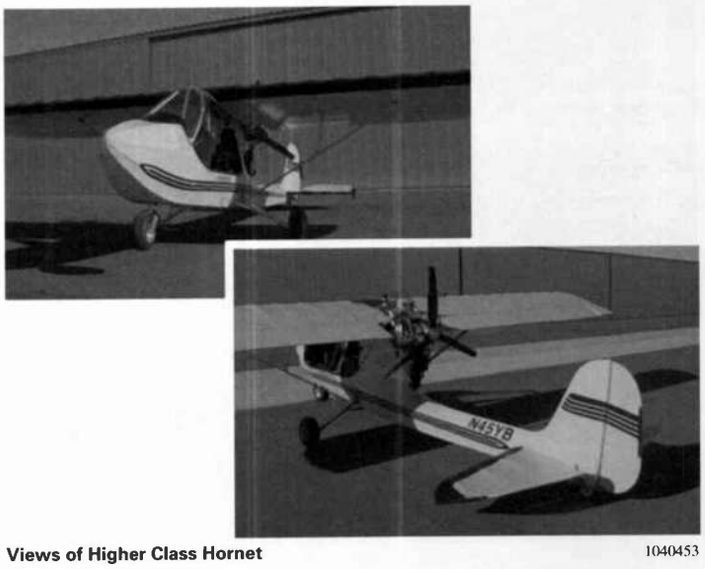
POWER PLANT: *Hornet:* One 41.0 kW (55 hp) Hirth 2703 engine with electric start is standard, driving Tennessee two-blade, wooden pusher propeller of diameter up to 1.52 m (5 ft 0 in); 48.5 kW (65 hp) Hirth 2706 optional.

Super Hornet: One 73.5 kW (98.6 hp) Rotax 912 ULS driving three-blade IVO propeller. Fuel capacity 68 litres (18.0 US gallons; 15.0 Imp gallons) in two tanks between spars in both models; oil capacity 3 litres (0.8 Imp gallons; 0.67 Imp gallons).

EQUIPMENT: Optional BRS VLS 1050 ballistic parachute.

DIMENSIONS, EXTERNAL:

Wing span	8.38 m (27 ft 6 in)
Length overall	6.10 m (20 ft 0 in)
Height overall	1.83 m (6 ft 0 in)



Views of Higher Class Hornet 1040453

AREAS:

Wings, gross	12.82 m² (138.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: Hornet	215 kg (475 lb)
Super Hornet	286 kg (630 lb)
Max T-O weight: Hornet	454 kg (1,000 lb)
Super Hornet	598 kg (1,320 lb)

PERFORMANCE (Hornet: 41.0 kW; 55 hp engine; Super Hornet: 73.5 kW; 98.6 hp engine):

Never-exceed speed (VNE): Hornet	108 kt (201 km/h; 125 mph)
Max level speed: Hornet	104 kt (193 km/h; 120 mph)
Super Hornet	120 kt (222 km/h; 138 mph)
Normal cruising speed at 75% power: Hornet	61 kt (113 km/h; 70 mph)
Super Hornet	95 kt (176 km/h; 109 mph)
Stalling speed, flaps down: Hornet	35 kt (65 km/h; 40 mph)
Super Hornet	34 kt (63 km/h; 40 mph)
Max rate of climb at S/L: Hornet	305 m (1,000 ft)/min
T-O run: Hornet	114 m (375 ft)
Super Hornet	92 m (300 ft)
Landing run: Hornet	76 m (250 ft)
Super Hornet	107 m (350 ft)
Range, 10% reserves: Hornet	304 n miles (563 km; 350 miles)

HONDA

HONDA AIRCRAFT COMPANY

c/o Atlantic Aero Inc, Piedmont Triad International Airport, Greensboro, North Carolina 27425
Web: world.honda.com/HondaJet
PRESIDENT AND CEO: Michimasa Fujino
SENIOR CHIEF ENGINEER: Osamu Kubota

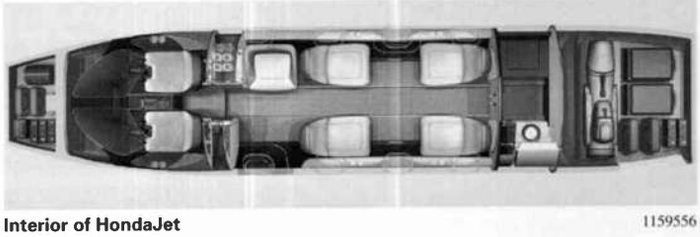
Honda's first business jet was the MH02, designed and built in the late 1980s/early 1990s with the aid of Mississippi State University. This aircraft (N3079N) first flew on 5 March 1993, but the programme lapsed some three years later without entering production, the aircraft having flown some 170 hours.

More recently, Honda R & D has developed a successor, known simply as the HondaJet, together with the HF-118 engines which power it. This took place at a 2,787 m² (30,000 sq ft) facility on the Greensboro leasehold site of Atlantic Aero Inc, with whom Honda R & D teamed in 2000. The HondaJet prototype flew in December 2003 and did not reserve a public debut until shown at EAA AirVenture Oshkosh in July 2005. Announced marketing and production plans in July 2006. Honda Aircraft Company Inc formed August 2006.

HONDA HA-420 HONDAJET

TYPE: Light business jet.

PROGRAMME: Development began in 2000; first brief details revealed in mid-2000; originally intended HF-118 engine made first flight 10 June 2002 in Cessna CitationJet testbed; wing aerofoil tested 1997 as 'glove' section on T-33 testbed; wind tunnel tests conducted at Honda low-speed wind tunnel, the University of Washington, NASA NTF, ONERA (France), Boeing's transonic wind tunnel and Japanese National Aeronautics Laboratory's transonic flutter wind tunnel. Static testing of prototype (N420HA/c/n P001) under way by mid-2003; first flight undertaken in secrecy at Piedmont Triad Airport, North Carolina, 3 December 2003 and announced on 16 December 2003. Public debut at EAA AirVenture at Oshkosh 28 July 2005, at which time it had completed more than 156 flight hours and achieved a maximum speed of 393 kt (728 km/h; 452 mph) and a maximum altitude of 13,106 m (43,000 ft). Had increased to 412 kt (763 km/h; 474 mph) and 256 hours by October 2006.



Interior of HondaJet 1159556

Marketing plans announced at AirVenture 25 July 2006; orders accepted from 17 October 2006 when pricing (and change from Honda HF118 engine) announced at NBAA Convention, Orlando, Florida; certification process began 11 October 2006 and first deliveries due in 2010; production in US; partnership with Piper Aircraft to provide sales and service.

COSTS: USD3.65 million (2006).

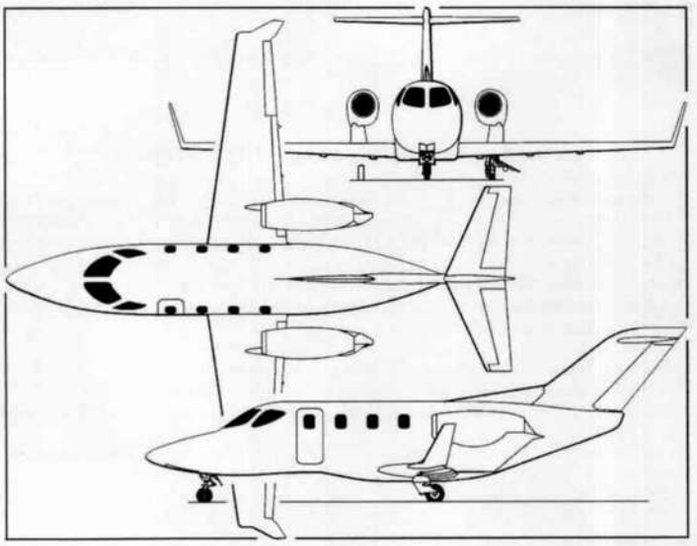
DESIGN FEATURES: Low-mounted, moderately tapered wings of natural laminar flow section, with wing cabane-mounted engines and winglets. T tail with sharply swept fin and rudder, plus dorsal fin; tailplane has sweptback leading-edges and elevator cut-outs for rudder movement. Primary design considerations were large cabin size and range/fuel consumption economics. Engine position allows increase of 30 per cent in fuselage available volume without penalty. Nose shape optimised for generation of fuselage laminar flow, which also achieved on wings despite their relative thickness.

Laminar flow Honda SMH-1 wing section. Washout 5.1°.

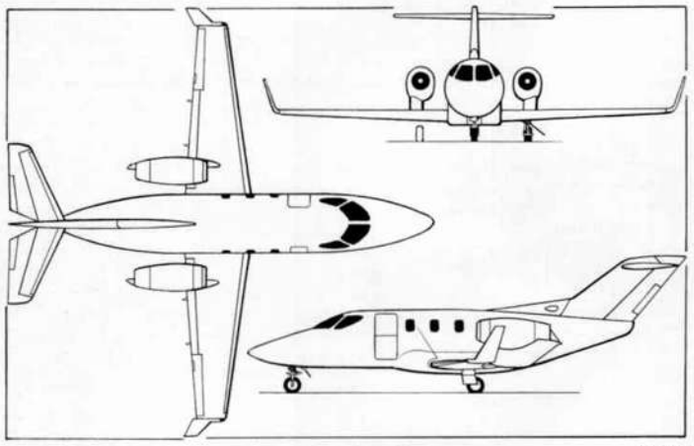
FLYING CONTROLS: Conventional and manual. Actuation by pushrods and cables. Electrically actuated flaps with mechanical linkage (settings 15.7° for T-O, 50° for landing). Stall characteristics said to be 'docile' in both cruise and climb.

Prototype HondaJet light business jet *(Paul Jackson)* 1159371

HondaJet instrument panel 1159557



Production version of HondaJet *(Paul Jackson)* 1158954



Honda R & D HondaJet prototype *(James Goulding)* 1159395

STRUCTURE: Fuselage entirely of graphite composites in combination of honeycomb sandwich and co-cured stiffened panels. Aluminium alloy for three-spar wings and for two-spar fin and tailplane.

LANDING GEAR: Tricycle type; retractable. Single wheel on each unit. Trailing-link main units, retracting inwards into underside of wing centre-section; nosewheel retracts forward and is steer-by-wire (±10° for take-off, ±50° for taxying). Hydraulic retraction. Tyres 16×4.4-8 (prototype 14.5×5.5-6) nose; 17.5×5.75-8 main.

POWER PLANT: Two 8.36 kN (1,880 lb st) GE-Honda HF120 podded turbofans, mounted on sweptback overwing pylons and equipped with Honda-developed FADEC.

Fuel in four tanks (one in each outer wing, one in wing centre-section, and one rear fuselage bladder tank). Single-point refuelling at rear on starboard side.

ACCOMMODATION: Standard seating for two crew and five passengers (club four, plus one sideways, facing door) and rear lavatory; optional two-plus-six air taxi layout. Four (prototype three) passenger cabin windows per side; cabin door on port side immediately aft of flight deck; emergency hatch opposite door, starboard.

SYSTEMS: Cabin pressurised to 0.60 bar (8.7 lb/sq in), giving 2,440 m (8,000 ft) equivalent environment at altitude of 13,400 m (44,000 ft). Wing leading-edge and engine air intake anti-icing; windscreen electrically heated. Hydraulic system pressure 207 bar (3,000 lb/sq in).

AVIONICS: Garmin G1000 integrated modular suite with three-screen EFIS comprising two PFDs and one MFD.

Instrumentation: EFIS, comprising PFD for each crew member and single central MFD.

Preliminary details as follows:

DIMENSIONS, EXTERNAL:

Wing span over winglets	12.15 m (39 ft 10½)
Length overall	12.71 m (41 ft 8½ in)
Height overall	4.03 m (13 ft 2½ in)

DIMENSIONS, INTERNAL:

Cabin: Length between pressure bulkheads	5.43 m (17 ft 9¾ in)
Max height	1.51 m (4 ft 11½ in)
Max width	1.52 m (5 ft 0 in)
Baggage volume: nose	0.25 m^3 (9.0 cu ft)
aft	1.6 m^3 (57 cu ft)

WEIGHTS AND LOADINGS:

Useful load	1,532 kg (3,378 lb)
Max payload	726 kg (1,600 lb)

PERFORMANCE (estimated):

Max level speed at FL300	420 kt (777 km/h; 483 mph)
Max rate of climb at S/L	1,216 m (3,990 ft)/min
Optimum cruising altitude	12,500 m (41,000 ft)
Max certified altitude	13,105 m (43,000 ft)
T-O to 11 m (35 ft)	951 m (3,120 ft)
Landing run	762 m (2,500 ft)
Range: VFR, 292 kg; 644 lb payload	1,400 n miles (2,592 km; 1,611 miles)
IFR, pilot and three passengers, 45 min reserves, FL410	1,180 n miles (2,185 km; 1,357 miles)

HPA

INTERNATIONAL HIGH PERFORMANCE AIRCRAFT, INC

PO Box 926, Venice, Florida 34284
Tel: (+1 941) 480 98 81
Fax: (+1 941) 480 93 81
e-mail: info@international-hpa.com
Web: www.international-hpa.com

CHIEF DESIGNER: Petr Varadi

The M1 SpeedCruiser is being developed by International High Performance Aircraft of Lobecek 732, CZ-728 01 Kralupy nad Vlatava, Czech Republic (www.hpai.com), and Venice, Florida. M1 is related to Team Rocket F1 and F1EVO.

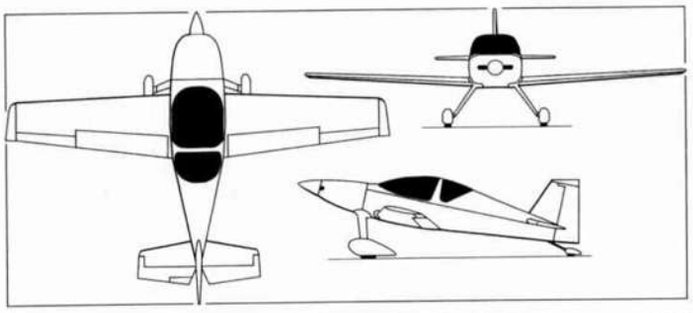
In addition to aircraft kits, HPA also manufactures parts for warbirds such as the FW 190 and P-63 King Cobra, quick-build kits of the Stewart S-51 Mustang scale replica, and other Czech-built ultralight designs.

HPA M1 SPEEDCRUISER

TYPE: Side-by-side kitbuilt.

PROGRAMME: Announced at Oshkosh in July 2002 as the Team Rocket F2, then based on major components from the F1EVO, including wings, tail and landing gear. By July 2003, had become M1. Development continues; prototype had not flown by October 2006.

COSTS: Estimated kit price USD25,000; fast-build kit USD35,000 (2003).



International High Performance M1 Speedcruiser *(Paul Jackson)* 1047841

DESIGN FEATURES: Intended to combine high performance and low price. Low-wing monoplane with closely cowled engine. Tapered wings and tailplane. Meets FAA's '51 per cent' rule. Quoted build time 1,000 hours for fast-build kit.

FLYING CONTROLS: Conventional and manual. Flaps. Horn-balanced rudder and elevators.

STRUCTURE: Principally of aluminium, primed with epoxy chromate for corrosion resistance. Titanium mainwheel legs; glass fibre engine cowling and wingtips.

LANDING GEAR: Fixed; option of tailwheel or nosewheel. Fuselage-mounted spring titanium cantilever mainwheel legs. Mainwheels 5.00-5.

POWER PLANT: One 224 kW (300 hp) Textron Lycoming IO-540 flat-six and MT-Propeller MTV-9-B-C/C193-109 three-blade, constant-speed propeller. Fuel capacity 227 litres (60.0 US gallons; 50.0 Imp gallons).

ACCOMMODATION: Two persons side by side beneath rearward-sliding canopy. Fixed windscreen.

DIMENSIONS, EXTERNAL:

Wing span	8.20 m (26 ft 10¾ in)
Wing aspect ratio	6.6
Length overall	6.40 m (21 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.28 m (4 ft 2½ in)
Max width	1.14 m (3 ft 9 in)
Max height	1.12 m (3 ft 8 in)
Baggage hold volume	0.42 m³ (15.0 cu ft)

AREAS:

Wings, gross	10.22 m² (110.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	590 kg (1,300 lb)
Max T-O weight	952 kg (2,100 lb)
Max wing loading	93.2 kg/m² (19.09 lb/sq ft)
Max power loading	4.26 kg/kW (7.00 lb/hp)

PERFORMANCE:

Max operating speed	230 kt (426 km/h; 265 mph)
Normal cruising speed at 75% power	209 kt (386 km/h; 240 mph)
Stalling speed, power off, flaps down	44 kt (81 km/h; 50 mph)
Max rate of climb at S/L	1,067 m (3,500 ft)/min
T-O run	91 m (300 ft)
Landing run	213 m (700 ft)
Range at 55% power	1,099 n miles (2,035 km; 1,265 miles)

PRESIDENT: John Brown

Independent has produced the first all-composites amphibious aircraft optimised for the US LSA category.

INDEPENDENT JB1 SEADRAGON

TYPE: Two-seat amphibian/kitbuilt.

PROGRAMME: Manufacture began in 2002. Prototype X-JB1 apparently flying by July 2005, when exhibited at AirVenture, Oshkosh, although unregistered.

COSTS: USD64,000 flyaway (2006).

DESIGN FEATURES: Optimised for US LSA seaplane category. High-wing pusher with stabilising sponsons each side of forward fuselage. Rounded fin and rectangular rudder; low tailplane with auxiliary fins at tip. Limited aerobatic capability.

Option of external fuel tanks; STOL kit; trimmable rudder; folding wing; and alternative aerofoil.

FLYING CONTROLS: Conventional and manual. In-flight elevator trim. No flaps. Lower portion of rudder used as water rudder.

STRUCTURE: Composites throughout. Carbon fibre spar.

LANDING GEAR: Optional nosewheel or tailwheel landing gear as standard. Method of retraction not disclosed.

POWER PLANT: One Hirth F30 piston engine of 78.3 kW (105 hp) driving a ground-adjustable pitch, pusher propeller. Fuel capacity 114 litres (30.0 US gallons; 25.0 Imp gallons).

ACCOMMODATION: One or two persons in tandem beneath single-piece canopy/windscreen.

DIMENSIONS, EXTERNAL:

Wing span	7.67 m (25 ft 2 in)
Wing aspect ratio	4.7
Length overall	8.03 m (26 ft 4 in)
Height overall	2.24 m (7 ft 4 in)

AREAS:

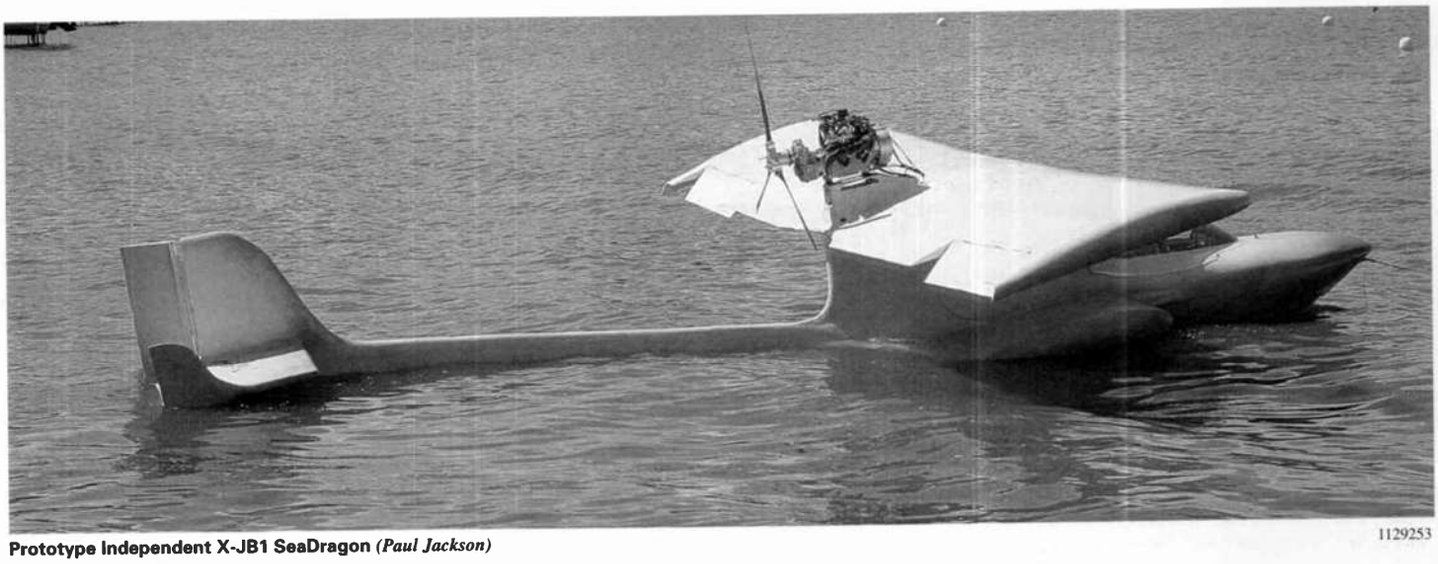
Wings, gross	12.31 m² (132.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	354 kg (780 lb)
Max baggage weight	45 kg (100 lb)
Max T-O weight	650 kg (1,435 lb)
Max wing loading	52.9 kg/m² (10.83 lb/sq ft)
Max power loading	8.32 kg/kW (13.67 lb/hp)

PERFORMANCE:

Max level speed	160 kt (296 km/h; 184 mph)
Cruising speed	120 kt (222 km/h; 138 mph)
Stalling speed: flaps down	38 kt (71 km/h; 44 mph)
Max rate of climb at S/L	396 m (1,300 ft)/min
T-O and landing run: land	107 m (350 ft)
water	122 m (400 ft)
Range: with max fuel	417 n miles (772 km; 480 miles)
Endurance	3 h 45 min



Prototype Independent X-JB1 SeaDragon *(Paul Jackson)* 1129253

INDUS

INDUS AVIATION INC

PRESIDENT: Dr Ram Pattissapu
DIRECTOR, SALES AND MARKETING, NORTH AMERICA: Scott Severen

INDIAN OFFICE:
Indus Aviation Products Pvt Ltd
898/1, 80 Feet Road, 6th Block, Koramangala, Bangalore 560095
Tel: (+91 80) 51 50 15 21
Fax: (+91 80) 51 50 15 23
MANAGER, INDIA OPERATIONS: Kiran Kota

IndUS was formed in 1994 and in 2002 bought the type certificate, production certificate and tooling for the Thorp T-211, previously produced by Venture Light Aircraft Resources, renaming the aircraft as the Sport E in the process; further renamed Thorpedo in 2005. IndUS has chosen TAAL of India to build the aircraft, and also to handle non-US marketing; the tooling shipped there to facilitate this.

INDUS THORPEDO and SKY SKOOTER

TYPE: Side-by-side lightplane kitbuilt.

PROGRAMME: Originated in T-11 Sky Skooter, designed by John Thorp and first flown 15 August 1946; certified 22 December 1948, certificate A-791. T-211 certified 20 April 1964 by Tubular Aircraft Products of Los Angeles, which produced parts for 100 aircraft; rights passed to Adams Industries of Detroit, then Thorp Aero Inc at Sturgis, Kentucky, which acquired components in stock; production rights passed to Phoenix Aircraft at Mesa, Arizona, in 1992, but that company declared bankrupt in mid-1994. Acquired by AD Aircraft in the UK; market launch (and first sale, to Ken Fowler) of kits at PFA International Air Rally & Exhibition at Cranfield, Bedfordshire, in July 1998. AD sold six homebuild kits supplied from the USA by Venture Light Aircraft Resources (the previous owner); Venture production began with c/n 104. UK production of complete aircraft planned, but cancelled in 1999.

IndUS took over rights in 2002 (and parts stock sufficient for some 20 aircraft, all 'production' since 1970s having been from original stock of 100, from which requests for spare parts were also deducted by subsequent owners); initially named Sport E, this changing to Thorpedo in 2005. In December 2003, IndUS announced that TAAL of India had started work on assembling the first two aircraft, components coming from the aforementioned parts stock; the first aircraft was due for delivery in May 2004; by August 2005, eight had been completed.

On 8 June 2005, LSA approval received; first LSA compliant aircraft is N211LS.

CURRENT VERSIONS: **T-211 Thorpedo:** Factory-built version.

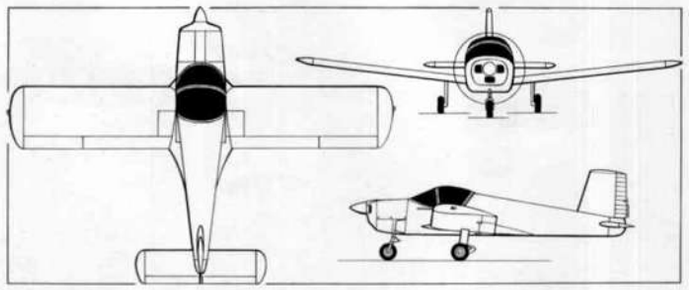
Data refer to this version.

T-11 Sky Skooter: As Thorpedo, but with Jabiru 2200 engine. US development by "T-211 Sky Skooter" N211TH. First US T-11 built by IndUS was N211YY in 2006.

Sport Experimental: Continental-engined kitbuilt version, supplied complete, or in eight sub-kits for stage-by-stage assembly.

CUSTOMERS: Five kits sold during PFA International Air Rally in July 1999, increasing total to six. (At least nine built in USA by Tubular Aircraft, one; Aircraft Engineering Associates, one; and Venture.) Two further kits sold after Sun 'n' Fun, April 2004 for completion under Light Sport Aircraft regulations plus one Part 23 certified example for flight training. By October 2006, 24 had been produced by Indus.

IndUS-built Thorp T-11 Sky Skooter *(Paul Jackson)* 1158796



IndUS T-211 Thorpedo two-seat kitbuilt *(James Goulding)* 0084388

COSTS: Basic kit USD24,995, excluding engine, propeller and avionics; Builder assistance available; LSA compliant aircraft USD79,995 for Sky Skooter, USD84,995 for Thorpedo LSA compliant ready-to-fly respectively (2006). FAA Pt 23 certified USD96,200 and USD111,950 respectively (2005).

DESIGN FEATURES: Economic, simple design for recreational market.

FLYING CONTROLS: Manual; pushrod operated controls except for rudder and trims which are cable-operated. Plain ailerons; all-moving tailplane with anti-balance tab occupying 90 per cent span; wide-span manually operated three-position trailing-edge flaps with maximum deflection of 20°.

STRUCTURE: All aluminium fuselage; wing with main spar, false spar and externally stiffened (ribbed) skin; ailerons, flaps, tailplane and rudder have externally stiffened skin. IndUS investigating possibility of fitting 'smooth' wing, subject to satisfactory resolving of structural issues.

LANDING GEAR: Tricycle type; fixed. Wing-mounted, faired, cantilever mainwheel legs with integral oleo-pneumatic shock-absorbers; all three wheels size 5.00-5; steerable nosewheel; Cleveland wheels; Cleveland 30-9 brakes on main units.

POWER PLANT: One 74.6 kW (100 hp) Teledyne Continental O-200A flat-four, driving a Sensenich 69CK two-blade fixed-pitch propeller; IndUS fitting 89 kW (120 hp) Jabiru 3300 flat-six (Thorpedo) and 63.4 kW (85 hp) Jabiru 2200 flat-four (Sky Skooter) to machines in Light Sport Aircraft category. Fuel tank aft of cabin, capacity 91 litres (24.0 US gallons; 20.0 Imp gallons), of which 79.5 litres (21.0 US gallons; 17.5 Imp gallons) are usable; oil capacity 5.7 litres (1.5 US gallons; 1.25 Imp gallons).

ACCOMMODATION: Two seats side by side beneath rearward-sliding transparent canopy; fixed windscreen. Baggage compartment behind seats, max weight 8.1 kg (17.8 lb).

SYSTEMS: 12 V 60A alternator.

DIMENSIONS, EXTERNAL:

Wing span	7.92 m (26 ft 0 in)
Wing aspect ratio	5.9
Length overall	5.87 m (19 ft 3 in)
Height overall	1.90 m (6 ft 2¾ in)
Propeller diameter	1.70 m (5 ft 7 in)

DIMENSIONS, INTERNAL:

Cabin max width	1.02 m (3 ft 4 in)

AREAS:

Wings, gross	10.68 m² (115.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: T-211	302 kg (665 lb)
T-11	286 lb (630 lb)
Max baggage weight	18 kg (40 lb)
Max T-O weight	576 kg (1,270 lb)
Max wing loading	53.9 kg/m² (11.04 lb/sq ft)
Max power loading: T-211	6.44 kg/kW (10.58 lb/hp)
T-11	9.09 kg/kW (14.94 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE): both	138 kt (255 km/h; 158 mph)
Max level speed: T-211	115 kt (213 km/h; 132 mph)
T-11	100 kt (185 km/h; 115 mph)
Cruising speed at 75% power: T-211	107 kt (198 km/h; 123 mph)
Stalling speed, flaps down, power on: T-211	41 kt (76 km/h; 48 mph)
T-11	39 kt (71 km/h; 44 mph)
Max rate of climb at S/L	311 m (1,020 ft)/min
Service ceiling: T-211	4,663 m (15,300 ft)
T-11	2,620 m (8,600 ft)
T-O run: T-211	107 m (350 ft)
T-11	110 m (360 ft)
Landing run: T-211	122 m (400 ft)
T-11	115 m (375 ft)
Max range: both	325 n miles (603 km; 375 miles)

PRESIDENT: Bart Miller

Trading as Interstate Aircraft Company, this firm was established to relaunch production of the Arctic Tern two-seat bushplane. First aircraft was built in 2006.

INTERSTATE S-1B2 ARCTIC TERN

TYPE: Two-seat lightplane.

PROGRAMME: Interstate Aircraft and Engineering Corporation S-1A built at El Segundo, California, from 1940 with 48.5 kW (65 hp) Continental flat-four; certified 26 February 1941; later with Franklin engines of various ratings (S-1A-65F, -85F and -90F); became L-6 Cadet observation and liaison version for USAAF upon rear extension of cockpit glazing and addition of flaps; this version certified as S-1B1 on 19 August 1942, powered by Franklin O-200 engine of 84.3 kW (113 hp). Type certificates of S-1A and S-1B to Harlow Aircraft Company, 23 July 1945; to Call Aircraft Company 15 July 1950 for production (possibly rebuild) of small number of modified aircraft; to Nikiski Marine Corporation on 14 May 1969 (no known production); then to Arctic Aircraft Company, owned by Bill Diehl and based at Anchorage, Alaska, 15 May 1970.

Re-engineered by Arctic, using more modern materials; Lycoming O-320 engine; certified 25 July 1975 as Arctic S-1B2 Tern; floatplane certified 20 January 1981. Prototype N50AA built 1974; further 28 production aircraft up to 1985.

Certificate transferred to current owner on 23 June 1999, together with all tools and jigs from Arctic company. Modifications to present version, undertaken in conjunction with Alaska Aircraft Engineering, meet FAR Pt 23 criteria and include aluminium spars (replacing wood) and wing struts (replacing steel): constant-speed propeller: new avionics; expanded CG envelope; and MTOW increased from 748 kg (1,650 lb) for landplane. Process involved 500 drawing changes and 250 new drawings.

CUSTOMERS: Previous production accounted for 321 civilian S-1As up to 1942 (including eight L-8A Cadets for Bolivia); one XO-63 prototype; 250 L-6 (S-1B1) Cadets; and 29 Terns (c/n 1001 to 1029), of which 22 remained on US Civil Register in 2004, with 132 S-1As, and 46 S-1B1s/L-6s. Current production begins at c/n 2001, which registered N801AT in May 2006 and exhibited at AirVenture, Oshkosh in July 2006.

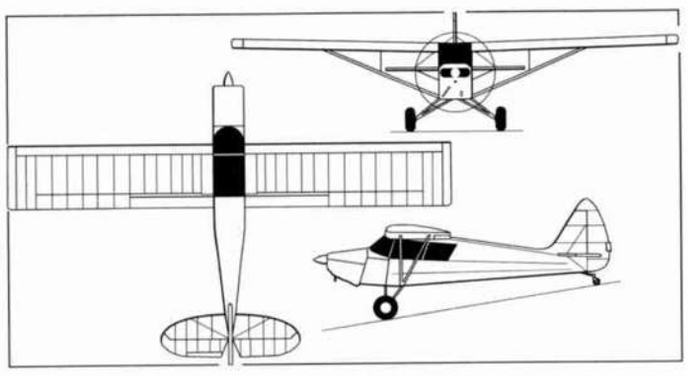
COSTS: USD156,750 (2006).

DESIGN FEATURES: Current aircraft is rugged 'bushplane' design with short-field performance bestowed by large flaps.

Constant-chord wing attached to upper longerons and braced with V struts and intermediate struts each side. Tall, curved fin.

Wing section NACA 23012; dihedral 2°; incidence 4°

First Interstate S-1B2 Arctic Tern from current production *(R W Simpson)* 1159303



Interstate S-1B2 Arctic Tern tandem-seat bushplane *(Paul Jackson)* 1159396

FLYING CONTROLS: Conventional and manual. Horn-balanced elevators and rudder; mass-balanced ailerons. Trim tab in port elevator. Control surface deflections: ailerons +19/–20°; elevators ±30°; rudder ±30°; flaps 50°.

STRUCTURE: Welded steel tube fuselage and aluminium wing, both with fabric covering, apart from wing leading-edge and glass fibre engine cowling. Factory airframe corrosion protection standard.

LANDING GEAR: Tailwheel type; fixed. Two side Vs attached to lower longerons, plus half-axles attached to single hydraulic/helical spring oleo shock-absorber mounted internally on centreline. Cleveland wheels and brakes; main tyres 8.50-6 standard; 8.50-6 tundra tyres optional; Scott 3200 steerable tailwheel. Provision for Wipline 2100 floats or skis.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320-D1A flat-four driving a Hartzell constant-speed (McCauley governor) propeller. Fuel in two wing tanks; total usable capacity 151 litres (40.0 US gallons; 33.3 Imp gallons). Optional belly tank with additional 121 litres (32.0 US gallons; 26.7 Imp gallons).

ACCOMMODATION: Two seats in tandem; rear seat foldable; crew door starboard. Leather upholstery standard. Two rear storage bins with external door, starboard. Cockpit ventilated and heated.

AVIONICS: *Comms:* Garmin GNC 250XL GPS/com, GTX 320A transponder, PS Engineering PM-1000 intercom and lightweight ELT, all standard.

Instrumentation: Low-range ASI, altimeter, VSI, electric turn co-ordinator, directional gyro, compass, artificial horizon, suction gauge, recording tachometer, oil temperature and oil pressure gauges, manifold pressure gauge, ammeter and four-cylinder switchable CHT/EGT gauge, all standard.

EQUIPMENT: Whelen anti-collision and position lights, landing light, panel red spotlight, cockpit dome light and baggage compartment loading light, all standard. Optional towing hook.

DIMENSIONS, EXTERNAL:

Wing span	10.94 m (35 ft 10 ¾ in)
Wing chord (constant)	1.57 m (5 ft 2 in)
Wing aspect ratio	7.0
Length overall	7.32 m (24 ft 0 in)
Height overall	2.13 m (7 ft 0 in)
Tailplane span	3.35 m (11 ft 0 in)
Propeller diameter	2.03 m (6 ft 8 in)

DIMENSIONS, INTERNAL:

Cockpit: Max width	0.66 m (2 ft 2 in)
Volume	1.38 m^3 (48.7 cu ft)
Baggage volume	0.92 m^3 (32.5 cu ft)

AREAS:

Wings, gross	17.24 m^2 (185.6 sq ft)
Trailing-edge flaps (total)	1.77 m^2 (19.02 sq ft)
Fin	0.74 m^2 (7.98 sq ft)
Rudder, incl tab	0.75 m^2 (8.10 sq ft)
Horizontal tail surfaces (total)	2.67 m^2 (28.75 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	522 kg (1,150 lb)
Max baggage weight	181 kg (400 lb)
T-O weight: Normal	861 kg (1,900 lb)
Utility	975 kg (2,150 lb)
floatplane	1,066 kg (2,350 lb)
Max wing loading: Utility	56.6 kg/m^2 (11.58 lb/sq ft)
Max power loading: Utility	8.18 kg/kW (13.44 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	122 kt (227 km/h; 141 mph)
Max level speed	137 kt (254 km/h; 158 mph)
Cruising speed at 75% power	109 kt (201 km/h; 125 mph)
Stalling speed, flaps down	34 kt (63 km/h; 39 mph)
Max rate of climb at S/L	457 m (1,500 ft)/min
T-O run	99 m (325 ft)
T-O to 15 m (50 ft)	152 m (500 ft)
Landing from 15 m (50 ft)	138 m (450 ft)
Landing run	77 m (250 ft)

PRESIDENT: Steve Schulz
SALES MANAGER: Stephen Sacks

DreamWings Valkyrie advanced ultralight first flew 1999, but company suffered bankruptcy in mid-2001. By that time, 145 potential customers had lodged deposits worth USD1.5 million, all of which was lost. Maintaining their enthusiasm for the aircraft, this group formed Ion Aircraft to continue development and launch production. Completion of the prototype was postponed from 2005 to 2006.

ION ION

TYPE: Two-seat lightplane.

PROGRAMME: Re-engineered DreamWings Valkyrie; prototype exhibited, partly assembled, at AirVenture, Oshkosh, in July 2005; first flight due later that year; initial deliveries due mid-2006. However, rollout of prototype (N5510N) delayed until June 2006.

Engineering by Air Boss of Reno, Nevada; CFD work by AMI of Redmond, Washington.

CURRENT VERSIONS: **Ion 100:** Kit version to LSA rules; fixed landing gear.

Ion 105: Kit version to Experimental rules; retractable landing gear and extended 'cruise' wings.

Ion 110: Kit version to European 450 kg rules.

Ion 120: Factory-built version to LSA rules.

DESIGN FEATURES: Twin-boom pusher configuration; tailplane mounted at top of fins. Optional 'cruise' wings of longer span, adding some 20 kt, but increasing stalling speed to 49 kt. Compared with Valkyrie, dispenses with canard; tailplane raised.

FLYING CONTROLS: Conventional and manual. Plain 'piano hinged' ailerons and flaps. Controls cable actuated, except electric flaps.

STRUCTURE: Pod, wing centre-section, booms and empennage of pre-impregnated carbon fibre/epoxy composites; wings outboard of booms are bonded aluminium; engine cowling of glass fibre.

Prototype Ion and its building team in June 2006 1158277

LANDING GEAR: Tricycle type. Fixed for LSA category; retractable gear optional. Fixed gear comprises fuselage-mounted spring 2024 aluminium cantilever legs; hydraulic brakes. Castoring nosewheel.

POWER PLANT: One piston engine driving a Warp Drive three-blade, carbon fibre pusher propeller. Option of 73.5 kW (98.6 hp) Rotax 912S, 84.6 kW (113.4 hp) Rotax 914.89 kW (120 hp) Jabiru 3300 or 1.3 litre B2 Engines motorcar power plant conversion. Fuel capacity 76 litres (20.0 US gallons; 16.7 Imp gallons).

ACCOMMODATION: Two persons in tandem beneath single-piece canopy/windscreen. Rear seat raised 22 cm (8½ in).

EQUIPMENT: Provision for ballistic recovery parachute.

DIMENSIONS, EXTERNAL:

Wing span: LSA	9.90 m (32 ft 6 in)
Length overall	7.32 m (24 ft 0 in)

DIMENSIONS, INTERNAL:

Cockpit max width	0.81 m (2 ft 8 in)

WEIGHTS AND LOADINGS:

Useful load	250 kg (552 lb)

PERFORMANCE (Rotax 912S engine; estimated):

Cruising speed at 75% power	132 kt (244 km/h; 152 mph)
Stalling speed, flaps down	37 kt (69 km/h; 43 mph)
Max rate of climb at S/L	491 m (1,610 ft)/min
T-O run	118 m (385 ft)
g limits	+4.4/–2.2

PRESIDENT: John Powell

This company, formed in 1979, has conceived an ambitious project, known as Airship To Orbit (ATO), which would use airships as the first and third stages in a three-stage method of attaining Earth orbit. The first craft, named Transatmospheric Ascender, would climb from Earth to 42,670 m (140,000 ft), where it would dock with a Dark Sky Station (DSS) suborbital space station - a permanent, crewed facility that would serve as the construction base and also as the departure port for a very much larger Orbital Ascender. As of early 2006, the ATO project had been more than two decades in development, with over 80 'real hardware' test flights; the Transatmospheric Ascender prototype was complete and awaiting test flights; and four unmanned DSSs had been built and flown, with five more to follow and the first crewed DSS then due to fly by the end of 2006. It is also described as a 'pay as you go' system, with each component having its own business application and funding source. For example, funding for the Transatmospheric Ascender was provided by the US Defense Department and the DSS has multiple customers in the telecommunications community. Project completion is forecast for 2012.

JP AEROSPACE ASCENDER

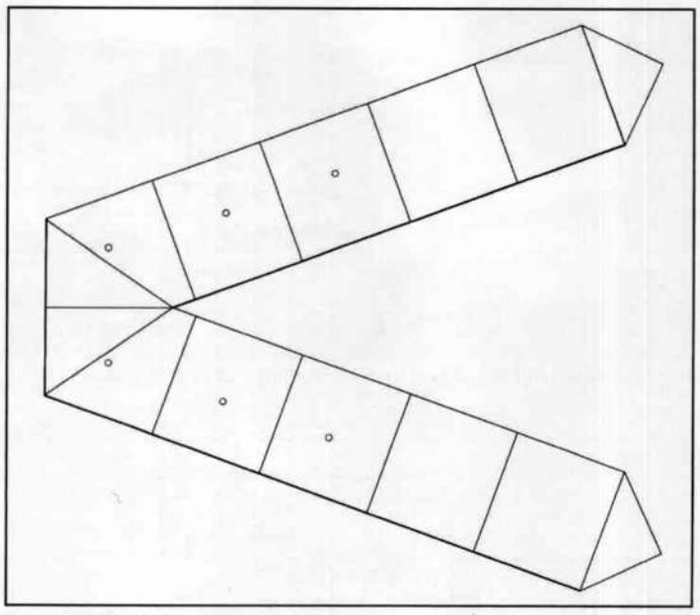
TYPE: Hybrid semi-rigid air vehicle.

PROGRAMME: Begun in 1980s. Prototype DSS platform first flown 29 January 2000. Two subscale prototypes of Ascender (6.1 m; 20 ft and 28.3 m; 93 ft long) built and flown; designations Ascender 20 and Ascender 90, respectively; full size version nearing completion mid-2006.

CURRENT VERSIONS: **Transatmospheric Ascender:** V-shaped atmospheric airship, for mainly vertical flight in DSS stationed at 42,670 m (140,000 ft). Each arm 53.3 m (175 ft) long and 12.8 m (42 ft) high, braced by 30.5 m (100 ft) carbonfibre cross-truss. Hybrid vehicle, using combination of buoyancy and aerodynamic lift and driven by 2.00 m (6 ft 6¾ in), two-blade composites (carbon fibre, Kevlar and glass fibre) propellers designed to operate in near vacuum. Operated by a crew of three; can be configured for cargo or passengers.

Orbital Ascender: Huge, V-shaped airship/dynamic vehicle, launched from DSS and using buoyancy to climb to 60,960 m (200,000 ft). From there, it uses solar electric propulsion to accelerate slowly and climb dynamically until, after about five days, it reaches orbital velocity. Initial test vehicle has 1,829 m (6,000 ft) arms; a 36,575 m (120,000 ft) flight test for the ion engine was scheduled by the end of 2005.

NSMV: Near Space Manoeuvring Vehicle, version of Orbital Ascender built for US Air Force Space Battlelab as communications relay asset. Management transferred to GSSL Inc, but after two unsuccessful flight tests concept was abandoned in 2005. Arm lengths (each) 53.91 m (176 ft 10¼ in); arm angle 40°.



Ascender NSMV plan view *(Paul Jackson)* 1158949

PRESIDENT: Troy Zehr
MARKETING DIRECTOR: Kathi Jo Zehr

Just has worked in collaboration with Reality Aircraft of the UK to market the Easy Raider and Escapade lightplanes in both countries. An Escapade variant, the Highlander, while described in the former entry, is not available in the UK. In 2004, Just announced the Summit, although marketing had not formally begun a year later.

JUST SUMMIT

TYPE: Tandem-seat ultralight kitbuilt.

PROGRAMME: Announced in 2004 as US version of Reality Sky Raider, although known specification shows several differences to the UK-certified aircraft, most noticeably the adsence of a fin fillet. By mid-2006, marketing had not formally begun.

DESIGN FEATURES: High, constant-chord, foldable wing supported by V-struts and intermediate struts. Quoted build time 400 hours.

FLYING CONTROLS: Conventional and manual. Ailerons and elevator actuated by pushrods; rudder by cables. Three-position flaps.

STRUCTURE: Chrome-moly 4130 welded steel tube fuselage and empennage with fabric covering. Wing built on 6061 aluminium spar with wooden ribs and fabric covering. Glass fibre engine cowling.

LANDING GEAR: Tailwheel type; fixed. Two faired-in side Vs hinged to lower longerons, plus half-axles with bungee cord shock-absorbers attached to compression frame. Brakes. Matco steerable tailwheel. Optional spring aluminium cantilever main legs.

Prototype Just Summit 1159030

POWER PLANT: One piston engine between 37 and 89 kW (50 and 120 hp). Rotax 503, 582, 912 and 912S or Jabiru 2200 and 3300 all suitable. Fuel in wings, capacity 38 litres (10.0 US gallons; 8.3 Imp gallons) standard; 76 litres (20.0 US gallons; 16.7 Imp gallons) optional.

DIMENSIONS, EXTERNAL:

Wing span	9.83 m (32 ft 3 in)
Length: overall	5.79 m (19 ft 0 in)
wings folded	6.71 m (22 ft 0 in)
Height overall	1.73 m (5 ft 8 in)

AREAS:

Wings, gross	11.23 m^2 (120.9 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	204 kg (450 lb)
Max T-O weight	449 kg (990 lb)

PERFORMANCE:

No details available

CHAIRMAN EMERITUS: Charles H Kaman
CHAIRMAN, PRESIDENT AND CEO, KAMAN CORPORATION: Paul H Kuhn
PRESIDENT, KAMAN AEROSPACE CORPORATION, HELICOPTER DIVISION: Salvatore S Bordonaro
VICE-PRESIDENT, ENGINEERING, KAMAN AEROSPACE CORPORATION, HELICOPTER DIVISION: Michael A Bowes
VICE-PRESIDENT, SUBCONTRACTING AND BUSINESS DEVELOPMENT, KAMAN AEROSPACE CORPORATION, HELICOPTER DIVISION: William D Brown

Founded 1945 by Charles H Kaman. Developed servo-flap control of helicopter main rotor, initially in contrarotating two-blade main rotors, and still used in SH-2G Super Seasprite four-blade main rotor and on the K-MAX. R&D programmes sponsored by US Army, Air Force, Navy and NASA include advanced design of helicopter rotor systems, blades and rotor control concepts, component fatigue life determination and structural dynamic analysis and testing. In late 2001, company was said to be in early conceptual stages for a multirole helicopter of similar size to the NH 90, with a cabin wide enough to admit stretchers stowed widthways; no further details of this had emerged by fourth quarter 2006.

Kaman has also undertaken helicopter drone programmes since 1953; is continuing advanced research in rotary-wing unmanned aerial vehicles (UAVs). Its intermeshing rotor system design was a key ingredient in the Northrop Grumman candidate for the (subsequently cancelled) DARPA/US Army Unmanned Combat Armed Rotorcraft (UCAR) programme. Kaman is however pursuing US Army interest in an unmanned logistics UAV. Following a USMC demonstration of the K-MAX/BURRO (Broad-area Unmanned Responsive Resupply Operations) in 2001, a demonstration to the US Army was completed in June 2003; a second, for the aviation community, took place in September 2003; BURRO development and promotion was continuing in 2006. See *Jane's Unmanned Aerial Vehicles and Targets* for further details.

Kaman Aerospace has a workforce of about 1,200 and is major subcontractor on many aircraft and space programmes, including design, tooling and fabrication of components in metal, metal honeycomb, bonded and composites construction, using techniques such as filament winding, braiding and RTM. Participates in programmes including Northrop Grumman E-2C, Bell Boeing V-22, Boeing 737, 747, 757, 767, 777 wing trailing-edge, KC-135 and C-17, Sikorsky H-60 and NASA Space Shuttle Orbiter main fuel tank. Sikorsky contract (approximately USD27.7 million initially), announced 27 January 2005, is for 84 cockpit sets for UH-60L, UH-60M, MH-60S and S-70A in 2005-06; has multi-year options for up to 349 units. It was announced in April 2006 that Kaman Aerospace had signed an agreement with Boeing to support the latter's entry in the proposed HH-47 combat search and rescue (CSAR-X) programme for the US Air Force, by manufacturing the aircraft's 9.14 m (30 ft) aerial refuelling probe. Kaman also designs and produces fuzes for a range of weaponry.

Kaman designed and, since 1977, has been producing all-composites rotor blades for Bell AH-1 Cobras for US and foreign forces. Appointed in April 2000 to build fuselages for MD Helicopters' single-engine line (MDH 500, 520, 530 and 600) under 10-year contract; a further contract to build MDH Explorer rotor blade systems was awarded in July 2000, but work was suspended in the second quarter of 2003 due to falling sales and a USD21 million MDHI debt written off in the third quarter of 2004. With restoration of MDHI's fortunes, MD 500/520/530/600 fuselage work placed elsewhere, but Explorer rotor blade systems production resumed under new multiyear agreement signed in early 2006.

KAC's activities were reorganised in early 2002 into three new business units, of which Helicopter Programs has responsibility for the Super Seasprite and K-MAX described in the following entries. Aerostructures Subcontracting, in Bloomfield and Jacksonville, focuses on non-rotary-wing aircraft programmes including commercial airliner wing structures and components; major structural assemblies for military transports; aircraft thrust reversers; and business jet subassembly components. Helicopter Subcontracting, also with operations in Bloomfield and Jacksonville, undertakes work on helicopter airframes, composites rotor blades and components, including manufacture (until 2003) of MD 500 and MD 600 fuselages for MD Helicopters. In early 2002, Kaman acquired Plastic Fabrication Company of Wichita, Kansas, a manufacturer of composites parts and assemblies for aerospace applications.

Kaman Aerospace International Corporation was established in 1995 as the international affiliate of Kaman Aerospace with offices in Canberra and Nowra, Australia; Kuala Lumpur, Malaysia; Cairo, Egypt; and Bloomfield, Connecticut.

KAMAN (K894) SH-2G SUPER SEASPRITE

TYPE: Naval combat helicopter.

PROGRAMME: Available as either SH-2F remanufactured airframe or as new-build helicopter. Sales promotion continues, with a new (2004) campaign based on BAE Systems Avionics' mission system and sensor suite, aimed at potential NATO customers such as Portugal and Romania.

CURRENT VERSIONS: **SH-2G(E):** Ten for Egypt, ordered 22 February 1995 and delivered between October 1997 and November 1998. Remanufactured from SH-2F.

SH-2G(A): Eleven for Royal Australian Navy, selected in January 1997. Remanufactured from SH-2F. Deliveries began on a pre-acceptance basis in March 2001; provisional acceptance October 2003; 10 delivered by July 2004. Kaman reported "completing delivery" in March 2005; eight aircraft then operational in ITH (interim training helicopter) configuration, with handover of first fully operational machine then targeted for mid-year. However, by October 2005 date had slipped again, due to need for additional testing of ITAS software. Aircraft grounded 'indefinitely' 15 May 2006 pending resolution of ITAS software problems; at that time, 10 aircraft in Australia (including nine with 805 Squadron, HMAS *Albatross*, at Nowra, New South Wales), and one with Kaman for formal qualification testing (started 8 June 2006) and acceptance trials (due to begin in 3Q06); this aircraft expected to be handed over to RAN March 2007.

SH-2G(NZ): Five new-build aircraft for Royal New Zealand Navy, delivered between August 2001 and February 2003.

SH-2G: Four stored US Navy aircraft reactivated, with minor modifications, and delivered to Polish Navy between September 2002 and August/September 2003.

CUSTOMERS: Australia (11), Egypt (10), New Zealand (five) and Poland (four), as described above.

Australian Navy Kaman SH-2G(A) *(Paul Jackson)* 1040421

KAMAN K-1200 K-MAX

TYPE: Light lift helicopter.

PROGRAMME: First flight (N3182T) 23 December 1991; first public showing 22 March 1992; first flights of second prototype (N131KA) 18 September 1993 and first production aircraft (N132KA) 12 January 1994; third prototype is static and drop test aircraft to prove 20 year life at 1,000 hours per year and with 30 return logging sorties per hour. Certification to FAR Pts 27 and 133 achieved 30 August 1994 after 800 hour/32 month programme. N133KA of Scott Paper (now Kimberly-Clark) achieved 1,000 hours in eight months, 22 June 1995, as first K-MAX to reach this total. Canadian certification awarded 23 November 1994; now certified in Australia, Austria, Canada, Ecuador, Germany, Japan, New Zealand, Switzerland, Taiwan and USA. Uses include logging, firefighting, agricultural spraying, constructing and surveying.

A USD690,000 contract to demonstrate Vertrep (Vertical Replenishment) to US Navy awarded August 1995: two month demonstration period saw two K-MAXs (c/n 0010 and 0013) lift 453,592 kg (1,000,000 lb) with follow-on assessment in Guam during May 1996 during which 142 hours were flown and 2,449,400 kg (5,400,000 lb) was lifted. Two helicopters then began USD5.7 million six-month deployment in Arabian Gulf on 3 June 1996 aboard USS *Niagara Falls*. During late August 1998, the prototype K-MAX was involved in trials for Magic Lantern mine detection systems. FAA Pt 27 IFR certification received 14 May 1999 as part of bid for US Navy Vertrep contract. Kaman received certification for an external seat in June 1999; up to two may be fitted. On 14 July 1999 USMC placed contract worth USD4.2 million for remote piloting package and another worth USD2.7 million to May 2000: development of unmanned version continuing in 2006: for further details see *Jane's Unmanned Aerial Vehicles and Targets*. In November 2001, on behalf of the US Naval Undersea Warfare Center at Newport, Rhode Island, a manned K-MAX recovered more than two dozen torpedoes used during exercises in local waters.

K-MAX production suspended after completion of 38th aircraft in 2003; seven sales or leases by the end of July 2004, including delivery of the last 'white tail' during that month to Grizzly Mountain Aviation. Marketing continues, but no further production or orders until 6 February 2005, when Kaman announced delivery of a previously leased aircraft to Lucky Air of South Korea.

On same date, company revealed dedicated firefighting version, named **Fire Max**, equipped with a 2,650 litre (700 US gallon; 583 Imp gallon) fixed, conformal, carbon fibre tank with hydraulically powered hover refill pumps designed by Isolair. The system, known as Eliminator II, began flight testing 11 July 2005. At the time of the Fire Max announcement, Kaman stated that there were 27 K-MAXs in service. Launch customer for the Eliminator II system is Rainier Heli-Lift of Kirkland, Oregon. A similar system has been

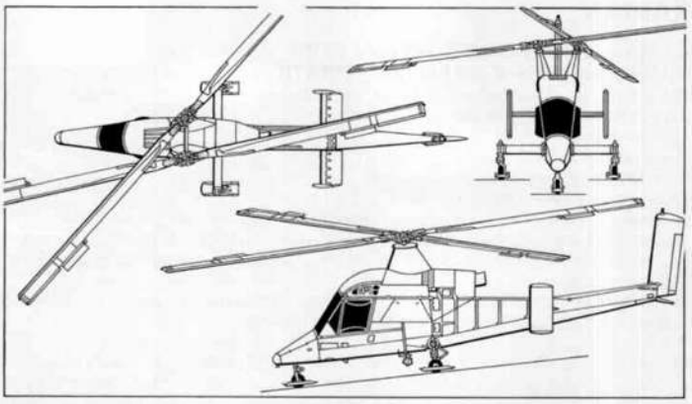
Kaman K-MAX single-seat helicopter 1040424



Production version of Kaman K-MAX intermeshing rotor helicopter *(Mike Keep)* 0507267

developed by Kawak Aviation Technologies. By the time of the maiden flight, Kaman reported 'significant' interest in the Fire Max, sufficient to implement a production restart by the end of 2005, but no orders reported by November 2006.

CUSTOMERS: Refer to table for current users. Kaman moved from its original helicopter lease programme to a sales programme, but reinstated leasing arrangements in 2002, with Eagle Helicopters (Switzerland) and Superior Helicopters (Oregon) becoming lease customers shortly afterwards. Current operators (at July 2003) include Mountain West, Woody Contracting, Superior Helicopter (four), Petroleum Helicopters, Rainier Heli-Lift and Midwest Helicopters in USA; Cariboo Chilcotin and MacKenzie Heli Services in Canada; Helog of Switzerland; Japan Royal Helicopters (two); Rotex Helicopters AG of Lichtenstein; and Wucher Helikopter of Austria.

A K-MAX operated by Woody Contracting was the first to exceed 10,000 flying hours (increased to more than 14,000 hours by mid-2003). In December 2000, US State Department ordered five; these delivered in 2002, and in mid-2003 were performing logistics support for anti-drug operations in Colombia. Total of 37, plus one static test airframe. Of these, 11 lost in accidents by mid-2006, at which time 26 in operation.

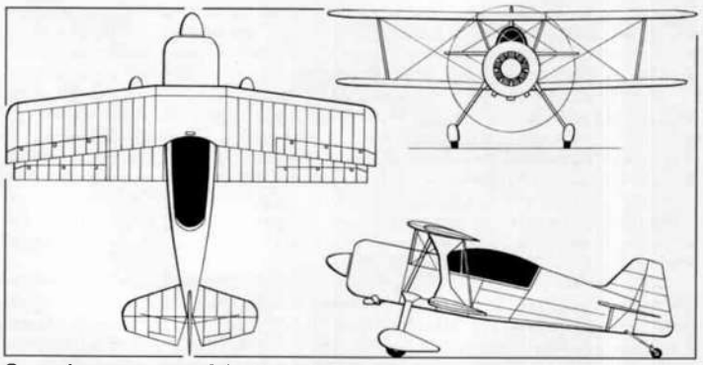
PRESIDENT: Jim Kimball
VICE-PRESIDENT: Kevin Kimball

Jim Kimball Enterprises was founded in 1980 and offers kits of the Pitts Model 12 after purchasing design rights from Mid-America Aircraft. Plans are also marketed (as Model 12 Inc) by the company.

Recent additions to the Kimball range are the Raptor, McCullocoupe, DR 109 and Pitts Python development of the Model 12.



General arrangement of the Kimball (Pitts) Model 12 (VOKBM M-14P radial engine) *(James Goulding)* 0079018

KIMBALL (PITTS) MODEL 12

TYPE: Tandem-seat biplane/kitbuilt.

PROGRAMME: Designed by Curtis Pitts and prototype originally named Macho Stinker. Design started in 1992; construction of prototype began 1994; first flight March 1996; first delivery April 1997. A 'high-performance' version has been replaced by the Pitts Python.

CURRENT VERSIONS: **Model 12:** Baseline version, *as described.*

Model 12-540: As Model 12, but with 224 kW (300 hp) Textron Lycoming AEIO-540 or 246 kW (330 hp) Textron Lycoming AEIO-580 engine. General dimensions as Model 12.

Python: Introduced in 2006, as Model 12, but with increased use of titanium and lightweight landing gear to reduce empty weight to 647 kg (1,427 lb). Front cockpit and controls, wing fuel tank and onboard airstart systems all removed. Prototype N112PP. Currently only available to special order.

High Performance: Strengthened version with shorter fuselage and wing spans. As standard Model 12, except where noted; replaced by Python.

CUSTOMERS: Total of 64 under construction in nine countries: Australia, Canada, Finland, Germany, Iceland, Lithuania, South Africa, Sweden and the US; plus 300 sets of plans sold in a further six countries. Total of 32 flying by June 2006, including one each in Australia, Canada and South Africa and two in Germany.

COSTS: Model 12 kit USD49,150; complete aircraft USD187,000 (2006). Model 12-540 kit USD49,150; complete aircraft USD215,000 (2006).

DESIGN FEATURES: Traditional Pitts design, optimised for aerobatics; contours dictated by M-14P radial engine. Wire- and strut-braced wings of unequal span; upper wing mounted on cabane; single interplane strut each side; wire-braced tailplane and fin. Quoted build time 2,500 hours.

FLYING CONTROLS: Conventional and manual. Rod-connected ailerons on upper and lower wings. Flight-adjustable trim tab in each elevator.

Pitts Python, awarded Sun 'n' Fun Grand Champion plans homebuilt 2006 *(Paul Jackson)* 1040399

STRUCTURE: 4130 steel tube fuselage; wooden spars and wooden truss ribs; fabric covering with aluminium cockpit sides. Metal interplane struts and cabane, composites engine cowling. Upper wing section NACA 639_2-015, lower wing section NACA0012.

LANDING GEAR: Tailwheel type; non-retractable. Optional composites mainwheel fairings. Aluminium sprung main legs; mainwheels 6.00-6 in; Cleveland disc brakes.

POWER PLANT: One 265 kW (355 hp) VOKBM M-14P or 294 kW (394 hp) P.14PF (in Python) nine-cylinder radial engine driving an MT MTV-9-K-C/CL260-9 three-blade constant-speed propeller. In 2003, the option of fitting a 224 kW (300 hp) Textron Lycoming AEIO-540 or 246 kW (330 hp) Textron Lycoming AEIO-580 flat-six was added. Fuel capacity 204 litres (54.0 US gallons; 45.0 Imp gallons) in 68 litre (18.0 US gallon; 15.0 Imp gallon) wing tank and 136 litre (36.0 US gallon; 30.0 Imp gallon) fuselage tank; latter deleted in Python. Oil capacity 15 litres (4.0 US gallons; 3.3 Imp gallons).

ACCOMMODATION: Pilot and passenger in enclosed cockpit under one-piece Perspex canopy hinged on right side. Fixed windscreen.

SYSTEMS: 14 V or 28 V battery.

DIMENSIONS, EXTERNAL (A: Model 12; B: Python; C: Model 12-540):

Wing span: upper	6.71 m (22 ft 0 in)
lower	6.40 m (21 ft 0 in)
Wing chord at tip	1.07 m (3 ft 6 in)
Length overall	5.99 m (19 ft 8 in)
Max width of fuselage	1.07 m (3 ft 6 in)
Height: overall	2.97 m (9 ft 9 in)
to top of upper wing	2.51 m (8 ft 3 in)
Tailplane span	2.44 m (8 ft 0 in)
Wheel track	2.29 m (7 ft 6 in)
Wheelbase	4.42 m (14 ft 6 in)
Propeller diameter: A, C	2.49 m (8 ft 2 in)
B	2.59 m (8 ft 6 in)
Propeller ground clearance: A, C	0.36 m (1 ft 2 in)

AREAS:

Wings, gross	14.01 m^2 (150.8 sq ft)
Ailerons (total)	1.88 m^2 (20.21 sq ft)
Fin	0.34 m^2 (3.69 sq ft)
Rudder, incl tab	0.63 m^2 (6.82 sq ft)
Elevators, incl tab	0.68 m^2 (7.30 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: A	703 kg (1,550 lb)
B	647 kg (1,427 lb)
C	624 kg (1,375 lb)
Max baggage weight	18 kg (40 lb)
Max T-O weight: A, B	1,043 kg (2,300 lb)
C	1,020 kg (2,250 lb)
Max wing loading: A	74.5 kg/m^2 (15.25 lb/sq ft)
B	74.8 kg/m^2 (15.32 lb/sq ft)
C	72.8 kg/m^2 (14.92 lb/sq ft)
Max power loading: A	3.94 kg/kW (6.47 lb/hp)
B	3.55 kg/kW (5.84 lb/hp)
C: AEIO-540	4.56 kg/kW (7.50 lb/hp)
AEIO-580	4.15 kg/kW (6.82 lb/hp)

PERFORMANCE:

Never-exceed and max operating speed (VNE, VMO)	207 kt (384 km/h; 239 mph)
Max cruising speed	178 kt (330 km/h; 205 mph)
Econ cruising speed, 75% power	152 kt (282 km/h; 175 mph)
Stalling speed, power off	56 kt (103 km/h; 64 mph)
Roll rate: A	220°/s
B	300°/s
Max rate of climb at S/L	More than 914 m (3,000 ft)/min
T-O run	76 m (250 ft)
T-O to 15 m (50 ft)	91 m (300 ft)
Landing from 15 m (50 ft)	274 m (900 ft)
Range with max fuel	525 n miles (972 km; 604 miles)

KIMBALL MODEL 15 RAPTOR A S

TYPE: Tandem-seat sportplane kitbuilt.

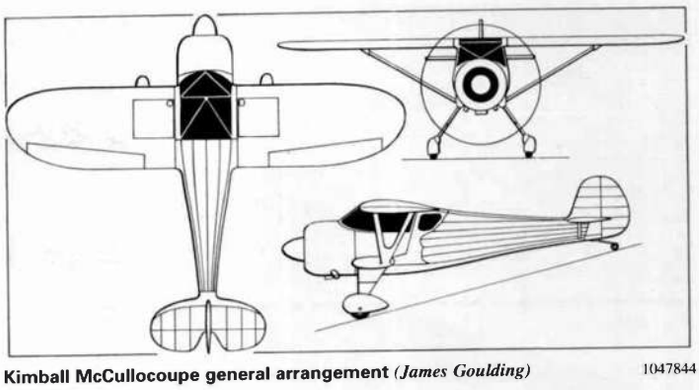
PROGRAMME: Work began late 1999 and project details revealed early 2001; construction start date still not finalised by late-2006.

KIMBALL MCCULLOCOUPE

TYPE: Side-by-side sportplane kitbuilt.

PROGRAMME: Design initiated late 2000. Construction of prototype began in mid-2001, with intended completion date of end 2002. First flight (N511) achieved 1 March 2004 and aircraft made public debut at Sun 'n' Fun in April 2004.

Kimball McCullocoupe prototype at its public debut, April 2004 *(Paul Jackson)* 1047400



Kimball McCullocoupe general arrangement *(James Goulding)* 1047844

All data are provisional.

CUSTOMERS: One flying by October 2006; had achieved more than 200 hours' flying.

DESIGN FEATURES: Similar to clip-wing Monocoupe designs of 1930s.

FLYING CONTROLS: Conventional and manual. Pushrod-actuated ailerons and elevators; cable-operated rudder and tailwheel steering. Mechanisms fully contained within wings to eliminate drag.

STRUCTURE: Fabric-covered tubular steel fuselage. Strut-braced, two-piece wood-covered wing with two Douglas fir main spars and mahogany plywood ribs. Compared to original Monocoupe 110 Special, has larger tail surfaces to improve handling. Strut-braced tailplane. Airfoil Clark Y.

LANDING GEAR: Fuselage-mounted spring aluminium cantilever mainwheel legs (as Kimball-built Pitts Model 12) encased in two-part, telescoping trouser, lower section of which is protected from friction damage when compressed within upper portion. Glass fibre wheel fairings. Tyres 6.00-6.

POWER PLANT: One 294 kW (394 hp) VOKBM M-14PF nine-cylinder radial engine driving a specially designed three-blade constant-speed MT propeller. Fuel capacity 288 litres (76.0 US gallons; 63.3 Imp gallons) in two 98 litre (26.0 US gallon; 21.6 Imp gallon) wing tanks and one 91 litre (24.0 US gallons; 20.0 Imp gallon) tank positioned under seats.

ACCOMMODATION: Pilot and passenger side by side.

DIMENSIONS, EXTERNAL:

Wing span	7.92 m (26 ft 0 in)
Wing chord at root	1.52 m (5 ft 0 in)
Wing aspect ratio	5.4
Length overall	6.86 m (22 ft 6 in)
Height to top of wing	2.44 m (8 ft 0 in)
Propeller diameter	2.49 m (8 ft 2 in)

AREAS:

Wings, gross	11.57 m^2 (124.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	635 kg (1,400 lb)
Max baggage weight	36 kg (80 lb)
Max T-O weight	1,134 kg (2,500 lb)
Max wing loading	98.0 kg/m^2 (20.06 lb/sq ft)
Max power loading	3.86 kg/kW (6.35 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	234 kt (434 km/h; 270 mph)
Normal cruising speed	182 kt (338 km/h; 210 mph)
Stalling speed	57 kt (105 km/h; 65 mph)
Endurance	6 h 0 min

KIMBALL DR109

TYPE: Tandem-seat sportplane kitbuilt.

PROGRAMME: Designed by Dan Rihn as two-seat version of his DR 107 One Design. Added to Kimball product line in 2003. Prototype N109DR first flown 1996.

CUSTOMERS: At least 11 sold with 10 on US Register by September 2006.

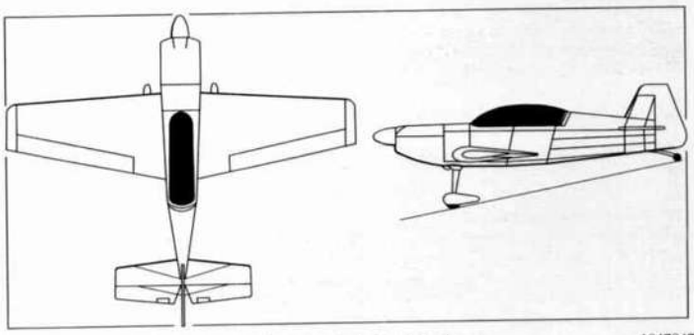
COSTS: Kit USD50,000 (2006).

DESIGN FEATURES: Low-wing monoplane with a specially designed 16% symmetrical aerofoil, conic nose and flat sides. Roll rate 360°/s.

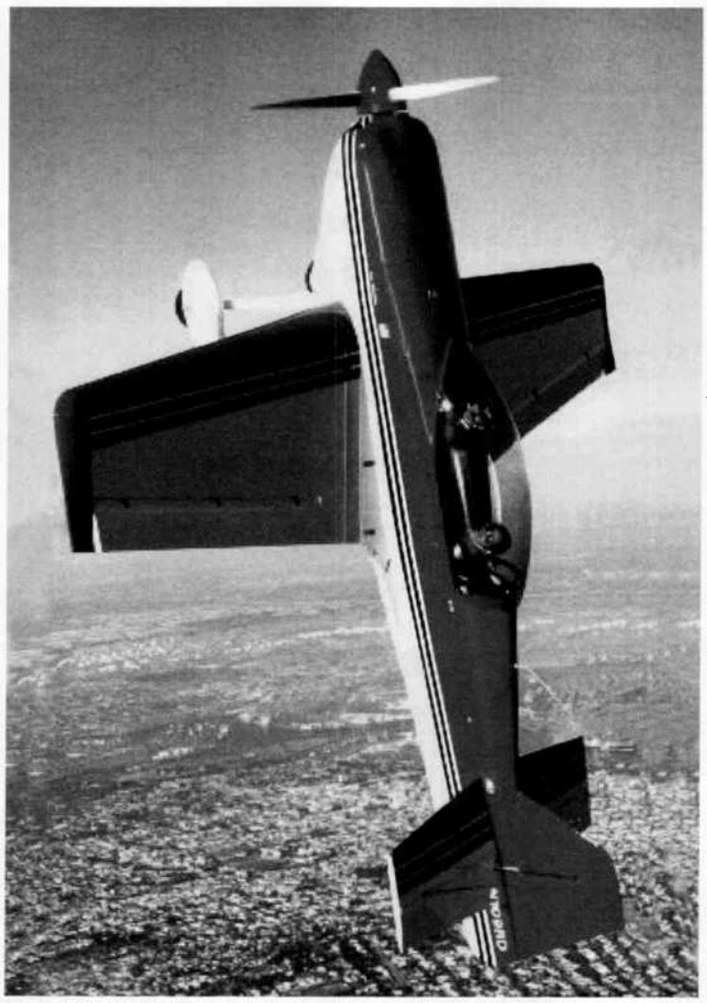
FLYING CONTROLS: Conventional and manual. Pushrod-actuated ailerons and elevator, cable-actuated rudder. Large, symmetrical, constant-chord ailerons extend to 75 per cent of wing length and are mass balanced and aerodynamically counterbalanced; each fitted with spade ground-adjustable balances. Trim tab on each elevator also acts as a servo tab to reduce stick forces.

STRUCTURE: Fuselage of welded steel tube, sheet metal-covered from firewall aft to cockpit; fabric-covered from rear cockpit aft to empennage. Aluminium sheet metal turtledeck. Fabric-covered, wire-braced tail surfaces have steel tube spars and bent-up steel sheet metal ribs. One-piece wing has Douglas fir main and subsidiary box spars and plywood covering. All-wood ailerons. Two-piece glass fibre engine cowling.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring aluminium cantilever mainwheel legs; steerable swivel-mounted aluminium spring tail unit. Mainwheels 5.00-5; hydraulic disc brakes.



Two aspects of the Kimball (Rihn) DR 109 *(Paul Jackson)* 1047847



Kimball (Rihn) DR 109 1047444

POWER PLANT: One Textron Lycoming piston engine. Option of 149 kW (200 hp) AEIO-360-AIE6 flat-four; or 194 kW (260 hp) AEIO-540-D4A5; or 224 kW (300 hp) AEIO-540-L1B5 flat-six; all drive an MTV-9 three-blade variable-pitch constant-speed propeller; prototype has AEIO-540-D4A5. Fuel capacity 114 litres (30.0 US gallons; 25.0 Imp gallons) in main tank ahead of cockpit; total auxiliary fuel capacity 61 litres (16.0 US gallons; 13.3 Imp gallons) in two wing tanks.

ACCOMMODATION: Pilot and passenger in tandem cockpits under single-piece side-opening canopy; each seat has adjustable back nominally reclined to 30° and five-point aerobatic seat belt system. Can be flown solo from rear seat. Dual controls.

SYSTEMS: 12 V electrical system; electric engine starter.

AVIONICS: *Comms:* Terra VHF radio, transponder with encoder; Sigtronics voice-activated intercom.

Flight: Grand Rapids Technology engine information system.

DIMENSIONS, EXTERNAL:

Wing span	7.32 m (24 ft 0 in)
Wing aspect ratio	5.1
Length overall	6.71 m (22 ft 0 in)
Height overall	1.88 m (6 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin max width	0.61 m (2 ft 0 in)

AREAS:

Wings, gross	10.59 m² (114.0 sq ft)

WEIGHTS AND LOADINGS (A: AEIO-360-A1E6, B: AEIO-540-D4A5, C: AEIO-540-L1B5):

Weight empty	612 kg (1,350 lb)
Max T-O weight	1,020 kg (2,250 lb)
Max wing loading	96.4 kg/m² (19.74 lb/sq ft)
Max power loading: A	6.85 kg/kW (11.25 lb/hp)
B	5.27 kg/kW (8.65 lb/hp)
C	4.56 kg/kW (7.50 lb/hp)

PERFORMANCE (A, B, C as above):

Max operating speed: A	167 kt (309 km/h; 192 mph)
B	178 kt (330 km/h; 205 mph)
C	187 kt (346 km/h; 215 mph)
Normal cruising speed: A	146 kt (270 km/h; 168 mph)
B	155 kt (286 km/h; 178 mph)
C	161 kt (298 km/h; 185 mph)
Stalling speed: A, B, C	53 kt (97 km/h; 60 mph)
Max rate of climb at S/L	853 m (2,800 ft)/min
T-O run	183 m (600 ft)
Landing from 15 m (50 ft)	549 m (1,800 ft)
Range (45 min reserves): A	351 n miles (650 km; 404 miles)
B	391 n miles (724 km; 450 miles)
C	373 n miles (692 km; 430 miles)
g limits	±10

Web: www.kitfoxaircraft.com

OWNERS:
John McBean
Debra McBean

Kitfox programme inaugurated by Denney Aerocraft Company and taken over by SkyStar Aircraft Corporation in 1993. By October 2004, more than 4,500 Kitfox kits had been sold in 42 countries and by August 2005, 5,000 had been delivered. In 1998, the Kitfox Lite was added and in the following year the company streamlined its range. The Series 6 Kitfox and Kitfox Lite² were added in January 2000; the Series 7 was introduced in early 2002 to replace the Series 6; the Kitfox Lite² was completed in 2003.

Rights to Aero Designs Pulsar purchased by SkyStar in late 1996, but in July 1999 the design was sold to the Pulsar Aircraft Corporation.

In early 2001, Skystar opened a spare parts shop at Caldwell and launched an Internet retailing operation. In January 2004, in advance of the Light Sport Aircraft category, SkyStar reorganised into two separate divisions: Sport Plane and Experimental/Manufacturing; the former headed by former President and CEO Ed Downs; the latter by Frank Miller.

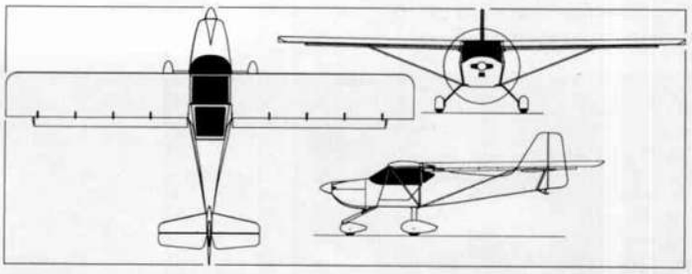
On 14 October 2005, Skystar filed for Chapter 7 bankruptcy; the tooling and intellectual assets were purchased by Sports Plane LLC in early April 2006 and Kitfox Aircraft formed to sell kits. The company is building a 929 m² (10,000 sq ft) factory at Homedale Airport, Idaho. In July 2006, it introduced the Kitfox SuperSport, which was the only available version at that time.

KITFOX KITFOX

TYPE: Side-by-side kitbuilt.

PROGRAMME: Prototype Kitfox first flown 7 May 1984. Initial variants, now discontinued, had MTOW below US 544 kg (1,200 lb) ultralight limit; kit production totalled 257 Model 1s, 491 Model 2s, and 467 Model 3s. Series IV (retrospectively renamed Classic IV) introduced 1991; 323 kits of 476 kg (1,050 lb) MTOW version produced before introduction of current version. First certified version was Series 5, introduced April 1994, but replaced by Series 6 in January 2000; itself replaced by Series 7 in early 2002.

Kitfox 3 two-seat kitbuilt *(Paul Jackson)* 1040500



Kitfox Series 7, showing folded wing position in profile *(Paul Jackson)* 1047848

CURRENT VERSIONS: **Classic IV:** Ultralight version, introduced in 1992. Engines up to 74.6 kW (100 hp) can be fitted under helmeted engine cowling. MTOW 544 kg (1,200 lb). **Speedster** option includes short-span wings and improved streamlining for up to 17 kt (32 km/h; 20 mph) additional speed. Still available in 2005; quoted build time 900 hours.

Kitfox 4B: Biplane version. One only built (N95FX).

Kitfox 6 Convertible: Introduced 2000; tailwheel and nosewheel subvariants. Considerably refined design, with only 5 per cent parts commonality with Kitfox V. Now discontinued.

Kitfox 7: Public debut at Sun 'n' Fun, April 2002; modifications include different struts and redesigned cowling, plus wing technology developed for Kitfox Lite. Longer cargo area introduced in 2005, with external access, by adding dorsal fin.

Kitfox Sport: Intended to meet Sport Pilot category; empty weight of 318 kg (700 lb). Prototype (N702KS) built 2002; one further completed by October 2005.

Kitfox Super Sport: Made public debut at AirVenture '06, at which time only Kitfox available from new owners. Based on Kitfox 7 with additional refinements to be LSA compliant.

Detailed description applies to above version except where indicated.

Kitfox Lite: *Described separately.*

CUSTOMERS: Some 4,500 Kitfox aircraft kits delivered to 42 countries, and over 2,500 built.

COSTS: Kitfox Super Sport kit USD17,985; with engine component package and Rotax 912ULS USD36,239 (2006).

DESIGN FEATURES: Designed to have good short-field performance. Constant-chord, high wing with V strut bracing each side; braced tailplane, mid-mounted. With Kitfox IV, introduced in 1991, new wing with laminar flow section and all-metal hinge brackets for full-span flaperons became standard; windscreen material thickened and given increased slope and, with other changes, resulted in increase in cruising speed; stalling and landing speeds decreased, former due to use of flaperons; wing folding standard. Optional agricultural spray pods. Quoted build time 1,000 hours.

FLYING CONTROLS: Manual. Junkers-type differential flaperons have been redesigned for Series 7; rudder and elevators with anti-balance tab each side. Variable incidence tailplane.

STRUCTURE: Wings of aluminium alloy, plywood ribs and glass fibre tips, with fabric covering overall. Steel tube fuselage and tail unit, with fabric covering.

LANDING GEAR: Fixed. Fuselage-mounted spring aluminium cantilever mainwheel legs with optional speed fairings. Option of tailwheel or trailing link, castoring nosewheel; can be converted after completion; hydraulic disc brakes; optional floats, amphibious floats and skis.

POWER PLANT: One 73.5 kW (98.6 hp) Rotax 912 ULS driving a Hoffmann HO-V352F two-blade constant-speed propeller; options include 74.6 kW (100 hp) Teledyne Continental O-200, 93.2 kW (125 hp) Teledyne Continental IO-240B and 86.5 kW (116 hp) Textron Lycoming O-235. Fuel in two wing tanks, total capacity 102 litres (27.0 US gallons; 22.5 Imp gallons) of which 98 litres (26.0 US gallons; 21.7 Imp gallons) are usable.

ACCOMMODATION: Two, side by side, can have 0.24 m³ (8.5 cu ft) storage space behind seat. Optional drop tank style cargo pod. Clear Lexan doors can be opened in flight.

DIMENSIONS, EXTERNAL:

Wing span: normal	9.75 m (32 ft 0 in)
optional (Speedster and Sport)	8.84 m (29 ft 0 in)
Wing aspect ratio: normal	7.8
optional (Speedster and Sport)	7.0
Width, wings folded	2.44 m (8 ft 0 in)
Length: overall	5.99 m (19 ft 8 in)
wings folded: Series 7, Super Sport	6.88 m (22 ft 7 in)
Sport	6.71 m (22 ft 0 in)
Max width of fuselage	1.08 m (3 ft 6½ in)
Height overall: tailwheel	1.73 m (5 ft 8 in)
nosewheel	2.44 m (8 ft 0 in)
Tailplane span	2.41 m (7 ft 11 in)
Wheel track	2.03 m (6 ft 8 in)
Propeller diameter	1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin max width	1.09 m (3 ft 7 in)

AREAS:

Wings, gross (normal): Series 7, Super Sport	12.26 m² (132.0 sq ft)
Speedster and Sport	11.15 m² (120.0 sq ft)

WEIGHTS AND LOADINGS (Rotax 912 ULS):

Weight empty: Series 7	363 kg (800 lb)
Super Sport	340 kg (750 lb)
Sport	318 kg (700 lb)
Max baggage weight	68 kg (150 lb)
Max T-O weight: Series 7	703 kg (1,550 lb)
Super Sport	598 kg (1,320 lb)
Sport	558 kg (1,232 lb)
Max wing loading: Series 7	57.3 kg/m² (11.74 lb/sq ft)
Super Sport	48.8 kg/m² (10.00 lb/sq ft)
Sport	50.1 kg/m² (10.27 lb/sq ft)
Max power loading: Series 7	9.57 kg/kW (15.72 lb/hp)
Super Sport	8.15 kg/kW (13.39 lb/hp)
Sport	7.60 kg/kW (12.49 lb/hp)

PERFORMANCE (Super Sport, two crew, Rotax 912 ULS, unless stated otherwise):

Never-exceed speed (VNE)	121 kt (225 km/h; 140 mph)
Max level speed	111 kt (205 km/h; 125 mph)
Cruising speed	104 kt (193 km/h; 120 mph)
Stalling speed	36 kt (66 km/h; 41 mph)
Max rate of climb at S/L	396 m (1,300 ft)/min
Service ceiling	4,875 m (16,000 ft)
T-O run	89 m (290 ft)
Landing run	83 m (270 ft)
Range, with reserves:	
Series 7	664 n miles (1,231 km; 765 miles)
Super Sport	531 n miles (984 km; 612 miles)
Sport	573 n miles (1,062 km; 660 miles)
Endurance	5 h 24 min
g limits, pilot only	+3.8/−1.52

KOLB

Tel: (+44 17 24) 73 46 14
Web: www.sfmicrolights.com

The New Kolb Aircraft Company purchased design rights to Homer Kolb's series of light aircraft in 1999. FireStar continues to be marketed; the Laser was not put into production in kit built form, while in 2004, Kolb discontinued production of the Sling Shot but reinstated it in 2006. Kolbra launched at EAA convention, Oshkosh, July 2000. Total sales of all products exceed 3,000. In its 1,347 m² (14,500 sq ft) factory, Kolb has 18 employees and also produces assemblies for other kit manufacturers, including Rihn Aircraft. In 2005, the new generation Laser 2 was under development, intended for the LSA market.

In April 2002, Kolb announced that it had been appointed US assembly centre and distributor for the Ultravia Pelican Sport (which see) which is marketed as the Kolb Sport 600; on 28 June 2006 it acquired Ultravia's assets. A strategic alliance with Flyer Industria Aeronautica Ltda of Sao Paulo, Brazil, has seen work begin on the Kolb Flyer Super Sport, due to have been revealed at the Sebring Air show in January 2007.

In June 2005, company owner Norm Labhart was killed in the crash of a Kolb Mk III Xtra.

KOLB FIREFLY

TYPE: Single-seat ultralight kitbuilt.

PROGRAMME: Introduced at Sun 'n' Fun 1995.

CUSTOMERS: Over 100 flying by mid-2002 (latest information).

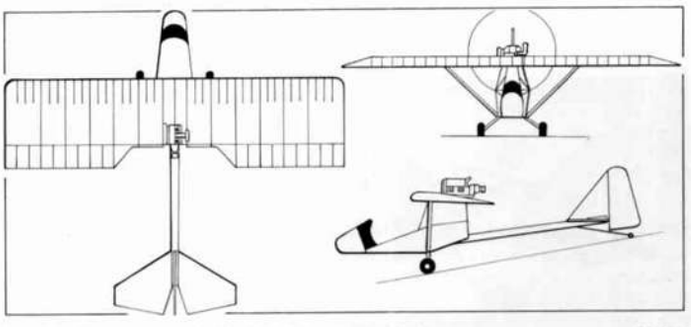
COSTS: Kit USD8,315 excluding engine. Quick-build option, extra USD2,895 (both 2006).

DESIGN FEATURES: High, constant-chord wing and boom-mounted empennage, based on FireStar; meets FAR Pt 103.7. Folding wings and tail for easy storage. Quoted build time 400 hours.

Modified NACA 4412 series aerofoil.

FLYING CONTROLS: Full-span flaperons.

Single-seat Kolb FireFly *(Paul Jackson)* 1040395



Kolb FireFly single-seat ultralight *(James Goulding)* 0045105

STRUCTURE: Welded 4130 chromoly steel fuselage cage; 127 mm (5 in) rear fuselage tube and wing spar. Glass fibre nosecone; aluminium tube, fabric-covered wings.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring cantilever mainwheel legs; speed fairings and brakes optional.

POWER PLANT: One 29.5 kW (39.6 hp) Rotax 447 UL two-cylinder piston engine with Rotax 2.58:1 reduction unit, driving WarpDrive three-blade ground adjustable wooden propeller (three-blade IVO propeller optional). Fuel capacity 18.9 litres (5.0 US gallons; 4.2 Imp gallons).

ACCOMMODATION: Optional full enclosure cockpit.

DIMENSIONS, EXTERNAL:

Wing span	6.71 m (22 ft 0 in)
Width, wings folded	1.75 m (5 ft 9 in)
Length overall	5.94 m (19 ft 6 in)

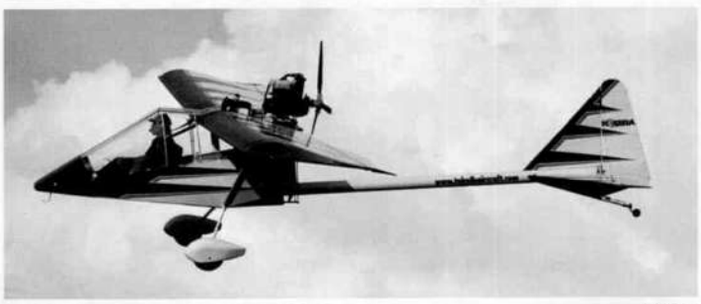
Never-exceed speed (VNE) ..... 69 kt (128 km/h; 80 mph)
Max operating speed ..... 60 kt (112 km/h; 70 mph)
Stalling speed ..... 24 kt (44 km/h; 27 mph) CAS
Max rate of climb at S/L ..... 305 m (1,000 ft)/min
T-O and landing run ..... 46 m (150 ft)
g limits ..... +4/–2

KOLB KOLBRA

TYPE: Tandem-seat ultralight kitbuilt.
PROGRAMME: First flown 7 May 2000 and publicly announced July 2000. Debut at Oshkosh that month. Prototype N718KA.
CURRENT VERSIONS: **Kolbra:** Ultralight trainer version, meeting FAR Pt 103.
King Kolbra: Experimental version, meeting FAR Pt 23.
CUSTOMERS: Over 50 kits sold and 12 aircraft flying by mid-2006, including 10 Kolbras.
COSTS: Kolbra kit USD12,179 excluding engine and covering (2006).
DESIGN FEATURES: Comprises Mark III wings and tail, FireStar nose and Sling Shot-style landing gear; resulting hybrid then optimised for training role. Quoted build time 450 hours.
FLYING CONTROLS: Manual. Full-span flaperons.
STRUCTURE: Welded 4130 chromoly steel fuselage cage; 152 mm (6 in) diameter rear fuselage tube and wing spar. Glass fibre nosecone; aluminium tube wings, fabric-covered.
LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring chromoly cantilever mainwheel legs with Matco wheels and high flotation or tundra tyres. Optional hydraulic disc brakes and wheel fairings.
POWER PLANT: One 47.8 kW (64.1 hp) Rotax 582 UL two-cylinder piston engine with 'B' type 2.58:1 ratio gearbox, or 'C' or 'E' type 3.47:1 ratio gearbox, driving a two- or three-blade IVO or three-blade Warp Drive propellers in Kolbra. One 59.6 kW (79.9 hp) Rotax 912 UL, 73.5 kW (98.6 hp) Rotax 912 ULS or 59.7 kW (80 hp) Jabiru 2200 can be fitted driving 1.83 m (6 ft 0 in) two- or 1.63 m (5 ft 4 in) three-blade IVO or Warp Drive propeller in King Kolbra.
Fuel capacity (both) 37.9 litres (10.0 US gallons; 8.3 Imp gallons).
SYSTEMS: Optional electric starter and dual Magnum strobes.
EQUIPMENT: Optional BRS ballistic parachute.
DIMENSIONS, EXTERNAL:
Wing span ..... 8.64 m (28 ft 4 in)
Length overall ..... 7.32 m (24 ft 0 in)
Height overall, three-blade propeller ..... 2.03 m (6 ft 8 in)
AREAS:
Wings, gross ..... 14.31 m² (154.0 sq ft)
WEIGHTS AND LOADINGS (A: Kolbra Trainer with Rotax 582, B: King Kolbra with Jabiru):
Weight empty: A ..... 225 kg (496 lb)
B ..... 249 kg (550 lb)
Max T-O weight: A, B ..... 454 kg (1,000 lb)
PERFORMANCE:
Never-exceed speed (VNE):
A, B ..... 95 kt (177 km/h; 110 mph)
Normal cruising speed: A ..... 65 kt (121 km/h; 75 mph)
B ..... 74 kt (137 km/h; 85 mph)
Stalling speed, flaps down: A ..... 31 kt (57 km/h; 35 mph)
B ..... 40 kt (73 km/h; 45 mph)
Max rate of climb at S/L: A, B ..... 335 m (1,100 ft)/min
T-O run: A, B ..... 46 m (150 ft)
Landing run: A, B ..... 76 m (250 ft)
Range: A ..... 160 n miles (296 km; 184 miles)
B ..... 250 n miles (463 km; 287 miles)
g limits ..... +4/–2



Kolb Kolbra tandem-seat ultralight *(Paul Jackson)* 1047411

KOLB MARK III XTRA

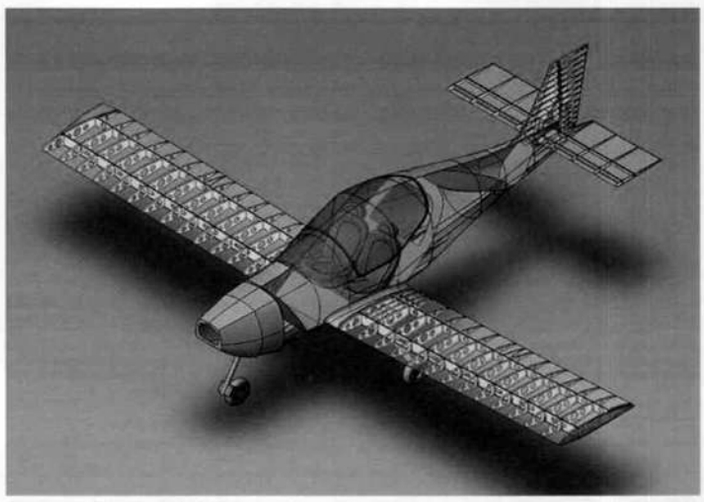
TYPE: Side-by-side ultralight kitbuilt.
PROGRAMME: Based on the TwinStar of 1984 and its 1990 Mark III Classic derivative with further aerodynamic alteration by Barnaby Wainfan.
CUSTOMERS: Over 50 kits sold by June 2004 (plus over 300 of Classic); by October 2005 42 Xtras and 304 Classics were flying.
COSTS: USD11,889 excluding engine, propeller, instruments, upholstery and covering (2006).
DESIGN FEATURES: Xtra incorporates aerodynamic refinements to fuselage, including chisel nose, devised by Barnaby Wainfan. Wings and tail fold for transportation and storage. Quoted build time 450 hours.
FLYING CONTROLS: Manual. Dual controls optional. Flaperons.
STRUCTURE: Welded 4130 chromoly steel fuselage cage. Glass fibre nosecone; fabric-covered aluminium tube wings.
LANDING GEAR: Tailwheel type; fixed. As Kolb Kolbra.
POWER PLANT: Choice of either 47.8 kW (64.1 hp) Rotax 582 or 59.6 kW (79.9 hp) Rotax 912 UL driving a three-blade propeller. Fuel capacity 37.9 litres (10.0 US gallons; 8.3 Imp gallons).

Kolb Mk III Xtra registered in UK *(Paul Jackson)* 1133243

ACCOMMODATION: Pilot and passenger in side-by-side seating. Doors open forward and are removable.
EQUIPMENT: Optional BRS ballistic parachute.
DIMENSIONS, EXTERNAL:
Wing span ..... 9.14 m (30 ft 0 in)
Length overall ..... 7.32 m (24 ft 0 in)
Height overall ..... 1.93 m (6 ft 4 in)
AREAS:
Wings, gross ..... 14.87 m² (160.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty ..... 204 kg (450 lb)
Max T-O weight ..... 453 kg (1,000 lb)
PERFORMANCE (A: Rotax 582; B: Rotax 912):
Never-exceed speed (VNE) ..... 86 kt (160 km/h; 100 mph)
Normal cruising speed: A ..... 70 kt (129 km/h; 80 mph)
B ..... 78 kt (145 km/h; 90 mph)
Stalling speed: A ..... 33 kt (62 km/h; 38 mph)
B ..... 36 kt (66 km/h; 41 mph)
Max rate of climb at S/L: A ..... 305 m (1,000 ft)/min
B ..... 396 m (1,300 ft)/min
T-O run: A, B ..... 46 m (150 ft)
Landing run: A ..... 61 m (200 ft)
B ..... 53 m (175 ft)
Range: A ..... 200 n miles (370 km; 230 miles)
g limits ..... +4/–2

KOLB LASER 2

TYPE: Side-by-side ultralight kitbuilt.
PROGRAMME: Announced 2005; loosely based around Kolb Laser of mid-1990s, development of which was abandoned in 2000. It is intended to be LSA compliant.
LANDING GEAR: Fixed tricycle layout.
All data are provisional.
DIMENSIONS, EXTERNAL:
Wing span ..... 9.14 m (30 ft 0 in)
Length overall ..... 6.71 m (22 ft 0 in)
Height overall ..... 2.03 m (6 ft 8 in)
DIMENSIONS, INTERNAL:
Cabin max width ..... 1.17 m (3 ft 10 in)
PERFORMANCE:
Max cruising speed ..... 120 kt (222 km/h; 138 mph)
Stalling speed: flaps up ..... 40 kt (75 km/h; 46 mph)
flaps down ..... 35 kt (65 km/h; 41 mph)
Max rate of climb at S/L ..... 335 m (1,100 ft)/min
Range ..... 600 n miles (1,111 km; 690 miles)

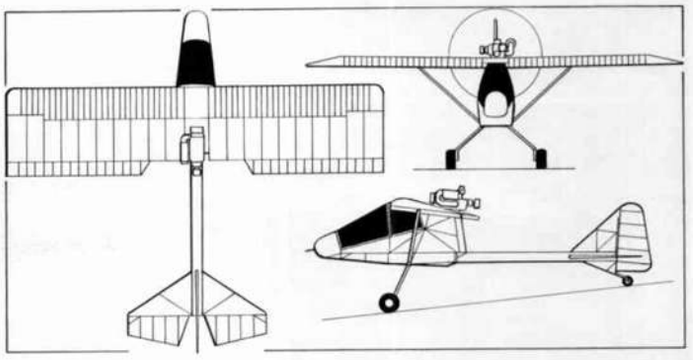


Cutaway drawing of Kolb Laser 2 1133313

KOLB SLING SHOT

TYPE: Tandem-seat ultralight.
PROGRAMME: First flown July 1996.
CUSTOMERS: Over 30 flying by November 2006.
COSTS: Kit USD12,339; quick-build option adds USD3,195 (2006).
DESIGN FEATURES: Generally as for FireFly. Quoted build time 400 hours.
FLYING CONTROLS: Full-span flaperons.
STRUCTURE: Welded 4130 chromoly steel fuselage cage; 127 mm (5 in) rear fuselage tube and wing spar. Glass fibre nosecone and steel-reinforced, aluminium tube, fabric-covered wings.
LANDING GEAR: Tailwheel type; fixed; hydraulic disc brakes optional.
POWER PLANT: One 47.8 kW (64.1 hp) Rotax 582 using 2.58:1 or 3.47:1 reduction unit driving IVO two- or three-blade wooden propeller (metal propeller optional); further options are

Kolb Sling Shot *(Paul Jackson)* 0089501



Kolb Sling Shot two-seat ultralight *(James Goulding)* 0045107

37.0 kW (49.6 hp) Rotax 503 with 2.58:1 reduction unit; 59.6 kW (79.9 hp) Rotax 912 and 59.7 kW (80 hp) Jabiru 2200. Fuel capacity 37.0 litres (10.0 US gallons; 8.3 Imp gallons). Electric starter optional.

EQUIPMENT: Optional ballistic parachute and strobe lighting.

DIMENSIONS, EXTERNAL:

Wing span	6.71 m (22 ft 0 in)
Width, wings folded	1.91 m (6 ft 3 in)
Length overall	5.79 m (19 ft 0 in)
Height overall	2.08 m (6 ft 10 in)

AREAS:

Wings, gross	10.22 m² (110.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	179 kg (395 lb)
Max T-O weight	385 kg (850 lb)

PERFORMANCE (Rotax 582 engine):

Max operating speed	100 kt (185 km/h; 115 mph)
Normal cruising speed	78 kt (145 km/h; 90 mph)
Stalling speed, power off	36 kt (66 km/h; 41 mph)
Max rate of climb at S/L	396 m (1,300 ft)/min
T-O and landing run	61 m (200 ft)
g limits	+4/–2

LANCAIR

LANCAIR INTERNATIONAL

2244 Airport Way, Redmond, Oregon 97756
Tel: (+1 541) 923 22 44
Fax: (+1 541) 923 22 55
e-mail: tech@lancair.com
Web: www.lancair.com

CEO: Joseph Bartels
CUSTOMER SUPPORT: Kim Lorentzen
GENERAL MANAGER: Tim Ong

More than 2,000 Lancairs (including out-of-production Model 235) sold to customers in 40 countries; around 800 are currently flying.

Lancair International is part of Lancair Group, which also owns Columbia Aircraft Manufacturing Company (known as Lancair Company until 2005). Both companies had been sold to Joseph Bartels on 30 January 2003 but remained at Redmond with same employees.

Lancair is also US distributor for HeliSport CH-7 Kompress light helicopter.

LANCAIR LANCAIR IV, IV-P and SENTRY

TYPE: Four-seat kitbuilt.

PROGRAMME: Kit deliveries began 1990. On 20 February 1991, prototype set NAA world speed record between San Francisco and Denver of 314.7 kt (583.2 km/h; 362.4 mph). First kit completed July 1991.

CURRENT VERSIONS: **Lancair IV:** Standard version.

Description mainly applies to Lancair IV.

Lancair IV-P: Pressurised version; first flight 1 November 1993. Provides 0.34 bar (5.0 lb/sq in) differential; equipment from Dukes Research of California.

Lancair Propjet IV-P: Powered by 560 kW (751 shp) Walter M 601E turboprop; prototype (N750TL, registered as a **IV-TP**) first flown 9 July 2001. Available as option to standard IV-P at cost of US$7,500; completed aircraft can be retrospectively converted; main structural alteration is repositioning of firewall.

On 11 September 2002, a Lancair IV-P Propjet flown by Wesley E Behel Jr claimed a Class C-1c Group 2 speed record over a 3 km course at restricted altitude by flying at 307 kt (568 km/h; 352 mph).

Lancair Sentry: Tandem-seat version based on Lancair IV and retaining wing and lower fuselage, with redesigned upper fuselage and vertical tail, latter of 10 per cent increased area. Prototype (N806EY) first flown 7 September 2002. Power supplied by same engine as Propjet IV-P, but with larger fuel tank. Intended for military training and civil air racing markets.

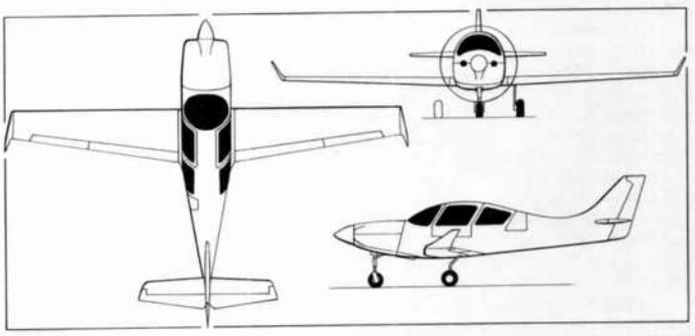
CUSTOMERS: Total of 580 kits sold; more than 270 flying by mid-2006, including 24 Propjets. The Mexican Navy assessing Sentry to augment its Aermacchi Redigo fleet.

COSTS: Fastbuild USD92,500. Pressurised version: Fastbuild USD117,500. Firewall fastbuild options and two-week builder workshop programmes available. Turbine IV-P USD129,500; Walter engine USD84,000. Sentry USD119,900 (2006).

DESIGN FEATURES: Conventional seating for four persons in airframe of new design, but following Lancair formula for high cruising speeds. Optional winglets. Quoted fastbuild construction time 1,000 hours.

FLYING CONTROLS: Conventional and manual. Fowler flaps. Sidestick controllers for both pilots. Trim tabs in port aileron and port elevator. Optional speed brakes.

Lancair IV with landing gear retracting *(Paul Jackson)* 1040400



Lancair IV four-seat light aircraft *(James Goulding)* 0106496

STRUCTURE: Carbon fibre/epoxy airframe, with Nomex honeycomb cores.

LANDING GEAR: Tricycle layout; retractable. Mainwheels 15×6.00-6; nosewheel is 5.00-5. Cleveland dual-piston caliper brakes. Hydraulic actuation.

POWER PLANT: One 261 kW (350 hp) Teledyne Continental TSIO-550-E1B,-E2B or -E3B twin-turbocharged flat-six engine driving a three-blade Hartzell HC-H3YF-1RF/F7693DF or HC-H3YF-2UF/FC7693DF constant-speed propeller or four-blade MTV-14D/195-30a constant-speed propeller. Walter M 601E turboprop can also be fitted; as described above, with three-blade Avia V-508E/2134 propeller or Hartzell HC-B3TW-3X/T8290NX three-blade propeller with Walter-installed governor. Two versions of PT-6A turboprop tested during 1999, but apparently not proceeded with. Lancair IV-P N540LM flew September 2000 as testbed for 485 kW (650 hp) Eagle 540 piston engine. Fuel in integral wing tanks; total standard usable capacity in IV-P 341 litres (90.0 US gallons; 74.9 Imp gallons); long-range tanks, total capacity 416 litres (110 US gallons; 91.6 Imp gallons); in Propjet IV-P 473 litres (125 US gallons; 104 Imp gallons), optional long-range tanks increasing this to 549 litres (145 US gallons; 121 Imp gallons). Oil capacity 11.4 litres (3.0 US gallons; 2.5 Imp gallons).

SYSTEMS: Thermoelectric de-icing system tested during 2001.

DIMENSIONS, EXTERNAL:

Wing span: plain tips	9.19 m (30 ft 2 in)
winglets	9.93 m (32 ft 7 in)
Wing chord: at root	1.18 m (3 ft 10½ in)
at tip	0.77 m (2 ft 6¼ in)
Wing aspect ratio	9.3
Width, wings removed	2.41 m (7 ft 11 in)
Length overall: IV-P	7.62 m (25 ft 0 in)
Propjet IV-P	7.92 m (26 ft 0 in)
Height overall	2.44 m (8 ft 0 in)
Tailplane span	3.35 m (11 ft 0 in)
Wheel track	2.13 m (7 ft 0 in)
Wheelbase	1.88 m (6 ft 2 in)
Propeller diameter	1.93 m (6 ft 4 in)
Propeller ground clearance	0.25 m (10 in)

DIMENSIONS, INTERNAL:

Cabin: Length	3.20 m (10 ft 6 in)
Max width	1.17 m (3 ft 10 in)
Max height	1.22 m (4 ft 0 in)

AREAS:

Wings, gross: plain tips	9.10 m² (98.0 sq ft)
winglets	10.03 m² (108.0 sq ft)
Winglets, total	1.30 m² (14.00 sq ft)
Flaps, total	1.12 m² (12.07 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: IV	907 kg (2,000 lb)
IV-P	998 kg (2,200 lb)
Propjet IV-P	1,043 kg (2,300 lb)
Max baggage weight	68 kg (150 lb)
Max T-O weight: IV, IV-P	1,610 kg (3,550 lb)
Propjet IV-P	1,723 kg (3,800 lb)

Turboprop Lancair Propjet IV-P *(Paul Jackson)* 1040401

Max landing weight	1,451 kg (3,200 lb)
Max wing loading: IV, IV-P	176.9 kg/m² (36.22 lb/sq ft)
Propjet IV-P	189.3 kg/m² (38.78 lb/sq ft)
Max power loading: IV-P	6.17 kg/kW (10.14 lb/hp)
Propjet IV-P	3.08 kg/kW (5.06 lb/shp)
PERFORMANCE:	
Never-exceed speed (VNE)	274 kt (507 km/h; 315 mph)
Cruising speed at 75% power at 7,315 m (24,000 ft):	
IV-P	291 kt (539 km/h; 335 mph)
Propjet IV-P	322 kt (595 km/h; 370 mph)
Stalling speed:	
IV-P standard wing	66 kt (121 km/h; 75 mph)
IV-P with winglets	64 kt (118 km/h; 73 mph)
Propjet IV-P	65 kt (120 km/h; 74 mph)
Max rate of climb at S/L: IV-P	792 m (2,600 ft)/min
Propjet IV-P	2,134 m (7,000 ft)/min
Service ceiling	8,840 m (29,000 ft)
T-O run: IV, IV-P	457 m (1,500 ft)
Propjet IV-P	366 m (1,200 ft)
T-O to 15 m (50 ft)	549 m (1,800 ft)
Landing run: IV, IV-P	518 m (1,700 ft)
Propjet IV-P	427 m (1,400 ft)
Range, with max fuel, no reserves:	
IV-P	1,347 n miles (2,494 km; 1,550 miles)
Propjet IV-P	1,216 n miles (2,253 km; 1,400 miles)
Endurance: IV-P	6 h 0 min
Propjet IV-P	4 h
g limits: IV-P	+4.4/–2.3 (allowable), +8/–4 ultimate
Propjet IV-P	+3.8/–1.9

LANCAIR LANCAIR ES and SUPER ES

TYPE: Four-seat kitbuilt.

PROGRAMME: Prototype unveiled at Oshkosh in 1992; flight testing completed 1995. Certification of Fastbuild kit granted early 1996 under simplified version of FAR Pt 23 governing light aircraft. Further improvements to Fastbuild kit introduced in early 2002.

CURRENT VERSIONS: **ES**: Baseline version.

ES-P: Pressurised version; introduced 3 March 2004; carbon fibre wings and fuselage.

Super ES: Higher-powered version.

Description applies mainly to this version.

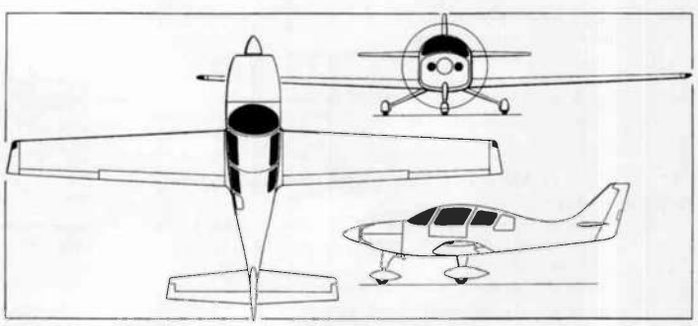
CUSTOMERS: Total of 254 kits sold by September 2006, of which 55 flying by that date. Production continues.

COSTS: Standard Fastbuild USD76,500; ES-P USD112,500. Estimated completion cost of ES USD138,000 (2006).

DESIGN FEATURES: Generally as for earlier Lancairs; hardtop cabin with paired side-by-side seats. Sidestick controls. Quoted Fastbuild kit construction time 1,800 hours; with new 2002 improvements reduced to quoted time of 700 hours.

FLYING CONTROLS: Generally as for Lancair IV.

Lancair ES four-seat kitbuilt *(Paul Jackson)* 1040397



Lancair Super ES general arrangement *(James Goulding)* 1158953

STRUCTURE: All-composites.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring cantilever mainwheel legs with wheel fairings. Nosewheel steerable through 90°. Main tyres 6.00–15×6; nose 5.00-5.

POWER PLANT: *ES:* One 149 kW (200 hp) Teledyne Continental IO-360-ES1B flat-six engine; three-blade MTV-12-D/188-17 constant-speed propeller.

Super ES: One 209 kW (280 hp) Teledyne Continental IO-550-G or 231 kW (310 hp) IO-550-N19B or -N20B with choice of three-blade Hartzell PHC-J3YF-1RF/F7693DF or

Lancair Super ES *(Paul Jackson)* 1040396

MTV-9-D/198-58 constant-speed propeller. Standard fuel capacity 360 litres (95.0 US gallons; 79.1 Imp gallons), in two wing tanks. Oil capacity 7.6 litres (2.0 US gallons; 1.7 Imp gallons).

ES-P: One 231 kW (310 hp) Teledyne Continental TSIO-550C or IO-550-N19B or -N20B and propellers as above. Fuel capacity 397 litres (105 US gallons; 87.4 Imp gallons).

ACCOMMODATION: Pilot and three passengers in two pairs of seats. Optional second door introduced 2004.

DIMENSIONS, EXTERNAL:

Wing span	10.82 m (35 ft 6 in)
Wing chord: at root	1.50 m (4 ft 11 in)
at tip	0.91 m (3 ft 0 in)
Wing aspect ratio	9.0
Width, wings removed	2.41 m (7 ft 11 in)
Length overall	7.62 m (25 ft 0 in)
Height overall	2.34 m (7 ft 8 in)
Tailplane span	4.01 m (13 ft 2 in)
Wheel track	2.36 m (7 ft 9 in)
Wheelbase	1.88 m (6 ft 2 in)
Propeller diameter	1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin: as Lancair IV	
Baggage hold volume	1.0 m^3 (35 cu ft)

AREAS:

Wings, gross	13.01 m^2 (140.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty:	
ES, Super ES with IO-550-G	862 kg (1,900 lb)
Super ES with IO-550N	907 kg (2,000 lb)
Max baggage weight	79 kg (175 lb)
Max T-O weight: Normal	1,451 kg (3,200 lb)
Utility	1,361 kg (3,000 lb)
ES-P	1,587 kg (3,500 lb)
Max wing loading: Normal	111.60 kg/m^2 (22.86 lb/sq ft)
Utility	104.6 kg/m^2 (21.43 lb/sq ft)
ES-P	122.1 kg/m^2 (25.00 lb/sq ft)
Max power loading: Normal:	
ES	9.74 kg/kW (16.00 lb/hp)
Super ES	6.96 kg/kW (11.43 lb/hp)
Utility: ES	9.13 kg/kW (15.00 lb/hp)
Super ES	6.52 kg/kW (10.71 lb/hp)
ES-P	6.87 kg/kW (11.29 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	220 kt (467 km/h; 253 mph)
Cruising speed at 75% power at FL100:	
ES	174 kt (332 km/h; 200 mph)

Super ES	6 h
g limits: Normal	+4.4/−2.3
Utility	+9.0/−4.5

LANCAIR LEGACY

TYPE: Side-by-side kitbuilt.

PROGRAMME: Prototype (N199L) first flown 16 July 1999, publicly displayed at Oshkosh 28 July 1999. First kitbuilt example (N540L) first flown 15 May 2001. Early aircraft were marked "Legacy 2000".

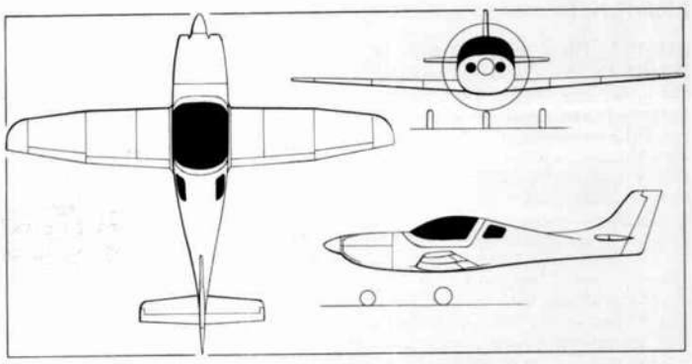
At Reno, Nevada, on 13 September 2002, a Legacy flown by Frederick E Schrameck claimed a Class C-1c Group 1 record for speed, over a 3 km course at restricted altitude, of 297 kt (550 km/h; 342 mph).

CURRENT VERSIONS: **Legacy:** Retractable landing gear version, *as described.*

Legacy FG: Fixed landing gear version introduced at Sun 'n' Fun 2003; as standard Legacy, but built mainly of glass fibre, rather than carbon fibre. Prototype N359L.

CUSTOMERS: Ten sold during Oshkosh debut; 16 by end of 1999, 150 by May 2001; by September 2002, over 100 had been delivered. Sales exceeded 290 kits by September 2006, by which time 113 aircraft were registered in the US; Legacy FG numbered eight at this time.

Lancair Legacy kitbuilt *(Paul Jackson)* 1040402



Lancair Legacy general arrangement *(James Goulding)* 0126950

COSTS: Legacy USD55,500; Legacy FG USD38,500. Estimated completion cost USD119,000 (Legacy) and USD91,000 (Legacy FG) (2006).

DESIGN FEATURES: Improved version of Lancair series of two-seat kitbuilts, offering increased cabin area, new wing and better performance; only part common to Lancair 360 is horizontal stabiliser. Quoted build time under 1,000 hours.

Streamlined design. Sweptforward wing trailing-edge, tapered tailplane and sweptback fin; low wing and mid-mounted horizontal tail.

Wing section NLF(1)-0215F; incidence 1°; dihedral 3°; twist 1° 30'; thickness/chord ratio 15 per cent.

FLYING CONTROLS: Conventional and manual. Fowler flaps. Aileron and elevator electric trim system included. Optional rudder trim and speedbrakes.

STRUCTURE: Carbon fibre airframe.

LANDING GEAR: Tricycle type; retractable. Mainwheels retract inwards; nosewheel rearwards. Hydraulic actuation. Cleveland 5.00-5 in wheels and brakes.

POWER PLANT: *Legacy:* Initially offered with one 149 kW (200 hp) Textron Lycoming IO-360-C1D6 flat-four driving a two-blade Hartzell or three-blade MTV-12B constant-speed propeller. Hartzell introduced 7694-4T two-blade propeller specifically for Legacy in February 2002. By 2003 this had been upgraded to a 231 kW (310 hp) Teledyne Continental IO-550-N driving a three-blade constant-speed propeller. Optional engines include 134 kW (180 hp) Lycoming IO-360-B1F and -M1A and 194 kW (260 hp) Lycoming IO-540. Standard fuel capacity 250 litres (66.0 US gallons; 55.0 Imp gallons).

Experimental example with supercharger displayed at Sun 'n' Fun 2002, offering 295 kt (547 km/h; 340 mph) at 4,570 m (15,000 ft).

Legacy FG: One 149 kW (200 hp) Textron Lycoming IO-360-A1B6 flat-four driving a Hartzell HC-F2YR-1FX/F7496X Scimitar two-blade propeller. Alternatively a 134kW (180 hp) Superior TNIO-360 Turbo Normalised XP-360 can be fitted. Standard fuel capacity 246 litres (65.0 US gallons; 54.1 Imp gallons).

ACCOMMODATION: Pilot and passenger in 25° reclined side-by-side seats beneath forward-hinging, one-piece canopy.

DIMENSIONS, EXTERNAL:

Wing span	7.77 m (25 ft 6 in)
Wing aspect ratio	7.9
Length overall	6.71 m (22 ft 0 in)
Height overall	2.54 m (8 ft 4 in)
Tailplane span	2.54 m (8 ft 4 in)
Wheelbase	1.37 m (4 ft 6 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.60 m (5 ft 3 in)
Max width	1.10 m (3 ft 7½ in)
Max height	1.17 m (3 ft 10 in)
Baggage area	1.49 m^3 (16.0 cu ft)

AREAS:

Wings, gross	7.66 m^2 (82.5 sq ft)

WEIGHTS AND LOADINGS (A: Legacy; B: Legacy FG):

Weight empty: A	680 kg (1,500 lb)
B	590 kg (1,300 lb)
Max baggage weight: A, B	41 kg (90 lb)
Max T-O weight:	
Normal category: A, B	997 kg (2,200 lb)
Utility category: A, B	861 kg (1,900 lb)
Max wing loading:	
Normal category: A, B	130.2 kg/m^2 (26.67 lb/sq ft)
Utility category: A, B	112.4 kg/m^2 (23.03 lb/sq ft)
Max power loading:	
Normal category: A	4.32 kg/kW (7.10 lb/hp)
B	6.70 kg/kW (11.00 lb/hp)
Utility category: A	3.73 kg/kW (6.13 lb/hp)
B	5.78 kg/kW (9.50 lb/hp)

PERFORMANCE (A: Legacy; B: Legacy FG):

Max cruising speed at FL180:	
A	261 kt (483 km/h; 300 mph)
Normal cruising speed: at FL80: A	240 kt (444 km/h; 276 mph)
B	182 kt (338 km/h; 210 mph)
at FL120: A	217 kt (402 km/h; 250 mph)
Stalling speed, flaps down: A	59 kt (108 km/h; 67 mph)
B	57 kt (105 km/h; 65 mph)
Max rate of climb at S/L: A	914 m (3,000 ft)/min
B	792 m (2,600 ft)/min
Service ceiling: A, B	5,485 m (18,000 ft)
T-O run: A	244 m (800 ft)
B	305 m (1,000 ft)
Landing run: A, B	275 m (900 ft)
Range with max fuel, no reserves:	
A	1,042 n miles (1,931 km; 1,200 miles)
B	1,173 n miles (2,172 km; 1,350 miles)
g limits: Normal: A, B	+3.8/−1.7
Utility: A, B	+4.4/−2.2

LEARJET

BOMBARDIER AEROSPACE LEARJET (SUBSIDIARY OF BOMBARDIER INC)

One Learjet Way, PO Box 7707, Wichita, Kansas 67277
Tel: (+1 316) 946 20 00
Fax: (+1 316) 946 22 20
VICE-PRESIDENT AND GENERAL MANAGER: Jim Ziegler
VICE-PRESIDENT, OPERATIONS: Ghislain Bourque
VICE-PRESIDENT, FINANCE: Chris Chrashaw
VICE-PRESIDENT, ENGINEERING: Keith Miller
DIRECTOR, PUBLIC RELATIONS: Dave Franson

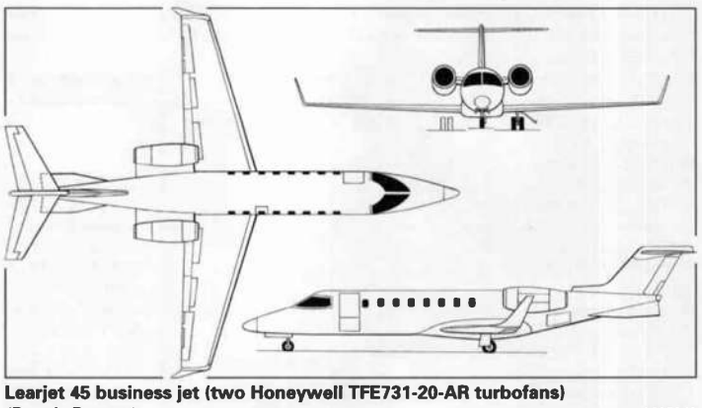
Company originally founded 1960 by Bill Lear Snr as Swiss American Aviation Corporation (SAAC); transferred to Kansas 1962 and renamed Lear Jet Corporation; prototype Lear Jet 23 (N801L) first flew 7 October 1963; Gates Rubber Company bought about 60 per cent share in 1967 and renamed it Gates Learjet Corporation, moving much of manufacturing to Tucson, Arizona; 64.8 per cent acquired by Integrated Acquisition Inc September 1987 and renamed Learjet Corporation; all manufacturing moved from Tucson to Wichita during 1988, leaving customer service completion and modification centre in Tucson.

Acquisition of Learjet by Canada's Bombardier announced April 1990 and concluded 22 June 1990 for US$75 million; name changed to Learjet Inc; Bombardier assumed responsibility for Learjet's line of credit; now part of Bombardier Inc. Learjet 40, 45 and 60 assembled in Wichita and flown to Tucson for completion and delivery.

More than 2,400 Learjets built, including 105 LJ23s, 259 LJ24s, 368 LJ25s, five LJ28s, four LJ29s, 225 LJ31s, 673 LJ35s, 62 LJ36s, 15 LJ40s, 256 LJ45s, 147 LJ55s and 281 LJ60s. 2,000th Learjet, Model 45 N158PH, delivered to Parker Hannifin Corporation in August 1999.

Learjet bought manufacturing and marketing rights and tooling of Aeronca thrust reversers, for application to Learjet and other aircraft, March 1989.

Total of 36 deliveries in 1994; 43 in 1995; 34 in 1996; 45 in 1997; 61 in 1998; 99 in 1999, 134 in 2000; 182 in 2001, 60 in 2002, 31 in 2003, 48 in 2004, 67 in 2005, and 55 in the first nine months of 2006.



Learjet 45 business jet (two Honeywell TFE731-20-AR turbofans) *(Dennis Punnett)* 0507269

LEARJET 45

TYPE: Business jet.

PROGRAMME: Design started September 1992; unveiled at NBAA Convention 20 September 1992. Other members of Bombardier group are involved; Learjet is responsible for project co-ordination, final assembly, testing and certification.

Engine testing began January 1995 with TFE731-20 installed in one nacelle of Learjet 31A testbed. Wing and fuselage of first production aircraft (N45XL) mated at Wichita 4 November 1994; first flight 7 October 1995; second prototype (N452LJ) first flown 6 April 1996, assigned to flutter testing; third aircraft (N453LJ), first flown 24 April 1996, assigned to avionics testing; fourth aircraft assigned to HIRF and lightning-strike testing, engine testing and fuel system operation; fifth aircraft fitted with production interior and assigned to function and reliability testing, including interior noise measurement.

Initial FAA certification granted 22 September 1997 followed by full approval in May 1998; JAA certification achieved 3 July 1998; FAA RVSM approval granted 25 July 2000. First customer delivery (N903HC) 28 July 1998, to Hytrol Conveyor of Jonesboro, Arkansas. First delivery to Europe (N459LJ) 8 September 1998 for Eifel Holdings Ltd of Jersey. More than 210 delivered by December 2002, including 2,000th Learjet, N158PH, to Parker Hannifin Corporation in August 1999. 100th Learjet 45 delivered in October 2000, initially as Bombardier company demonstrator, but destined for a Philippine operator; 200th delivered in April 2002. EASA approval to operate into London City Airport announced 11 October 2004. Civil Aviation Administration of China certification achieved 5 January 2005.

CURRENT VERSIONS: **Learjet 45:** Current version, *as described.*

Learjet 45^{XR}: Improved version offering enhanced payload/range capability. Announced at Farnborough International Air Show, 21 July 2002 and formally launched at NBAA Convention, Orlando, Florida, 10 September 2002; prototype demonstrated at NBAA Convention, Orlando, 7 to 9 October 2003 (N45XR c/n 232; FAA certification achieved 17 June 2004). Features include a 454 kg (1,000 lb) increase in maximum T-O weight; 15.57 kN (3,500 lb st) Honeywell TFE731-20-BR turbofans flat rated at ISA +25°C (104°F) with 0.67 kN (150 lb st) automatic power reserve at T-O; and redesigned cabin interior with seats that are 5 cm (2 in) wider and increase legroom by 15 cm (6 in), increased galley storage, LED lighting system that reduces heat emissions, improved access to systems behind the aft lavatory, and quick (20 min) removal of interior components. Learjet 45^{XR} maximum T-O weight increase and engine upgrade will be retrofittable to existing Learjet 45s.

CUSTOMERS: Deliveries began with seven in 1998, followed by 43 in 1999, 71 in 2000, 63 in 2001, 17 in 2003, 22 in 2004, 28 in 2005, and 25 in the first nine months of 2006. Major orders include 40, with 10 options, by JetSolutions for its FlexJets fractional ownership scheme. Customers include Singapore Airlines, which ordered two in April 2001, supplementing four aircraft delivered in 1998, Cathay Pacific Airways, which ordered two for crew training, operated by BAE Systems Flight Training (Australia) Pty Ltd at Adelaide, South Australia, of which the first was delivered on 24 August 2001 with the second delivered in 2002, Gold Air International which ordered five 45^{XR}s on 5 February 2003, Ocean Air Aero Taxi Ltd of Brazil, which ordered one 45^{XR} on 12 March 2003, Hughes Air Corporation of Calgary, Canada, which took delivery of a 45 on 10 July 2003, and the Irish Government, which took delivery of one in December 2003. Recent customers include the government of Sindh, Pakistan, which ordered one on 19 July 2006 for delivery in late 2006. The 300th delivery, to a US operator, took place on 15 June 2006.

COSTS: Learjet 45 USD9.848 million, Learjet 45^{XR} USD10.423 million (both 2002).

DESIGN FEATURES: Generally as Model 31; Learjet 45 designed to combine docile handling characteristics of 31/31A and 60 with exceptional fuel efficiency and good overall performance, and offer increased maintainability and reliability; new larger fuselage, wing and tail unit; increased head and shoulder room; wing carry-through spar recessed beneath floor; latest technology systems. Wing designed with NASA; winglets; sweepback 13° 25' at 25 per cent chord.

Performance enhancement package announced at the Paris Air Show in June 1999 includes maximum T-O weight increased by 136 kg (300 lb); reductions in T-O speeds; improved nosewheel steering and removal of 40 kt (74 km/h; 46 mph) steering system limitation; improved brake-by-wire effectiveness; reconfiguration of flap selector module to permit use of 8° flap setting, instead of 20°, for approach climb in the event of a go-around; improved climb performance with bleed air anti-icing systems operating; and updated Honeywell avionics software.

FLYING CONTROLS: Conventional and manual. Two spoiler/lift dumper panels in each wing; deflections 0°, 14° 30', 28° 30' and 60°. Horn-balanced elevators. Trim tab in rudder; two in each aileron. Flaps; deflections 0, 8, 20 and 40°.

Further improvements introduced in late 2000 include restyled seats providing greater freedom of movement in the cabin, a 10 to 12 dB reduction in cabin noise levels and improvements in the cabin air distribution system.

STRUCTURE: Unigraphics, CATIA and Computervision digital design systems adopted by Learjet, de Havilland of Canada and Shorts for engineering design. Short Brothers of UK manufactures the fuselage and de Havilland Canada the wings.

LANDING GEAR: Retractable tricycle type; semi-articulated trailing-link main legs retract inward, nose leg forward; twin-wheel main units, size 22×5.75-12 (10 ply) with brake-by-wire anti-skid carbon multidisc brakes; nosewheel has dual-chine tyre, size 18×4.4 (10 ply), with steer-by-wire.

POWER PLANT: Two Honeywell TFE731-20-1B turbofans (progressively 20R, 20AR and 20BR), each flat rated at 15.57 kN (3,500 lb st) at ISA +16°C (61° F), or 16.24 kN (3,650 lb st) with APR. Dee Howard target-type thrust reversers; digital electronic engine control. Fuel capacity 3,426 litres (905 US gallons; 754 Imp gallons) usable, plus 61 litres (16.0 US gallons; 13.4 Imp gallons) unusable. Oil capacity 7 litres (1.9 US gallons; 1.6 Imp gallons) per engine.

ACCOMMODATION: Two crew and up to nine passengers; eight-passenger cabin typically with PMP fully adjustable swivelling and reclining seats in double club arrangement, galley/refreshment centre and storage cabinet at front of cabin; lavatory, doubling as optional ninth seat, at rear; cabin pressurised, maximum differential 0.65 bar (9.43 lb/sq in); clamshell door with integral steps on port side at front of cabin, upper part serves as emergency exit; eight cabin windows per side, one forward of starboard wing leading-edge serving as emergency exit; externally accessible heated and lined baggage compartment, capacity 227 kg (500 lb), in aft fuselage accessed via door on port side beneath engine nacelle.

SYSTEMS: Honeywell air conditioning and pressurisation system, maximum differential 0.65 bar (9.4 lb/sq in), with dual independent digital control system and pneumatic redundancy; dual-zone automatic temperature control. Gaseous oxygen system, pressure 127.6 bar (1,850 lb/sq in). Main and auxiliary back-up hydraulic systems, pressure 207 bar (3,000 lb/sq in). Dual independent anti-icing and de-icing systems comprising bleed air anti-icing on wing and tailplane leading-edges and engine inlets, electric de-icing on pitot-static probes and electric anti-icing and de-fogging on windscreen. Honeywell RE 100 APU optional.

AVIONICS: Honeywell Primus 1000 integrated avionics system.

Comms: Dual Primus II nav/ident radios.

Radar: Primus 660 weather radar standard.

Learjet 45^{XR} twin-turbofan business jet *(Paul Jackson)* 1159778

Flight: Dual Primus II nav radios. Primus 1000 digital autopilot/flight director standard; Honeywell traffic-alert and collision-avoidance (TCAS II) optional.

Instrumentation: Primus 1000 with EICAS; dual PFDs and MFDs; flight and navigation information displayed on four 203 × 178 mm (8 × 7 in) EFIS screeens; heart of system is IC-600 integrated avionics computer, which combines EFIS and EICAS processor.

DIMENSIONS, EXTERNAL:

Wing span	14.56 m (47 ft 9¼ in)
Wing aspect ratio	7.3
Length overall	17.56 m (57 ft 7¼ in)
Max diameter of fuselage	1.75 m (5 ft 9 in)
Height overall	4.31 m (14 ft 1½ in)
Wheel track	2.84 m (9 ft 4 in)
Wheelbase	7.87 m (25 ft 9¾ in)

DIMENSIONS, INTERNAL:

Cabin:	
Length: incl flight deck	7.52 m (24 ft 8¼ in)
excl flight deck	6.02 m (19 ft 9 in)
Max width	1.55 m (5 ft 1 in)
Max height	1.50 m (4 ft 11 in)
Floor area, excl flight deck	5.76 m² (62.0 sq ft)
Volume, excl flight deck	11.6 m³ (410 cu ft)
Baggage compartment volume	1.4 m³ (50 cu ft)

AREAS:

Wings, basic	28.95 m² (311.6 sq ft)

WEIGHTS AND LOADINGS (A: Learjet 45, B: Learjet 45^{XR}):

Weight empty: A	5,797 kg (12,780 lb)
B	5,869 kg (12,939 lb)
Basic operating weight, typical: A, B	6,227 kg (13,729 lb)
Max baggage weight: cabin	77 kg (170 lb)
aft fuselage	227 kg (500 lb)
Max payload: A, B	1,030 kg (2,271 lb)
Payload with max fuel: A	435 kg (959 lb)
B	889 kg (1,959 lb)
Max fuel weight: A, B	2,750 kg (6,062 lb)
Fuel with max payload: A	2,154 kg (4,750 lb)
B	2,608 kg (5,750 lb)
Max T-O weight: A	9,298 kg (20,500 lb)
B	9,752 kg (21,500 lb)
Max landing weight: A, B	8,709 kg (19,200 lb)
Max ramp weight: A	9,412 kg (20,750 lb)
B	9,866 kg (21,750 lb)
Max zero-fuel weight: A, B	7,257 kg (16,000 lb)
Max wing loading: A	321.2 kg/m² (65.79 lb/sq ft)
B	336.9 kg/m² (69.00 lb/sq ft)
Max power loading: A	286 kg/kN (2.81 lb/lb st)
B	300 kg/kN (2.95 lb/lb st)

PERFORMANCE:

Max operating speed (VMO) to FL267	330 kt (611 km/h; 379 mph)
Max operating Mach No. (MMO) above FL267	0.81
High cruising speed: A, B	464 kt (859 km/h; 534 mph)
Normal cruising speed: A, B	457 kt (846 km/h; 526 mph)
Long-range cruising speed:	
A, B	430 kt (796 km/h; 495 mph)
Minimum control speed, landing, flaps 40°	97 kt (180 km/h; 112 mph) IAS
Time to FL430 after MTOW departure:	
A	23 min 6 s
B	24 min 54 s
Max certified altitude: A, B	15,545 m (51,000 ft)
T-O field length: A	1,326 m (4,350 ft)
B	1,542 m (5,060 ft)
FAR Pt 91 landing distance: A, B	811 m (2,660 ft)
Range with two crew and four passengers, NBAA IFR reserves:	
A, B	2,098 n miles (3,885 km; 2,414 miles)
Range with two crew and eight passengers, IFR reserves:	
B	2,007 n miles (3,717 km; 2,309 miles)

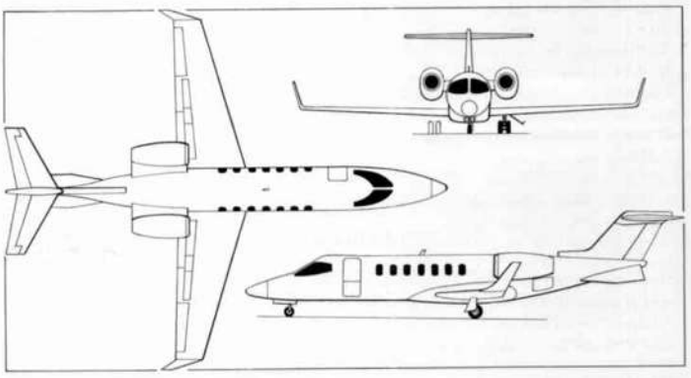
OPERATIONAL NOISE LEVELS:

T-O: A, B	74.5 EPNdB
Sideline: A	85.2 EPNdB
B	85.1 EPNdB
Approach: A, B	93.4 EPNdB

LEARJET 40

TYPE: Business jet.

PROGRAMME: Announced at Farnborough International Air Show 21 July 2002 as replacement for Learjet 31A. Prototype (N40LX, converted from Learjet 45 prototype) first flight 31 August 2002, immediately followed by first production aircraft (45-2001/N40LJ) 5 September. Public debut (N40LJ) and formal launch at NBAA Convention, Orlando, Florida, 10 September 2002; prototype and first production aircraft undertook flight test programme, leading to FAA certification (as variant of Learjet 45) on 11 July 2003, (and award of first airworthiness certificate to N40LJ on 18 September 2003), followed by EASA certification on 9 January 2004. Later that month, the first five aircraft were delivered, two to Bombardier's Flexjet fractional ownership programme, two to US operators, and one to a German customer.



Learjet 40 business jet *(James Goulding)* 0526908

CURRENT VERSIONS: **Learjet 40:** *As described.*

Learjet 40^{XR}: Improved version offering enhanced hot-and-high performance and faster climb. Announced 11 October 2004 at the NBAA Convention in Las Vegas. Features TFE731-20-BR turbofans flat-rated to ISA+25°C, increased maximum take-off weight of 9,525 kg (21,000 lb) and range with six passengers and max fuel of 1,781 n miles (3,298 km; 2,409 miles). FAA certification scheduled for fourth quarter 2005, with service entry shortly thereafter. Cost approximately USD400,000 more than a comparably equipped Learjet 40. Learjet 40s will be upgradable to Learjet40^{XR} standard through engine and airframe service bulletins. Service entry (no specific recertification required) January 2006.

CUSTOMERS: Total of 17 delivered in 2004, 21 in 2005, and 18 in the first nine months of 2006. Recent customers include Cirrus Aviation of Germany, which ordered two, of which the first entered service in February 2004.

COSTS: Approximately US$6.915 (2004).

DESIGN FEATURES: Generally as for Learjet 45, but fuselage shortened by 0.62 m (2 ft 0½ in) forward of wing, three cabin windows removed and capacity of fuselage fuel tank reduced.

POWER PLANT: As Learjet 45; TFE731-20AR-1B engines at outset, progressing to -20BR-1B. Fuel 3,036 litres (802 US gallons; 668 Imp gallons) usable, plus 61 litres (16.0 US gallons; 13.4 Imp gallons) unusable.

ACCOMMODATION: Two crew and up to seven passengers in forward club arrangement with galley on starboard side at front of cabin and full-width lavatory at rear. Compared with Learjet 45, cabin features redesigned seats that are 5 cm (2 in) wider and increase legroom by 15 cm (6 in), and an LED lighting system. The first 40 aircraft will feature an optional racing car-inspired red and black custom interior reflecting a sponsorship agreement between Bombardier and Indianapolis Motor Speedway Corporation.

DIMENSIONS, EXTERNAL:

Length overall	16.92 m (55 ft 6¼ in)
Wheelbase	7.86 m (25 ft 9½ in)

DIMENSIONS, INTERNAL:

Cabin: Length: incl flight deck	6.92 m (22 ft 8¼ in)
excl flight deck	5.40 m (17 ft 8½ in)
Floor area, excl flight deck	5.17 m² (55.7 sq ft)
Volume, excl flight deck	10.28 m³ (363 cu ft)

WEIGHTS AND LOADINGS:

Weight empty	5,779 kg (12,740 lb)
Basic operating weight	6,091 kg (13,428 lb)
Payload: max	1,167 kg (2,572 lb)
with max fuel	815 kg (1,797 lb)
Fuel weight: max	2,438 kg (5,375 lb)
with max payload	2,087 kg (4,600 lb)
Max ramp weight: initial	9,344 kg (20,600 lb)
SB 40-11-1	9,639 kg (21,250 lb)[1]
Max T-O weight: initial	9,230 kg (20,350 lb)
SB 40-11-1	9,525 kg (21,000 lb)[1]
Max landing weight	as Learjet 45
Max zero-fuel weight	as Learjet 45
Max wing loading	329.0 kg/m² (67.39 lb/sq ft)
Max power loading	293 kg/kN (2.88 lb/lb st)

[1] *Certified September 2004 (Service Bulletin)*

PERFORMANCE:

Max operating Mach No. (MMO)	as Learjet 45
Cruising speed: high	M0.81 (464 kt; 839 km/h; 534 mph)
normal	M0.79 (457 kt; 846 km/h; 526 mph)
long-range	M0.75 (480 kt; 796 km/h; 494 mph)
Minimum control speed	as Learjet 45

Learjet 40^{XR} company demonstrator *(Paul Jackson)* 1159781

LEARJET 60

TYPE: Business jet.

PROGRAMME: **Announced 3 October 1990 as Learjet 55C successor; first flight of proof-of-concept aircraft with one PW305 turbofan 18 October 1990; flight testing resumed 13 June 1991 with two PW305s and stretched fuselage (more than 300 hours flown by May 1992); first production aircraft first flight (N601LJ) 15 June 1992; certification awarded 15 January 1993; deliveries started immediately. Certified in Argentina, Austria, Bermuda, Brazil, Canada, China, Denmark, Germany, Grand Cayman, Italy, Luxembourg, Malaysia, Mexico, the Philippines, South Africa, Switzerland, Turkey, the United Arab Emirates and USA.**

Total fleet time stood at 775,000 flight hours, with a despatch reliability of 99.52 per cent in December 2004.

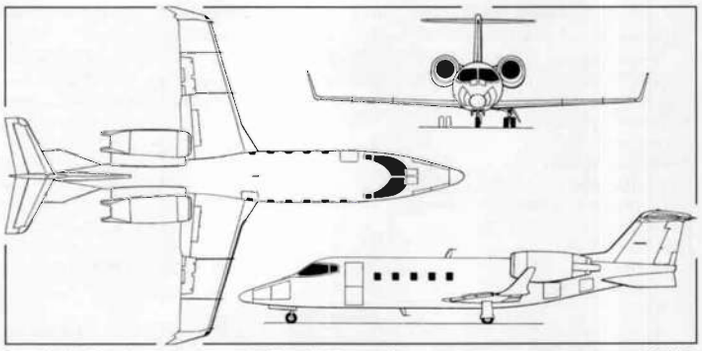
CURRENT VERSIONS: **Learjet 60**: Standard version, *as described*.

Learjet 60 Special Edition: Announced at the NBAA Convention in Las Vegas 11 October 2004, with deliveries commencing immediately from c/n 275, which was delivered to Unicorp National Development of Orlando, Florida. Former Learjet 60 optional items fitted as standard, including second ADF; second Honeywell KHF-950 long-range com; dual Rockwell Collins VHF-422C com; upgraded radio altimeter; EGPWS with windshear protection; TCAS II; Collins TWR-850 weather radar with turbulence detection; ice/lightning detection systems; ELT; upgraded CVR; digital FDR; APU; emergency lighting; tail illumination package; pulsating recognition and landing lights; lighted control wheel chart holders; plated and wood veneer cabin trim; slimline tables; left- and right-hand pyramid cabinets; premium carpets; lavatory with belted seat and extended baggage space; microwave oven; dual hot liquid containers; 110V/60HZ AC power outlets; dual channel Iridium satellite telephone with wireless handsets; forward and aft video monitors; CD player with 10-disk changer, DVD video system, and Airshow 400 in-flight entertainment system.

Learjet 60^{XR}: Announced at NBAA Convention, Orlando, Florida, 9 November 2005. First flight (N50163, c/n 60-294) 3 April 2006. Avionics fit certified by STC on 28 September 2006. FAA certification expected in fourth quarter 2006, with service entry in first quarter 2007. Launch customer Bombardier Flexjet has ordered 15.

New avionics suite features Rockwell Collins Pro Line 21 system, comprising four-screen LCD adaptive 203 x 254 mm (8 x 10 in) EFIS, dual AHRS, digitised EIS, IFIS with electronic charts, WXR-840 weather radar, dual nav/com, dual FMS-5000 FMS, TCAS II, EGPWS with windshear alert and ELT. Avionics options include XM graphic weather display, 3-D FMS maps, and second file server. Five standard cabin configurations include six-passenger executive configuration with two facing seats on starboard side of forward cabin with club four arrangement to rear, with additional belted lavatory seat in aft section; three seven-seat executive configurations with three-seat sideways-facing 9*g* divan on port or starboard side of the cabin and combinations of club-two or club-four seating, with additional belted lavatory seat in aft section; and high density arrangement seating eight in main cabin with two facing seats and sideways-facing two-seat 9*g* divan on starboard side of forward cabin with club-four arrangement to rear, and additional belted lavatory seat in aft section.

Other interior features include redesigned Audio International cabin electronic system with touch-screens for each passenger; audio-visual system with XM satellite radio and ports for DVD and MP3 players, iPods and laptop computers; advanced acoustic dampening and insulation; new LED lighting system; low profile galley with increased storage capacity and work surface area; and additional window in lavatory area. Cabin options include



Learjet 60 business transport *(Dennis Punnett)* 0507270

Airshow 410 or Airshow 4000 network in-flight entertainment system packages; Iridium satellite telephone; forward and aft video monitors with single or dual DVD players, XM radio, warming oven or microwave, dual hot liquid containers; and crystal, china and flatware galley cabinet inserts.

CUSTOMERS: Total of 281 built by October 2006, including 22 delivered in 1994, 24 in 1995, 23 in 1996, 24 in 1997, 32 in 1998, 32 in 1999, 35 in 2000, 29 in 2001, 18 in 2002, 12 in 2003, nine in 2004, 18 in 2005, and 12 in the first nine months of 2006. Recent customers include Government of Macedonia, which ordered one Special Edition in January 2005, and Nova Holding of Macedonia, which ordered two 60^{XRS} on 18 July 2006. The 300th Learjet 60 series aircraft was delivered 15 June 2006, to a Finnish operator.

COSTS: USD12.5 million (2004).

DESIGN FEATURES: Rear-engined business jet; low wing with leading-edge sweepback; T tail and two large strakes below rear fuselage.

Original Learjet 31 combined fuselage/cabin and power plant of Learjet 35A/36A with wing of Learjet 55; delta fins added to eliminate Dutch roll, stabilise aircraft at high airspeeds, induce docile stall and reduce approach speeds and field lengths; stick pusher/puller and dual yaw dampers no longer required; stick shaker and single yaw damper retained for comfort.

FLYING CONTROLS: Conventional and manual. Ailerons have brush seals and geared tabs; electrically actuated trim tab in port aileron. Electrically actuated tailplane incidence control has separate motors for pilot and co-pilot and single-fault survival protection; aircraft can be manually controlled following tailplane runaway and landed with reduced flap. Rudder has electric trim tab; automatic electric rudder assist servo operates automatically if rudder pedal loads exceed 22.6 kg (50 lb). Full-chord fences bracket the ailerons. Single spoiler panel in each wing used as airbrake and lift dumper. Hydraulically actuated flaps extend to 40°. Optional drag parachute mounted on inside of baggage hatch under tail.

LANDING GEAR: Retractable tricycle type, hydraulically actuated and electrically controlled; single wheel on nose unit and twin wheels on main units; nosewheel retracts forward, mainwheels inward; steerable nosewheel (±60°). Mainwheel tyre size 17.5×5.75–8, pressure 14.76 bar (214 lb/sq in); nosewheel tyre size 18×4.4 (10 ply), pressure 7.24 bar (105 lb/sq in).

POWER PLANT: Two Pratt & Whitney Canada PW305A turbofans with FADEC, each flat rated at 20.46 kN (4,600 lb st) at up to 27°C (80°F). Fuel details under Weights and Loadings below. Single-point pressure refuelling system standard; gravity-feed fuel filler ports in each wing.

ACCOMMODATION: Two crew and up to 10 passengers; gross pressure cabin volume 15.57 m^3 (550 cu ft); compared with 55C, main cabin is 0.71 m (2 ft 4 in) longer and rear baggage hold section 0.38 m (1 ft 3 in) longer; full-across aft lavatory has flat floor, large mirror, wardrobe and external servicing; total 1.67 m^3 (59 cu ft) baggage capacity divided between an externally accessible hold (larger than that of Learjet 55C) and internal pressurised,

Learjet 60 operated by the manufacturer *(Paul Jackson)* 1159782

Maiden flight of Learjet 60^{XR} on 3 April 2006 1159801

heated compartment that is accessible in flight; galley cabinet has warming oven, cold liquid dispensers, ice compartment and storage for dinnerware; entertainment centre; 10-way adjusting seating is standard. New interior introduced in 1998 (from c/n 115), featuring redesigned passenger service unit, wider headliner, revised beverage cabinet, optional television monitor and wider choice of upholstery fabrics and leather trim.

SYSTEMS: Environmental control system uses engine bleed air for air conditioning and pressurisation, maximum differential 0.65 bar (9.4 lb/sq in), maintaining sea level cabin altitude to 7,835 m (25,700 ft) and 2,440 m (8,000 ft) cabin altitude to 15,545 m (51,000 ft). Hydraulic system, pressure 103.4 bar (1,500 lb/sq in), provided by two engine-driven, variable volume pumps, with electrically driven auxiliary pump. Electrical system comprises two 30 V DC 400 A engine-driven starter-generators and two 24 V DC batteries. Oxygen system, capacity 2.18 m^3 (77.0 cu ft), with demand-type masks for crew and drop-down constant-flow masks for passengers. Bleed air anti-icing on wing leading-edges, engine inlets, engine spinners and inlet guide vanes, electric anti-icing on windscreen. Hamilton Sundstrand T-20G-10C3A APU.

AVIONICS: Standard fully integrated all-digital Rockwell Collins Pro Line 4.

Radar: Rockwell Collins WXR840 colour weather radar.

Flight: Four-tube (152 × 178 mm; 6 × 7 in) EFIS, dual digital air data computers, dual navigation and communications radios, UNS-1C FMS, dual automatic AHRS, Rockwell Collins AMS-850 avionics management system, advanced autopilot and long-range navaid as standard; circuit breaker and control panels redistributed, as in Learjet 31A.

DIMENSIONS, EXTERNAL:

Wing span	13.34 m (43 ft 9 in)

LEGEND

LEGEND AIRCRAFT INC

PO Box 11, 1015 Airport Drive, Winnsboro, Louisiana 71295
Tel: (+1 318) 435 44 01
e-mail: legendac@bellsouth.net
Web: www.turbinelegend.com
PRESIDENT: Lanny Rundell

Lanny Rundell of Southern Air (and formerly with Stoddard Hamilton) purchased the assets of Performance Aircraft in February 2002.

LEGEND LEGEND and LEGEND TURBINE LEGEND

TYPE: Tandem-seat sportplane kitbuilt; tandem-seat turboprop sportplane kitbuilt.

PROGRAMME: Prototype (N620L) first flown by Performance Aircraft Inc in 1996 with Chevrolet V-8 engine; subsequently converted to Turbine Legend with Walter M 601E turboprop; public debut in turboprop form at EAA Sun 'n' Fun at Lakeland, Florida, in April 1999.

CURRENT VERSIONS: **Legend:** Piston-engined version, powered by one 429 kW (575 hp) liquid-cooled Chevrolet V-8 driving a three-blade Hartzell propeller via a Geschwender 2:1 reduction gearbox. Wing span 8.22 m (27 ft 0 in). Ventral (P-51-type) air scoop.

Turbine Legend: Turboprop version, *as described.*

JC 100: Designation of Turbine Legend built in 2000 by Toys 4 Boys at Deland, Florida.

CUSTOMERS: By mid-2006, more than 39 kits had been sold and at least 24 aircraft were flying, including one in Canada.

COSTS: Fast-build kit, less engine USD119,700 (2005). Engine (new) USD104,000 (1999).

DESIGN FEATURES: Highly streamlined, low-wing monoplane with sweptback tail surfaces and steeply raked windscreen. Tapered wings and mid-mounted tailplane. Optional winglets. Quoted build time: 2,500 hours, standard; 1,900 hours fast-build. Roll rate 190°/s.

Legend Turbine Legend turboprop kitbuilt *(Paul Jackson)* 1040411

FLYING CONTROLS: Conventional and mechanical: horn-balanced elevators and rudder; three-axis electric trim; electrically actuated slotted flaps, maximum deflection 38°.

STRUCTURE: Mostly CFRP.

LANDING GEAR: Retractable tricycle type; mainwheel size 15×6.0-6, nosewheel size 5.00×5; mainwheels retract inwards, nosewheel rearwards; steering by differential braking; dual disc brakes standard.

POWER PLANT: One Walter M 601 turboprop, rated at 540 kW (724 shp) for take-off and 490 kW (657 shp) maximum continuous, driving an Avia V 508E/84 three-blade, constant-speed, reversible-pitch feathering propeller. Fuel contained in integral tanks in outer wings 379 litres (100 US gallons; 83.3 Imp gallons); optional tip tanks, combined capacity 95 litres (25.0 US gallons; 20.8 Imp gallons); three optional extra tanks in fuselage, total capacity 167 litres (44.0 US gallons; 36.7 Imp gallons).

ACCOMMODATION: Two persons in tandem under rear-hinged, upward-opening canopy with fixed single-piece windscreen. Dual controls standard.

DIMENSIONS, EXTERNAL:

Wing span	8.97 m (29 ft 5 in)
Wing aspect ratio	8.6
Length overall	7.84 m (25 ft 8½ in)
Height overall	2.93 m (9 ft 7¼ in)
Propeller diameter	2.13 m (7 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin max width	0.75 m (2 ft 5½ in)

AREAS:

Wings, gross	9.38 m^2 (101.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	930 kg (2,050 lb)
Max baggage weight	54 kg (120 lb)
Max T-O weight	1,496 kg (3,300 lb)
Max wing loading	159.5 kg/m^2 (32.67 lb/sq ft)
Max power loading	3.06 kg/kW (5.02 lb/shp)

PERFORMANCE:

Never-exceed speed (VNE)	347 kt (643 km/h; 400 mph)
Max level speed at S/L	274 kt (507 km/h; 315 mph)
Max cruising speed at 7,620 m (25,000 ft)	290 kt (537 km/h; 334 mph)
Econ cruising speed at 7,620 m (25,000 ft)	245 kt (454 km/h; 282 mph)
Manoeuvring speed	261 kt (482 km/h; 300 mph)
Stalling speed: flaps up	66 kt (123 km/h; 76 mph)
landing configuration	58 kt (107 km/h; 66 mph)
Max rate of climb at S/L	1,981 m (6,500 ft)/min
Service ceiling	10,670 m (35,000 ft)
T-O and landing run	244 m (800 ft)
Range: with standard fuel and reserves:	
at max cruising speed	821 n miles (1,520 km; 944 miles)
at econ cruising speed	993 n miles (1,839 km; 1,142 miles)
with optional fuel	1,207 n miles (2,237 km; 1,390 miles)
g limits: normal	+6/–4
ultimate	+9/–6

LEZA

LEZA AIRCAM CORPORATION

1 Leza Drive, Sebring, Florida 33870
Tel: (+1 863) 655 42 42
Fax: (+1 863) 655 03 10
e-mail: aircam@ct.net
Web: www.leza-aircam.com
CEO AND PRESIDENT: Antonio Leza

Leza AirCam has a 4,090 m² (44,000 sq ft) factory at Sebring Airport and also produces the former Maxair Drifter and Super Drifter series of single- and two-seat ultralights.

In 2004, company announced that it was planning a 3,440 m² (37,000 sq ft) extension to its factory.

In June 2006, Leza sold the design rights, tooling and inventory for the two types to Lockwood Aviation.

LIBERTY

LIBERTY AEROSPACE INC

1383 General Aviation Drive, Melbourne, Florida 32935
Tel: (+1 321) 752 03 32
Fax: (+1 321) 752 03 77
e-mail: sales@libertyaircraft.com
Web: www:libertyaircraft.com
PRESIDENT AND CEO: Anthony J P Tiarks
HEAD OF EUROPEAN OPERATIONS: Ivan Shaw
PUBLIC RELATIONS AND MARKETING: Russell Greenberg

Liberty was established specifically to produce the XL-2 lightplane. It received refinancing when KFH Bahrain acquired 75 per cent of the stock of Liberty's parent company in October 2004. The XL-2 was certified on 19 February 2004 and production deliveries began in 2005.

LIBERTY XL-2

TYPE: Two-seat lightplane.

PROGRAMME: Design, by the team that created the Europa kitbuilt (which see in UK section), began in 1997. Announced 26 May 2000; mockup displayed at NBAA Convention in New Orleans and AOPA-USA Convention in Long Beach during October 2000, when Scaled Technology Works (STW) announced as manufacturing partner; first three aircraft registered as built by STW Composites, but partnership ended in 2003 when STW closed.

'Official' first flight of prototype (N202XL) 2 April 2001, followed by public debut at EAA Sun 'n' Fun at Lakeland, Florida later that month; second prototype and sales demonstrator (N203XL) appeared at 2002 Sun 'n' Fun fitted with a redesigned engine cowling; production conforming prototype (N204XL) entered the flight test programme in September 2003; FAA FAR Pt 23 certification for day VFR achieved 19 February 2004; IFR certification 3 August 2005; Total of 16 aircraft manufactured by April 2006; initial delivery of an IFR-certified aircraft took place on 1 November 2005. Australian certification granted 1 December 2006.

CURRENT VERSIONS: **XL-2:** Standard version, adoption of Teledyne Continental IOF-240 engine announced 21 July 2001. *As described.*

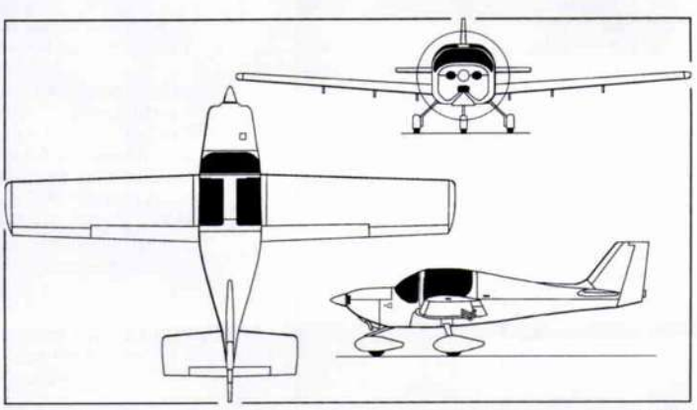
XL-2R: Proposed future version with Rotax 912 S flat-four.

XL-2 Surveillance Platform: Version under consideration in early 2004 would feature FLIR Systems Ultra 8500 FW long-range FLIR sensor; endurance 5 hours; estimated cost USD400,000.

CUSTOMERS: Launch customer Civil Flying School at Moorabbin Airport, Melbourne, Australia, ordered two in July 2000; Bill Crokaris of Melbourne has ordered one. First 50 aircraft (for Founders Club members, at special price of USD85,000); 60 sold by April 2004. Recent customers include Phases of Flight of Tamiami, Florida, and Ormond Beach Aviation Inc of Florida, which in February 2006 readed agreement with LAFT LLC of Helena, Montana for lease of up to 35 for its training fleet of which the first was delivered on 12 May 2006; LAFT LLC subsequently committed to options for a further 65 XL-2S. Del Sol Aviation of Albuquerque, New Mexico, which had ordered 13 for delivery over a three-year period, of which the first was delivered in July 2006. First delivery to a retail customer took place on 6 December 2005 to Thomas Sams of South Lake, Texas.

COSTS: Basic USD139,500 with Continental engine (2005). Estimated direct operating cost USD39.09 per hour.

Production Liberty XL-2 *(Paul Jackson)* 1159736



Liberty XL-2 two-seat lightplane *(Paul Jackson)* 1164882

DESIGN FEATURES: Based on Europa, but with modifications to optimise airframe for mass production; cabin is 10 cm (4 in) wider than that of Europa. Design goals included low price, efficient high-speed cruise with STOL performance, economy and ease of maintenance, advanced structural materials offering strength and durability, excellent handling with positive stability, and ability to store at home on a purpose-designed transporter.

FLYING CONTROLS: Conventional and manual, via pushrods. Dual controls and adjustable rudder pedals standard. All-moving mass-balanced tailplane with electrically actuated 1.3:1 geared anti-balance/trim tab maximum deflection +13/5°; mass-balanced ailerons with differential action, maximum deflection +25/−19°; electrically actuated slotted flaps occupying 70 per cent span and 30 per cent chord, maximum deflection 30°; rudder maximum deflection ±30°.

STRUCTURE: Welded 4130 steel tube forward fuselage and centre-section to carry engine, landing gear and wing attachment loads, with modular carbon fibre skin; flying surfaces comprise riveted subassembly with bonded aluminium skin; single-spar wings have optional folding facility, quick connect attachment to centre-section and self-connecting flap and aileron controls; de-riggable tailplane optional. Matrix Composites of Rockledge, Florida, manufactures composites fuselage components, and IAR SA of Romania supplies wing, tailplane and rudder; final assembly by Liberty at Melbourne, Florida.

LANDING GEAR: Non-retractable tricycle type; aluminium main legs; tubular steel nose leg; steering via castoring nosewheel and differential brakes. Cleveland wheels and hydraulic disc brakes. Tyre size 5.00×5.

POWER PLANT: One 93 kW (125 hp) Teledyne Continental IOF-240-B flat-four with Aerosance PowerLink FADEC driving a Sensenich W69EK7-63G two-blade, fixed-pitch, metal propeller, in standard version. Alternatively, for later certification, one 73.5 kW (98.6 hp) Rotax 912 S flat-four, driving a purpose-designed two-blade, fixed-pitch carbon fibre Dowty propeller via 2.43:1 reduction gearing. Fuel capacity 112 litres (29.5 US gallons; 24.6 Imp gallons) of which 106 litres (28 US gallons; 23.3 gallons) are usable.

ACCOMMODATION: Two persons, side by side with four-point safety harnesses; baggage compartment, with cargo net, behind seats, maximum capacity 45 kg (100 lb). Upward-hinged door on port side. Cabin heating.

SYSTEMS: Electrical system powered by 14 V 60 A engine-driven alternator. 14 V battery and 12 V auxiliary power outlet standard.

AVIONICS: Optional Garmin packages.

Basic IFR: Garmin GNC 430 GPS/com/nav/map/GS, GI 106A indicator, GMA 340 audio panel and GTX 327 transponder/altitude encoder.

Expanded IFR: As Basic IFR with addition of SL 30 com/nav/GS and second GI 106A indicator.

Deluxe IFR: As Expanded IFR but with addition of second GNS 430.

GNS 530 GPS/com/nav/map/GS and GTX 330 transponder can replace GNS 430 and GTX 327 in all packages.

Instrumentation: Vision Microsystems VM-1000 digital engine information display. Sensitive altimeter, magnetic compass, airspeed indicator, vertical speed indicator, electric tachometer, trim position indicator, flap position indicator, electric stall warning, annunciator panel, fuel contents gauge, fuel pressure gauge, manifold pressure gauge, percentage power gauge, OAT gauge, CHT gauge, EGT gauge, oil temperature and pressure gauges, voltmeter, ammeter and quartz clock.

EQUIPMENT: Standard equipment includes tinted windows, windscreen defrost, cloth upholstery, map/storage pockets, map shelf, baggage restraint net, static port and alternate static port, wingtip navigation lights, anti-collision beacon, tiedown points, fuel quick-drain and white paint finish. Optional equipment includes electric gyro package comprising artificial horizon, direction indicator and turn co-ordinator; pitot heat; speed kit comprising nose- and mainwheel fairings and flap hinge fairings; landing/taxi/instrument/ cabin flights; deluxe leather interior; pearlescent exterior paint; choice of two exterior decal designs; and towbar.

DIMENSIONS, EXTERNAL:

Wing span	8.53 m (28 ft 0 in)
Wing aspect ratio	7.0
Length overall	6.25 m (20 ft 6 in)
Height overall	2.24 m (7 ft 4 in)
Propeller diameter	1.75m (5 ft 9in)

DIMENSIONS, INTERNAL:

Cabin max width	1.22 m (4 ft 0 in)
Baggage volume	0.68 m³ (24.0 cu ft)

AREAS:

Wings, gross	11.33 m² (122.0 sq ft)

WEIGHTS AND LOADINGS (Continental engine):

Weight empty, VFR	500 kg (1,103 lb)
Baggage capacity	45 kg (100 lb)
Max T-O weight	750 kg (1,653 lb)
Max wing loading	72.1 kg/m² (14.76 lb/sq ft)
Max power loading	8.05 kg/kW (13.22 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	162 kt (300 km/h; 186 mph)
Max cruising speed	132 kt (244 km/h; 152 mph)

Max level speed	125 kt (232 km/h; 144 mph)
Manoeuvring speed	102 kt (189 km/h; 117 mph)
Stalling speed: flaps up	52 kt (96 km/h; 60 mph)
flaps down	45 kt (83 km/h; 52 mph)
Max rate of climb at S/L	268 m (879 ft)/min
T-O run	229 m (750 ft)
T-O to 15 m (50 ft)	381 m (1,250 ft)
Landing run	229 m (750 ft)
Range with max fuel and 55% power with reserves	500 n miles (926 km; 575 miles)
g limits	+3.8/−1.9

LITTLE WING

LITTLE WING AUTOGYROS INC

746 Highway 89 North, Mayflower, Arkansas 72106
Tel: (+1 501) 470 74 44
Fax: (+1 501) 470 74 87
e-mail: ron@littlewingautogyro.com
Web: www.littlewingautogyro.com
PRESIDENT: Ronald Herron

Founded in 1995, company is developing a series of autogyros; the original Roto-Pup was to be joined by a new design, the tricycle landing gear, open cockpit **Skylark;** this is in abeyance while company works on other projects, including a radial-engined aircraft. Workforce one; manufacturing area 55 m^2 (600 sq ft).

By April 2005, the Little Wing LW-5 held 19 world records in various classes, including the following in Class E-3a: East to West Coast USA; West to East Coast USA; Round trip US transcontinental; distance without landing (573 n miles; 1,061 km; 659 miles); time to 6,000 m (19,685 ft) (24 min 28 s); and altitude (8,049 m; 26,408 ft).

LITTLE WING ROTO-PUP

TYPE: Single-seat autogyro ultralight kitbuilt; two-seat autogyro ultralight kitbuilt.

PROGRAMME: Initial design work began in 1980 and construction of LW-1 prototype (N45LW), using a Piper PA-11 fuselage and Continental O-200 engine, started December 1990; this made its first flight 21 October 1994. LW-2 (N46LW), scaled-down version of LW-1, first flew April 1995 as legal ultralight at 115 kg (254 lb) using McCulloch O-100 engine; both LW-1 and LW-2 controlled in pitch by standard elevator control and laterally by tilting of rotor head; LW-3 (N45LW), controlled by full universal tilting of rotor head, first flew 22 September 1996 using TEC 2180 UW motorcar engine. Certified by FAA in Experimental category. In 2003, LW-3 was fitted with a seven-cylinder radial engine which has increased empty weight by 45 kg (100 lb); testing continues; **LW-4** and **LW-5** added to range in 2001.

CURRENT VERSIONS: **LW-2:** Controlled by elevator, rudder and laterally tilting rotor head; no longer available.

LW-3: Single seat, controlled by rudder and universally tilting rotor head, pushrod actuated.

LW-4: Two-seat version of LW-3 with modified fuselage to accommodate extra seat in same fuselage length as LW-3. Prototype (N49LW) first flown 2001 with Hirth F-130 engine. Controlled by rudder and universally tilting rotor head. Flown solo from rear seat.

LW-5: Tandem-seat, shorter version (N100MK) with 84.6 kW (113.4 hp) Rotax 914. Landing gear moved 24 cm (9½ in) forward to compensate for 61 cm (2 ft 0 in) reduction in length. Flown solo from rear seat.

Roto-Pup Ultralight: First flew April 1995. McCulloch O-100 engine; fuselage uncovered to remain within 115 kg (254 lb) ultralight limit. Controlled by elevator, lateral tilting rotor head and rudder. Offered as plans only.

CUSTOMERS: Total of 300 sets of plans sold. Five customer kit-built examples have also flown, including Andrew Keech's LW-5 (N100MK) with Rotax 914F engine which currently (2007) holds 19 world records and three US national records for altitude, distance and time to 6,000 m (19,685 ft). Also flew 1,000 mile cross-country in June 2002, and set world speed record around 500 km circuit on 20 March 2005. Others nearing completion in Australia, Belgium, Finland, France, Italy, Japan and UK as well as four simultaneously in Michigan by group of builders.

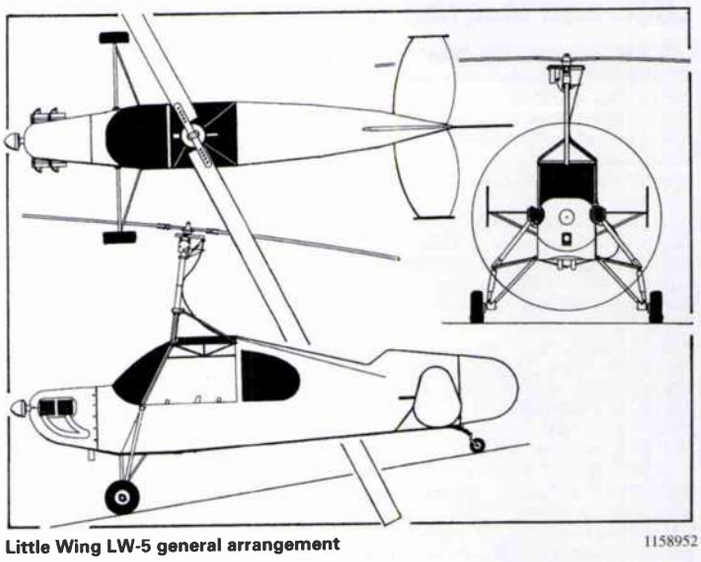
COSTS: LW-3 kit approximately USD10,000; LW-3+2 USD15,000, both without engines. Plans USD175 (all 2006).

DESIGN FEATURES: Tractor configured; fuselage design based on Piper PA-11 Cub Special but scaled-down to approximately 75 per cent size and using Pratt trusses in place of Cub's Warren trusses. Two-blade Rotor Flight Dynamics rotor; each blade is aluminium bonded and has positive twist of 6°. Rotor speed averages 390 rpm, blade tip speed 140 m (459 ft)/s. Rotor mast dampened by large rubber bushes at rear mast brace juncture and lateral pivot is spring-loaded. Rotor brake optional, but recommended on all versions. Automatic teetering limiters are standard.

FLYING CONTROLS: Floor-mounted control stick; pushrods (LW-3) and universally tilting rotor head for pitch and roll, plus cable-actuated rudder. Ground-adjustable horizontal stabiliser for airframe pitch and torque control; tip shields at ends of horizontal stabilisers. Heavy duty push-pull cables for rotor head tilting, arranged in matched pairs, used in LW-4 and LW-5.

STRUCTURE: Full chromoly 4130 steel tube welded fuselage. Rotor mast and pylon of extruded 6061-T6 aluminium covering 4130 internal structure, faired with 016 aluminium sheet and braced with 4130 struts; fuselage covered with Dacron fabric and polyurethane finish. Hub structure of 2024-T3 aluminium bar with multibolt attachments. Pitch is fixed. All aluminium 6061-T6 rotorhead with matched, double-row, angular contract bearings for radial and thrust loads. Pivots are all needle-bearings on hardened steel races.

Record-breaking Little Wing Roto-Pup LW-5 N100MK 1195969



Little Wing LW-5 general arrangement 1158952

LANDING GEAR: Tailwheel type; fixed. Two faired-in side Vs hinged to lower longerons and braced to fuselage sides at centreline by oleo struts. Matco 15 cm (6 in) aluminium mainwheels; tyre pressure 1.03 bar (15 lb/sq in). Matco solid rubber 3.00-2 steerable tailwheel on leaf spring suspension.

POWER PLANT: *LW-3:* One 52.2 kW (70 hp) TEC converted Volkswagen four-stroke engine with dual ignition; 59.6 kW (79.9 hp) Rotax 912; 73.5 kW (98.6 hp) Rotax 912S; 84.6 kW (113.4 hp) Rotax 914; 82.0 kW (110 hp) Rotec 2800 seven-cylinder radial four-stroke can all be fitted. Fuel capacity 38 litres (10.0 US gallons; 8.3 Imp gallons) in seat tank. Refuelling position on port side of cabin. Oil capacity 2.4 litres (5.0 US pints; 4.2 Imp pints).

LW-4 and LW-5: Rotax 912 912S and 914 driving three-blade carbon fibre WarpDrive propeller; and Rotec 2800 as LW-3 driving two-blade wooden Sterba propeller. Standard fuel capacity 49 litres (13.0 US gallons; 10.8 Imp gallons); optional belly tank of 57 litres (15.0 US gallons; 12.5 Imp gallons). Oil capacity 5.7 litres (1.5 US gallons; 1.25 Imp gallons) for Rotec engines, 3 litres (0.8 US gallons; 0.67 Imp gallons) in Rotax engines.

ACCOMMODATION: One or two occupants, according to version, in enclosed cockpit; forward-opening door on starboard side. Baggage compartment behind single seat. Polycarbonate windscreen and side windows.

SYSTEMS: Electric rotor pre-spin standard 1,000 A 12 V battery for ignition back-up and rotor pre-spin. Hydraulic pre-spin optional.

AVIONICS: Micronair 760 nav/com and EIS engine electronic monitoring system.

DIMENSIONS, EXTERNAL:

Rotor diameter: LW-2/3	7.62 m (25 ft 0 in)
Rotor blade chord	0.18 m (7 in)
Fuselage length: standard	5.49 m (18 ft 0 in)
LW-5	4.88 m (16 ft 0 in)
Height to top of rotor head	2.59 m (8 ft 6 in)
Tail unit span	2.13 m (7 ft 0 in)
Wheel track	2.13 m (7 ft 0 in)
Wheelbase: standard	3.96 m (13 ft 0 in)
LW-5	3.51 m (11 ft 6 in)
Propeller diameter: VW engine	1.57 m (5 ft 2 in)
Rotax 912, 912S, 914	1.83 m (6 ft 0 in)
Rotec engine	1.88 m (6 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin: Length: standard	1.24 m (4 ft 1 in)
LW-5	1.90 m (6 ft 3 in)
Max width: standard	0.63 m (2 ft 1 in)
LW-5	0.66 m (2 ft 2 in)
Max height	1.07 m (3 ft 6 in)

AREAS:

Rotor blades (each)	0.54 m^2 (5.83 sq ft)
Rotor disc: LW-2/3	45.62 m^2 (491.1 sq ft)
Dorsal fin	0.42 m^2 (4.52 sq ft)
Auxiliary tip plates (each)	0.15 m^2 (1.60 sq ft)
Rudder	0.28 m^2 (3.03 sq ft)
Tailplane	0.81 m^2 (8.80 sq ft)
Elevators (total)	0.84 m^2 (9.00 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: LW-2	160 kg (352 lb)
LW-3	204 kg (450 lb)
Max baggage weight	11 kg (25 lb)
Max fuel weight	24 kg (54 lb)
Max T-O weight: LW-2	340 kg (750 lb)

PERFORMANCE:

Never-exceed speed (VNE)	104 kt (193 km/h; 120 mph)
Max operating speed at S/L: LW-3	87 kt (161 km/h; 100 mph)
Econ cruising speed at FL10: LW-3	52 kt (97 km/h; 60 mph)
Touchdown speed for power-off landing	9–13 kt (16–24 km/h; 10–15 mph)
Max rate of climb at S/L: LW-3	518 m (1,700 ft)/min
Service ceiling: standard	3,050 m (10,000 ft)
with Rotax 914	7,925 m (26,000 ft)
T-O run: LW-3	61 m (200 ft)
Landing run: LW-3	3–6 m (10–20 ft)
Range: LW-3	100 n miles (185 km; 115 miles)
LW-4, LW-5 with belly tank	347 n miles (643 km; 400 miles)

LOCKHEED MARTIN

LOCKHEED MARTIN CORPORATION

6801 Rockledge Drive, Bethesda, Maryland 20817

SENIOR VICE-PRESIDENT, CORPORATE COMMUNICATIONS: Dennis Boxx

Former Lockheed Aircraft Corporation renamed Lockheed Corporation in September 1977. Merger with Martin Marietta announced 30 August 1994 and completed 15 March 1995. Further expansion resulted from the acquisition of Loral Corporation's defence electronics and systems integration businesses in April 1996 for approximately USD9.1 billion and completed purchase of Comsat in August 2000 for USD2.6 billion. Work force total of about 135,000 in June 2006. Net sales in 2005 reported as USD37.2 billion. Activities include design and production of aircraft, electronics, satellites, space systems, missiles, ocean systems, information systems, and systems for strategic defence and for command, control, communications and intelligence.

Major business groups of Lockheed Martin are:

AERONAUTICS COMPANY: **Electronic Systems,** comprising:
- Lockheed Martin Systems Integration — Owego
- Lockheed Martin Canada
- Lockheed Martin Simulation, Training and Support
- Lockheed Martin Transportation and Security Solutions
- Lockheed Martin Maritime Systems & Sensors
- Lockheed Martin Missiles and Fire Control
- Lockheed Martin Advanced Technology Laboratories

Information and Technology Services, comprising:
- Knolls Atomic Power Laboratory Inc
- Lockheed Martin Aircraft & Logistics Centers
- Lockheed Martin Information Technology
- Lockheed Martin Space Operations
- Lockheed Martin Systems Management
- Lockheed Martin Technical Operations
- Sandia National Laboratories
- Lockheed Martin Technology Ventures Corporation

Integrated Systems and Solutions

Space Systems Company

LOCKHEED MARTIN AERONAUTICS COMPANY

(LM Aero)

1 Lockheed Boulevard, Fort Worth, Texas 76108
Tel: (+1 817) 777 20 00
Fax: (+1 817) 763 47 97

PRESIDENT: Ralph D Heath
VICE-PRESIDENT, COMMUNICATIONS: Mary Jo Polidore

LM Aero includes the following operating units:

Lockheed Martin Aeronautics Company - Marietta

Lockheed Martin Aeronautics Company - Palmdale

Lockheed Martin Aeronautics Company - Fort Worth

Lockheed Martin Aeronautics Company established in January 2000 through consolidation of aeronautics businesses, with headquarters at Fort Worth, Texas. Sales were valued at USD10.2 billion in 2003, increasing to USD11.8 billion in 2004 and falling slightly to USD11.7 billion in 2005, throughout sustaining its position as biggest earning element of Lockheed Martin Corporation. Work force numbered about 20,000 in early 2005. Apart from main operating units detailed above, LM Aero has facilities in Florida, Mississippi, Pennsylvania and West Virginia.

Teaming arrangement agreed with Northrop Grumman to collaborate in development and marketing of AEW aircraft; also with KAI of South Korea to develop and market the T-50 Golden Eagle advanced trainer/lead-in fighter trainer.

LOCKHEED MARTIN AERONAUTICS - MARIETTA

86 South Cobb Drive, Marietta, Georgia 30063-0226

Fax: (+1 770) 494 04 45

DIRECTOR, LOCAL MEDIA RELATIONS: Alyce M Samo

In April 1991, Lockheed won competition to produce F-22 (now F/A-22) with General Dynamics (now Lockheed Martin Tactical Aircraft Systems) and (then) Boeing Military Airplanes. Lockheed Martin Aeronautics Company-Marietta also involved in studies into advanced mobility aircraft for 21st century strategic transport; was subcontractor to Boeing on NASA High-Speed Civil Transport (HSCT) programme; working with NASA on advanced subsonic technology transport programme; and engaged in other, classified projects.

Long-term activities at Marietta include production of C-130J Hercules and F-22 Raptor aircraft. LMAS signed joint venture agreement with Alenia of Italy in September 1996 concerning development and marketing of the C-27J tactical transport that incorporates systems developed for the C-130J Hercules. However, lack of sales resulted in Lockheed Martin scaling down involvement in closing months of 2002, including withdrawal from marketing of C-27J as joint effort with Alenia in US military competitions.

Lockheed Martin Aeronautics Company-Marietta working to develop standard avionics suite for future versions (upgrades) of P-3 Orion and AEW aircraft; open architecture design for maximum flexibility and system growth; elements include AN/APS-145 radar, GPS and communications/navigation system. Also interest from several countries on possible new-build aircraft.

Aeronautical Systems Support, with headquarters in Smyrna, Georgia, is subordinate element, with responsibility for after sales support, including provision of spare parts and technical back-up, for variety of aircraft types.

LOCKHEED MARTIN (645) F-22 RAPTOR

TYPE: Multirole fighter.
PROGRAMME:

DEVELOPMENT MILESTONES

Requirement issued	1981
Request for proposals	Sep 85
Design submitted	Jul 86
Programme launched	31 Oct 86
First flight	29 Sep 90
First flight, pre-production	7 Sep 97
Production go-ahead	15 Aug 01
First flight, production	Sep 03
First delivery	26 Sep 03

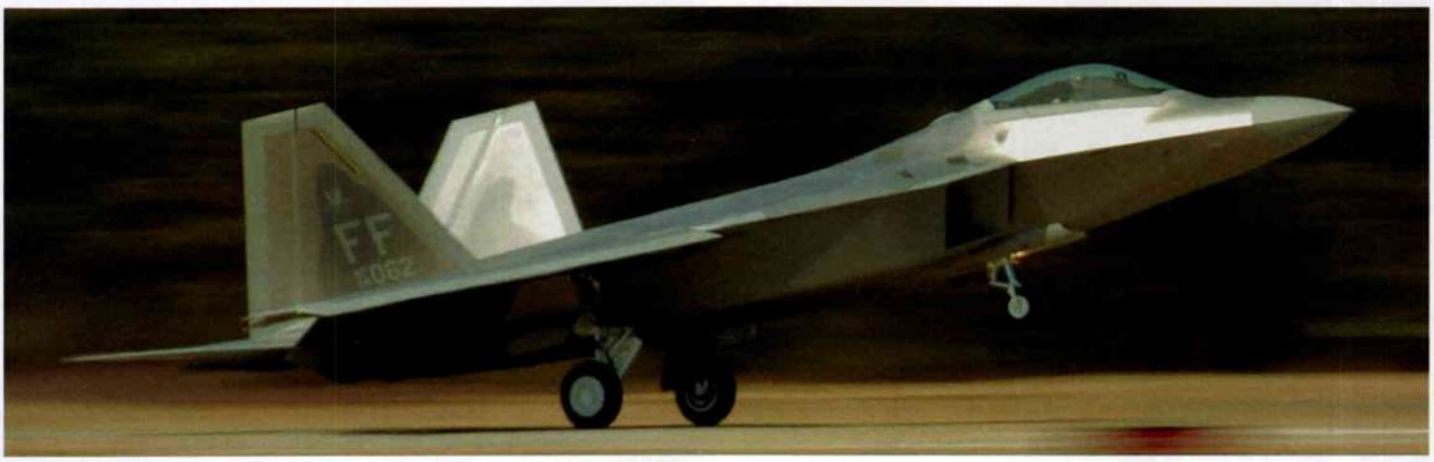
US Air Force Advanced Tactical Fighter (ATF) requirement called for 750 McDonnell Douglas F-15 Eagle replacements incorporating low observables technology and supercruise (supersonic cruise without afterburning); parallel assessment of two new power plants; request for information issued 1981; concept definition studies awarded September 1983 to Boeing, General Dynamics, Grumman, McDonnell Douglas, Northrop and Rockwell; requests for proposals issued September 1985; submissions received by 28 July 1986; USAF selection announced 31 October 1986 of demonstration/validation phase contractors: Lockheed YF-22 and Northrop YF-23; each produced two prototypes and ground-based avionics testbed. Competing engine demonstration/validation programmes launched September 1983; ground testing began 1986–87; flight-capable Pratt & Whitney YF119s and General Electric YF120s ordered early 1988; all four aircraft/engine combinations flown.

Decision of 11 October 1989 extended evaluation phase by six months; draft request for engineering and manufacturing development (EMD) proposals issued April 1990; first artists' impressions released May 1990; Lockheed teamed with General Dynamics (Fort Worth) and Boeing Military Airplanes to produce two YF-22 prototypes, which first flew on 29 September and 30 October 1990.

Acquisition of former General Dynamics gave Lockheed Martin control of 67.5 per cent of programme. Final engineering and manufacturing development (EMD) requests issued for both weapon system and engine 1 November 1990; proposals submitted 2 January 1991; F-22 and F119 power plant announced by USAF as winning combination, 23 April 1991; EMD contract given 2 August 1991 for 11 (later reduced to nine) flying prototypes, plus one static test article and one fatigue test airframe; design underwent several detail refinements through early 1990s.

Combat roles reassessment of May 1993 added air-to-ground attack with precision-guided munitions (PGMs) to F-22's roles. Under USD6.5 million contract addition on 25 May 1993, main weapon bay and avionics adapted for delivery of AIM-9X missile and 454 kg (1,000 lb) GBU-32 Joint Direct Attack Munition (JDAM). Addition of ground attack capability resulted in redesignation as the **F/A-22**, which announced by USAF Chief of Staff General John Jumper on 17 September 2002. This lasted only until 13 December 2005 when F-22A designation was re-adopted, with no change to planned capabilities, by General T Michael Moseley.

Preliminary design review, covering all aspects of the design, completed 30 April 1993; critical design review completed February 1995; preproduction verification (PPV) batch of four aircraft was scheduled to be ordered 1997 but these deleted from overall programme at start of that year; long lead items for first production batch (two aircraft), subsequently reclassified as Production Representative Test Vehicles (PRTV), ordered in 1998, with full funding in FY99. Minor design changes for production aircraft announced July 1991. Suggested name of SuperStar rejected in 1991 and it remained unnamed until occasion of roll-out in April 1997 when it was announced that the name Raptor had been chosen.



Lockheed Martin F-22A Raptor 04-4062 departs Marietta on delivery as the first aircraft for 94th FS 1040475

1040491

Lockheed Martin F-22A Raptor *(Paul Jackson)*

Fabrication of first component for first EMD aircraft (91-4001, c/n 4001) began 8 December 1993 at Boeing's facility in Kent, Washington; assembly of forward fuselage launched at Marietta on 2 November 1995 with start of work on nose landing gear well; assembly begun at Fort Worth in mid-1995 with mating of three assemblies that comprised the mid-fuselage of first EMD aircraft taking place in early 1996, followed by road transfer of entire section to Marietta in September 1996 for start of final assembly. Delivery by Boeing to Lockheed Martin at Marietta of subassemblies, including wing and aft fuselage, for first EMD aircraft took place on schedule in third quarter of 1996. Pratt & Whitney also delivered first F119 flight test power plant in September. Prototype rolled out 9 April 1997; planned May 1997 first flight delayed by fuel leaks and hardware-related anomalies. First flight accomplished 7 September 1997, with aircraft airborne for 58 minutes during which initial handling evaluation undertaken before landing gear was retracted and further handling assessment performed at speeds of up to 250 kt (463 km/h; 288 mph); maiden flight also included simulated powered approach at medium altitude before landing at Marietta. Second sortie of 35 minutes took place on 14 September 1997, after which aircraft underwent minor structural modifications and was then placed in structural test fixture for load ground tests and strain gauge calibration.

Low-rate initial production (LRIP) decision originally dependent upon accumulating 183 hours of flight testing; this milestone passed on 23 November 1998 and cleared way for release of USD195.5 million in late December 1998 for advance procurement (long lead items) for six Lot 1 LRIP aircraft, which subsequently reclassified as PRTV 2 aircraft after wrangle over funding in mid-1999. Earlier, in December 1998, Lockheed Martin received contract worth USD503 million for two PRTVs and associated programme support.

Wind tunnel testing occupied 19,195 hours up to YF-22 stage and a further 16,930 hours up to mid-1995, when Configuration 645 was finalised; six major categories were investigated (aerodynamic loads and weapons bay acoustics, inlet and engine compatibility, mission/manoeuvre performance, inlet icing, stability and control flying qualities, weapons and stores separation), with last-named comprising majority of 900 hours that remained to be done in 1995–97.

Avionics trials from November 1997 in a Boeing 757 (N757A) Flying Test Bed (FTB) with AN/APG-77 radar in F-22-type nosecone; block 1 software, permitting basic radar operation including simultaneous search-and-track modes, delivered to Boeing, April 1998 and subsequently tested on 757; block 2 software delivered on 7 December 1998, with block 3S beginning flight testing on 24 April 2000; this is early version of block 3.0 software, which delivered to Seattle on 11 August 2000 in readiness for airborne trials programme that began in mid-September. Communications/navigation/identification (CNI) system and EW suite tower-tested on full-scale model of forward fuselage at Fort Worth, Texas, during 1998–99; subsequently tested on Boeing 757 FTB, which is fitted with three common integrated processors (CIPs) for 1,400 hour software flight test programme. Further modification of Boeing 757 to mount representative wing section above forward fuselage completed in late 1998, and flight testing of conformal antennas began on 11 March 1999; by December 2000, 757 FTB had accumulated 641.9 flight test hours in 126 sorties. Radar testing accomplished using T-39 Sabreliner as target and involved a Lockheed T-33 for calibrated airborne trials from December 1998.

Milestones in 1999 included delivery of first AN/ALR-94 EW system on 15 February by Sanders to the Avionics Integration Laboratory in Seattle; 100th sortie in May; successful completion of design load limit testing of article 3999 on 25 September; and compliance with all five major 1999 flight test objectives (including flight at altitude of 50,000 ft; opening of side and main weapon bay doors in flight; supercruise demonstration; and flutter envelope expansion) by 24 September.

Flight test programme interrupted at least twice during 2000, with most serious occurrence arising in May after discovery of hairline cracks in canopies of first two aircraft; grounding order lifted on 5 June, when second EMD F-22 resumed testing with some restrictions while awaiting replacement unit. Major event of year was expected to be Pentagon Defense Acquisition Board review to culminate in award of contract for initial batch of LRIP aircraft; this was scheduled for 21 December, but slipped to 3 January 2001 and was further delayed by poor weather that prevented three of 11 critical test objectives being achieved; funding release dependent upon compliance with several 'exit criteria', including first flight of F-22 with block 3.0 software, first AMRAAM launch and first flights of aircraft 4004, 4005 and 4006. First AIM-120C AMRAAM launch (of 60 planned) achieved 24 October 2000; static tests completed 28 December 2000. Remaining three objectives satisfied by 6 February 2001, with first flight of aircraft 4006. However, decision to proceed with LRIP phase not taken until 15 August 2001, when initial batch of 10 aircraft approved with FY01 funds.

Objectives for 2002 comprised first flight of first Production Representative Test Vehicle (PRTV), which achieved on 12 October; first supercruise launch of AIM-120, including successful interception of aerial target, which accomplished on 5 November; expansion of flight envelope to permit start of USAF pilot training in anticipation of initial operational test and evaluation (IOT&E); and supercruise launch of, and interception by, heat-seeking AIM-9M, which undertaken on 22 November. Block 3.1 software package delivered 5 February 2002 and flown for first time (on 91-4006) on 25 April at Edwards AFB.

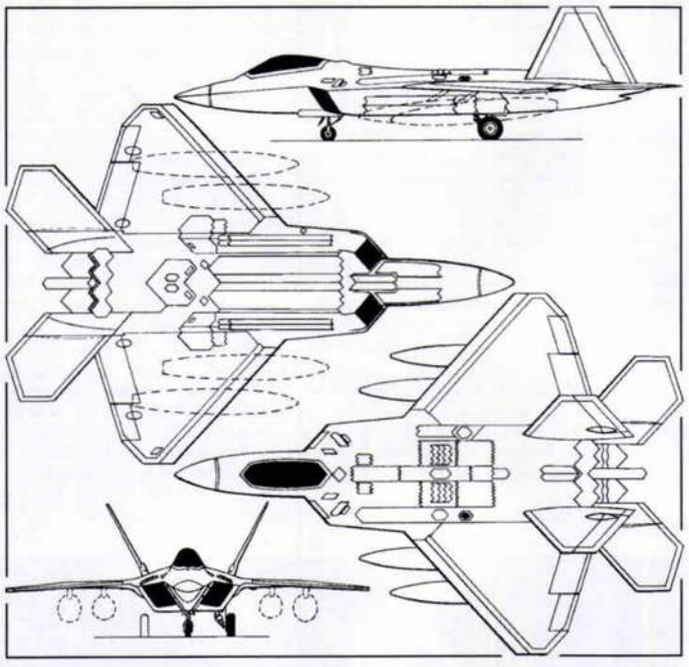
US Air Force 'Heritage Formation' of Lockheed Martin F-22A Raptor, North American P-51D Mustang and Boeing F-15C Eagle *(Paul Jackson)* 1040492



Lockheed Martin F-22A Raptor *(James Goulding)* 1158976

In February 2003, the fifth and sixth EMD aircraft successfully demonstrated the Intraflight Datalink (IFDL) facility for the first time. Subsequently, flight operations were briefly interrupted when nose gear of one aircraft retracted as engines were being shut down; this incident occurred on 18 March 2003 and resulted in the F-22 being grounded until 22 March.

Notable milestone passed on 18 April 2001, when 1,000th flight test hour recorded; 2,000th hour completed on 7 June 2002; 3,000th hour on 26 February 2003; 4,000th on 2 September 2003 and 5,000th on 9 February 2004. Nevertheless, delays in production and delivery of test aircraft meant programme was behind schedule, with knock-on effect on start of IOT&E; this was scheduled to start in August 2002, but was delayed and did not begin until 29 April 2004. At that time, 24 aircraft were flying and IOT&E was due for completion in September 2004. One year earlier, the first delivery to an operational unit was effected 26 September 2003, when Raptor 01-4018 was flown from Marietta to Tyndall AFB, Florida, for 43rd FS of 325th FW. Overall development programme was expected to be completed in March 2004, but continued until at least November 2005; this extension largely attributed to problems experienced with avionics software, such as tendency for elements of the avionics suite to shut down every 3 to 4 hours. By late April 2004, avionics package had demonstrated increased stability by completing five hours of continuous operation between malfunctions.

Total of 13 aircraft delivered to 325th FW by end of 2004, by which time first F-22 loss had occurred, this involving 422nd TES aircraft (00-4014) destroyed in take-off accident at Nellis on 20 December 2004. Deliveries to training unit at Tyndall continued into 2005, with entire fleet of 23 F-22As on strength by second quarter of 2005, although two aircraft loaned to 1st FW at Langley in early part of year. First Lot 3 aircraft (03-4041) was rolled out at Marietta on 27 October 2004. Initial delivery to 27th FS, 1st FW, Langley, on 12 May 2005 was 03-4042. Next two aircraft followed on 8 June, with subsequent deliveries to 27th FS being made at rate of two per month. 27th FS received USAF's 50th Raptor (03-4051) on 28 September 2005, at which time 63 of 83 F-22s on order had completed final assembly.

Final stage of trials programme was follow-on test and evaluation (FOT&E), which began on 29 August 2005 and concluded shortly before the end of that year; seven aircraft, modified to combat-coded configuration of 47th F-22A, took part in series of operational battlespace scenarios involving launch of AIM-120 AMRAAMs and delivery of JDAM weapons. Opposition forces were provided by Nellis-based 'aggressor' aircraft and completion of this programme resulted in the F-22A being given a mission capable rating and paved the way for declaration of IOC on 15 December 2005.

Re-equipment of 27th FS completed in early 2006, with second squadron at Langley (94th FS) accepting its first two aircraft (04-4062 and 04-4063) on 3 March 2006; remainder of Block 20 production expected to be assigned to 94th FS. First deployment to base outside continental US occurred in May-July 2006, when 12 F-22As of 27th FS participated in exercise 'Northern Edge'; during 12-day exercise period, these aircraft operated from Elmendorf AFB, Alaska and successfully accomplished 102 of 105 tasked sorties; dropped 26 JDAMs, scoring 26 direct hits; and demonstrated an 80:1 kill ratio in simulated air combat.

Shortly before this exercise, it emerged that a structural problem affecting the horizontal tail attachment points would require a retrofit programme; more than 70 aircraft (production numbers 4010 to 4083) are involved, with those up to 03-4061 to receive attention at the Ogden Air Logistics Center at Hill AFB, Utah, while the remaining 22 were to get strengthened fittings during the process of assembly at Marietta. Investigation of a separate problem resulting from inadequate heat treating of titanium structures in the forward fuselage section was also under way at this time; while this was not perceived to compromise flight safety, there was concern that fatigue could occur at a faster than predicted rate. Subsequently, in July 2006, the USAF decided to withhold funds to pay for inspection of the 48 affected aircraft.

Block 30 production aircraft to be assigned to 3rd Wing at Elmendorf AFB, Alaska; first F-22A for subordinate 90th FS will be 05-4087 which was rolled out on 16 October 2006. Initial training will be with 1st FW at Langley, deployment to Elmendorf following by mid-2007 and 90th FS anticipates being fully equipped by January 2008; second squadron at Elmendorf will be 525th FS, which due to reactivate in late 2007.

Next two squadrons to form, remain unidentified, but will probably be stationed at Holloman AFB, New Mexico, with seventh (and last of current planned force) to be established at Hickam AFB, Hawaii, in about 2010-11. Latter will be an Air National Guard (ANG) unit (199th FS), but will operate in association with regular 531st FS, sharing common resources at Hickam. Other second-line elements that will function in association with first-line units are to be located at Langley (149th FS/192nd FW from the ANG) and Elmendorf (302nd FS of Air Force Reserve Command).

By early August 2006, total of 76 F-22As had been delivered to USAF.

CURRENT VERSIONS: **F-22A**: Single-seat production version for USAF. Achieved IOC with 27th Fighter Squadron, 1st Fighter Wing on 15 December 2005. Current planning anticipates procurement of total of 183 F-22As (including final two EMD and eight PRTV aircraft for evaluation, service testing and development of tactics and operating procedures by USAF Air Warfare Center at Nellis AFB, Nevada).

F-22B: Projected two-seat version for USAF; development terminated 10 July 1996 to reduce costs.

FB-22: Proposed long-range strike-dedicated derivative under study by Lockheed Martin at USAF request in 2002; initial proposal larger than F-22, with combat radius of up to 1,565 n miles (2,897 km; 1,800 miles) and significantly bigger payload of 30 small diameter bombs. Most recent configuration, revealed at beginning of 2005, features larger, delta wing, increased capacity main weapons bays, plus 2,268 kg (5,000 lb) capacity wing weapons bays and external carriage of stealthy cruise missile. Total ordnance payload said to be 14,969 kg (33,000 lb), options including 1,000 kg (2,205 lb) JDAM, 250 kg (551 lb) Small Diameter Bombs, AAMs for self-defence and stand-off missiles, with wing stations plumbed for carriage of auxiliary fuel tanks if required.

If proceeded with, would have 85 per cent hardware and software commonality with F-22 and could enter production in 2012. Other probable changes might include insertion of fuselage plug to increase weapons bay size and carriage characteristics and compromised air-to-air combat capability. Secretary of the Air Force James Roche informed US Congress in late February 2003 that his optimum bomber force would include at least 150 FB-22s; however, USAF studies envisage deployment of about 50 new bombers starting in 2015.

NATF: Naval Advanced Tactical Fighter; projected US Navy variant to replace Grumman F-14 Tomcat; development abandoned.

CUSTOMERS: US Air Force; two YF-22 demonstrators; nine EMD aircraft plus one static and one fatigue test airframes; original 648 production aircraft programme of 1991 reduced to 442 in January 1994; latter originally to be funded from 1997 (long lead), beginning with four preproduction verification (PPV) aircraft in FY98, followed by series production of 438 (but PPV aircraft cancelled in early 1997). Quadrennial Defense Review (QDR) report in May 1997 resulted in planned procurement falling to 339 (including eight PRTV aircraft); further cuts followed, first to 333 in 1999 and then to 295 in 2001, although in early 2003, it appeared that as few as 276 could be acquired, with peak production rate of 32 per year during FY07 to FY10. By early 2004, imposition of a spending cap of USD36.8 billion by Congress resulted in yet another downward revision, to a total of about 224 F-22s.

Subsequently, in December 2004, US Department of Defense moved to cut total procurement to about 180 aircraft, although USAF vigorously defended F-22 programme and stated that it still required 381 aircraft. Ultimate total now looks likely to be 183, sufficient to allow equipment of seven combat-coded squadrons, plus training unit and small operational test and tactics unit; however, USAF leadership claims that minimum of 10 squadrons needed, which would require production of about another 60 aircraft and in December 2006 was calling for at least another 20, to be purchased with FY10 funds.

Contracts for two PRTV 1 aircraft and long lead items for batch of six PRTV 2 aircraft signed December 1998. Decision to authorise LRIP expected in December 2000 but delayed until 15 August 2001; clearance to begin full-rate production (FRP) due in December 2004, but not forthcoming until 18 April 2005. Pilot training at Tyndall AFB, Florida, by 43rd Fighter Squadron, 325th Fighter Wing from 2003, with IOC of first squadron achieved on 15 December 2005, this being 27th Fighter Squadron of 1st Fighter Wing at Langley AFB, Virginia. Following re-equipment of 1st Fighter Wing, next to convert will be two squadrons of 3rd Wing at Elmendorf AFB, Alaska; this expected to begin by end of 2006 with 90th FS.

In June 2006, US Congress appeared ready to lift ban imposed on export sales in 1997, with Japan and South Korea both viewed as potential customers for F-22.

PLANNED F-22 PROCUREMENT
(at December 2006)

FY	Lot	Quantity	First aircraft
99	PRTV 1	2	99-4010
00	PRTV 2	6	00-4012
01	LRIP 1	10	01-4018
02	LRIP 2	13	02-4028
03	LRIP 3	21	03-4041
04	LRIP 4	22	04-4062
05	LRIP 5	24	05-4084
06	FRP1	23	
07	FRP2	23	
Total		**141**	

Notes: Excludes two prototypes and nine EMD aircraft; further 40 aircraft expected to be procured in two lots during FY08 and FY09.

COSTS: USD818 million contracts to both ATF teams, October 1986, for 54-month studies; each airframe team investing own funds (Lockheed/Boeing/GD team investment totalled USD675 million in addition to DoD funding); each engine contractor, about USD50 million; total USD3,800 million spent by USAF on both ATFs up to April 1991; programme cost for 648 aircraft was USD13 billion for development (1991 base year) and USD52.5 billion for production (1994 then-year); flyaway cost USD61.2 million at 1991 prices.

EMD contract, 2 August 1991, comprised USD9,550 million for 11 (subsequently nine) airframes, plus USD1,375 million to P&W for 33 (later amended to 27) engines. FY94 US Congressional appropriation of USD2,100 million was USD163 million below expectations, resulting in slippage of critical design review and first flight. Similarly, FY95 appropriation of USD2,300 million was USD110 million below expected figure, leading to further delay in maiden flight; and on 9 December 1994, Defense Secretary William Perry announced 10 per cent cut (approximately USD210 million) in FY96 budget, necessitating a third restructuring of the programme.

On 30 December 1999, Lockheed Martin awarded contract for approximately USD1.3 billion, covering procurement of six PRTV 2 aircraft, augmenting earlier USD195.5 million contract for long-lead items; at same time, Pratt & Whitney received separate USD180 million award for 12 F119 engines. Additional appropriation of USD277.1 million allocated to Lockheed Martin for long-lead items for 10 Lot 1 LRIP aircraft; further USD862 million contract awarded 19 September 2001 towards remaining cost of producing these 10 aircraft. Total cost of LRIP 2 batch of 13 aircraft quoted as USD3.03 billion; subsequent appropriations for production aircraft have been USD4.46 billion in FY03 (21 aircraft); USD4.15 billion in FY04 (22); USD4,11 billion in FY05 (24) and USD3.82 billion in FY06 (23). By April 2004, total programme cost being reported as USD71.8 billion, of which development said to account for USD28.7 billion, although US General Accounting Office report of 15 March 2004 claimed that development costs are approaching USD40 billion. Flyaway unit cost for Lot 7 aircraft will be USD141.5 million according to FY07 budget documentation; same document stated total weapon system unit cost to be USD171.8 million.

DESIGN FEATURES: Low-observables configuration and construction; stealth/agility trade-off decided by design team. Antennas located in leading– or trailing-edges of wings and fins, or flush with surfaces, to minimise radar signature. Target thrust/weight ratio 1.4 (achieved ratio 1.2 at T-O weight); greatly improved reliability and maintainability for high sortie-generation rates, including under 20 minutes combat turnround time; enhanced survivability through 'first-look, first-shot, first-kill' capability; short T-O and landing distances; supersonic cruise and manoeuvring (supercruise) in region of M1.5 without afterburning; internal weapons storage and generous internal fuel; conformal sensors.

Highly integrated avionics for single-pilot operation and rapid reaction. Radar, RWR and comms/ident managed by single system presenting relevant data only, and with emissions controlled (passive to fully active) in stages, according to tactical situation. CIP handles all avionics functions, including self-protection and radio, and automatically reconfigures to compensate for faults and failures. Two CIPs, with space for third, linked by 400 Mbits/s fibre optic network (see Avionics). Computer architecture and avionics processes will need to be upgraded, in five to six years, following Intel decision to phase out 32-bit, 25 MHz i960MX chip which is obsolete; this chip has insufficient power to support intended air-to-ground applications after 2013, but is being installed on first 155 Raptors.

Lockheed Martin F-22A Raptor refuelling from a Boeing KC-135R
(SSgt Joshua Strang, USAF) 1040468

Wing and horizontal tail leading-edge sweep 42°; trailing-edge 17° forward, increased to 42° outboard of ailerons; all-moving five-edged horizontal tail. Vertical tail surfaces canted outwards at 28°; leading– and trailing-edge sweep 22.9°; biconvex aerofoil. Wing taper ratio 0.169; leading-edge anhedral 3.25°; root twist 0.5°; tip twist −3.1°; thickness/chord ratio 5.92 per cent at root, 4.29 per cent at tip; custom-designed aerofoil. Horizontal tails have no dihedral or twist.

Diamond-shaped cheek air intakes with highly contoured air ducts; single-axis thrust vectoring included on F119, but most specified performance achievable without.

Production aircraft coated with new, Boeing-developed, stealthy paint intended to enhance low-visibility attributes; this first applied to second EMD aircraft in March 2000.

FLYING CONTROLS: Triplex, digital, fly-by-wire system with GEC sidestick control, using line-replaceable electronic modules to enhance maintainability; thrust vectoring utilised to augment aerodynamic pitch control power and provide firm control even at low speeds and high angles of attack. Technology and control concepts demonstrated throughout the flight envelope during prototype air vehicle test programme, including flight at AoA greater than 60°; wind tunnel testing with models of production aircraft successfully attained AoAs greater than 85°.

Ailerons and flaperons occupy almost entire wing trailing-edge; full-span leading-edge flaps; conventional rudders in vertical tail surfaces; slab taileron surfaces; airbrake not included (differential rudder and wing trailing-edge surfaces for speed control). Control surface authorities: leading-edge flaps 0° up/35° down (2°/37° overtravel); trailing-edge flaperons 20° up/35° down; ailerons ±25°; horizontal tail leading-edges 30° up/25° down; rudders ±30°; speedbrake (rudder) 30° out.

STRUCTURE: Lockheed Martin at Marietta constructs forward fuselage, including cockpit (with avionics architecture, displays, controls, air data system), apertures, edges, tail assembly, landing gear and environmental control system and undertakes final assembly. Lockheed Martin's Fort Worth plant builds the centre-fuselage; Palmdale, the radome. Boeing responsible for wings, fuselage aft sections, power plant installation, auxiliary power generation system, radar, arresting gear system and avionics integration laboratory.

Total airframe weight comprises approximately 36 per cent titanium 64, three per cent titanium 62222, 24 per cent thermoset composites (both epoxy resin and bismaleimide), one per cent thermoplastic composites, 16 per cent aluminium, 6 per cent steel and 14 per cent

PLANNED F-22 DEPLOYMENT
(at at August 2006)

Wing	Squadron(s)	Associate Unit	Base	Equipped	Block
1st Fighter Wing (ACC)	27th and 94th FS	149th FS (ANG)	Langley AFB, Va	2005-06	20
3rd Wing (PACAF)	90th and 525th FS	302nd FS (AFRC)	Elmendorf AFB, Ak	2006-08	30
154th Wing (ANG)	199th FS (ANG)	531st FS	Hickam AFB, Hi	2010-11	40?
325th FW (AETC)	43rd FS	-	Tyndall AFB, Fl	2003-05	10

Notes: Holloman AFB, New Mexico has been identified as a probable future base for two squadrons equipped with the F-22A. Operating unit has not yet been identified, but may be the 49th FW; delivery of aircraft to this base appears likely to take place in 2009-10. In addition, a small number of aircraft are assigned to test duties.

other materials. Forward fuselage substructure is aluminium and composites; centre-fuselage includes titanium, aluminium and composites; both forward and centre-fuselage skins primarily graphite bismaleimide. Four main mid-fuselage section bulkheads are single-piece, closed-die, titanium forgings. Rear fuselage approximately 67 per cent titanium, 22 per cent aluminium and 11 per cent composites. Engine bay doors titanium honeycomb, produced by liquid-interface diffusion bonding. Tailbooms assembled by electron beam welding. Titanium vent screens (to reduce radar reflectivity) contain thousands of precisely shaped holes in special alignment, each cut by abrasive water-jet. Thermoplastics used in areas requiring high tolerance to damage, examples including doors for landing gear and weapon bay.

Wing skins are monolithic graphite bismaleimide. Main (front) wing spars are machined titanium forgings; intermediate spars are mix of resin transfer moulded (RTM) sine-wave composites and titanium for strength to meet vulnerability requirements in wing fuel tank; rear spars composites and titanium. Wingroot and control surface actuator attachment fittings are titanium HIP castings. Horizontal stabiliser incorporates 'tow placed' composites pivot shaft in addition to aluminium honeycomb core and graphite bismaleimide skins produced by GKN Aerospace Services; vertical stabilisers use solid graphite bismaleimide skins over graphite epoxy RTM spars. Wing control surfaces are combination of co-cured composites skins/substructure and non-metallic honeycomb core construction.

LANDING GEAR: Menasco retractable tricycle type, stressed for no-flare landings of up to 3.05 m (10 ft)/s. Honeywell wheels, brakes and anti-skid system. Nosewheel tyre Goodyear or Michelin 23.5×7.5-10 (22 ply) tubeless; mainwheel tyres Goodyear or Michelin 37×11.50-18 (30 ply) tubeless. Kaiser airfield arrester hook in enclosed fairing between engines.

POWER PLANT: Two 156 kN (35,000 lb st) class Pratt & Whitney F119-PW-100 advanced technology reheated turbofans, each fitted with a two-dimensional, convergent/divergent thrust vectoring (±20° in vertical plane) exhaust nozzle for enhanced performance and manoeuvrability.

Fuel in eight tanks in forward fuselage, mid-fuselage, wings and tailbooms; provision for later addition of fuel in saddle and fin tanks. Additionally, up to four external fuel tanks, each 2,271 litres (600 US gallons; 500 Imp gallons), on underwing hardpoints. Dorsal Xar Industries aerial refuelling receptacle covered by doors, except when required. Fuel grade JP-8.

ACCOMMODATION: Pilot only, on zero/zero modified Boeing ACES II ejection seat and wearing tactical life support system with improved *g*-suits, pressure breathing and arm restraint. Pilot's view over nose is −15°. Canopy manufactured by Sierracin Sylmar Corp as single-piece unit, hinged at rear.

SYSTEMS: Twin 276 bar (4,000 lb/sq in) hydraulic systems with four pumps (each 273 litres; 72.0 US gallons; 60.0 Imp gallons per minute), but single Parker Bertea actuator on each control surface to save weight and cost. Curtiss Wright actuators on leading-edge flaps. Two 65 kW engine-driven generators. Honeywell G250 335 kW (450 hp) APU driving a Hamilton Sundstrand 27 kW generator and 100 litre (26.5 US gallon; 22.0 Imp gallon)/min pump. Smiths 270 V DC electrical distribution system. Honeywell environmental control system for life support system and flight avionics (open loop air cycle), mission avionics (closed loop vapour cycle) and fuel cooling (thermal management). OBIGGS and Normalair-Garrett OBOGS.

AVIONICS: Final integration, as well as integration of entire suite with non-avionics systems, undertaken at Avionics Integration Laboratory, Seattle, Washington; airborne integration supported by Boeing 757 flying testbed and the Air Vehicle Integration Facility at Marietta.

Comms: TRW AN/ASQ-220 communication/navigation/identification (CNI) system includes Mk 12 IFF and UHF/VHF. CNI system uses modules contained in two integrated CNI racks, CIP assets and integrated display/control panels. Intra-Flight Data Link (IFDL) encrypted radio and wireless communications modem allows all Raptors in a flight to share target and system data without fear of being overheard. Supplier team, responsible for electronics and software, also includes Rockwell Collins, ITT and GEC.

Radar: Northrop Grumman/Raytheon AN/APG-77 multimode radar incorporates active electronically scanned array (AESA), capable of interleaving air-to-air search and multitarget track functions. Also has weather mapping mode and provisions for air-to-ground modes and side arrays. Radar reported to be capable of detecting 1 m^2 (10.76 sq ft) target at range of approximately 109 n miles (201 km; 125 miles). Fourth generation version of radar to be installed starting with Lot 5 production; this improved AN/APG-77(V)1 radar will incorporate advanced air-to-ground computer software.

Flight: Vehicle management system (VMS) combines flight and propulsion controls; integrated vehicle subsystem control (IVSC) operates utilities via digital databus. Total of 18 Raytheon 1750A common processor modules used for VMS, IVSC and stores management system. F-22 is first fighter with triplex digital flight control computers and no electrical or mechanical back-up; control reconfiguration modes provide safe flying after actuator or hydraulic failures. VMS controls 14 surfaces (horizontal tail, ailerons, flaperons, rudders, leading-edge flaps and inlet bleed and bypass doors). No AoA limitation, but overstressing made impossible by restrictions to roll rate and load factor, according to fuel state, stores carriage and flight condition. Lear Astronics VMS integrated with Rosemount low-observable air data system, including two AoA probes and four sideslip plates on nose. CNI system includes GPS, Tacan and ILS. Twin Litton LN-100F INS. Throttle and stick contain 20 controls with 63 functions.

Software Block 0 for initial flight tests. Block 1.1 installed on aircraft 4004 in 1999, was primarily for radar, but included more than half of the avionics suite's source lines of code. Block 2, installed in the 757 FTB in October 1999, began sensor fusion, including radio frequency co-ordination and some electronic warfare functions. Block 3S added CNI and ECCM; Block 3.0, tested in the 757 FTB in fourth quarter of 2000 and flown for first time in F-22 on 5 January 2001, provided full sensor fusion and weapon delivery function; Block 3.1.3 adds GBU-32 JDAM, JTIDS receive and GPS and will be available to IOC aircraft. Block 4 will incorporate helmet cueing and AIM-9X. Work is under way on a Block 5 upgrade that should provide JTIDS transmit as well as enhanced air-ground capability from around 2006, including compatibility with forthcoming Small Diameter Bomb (SDB).

Instrumentation: Fused situational awareness information is displayed to pilot via four Lockheed Martin colour liquid crystal multifunction displays (MFD); MFD bezel buttons provide pilot format control. Centre screen measures 203 × 203 mm (8 × 8 in) and typically will function as situation display; right and left screens measure 152 × 152 mm (6 × 6 in) and function as attack and defensive displays respectively; fourth screen (directly below situation display) can be used to provide global side-view depiction of tactical situation and may also present other data such as fuel status, engine parameters, stores data, BIT reports and electronic checklists. Additionally, 76 × 102 mm (3 × 4 in) upfront display screens on each side of the integrated control panel, immediately below the BAE Systems HUD. Illumination is NVG-compatible.

Mission: Two Hughes common integrated processors (CIP); CIP also contains mission software that uses tailorable mission planning data for sensor emitter management and multisensor fusion; mission-specific information delivered to system through Fairchild data transfer equipment/mass memory (DTE/MM) system that contains mass storage for default data and air vehicle operational flight programme; stores management system. General purpose processing capacity of CIP is rated at more than 700 million instructions per second (Mips) with growth to 2,000 Mips; signal processing capacity greater than 20 billion operations per second (Bops) with expansion capability to 50 Bops; CIP contains more than 300 Mbytes of memory with growth potential to 650 Mbytes. Of 132 slots available in CIPs 1 and 2, 41 are initially vacant and thus available for growth. Intra-flight datalink automatically shares tactical information between two or more F-22s. CNI system includes JTIDS (receive-only terminal). Lockheed Martin airborne video recorder. Lockheed Martin stores management system. Airframe contains provisions for IRST and side-mounted phased-array radar.

Self-defence: BAE Systems AN/ALR-94 electronic warfare (RF warning and countermeasures and missile launch detection functions) subsystem. AN/ALE-52 flare dispenser. Development flight testing of BAE Systems digital EW system undertaken at Edwards AFB in closing stages of 2005 as part of a product improvement programme that will replace older analogue receiver technology; inclusion of digital EW system began on Lot 5 production aircraft, with retrofit of older F-22s expected to follow.

ARMAMENT: Internal long-barrel General Dynamics M61A2 20 mm cannon with hinged muzzle cover and 480-round magazine capacity (production aircraft). Three internal bays for AIM-9M Sidewinder or next-generation AIM-9X (one in each side bay on Hughes LAU-141/A trapeze-type launcher) and six AIM-120C AMRAAM AAMs and/or 460 kg (1,015 lb) GBU-32 JDAM PGMs on Edo LAU-142/A vertical ejection launchers in main weapons bay. Four underwing stores stations at 3.17 m (125 in) and 4.42 m (174 in) from centreline of fuselage capable of carrying 2,268 kg (5,000 lb) each.

Typical weapon loads include six AIM-120s and two AIM-9s carried internally for air combat; two JDAMs, two AIM-120s and two AIM-9s carried internally for air-to-ground attack; and six AIM-120s and two AIM-9s internally, plus two external fuel tanks and further four AAMs (AIM-120 or AIM-9) underwing for long-range air combat.

Other weaponry envisaged for use by the F-22 includes the BLU-109 Penetrator, the wind-corrected munitions dispenser (WCMD), AGM-88 HARM, GBU-22 Paveway 3 guidance unit (with 500 lb bomb), new Small Diameter Bomb (SDB) and the low-cost autonomous attack system (LOCAAS) submunitions dispenser package.

DIMENSIONS, EXTERNAL:

Wing span	13.56 m (44 ft 6 in)
Wing chord: at root (theoretical)	9.85 m (32 ft 3½ in)
at tip (reference)	1.66 m (5 ft 5½ in)
at tip (actual)	1.14 m (3 ft 9 in)
Wing aspect ratio	2.4
Length overall	18.92 m (62 ft 1 in)
Height overall	5.08 m (16 ft 8 in)
Tail span: horizontal surfaces	8.84 m (29 ft 0 in)
vertical surfaces	5.97 m (19 ft 7 in)
Wheelbase	6.04 m (19 ft 9¾ in)
Weapon bay ground clearance	0.94 m (3 ft 1 in)

AREAS:

Wings, gross	78.0 m^2 (840.0 sq ft)
Leading-edge flaps (total)	4.76 m^2 (51.20 sq ft)
Flaperons (total)	5.10 m^2 (55.00 sq ft)
Ailerons (total)	1.98 m^2 (21.40 sq ft)
Vertical tails (total)	16.54 m^2 (178.00 sq ft)
Rudders/speedbrakes (total)	5.09 m^2 (54.80 sq ft)
Stabilators (total)	12.63 m^2 (136.00 sq ft)

WEIGHTS AND LOADINGS (estimated):

Weight empty (target)	14,365 kg (31,670 lb)
Max T-O weight	almost 27,216 kg (60,000 lb)
Max wing loading	348.7 kg/m^2 (71.43 lb/sq ft)
Max power loading	87 kg/kN (0.86 lb/lb st)

PERFORMANCE (YF-22, demonstrated):

Max level speed: supercruise	M1.58
with afterburning	M1.7 at 9,150 m (30,000 ft)
Ceiling	15,240 m (50,000 ft)
g limit	+7.9

PERFORMANCE (F-22A, design target, estimated):

Max level speed at S/L	800 kt (1,482 km/h; 921 mph)
g limit	+9

LOCKHEED MARTIN 382U/V SUPER HERCULES

US Air Force designations: C-, EC-, WC-130J
US Coast Guard designation: HC-130J
US Marine Corps designation: KC-130J
RAF designations: Super Hercules C. Mk 4 (C-130J-30); Super Hercules C. Mk 5 (C-130J)

TYPE: Medium transport/multirole.

PROGRAMME:

DEVELOPMENT MILESTONES

Programme launched	1991
First order (RAF)	Dec 94
Rolled out	18 Oct 95
First flight	5 Apr 96
First delivery (RAF)	24 Aug 98
Entered service (RAF)	14 Nov 00

US Air Force specification issued 1951, leading to first-generation Hercules (Allison T56 turboprops); first production contract for C-130A to Lockheed September 1952; first flight 23 August 1954; two YC-130 prototypes, 231 C-130As, 230 C-130Bs, 491 C-130Es, 1,089 C-130Hs and 113 L-100s manufactured before introduction of C-130J and commercial L-100J equivalent. Official total of 2,156 (including prototypes) delivered by January 1998, when final C-130H handed over.

Privately funded development and flight test programme for next-generation version began in 1991 as Hercules II, but subsequently known as C-130J Hercules, or L-100J in equivalent civilian form. Since late 2003, Lockheed Martin has adopted the name Super Hercules for the C-130J.

Initial British delivery accomplished on 24 August 1998; aircraft involved was ZH865, which arrived at Boscombe Down on 26 August for start of clearance trials by UK Defence Evaluation Research Agency (DERA). First aircraft ferried to RAF transport force at Lyneham was ZH878 on 21 November 1999. Final RAF aircraft flown from Marietta to Cambridge in late May 2000; final delivery to RAF on 21 June 2001.

First 'operational' mission accomplished by Lockheed Martin test crew in late November 1998, when C-130J completed three sorties from Marietta and airlifted 37,650 kg (83,000 lb) of hurricane relief supplies to Tegucigalpa, Honduras. Subsequently, 1999 witnessed start of deliveries to US Air Force Reserve Command and Air National Guard, as well as to operating units in Australia and the UK. Entire fleet had accumulated 30,000

1158215

US Coast Guard Lockheed Martin HC-130J marked as a 'C-130J' *(Paul Jackson)*

1158222

flight hours by February 2002; by 24 July 2002, this had risen to 50,000 hours. Roll-out of the 100th C-130J — an aircraft for the US Coast Guard — took place on 17 February 2003.

Block 5.3 software configuration available from third quarter 2001 is standard equipment for latest deliveries and was retrofitted to existing aircraft by end of 2002; Block 5.3 offers ability to fly integrated precision radar approaches, gives enhanced navigation capabilities and permits fully automatic formation flying using co-ordinated aircraft positioning system (CAPS). Next version is Block 5.4, introduced in FY05-06. Testing of this undertaken in fourth quarter of 2004 and focused on cargo handling system and upgrades to software associated with communications, navigation and identification systems; trials revealed need for further modification, with second series of tests from February 2005 until May 2005. Block 5.4 upgrade expected to have become operational at start of fourth quarter of 2005. In meantime, contract worth USD17.8 million signed in fourth quarter of 2004, covering purchase of total of 73 upgrade kits for installation from late 2005. A Block 6.0 configuration will follow in about 2007; this is expected to incorporate improvements originating with the Co-operative Systems and Software Upgrade Requirements Management (COSSURM); latter centres around a three-year, US$20 million contract awarded to Lockheed Martin in November 2003 by C-130J operators in Australia, Italy, the UK and the USA with the object of facilitating major avionics improvements. Upgrades that could feature in the Block 6.0 configuration include integration of the civil global air traffic management system as well as infrared countermeasures, inert gas generation system, Link 16 and improved logistic systems.

C-130J programme target of much criticism in 2004, with US DoD Inspector General audit report focusing on acquisition process, while the Pentagon's Operational Test and Evaluation director declared in January 2005 that the C-130J was "neither operationally effective nor operationally suitable"; a few weeks earlier, aircraft from the Air National Guard's 143rd AS and Air Force Reserve Command's 815th AS had begun the C-130J's first combat tour by deploying to an unidentified base in South-West Asia.

At the end of 2005, a total of 135 C-130Js had been delivered out of 182 aircraft then on order.

CURRENT VERSIONS: **C-130J:** Baseline version. Dimensionally similar to preceding C-130H, but incorporating new equipment and features as subsequently described. Subject of initial order for two from USAF in FY94, with subsequent contract for two in FY96; these initially earmarked for trials and eventually joined Air Force Reserve Command (AFRC), while further eight funded in FY97 and FY98 assigned to Air National Guard's 135th Airlift Squadron at Warfield ANGB, Martin State Airport, Baltimore, Maryland, which fully equipped by mid-July 2000. Initial aircraft delivered to AFRC 403rd Wing at Keesler AFB, Mississippi, on 31 March 1999 for training.

Description applies mainly to baseline C-130J except where indicated.

C-130J-30: Stretched version of current production C-130; fuselage lengthened by 4.57 m (15 ft 0 in), offering increases in capability of between 31 and 50 per cent, dependent upon mission and configuration (see accompanying diagram). Orders received from Australia, Denmark, Italy, UK and USA.

CC-130J: Designation allocated to C-130J-30 aircraft in USAF service during 2003 but subsequently dropped in 2004, when basic C-130J designation adopted by USAF. First three funded in FY99, with two more in FY00 and five in FY02. Initial deliveries to ANG units in Rhode Island and California; FY02 aircraft to be assigned to 146th AW (two aircraft), 143rd AW (one), 403rd Wing (one) and a new USAF C-130J training unit (48th Airlift Squadron) that was established within the 314th Airlift Wing at Little Rock AFB, Arkansas on 5 December 2003 (one); all five delivered in 2004. In March 2003, USAF concluded contract for multiyear procurement of 40 CC-130Js, at planned rate of eight per year from FY04 up to and including FY08, although only four funded in FY04, rising to 11 in FY05.

EC-130J: 'Commando Solo' psychological warfare version; first aircraft funded in FY97 budget, with first handed over on 17 October 1999; after flight testing, it moved to Palmdale, California, in July 2000 for fitting out before delivery to the 193rd Special Operations Squadron, Air National Guard, at Harrisburg IAP, Pennsylvania. IOC was expected by the end of 2003, but slipped into 2004 because of problems encountered in integrating a new switchable 60/90 kVA generator with the broadcast system; this in turn caused delay in delivery of fully equipped aircraft to the 193rd SOS. Following modification, first EC-130J joined 193rd SOS in September 2004. Additional procurement comprises third example in FY99 budget, fourth in FY00 and fifth in FY01; eventual total expected to be seven by FY09.

HC-130J: Replacement for earlier US Coast Guard HC-130s; funding for six aircraft contained in FY01 budget. First example accepted at Marietta in late 2002 and used for crew training before being formally delivered to Coast Guard at Elizabeth City, North Carolina, on 31 October 2003; these initially being used in logistics role but will eventually be fitted with full mission kit, including inverse synthetic aperture sea search radar. All six delivered by end of 2003; two subsequently deployed to 17th Coast Guard District and had begun flying operational missions from Kodiak, Alaska, by mid-2004.

KC-130J: Tanker/transport version for US Marine Corps, which has requirement for 51 to replace KC-130F, KC-130R and KC-130T variants. Originally to have two Flight Refuelling Mk32B-901E hose-and-drogue wing-mounted refuelling pods; three aircraft funded in FY97 budget, two in FY98, two in FY99, one in FY00, three in FY01 and two in FY02. Further aircraft for USMC covered by multiyear procurement contract concluded in March 2003; this comprises initial batch of four in FY03, with additional 17 aircraft at rate of four or five per year during FY05 to FY08. First contract for five USMC conversions (to be accomplished by end of 2000) announced 21 July 1998. Final assembly of first KC-130J (165735) began 22 March 1999, with first flight on 9 June 2000; total of three aircraft assigned to test programme at Patuxent River in latter half of 2000; first drogue engagement accomplished by Navy F/A-18 Hornet on 30 August 2000; initial trials revealed that aft fairing of pod was unsatisfactory, with cracks appearing in hose/drogue coupling; redesign of fairing in 2000–01 cleared way for further testing in second quarter of 2001, which confirmed much improved performance in areas of flying quality and durability. Further difficulties experienced with Mk 32B pods during flight testing (including 'sine wave' oscillation of hose) eventually culminated in Marine Corps deciding to abandon Flight Refuelling system and switch to proven Sargent Fletcher pods taken from existing KC-130F/R aircraft; new-build pods, with a higher fuel flow rate, are to be acquired by the Marines and Lockheed Martin will continue to work with Flight Refuelling on finding a solution that will allow the Mk 32B to be offered to export customers. On completion of trials, all three test aircraft assigned to USMC tanker/transport squadron VMGR-252 at MCAS Cherry Point, North Carolina, which took delivery at beginning of September 2001; total of seven handed over by end 2001. Two aircraft subsequently assigned to intensive 270-hour operational evaluation from October 2003, which paved way for operational introduction by USMC; analysis of results culminated in KC-130J being considered suitable for operational service with effect from September 2004. Initial deployment (to Al Asad, Iraq) begun 10 February 2005 by VMGR-252; previously, on 23 September 2004, VMGR-352 at Miramar, California, became second operational squadron when it accepted first of 11 KC-130Js. Provisions for installation of refuelling probe incorporated in basic aircraft. Additional fuel in underwing and cargo hold tanks; see Power Plant.

'KC-130J Sea Herk': Lockheed Martin proposal for transport/tanker version with minor changes to allow take-off and landing on future US Navy Rapid Strategic Lift Ship (RSLS), which expected to join fleet in about 2020; 'Sea Herk' could carry payload of 13,608 kg (30,000 lb) some 300 n miles (556 km; 345 miles) on internal fuel or 10,400 kg (22,928 lb) payload some 2,000 n miles (3,704 km; 2,301 miles) with use of external fuel pods.

MC-X Combat Talon 3: Potential new variant for USAF Special Operations Command, which has requirement for up to 54 aircraft, with procurement likely to begin in 2006. This will almost certainly be based on the C-130J. The same organisation is also contemplating acquisition of a new **AC-X** gunship that could utilise the C-130J airframe. In May 2004, Lockheed Martin presented **'Arsenal Ship'** concept to USAF, this envisaging suitably modified C-130 able to carry and launch up to eight large cruise missiles or greater number of smaller weapons comparable in size to AGM-158 JASSM in stand-off role.

WC-130J: Weather reconnaissance version with aerial reconnaissance weather officer console, dropsonde system operator console and dropsonde launch tube; initial four in FY96 budget, with three more in FY97, two in FY98 and one in FY99; for 53rd WRS, Air Force Reserve Command at Keesler AFB, Mississippi. USD46.9 million contract for modification of first six, with option for further four, signed 18 September 1998; deliveries began on

Lockheed Martin C-130J Super Hercules of USAF's 314th AW *(Paul Jackson)* 1158214

US Marine Corps Lockheed Martin KC-130J aerial tanker *(US Navy)* 1158221

30 September 1999; formal acceptance 12 October 1999. This version not declared fully operational until start of the hurricane season in June 2005.

CUSTOMERS: See tables. Total of 182 ordered by February 2006. First customer was RAF, which ordered 25 in December 1994; of these, 15 are stretched C-130J-30, designated C. Mk 4, with final 10 as standard C-130Js, designated Hercules C. Mk 5. Delivery of first example to the trials unit at Boscombe Down was due in November 1996, but was delayed until 26 August 1998. First service recipient was J Conversion Flight of No. 57 (Reserve) Squadron, followed by No. 24 and then No. 30 Squadrons at RAF Lyneham. Deliveries to Lyneham began on 21 November 1999, when C. Mk 4 ZH878 arrived for duty as temporary ground procedures trainer; two days later, on 23 November, C. Mk 4 ZH875 was formally handed over in official ceremony at Lyneham. Completion of deliveries occurred on 21 June 2001; operational service with RAF began 14 November 2000, when No.24 Squadron flew scheduled mission to Puerto Rico. No.30 Squadron attained operational status in June 2002.

Second order covered two C-130Js for evaluation by the USAF (these later transferred to Air Force Reserve Command) and was finalised on 13 October 1995, one week before the first was rolled out at Marietta. Further two funded in FY96, four in FY97 and four in FY98 for Air Force Reserve Command (AFRC) and Air National Guard (ANG) units; first ANG squadron was 135th AS at Martin State Airport, Baltimore. Orders for C-130J-30 began FY99 with contract for three ANG aircraft, with FY01 procurement including two more C-130J-30s for ANG and initial batch of six C-130Js for long-range SAR duties with US Coast Guard; five more C-130J-30s in FY02 budget, including first for USAF and AFRC. First C-130J-30 rolled out 25 January 2001; following testing, this delivered to 143rd AW, Rhode Island ANG, on 2 December 2001. Two more C-130J-30s to 143rd AW by end 2001, with next two for 146th AW, California ANG, which received its first example on 2 June 2002. USAF requirement exists for more than 150 C-130J-30s, of which initial tranche of about 40 covered by multiyear procurement contract signed in March 2003; first USAF aircraft delivered to 314th AW at Little Rock AFB, Arkansas, on 16 April 2004. Other special mission versions acquired by USA, including WC-130J for weather reconnaissance, KC-130J tanker and EC-130J for psychological warfare operations.

Second order received in 1995 was from Australia, for 12 C-130J-30s to replace C-130Es of No. 37 Squadron at Richmond, at total cost of US$660 million. Order placed on 21 December 1995 and included options for an additional 24 aircraft, plus eight options for New Zealand, which was guaranteed pricing based on Australia's larger order; options have not been converted to firm orders. First Australian C-130J (A97-440/N130JQ, c/n 5440) flew on 15 February 1997; delivery began 7 September 1999, when A97-464 arrived at Richmond; last aircraft handed over on 1 June 2000, with operational status achieved in December 2001.

Third overseas customer was Italy, which initially ordered 18 C-130Js, subsequently adding two more in January 2000 and another two in March 2000, with last four being stretched C-130J-30 version. At same time as placing final order, Italy revised overall procurement plan and eventually received 12 C-130Js and 10 C-130J-30s. First aircraft rolled out at Marietta on 11 July 2000. Italian military certification also awarded in July 2000, with first C-130J delivery (actually second aircraft, MM 62176, c/n 5497) to 2° Gruppo, 46° Aerobrigata at Pisa departing USA on 16 August; formal acceptance 21 September 2000. All are tanker-capable and configured to receive fuel, although only six likely to be operated as such at any one time. Two of the original aircraft to be adapted as sigint platforms by 2006, with antennae fitted to removable panels; reconfiguration from basic transport role to specialised sigint mission would require maximum of 24 hours; equipment is to include 12 workstations, a communications suite and secure datalinks. C-130J-30 version assigned to 50° Gruppo, 46° Aerobrigata, from third quarter of 2002, with final aircraft handed over to Italy at Marietta on 10 February 2005. Most recent export customer is Denmark, which ordered three C-130J-30s, with option on fourth, in December 2000; all three formally accepted at Marietta on 21 October 2003, with delivery to Denmark following in March and April of 2004. Danish option converted to firm order in July 2004, with delivery due in late 2007.

Other potential customers reported to be in discussion with Lockheed Martin include Bahrain, Egypt, Israel, Kuwait and Portugal. Saudi Arabia reported to have requirement for up to 24 aircraft, while C-130J demonstrated to Brunei and India in early 2005. In mid-2005, Canada also considering procurement of between 15 to 20 C-130J-30 aircraft and Australia has indicated that it may purchase six to eight tanker-configured examples.

MILITARY/GOVERNMENT C-130J SALES
(To March 2006, excluding US)

Country	J	J-30	Total
Australia		12	12
Denmark		4	4
Italy	12	10	22
UK	10	15	25
Total	**22**	**41**	**63**

COSTS: USD55 million programme unit cost (Australia) (1995). Italian order of November 1997 valued at USD1.2 billion. Baseline price of C-130J-30 quoted as USD67 million in early 2002. Multiyear procurement of 40 C-130J-30s for USAF and 20 KC-130Js for US Marine Corps valued at USD4.05 billion (unit price USD67.5 million). FY03 contract for one C-130J-30 for Air Force Reserve Command worth USD70.5 million.

DESIGN FEATURES: Archetypal tactical transport; upswept rear fuselage for ramp access; high wing for propeller ground clearance despite low floor height; latter provided by pannier-mounted landing gear, which obviates long mainwheel legs stowed in wings. Can deliver loads and parachutists over open ramp and parachutists through side doors; cargo hold pressurised.

Significant changes introduced with C-130J, which optimised for economical operation, justifying customers' substitution for earlier C-130s on 30 year lifetime savings alone. Entirely revised flight deck reduces LRUs by half and wire assemblies by 53 per cent, with

wire terminations cut by 81 per cent; has four MFDs, plus HUD for both pilots; lighting compatible with NVGs. Most systems have digital interfaces with the main mission computer to include unmodified mechanical systems like the hydraulics, which are largely unaltered from those of C-130H; provision for integrated self-defence suite (RWR, MAW, chaff/flare dispensers and IR jammers). Propulsion system provides 29 per cent more take-off thrust and is 15 per cent more efficient; fuel efficiencies obviate requirement for external tanks on most types of mission; propeller has 50 per cent fewer parts and weighs 15 per cent less. Manpower requirements of typical 16-aircraft squadron cut by 38 per cent compared with earlier versions of C-130, as result of reduced flight crew and 50 per cent better maintainability. Comprehensive computerised maintenance system employs a hand-held data module as interface between aircraft's BITE and operating base's central technical records.

Wing section NACA 64A318 at root and NACA 64A412 at tip; dihedral 2° 30'; incidence 3° at root, 0° at tip.

FLYING CONTROLS: All flying controls integrated with digital autopilot/flight director and comprise control surfaces boosted by dual hydraulic units; trim tabs on ailerons, both elevators and rudder; elevator tabs have AC main supply and DC standby; Lockheed-Fowler composites trailing-edge flaps.

STRUCTURE: All-metal two-spar wing with integrally stiffened taper-machined skin panels up to 14.63 m (48 ft 0 in) long. Incorporates carbon fibre composites materials for flaps and 32 graphite-epoxy trailing-edge panels.

LANDING GEAR: Hydraulically retractable tricycle type. Each main unit has two wheels in tandem, retracting into fairing built on to fuselage side. Nose unit has twin wheels and is steerable ±60°. Mainwheels 20.00-20 (26 ply) tubeless; nose 12.50–16 (12 ply) tubed or tubeless. Oleo shock-absorbers. Minimum ground turning radius: C-130J, 11.28 m (37 ft) about nosewheel and 25.91 m (85 ft) about wingtip; C-130J-30 14.33 m (47 ft) about nosewheel and 27.43 m (90 ft) about wingtip.

POWER PLANT: Four Rolls-Royce AE 2100D3 turboprops, flat rated to 3,424 kW (4,591 shp) (manufacturer's rating 3,458 kW; 4,637 shp at ISA +25°C), fitted with Dowty Aerospace R391 six-blade composites propellers and Lucas Aerospace FADEC. Automatic thrust control system (ATCs) and autofeather systems, plus engine monitoring system (EMS) which is incorporated into aircraft's integrated diagnostic system (IDS).

Total internal fuel capacity of 25,552 litres (6,750 US gallons; 5,621 Imp gallons) without foam and 24,363 litres (6,436 US gallons; 5,359 Imp gallons) with foam. Provisions only for two optional underwing pylon tanks, each with capacity of 5,220 litres (1,379 US gallons; 1,148 Imp gallons) without foam and 4,883 litres (1,290 US gallons; 1,074 Imp gallons) with foam. Total fuel capacity 35,992 litres (9,508 US gallons; 7,917 Imp gallons) without foam and 34,129 litres (9,016 US gallons; 7,507 Imp gallons) with foam. Tanker versions can carry cargo hold tank with additional 13,578 litres (3,587 US gallons; 2,987 Imp gallons). Single pressure refuelling point and overwing gravity fuelling. In-flight refuelling probe fitted as standard on port side of RAF aircraft; optional for all others, with Italian aircraft currently unique in being configured as receiver/tankers.

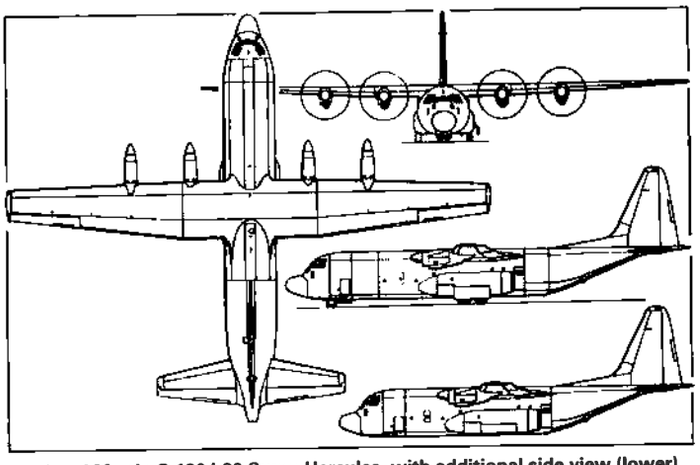
ACCOMMODATION: Crew of two on flight deck, comprising pilot and co-pilot, with provisions for optional third workstation. Ergonomic problems suffered by short pilots necessitated a number of alterations to cockpit, including redesign of seat and seat track. HUD and main control yoke, with throttle quadrant also modified. Two crew bunks, with lower incorporating three additional seats and harnesses for relief crew/flight deck passengers. Galley. Separate loadmaster's station in cargo hold, including folding desk, is standard equipment on RAF aircraft; optional for all others. Flight deck and main cabin pressurised and air conditioned.

Standard complements for C-130J as follows: 92 troops, 64 paratroopers, 74 litter patients plus two attendants, 54 passengers on palletised airline seating. Corresponding data for C-130J-30 are 128 troops, 92 paratroopers, 97 litter patients plus four attendants and 79 passengers on palletised airline seating. Airdrop loads comparable to C-130H/H-30 and include light armoured vehicles. Light and medium towed artillery pieces, wheeled and tracked vehicles and 463L palletised loads (five in C-130J and seven in C-130J-30, plus one on ramp in each model) are transportable. Hydraulically operated (with dual actuators) main loading door and ramp at rear of hold; can be opened in flight at up to 250 kt (463 km/h; 288 mph). Crew door on port forward fuselage side. Paratroop door on each side aft of landing gear fairing. Two emergency exit doors standard. Optional cargo handling system ordered by the USAF includes flush-mounted winch; in-ramp towplate for airdrop operations; low-profile rails and electric locks; flip-over rollers with covers; container delivery system centre vertical restraint rails. Capable of automatic preprogrammed cargo drops.

SYSTEMS: Lucas generator. Environmental control system in starboard undercarriage fairing is similar to that of the C-130H, incorporating dual air cycle machines, but with 30 per cent greater cooling capacity and a digital electronic control system. Honeywell GTCP85-185L(A) auxiliary power unit in port undercarriage fairing furnishes ground electrical power and bleed air for environmental control system. MIL-STD-1553B digital databus architecture. Integrated diagnostic system (IDS) incorporating fault detection/isolation subsystem with BIT (built-in test) facility. Goodrich pneumatic fin anti-icing system.

AVIONICS: *Comms:* Honeywell com/nav/ident management system, with Intel 80960 processor. AN/ARC-222 VHF, HF/UHF radio, intercom and IFF, with provisions for satcom system. All communication radios have secure features. AN/APX-119 IFF to be included on Block 5.4 and subsequent aircraft.

Radar: Northrop Grumman AN/APN-241 low-power colour radar incorporates Doppler beam-sharpening ground mapping mode, air-to-air skin paint mode and protective windshear mode as well as conventional colour weather radar.



Lockheed Martin C-130J-30 Super Hercules, with additional side view (lower) of C-130J *(Paul Jackson)* 1158213

Flight: HG-9550 radar altimeter, AN/ARN-153(V) Tacan, digital autopilot/flight director (DA/FD), dual Honeywell laser INS with embedded GPS receivers, Doppler velocity sensor, VOR, ILS, marker beacon receiver, UHF/VHF DF, ADF, E-TCAS, ground collision avoidance system (GCAS), global digital map display units and provision for microwave landing system.

Instrumentation: 'Dark cockpit' concept. Flight Dynamics HUD as certified primary flight instrument at pilot and co-pilot positions, four 152 × 203 mm (6 × 8 in) Avionics Display Corporation active matrix liquid-crystal display (AMLCD) colour multipurpose display systems (CMDSs) which are NVG-compatible for flight instrumentation, navigation and engine information and five Avionics Display Corporation 58 × 76 mm (2.3 × 3 in) monochrome AMLCDs for digital selector panels.

Mission: DRS Technologies AN/APN-243(V) station-keeping equipment. Provision for secure voice communication system.

Self-defence: Provisions for Lockheed Martin AN/AAR-47 missile warning system, Sanders AN/ALQ-157 IR countermeasures system, BAE Systems AN/ALE-47 chaff/flare dispensing systems and AN/ALR-56M radar warning receiver or AN/ALR-69 enhanced radar warning system. Testing of RWR, countermeasures dispensing system (CMDS) and missile warning system undertaken in September and October 2003; an aircraft from the 135th AS was used, spending a week in the Benefield Anechoic Facility at Edwards AFB to evaluate RWR and CMDS operation, before moving to the Naval Weapons Center at China Lake to test the missile warning system in flight; further trials followed in November 2004, these verifying correct operation of CMDS in fully automatic, semi-automatic and manual modes. Northrop Grumman Large Aircraft Infra-Red Countermeasures (LAIRCM) system to be installed on Air Mobility Command C-130J, following successful conclusion of EMD testing in 2002–04.

EQUIPMENT: USMC KC-130Js were intended to use Flight Refuelling Mk 32B-901E hose pods underwing, but problems encountered during flight testing have resulted in existing Sargent Fletcher refuelling pods being installed instead. Italy expected to fit the Mk 32B-901E pod to some aircraft and may also seek alternative solution. C-130J-30s for Air National Guard's 146th AW are equipped with Aero Union Systems Airborne Fire Fighting System (AFFS), which allows them to drop up to 15,142 litres (4,000 US gallons; 3,331 Imp gallons) of fire retardant in a single pass. Italian C-130J configured to operate with Special Avionics Mission Strap-on-Now (SAMSON) C-130 Open Skies System (COPS) in support of international arms control verification efforts.

DIMENSIONS, EXTERNAL:

Wing span	40.41 m (132 ft 7 in)
Wing aspect ratio	10.1
Length overall: C-130J	29.79 m (97 ft 9 in)
C-130J-30	34.37 m (112 ft 9 in)
Height overall: C-130J	11.84 m (38 ft 10 in)
C-130J-30	11.81 m (38 ft 9 in)
Tailplane span	16.05 m (52 ft 8 in)

VICE-PRESIDENT AND SITE GENERAL MANAGER: Richard S Baker
SENIOR MANAGER, PALMDALE LOCAL MEDIA RELATIONS: Dianne Knippel
Palmdale performs upgrades and modifications to Lockheed U-2, F-117 and C-130 aircraft. Is headquarters for Advanced Development Programs (ADP) initiatives across the Lockheed Martin Aeronautics Company, this facility also being known as the legendary Skunk Works. Responsibilities include derivatives or upgrades of current aircraft systems, new development systems, critical technology development and integration, and operational effectiveness and system analysis. Palmdale performs rapid prototyping, exemplified most recently by the X-35 Joint Strike Fighter concept demonstrators. Next-generation platforms such as new strategic and tactical airlift aircraft and advanced Unmanned Air Vehicle concepts are currently undergoing research and test at Palmdale.

LOCKHEED MARTIN P-791

TYPE: Hybrid buoyant aircraft.
PROGRAMME: Company-funded subscale POC prototype, possibly of a design intended for DARPA Walrus programme, but no details released. Eye-witness reports of five-minute maiden flight on 31 January 2006 suggest overall length of around 61 m (200 ft) and cruising speed of about 20 kt (37 km/h; 23 mph). Skunk Works understood to be continuing to develop hybrid lift technology, despite cancellation of Walrus programme.
DESIGN FEATURES: TCOM three-lobe envelope; air cushion landing gear (four units, one fore and aft on each outer lobe). Two side-mounted and two rear-mounted engines, possibly with vectored thrust.

Lockheed Martin P-791 prototype, registered N791LM 1190411

LOCKHEED MARTIN AERONAUTICS - FORT WORTH

1 Lockheed Boulevard, Fort Worth, Texas 76108
Tel: (+1 817) 777 20 00
Fax: (+1 817) 763 47 97
Web: www.lmaeronautics.com
EXECUTIVE VICE-PRESIDENT, GENERAL MANAGER JSF PROGRAMME: Daniel J Crowley
EXECUTIVE VICE-PRESIDENT, GENERAL MANAGER JSF PROGRAMME INTEGRATION: C T 'Tom' Burbage
VICE-PRESIDENT, F-16 PROGRAMMES: John L Bean
DIRECTOR, FORT WORTH LOCAL MEDIA RELATIONS: Joseph W Stout
General Dynamics' Fort Worth Division sold to Lockheed; became Lockheed Fort Worth Company on 1 March 1993; renamed Lockheed Martin Tactical Aircraft Systems following merger between Lockheed and Martin Marietta in 1995. Adopted current title in January 2000 with consolidation of all Lockheed Martin aeronautical operations into single company with headquarters in Fort Worth, Texas.

Activities include production, development and support of F-16 Fighting Falcon; one-third share of F-22 Raptor development and initial production; and leadership of F-35 Lightning II (Joint Strike Fighter) development team (with Northrop Grumman and BAE Systems). Is principal subcontractor to Mitsubishi for production of F-2 in Japan and to KAI for development of T-50 Golden Eagle advanced trainer in South Korea.

Fort Worth work force numbered 16,200 in August 2003; factory and associated office facilities occupied 687,500 m^2 (7.4 million sq ft).

LOCKHEED MARTIN F-16 FIGHTING FALCON

Israel Defence Force names: F-16C Barak (Lightning), F-16D Brakeet (Thunderbolt) and F-16I Suefa (Storm)
Turkish Air Force name: Savaşan Şahin (Fighting Falcon)
United Arab Emirates Air Force name: Desert Falcon
TYPE: Multirole fighter.
PROGRAMME:

DEVELOPMENT MILESTONES

Request for proposals	6 Jan 1972
Design submitted	Feb 1972
Programme launched	Apr 1972
Rolled out	13 Dec 1973
First flight (YF-16)	20 Jan 1974
Official first flight (YF-16)	2 Feb 1974
First flight, pre-production	8 Dec 1976
First flight, production	7 Aug 1978
First delivery (USAF)	Aug 1978
Entered service (USAF)	6 Jan 1979

Emerged from General Dynamics YF-16 of US Air Force Lightweight Fighter prototype programme in 1972; first flight of prototype YF-16 (72-01567) 2 February 1974; first flight of second prototype (72-01568) 9 May 1974; selected for full-scale development (FSD) 13 January 1975; day fighter requirement extended to add air-to-ground capability with multimode radar and all-weather navigation; production of FSD aircraft began July 1975; first flight of FSD aircraft 8 December 1976. F-16 achieved 5 millionth flying hour late in 1993; 10 millionth flying hour passed in March 2002; total had risen to 12 million flight hours by June 2005. 4,000th aircraft delivered (to Egyptian Air Force) on 28 April 2000; total of 4,152 delivered as at 1 May 2004. 4,300th aircraft delivered (to Royal Air Force of Oman) on 20 April 2006.

Total sales 4,347 at end of 2001. Further orders from Chile (10 aircraft), Greece (30), Oman (12) and Poland (48), increased sales to 4,447 at start of 2006. US has indicated willingness to supply latest versions to Pakistan, which originally intended to obtain as many as 75 new-build aircraft. However, following devastating earthquake, Pakistan now contemplating acquisition of initial batch of 18 new-build F-16C and F-16D versions, as well as some refurbished F-16As and F-16Bs; it is likely that any new-build purchase will include option for follow-on batch of 18 aircraft. In addition, both Egypt and Thailand are understood to be considering acquisition of more new-build aircraft. In October 2005, Romania reported to be considering acquisition of substantial quantity of F-16s from surplus Israeli stocks.

CURRENT VERSIONS: **F-16A:** First version for air-to-air and air-to-ground missions; not currently in production.

F-16B: Standard tandem two-seat version of F-16A; fully operational both cockpits; fuselage length unaltered; reduced fuel.

F-16C/D: Single-seat and two-seat USAF Multinational Staged Improvement Program (**MSIP**) aircraft respectively, implemented February 1980. MSIP utilised growth capability to allow for precision ground attack and BVR missiles, and perfomance of all-weather, night and day missions; **Stage I** applied to Block 15 F-16A/Bs delivered from November 1981; **Stage II,** applied to Block 25 F-16C/Ds from July 1984, included core avionics, cockpit and airframe changes. Block 25 aircraft originally delivered with F100-PW-200 engine, but all surviving examples have F100-PW-220E following retrofit, as well as other improvements as detailed under Stage III of MSIP. **Stage III** involved installation of systems as they became available, beginning 1988 and extending to Block 50/52, including selected retrofits back to Block 25. Changes included adoption of Northrop Grumman AN/APG-68 multimode radar, with improved range, resolution, more operating modes and better ECCM than AN/APG-66; advanced cockpit with multifunction displays and upfront controls, BAE Systems wide-angle HUD, Fairchild mission data transfer equipment and radar altimeter; expanded base of fin giving space for proposed later fitment of AN/ALQ-165 Airborne Self-Protection Jamming system (since cancelled, though now installed in Korean aircraft); increased electrical power and cooling capacity; structural provision for increased take-off weight and manoeuvring limits; and new weapons such as AIM-120A AMRAAM and AGM-65D Maverick.

Common engine bay introduced at **Block 30/32** (FMS deliveries from December 1985 and USAF deliveries from July 1986) to allow fitting of either P&W F100-PW-220 (Block 32) or GE F110-GE-100 (Block 30) Alternate Fighter Engine. Other changes include computer memory expansion and seal-bonded fuselage fuel tanks. Additions in 1987 included voice message unit, doubled chaff/flare capacity, repositioning of RWR antennas to provide better coverage in forward hemisphere, AGM-45 Shrike anti-radiation missiles, crash survivable flight data recorder and modular common inlet duct ('large-mouth') allowing full thrust from F110 at low airspeeds.

Software upgraded for full Level IV multitarget compatibility with AMRAAM early 1988. Industry-sponsored development of radar missile capability for several air forces resulted in firing of AIM-7F and AIM-7M missiles from F-16C in May 1988; capability introduced mid-1991; missiles guided using pulse Doppler illumination while tracking targets in a high PRF mode of the AN/APG-68 radar.

First Polish Air Force Lockheed Martin F-16C Fighting Falcon 1158220

Lockheed Martin F-16C Fighting Falcons flown by 181st FW, Indiana Air National Guard *(MS John S Chapman, USAF)* 1158212

Block 40/42 (deliveries from December 1988) upgrades include AN/APG-68(V)1 radar allowing 100 hour operation before maintenance, full compatibility with Lockheed Martin low-altitude navigation and targeting infra-red for night (LANTIRN) pods, four-channel digital flight control system, expanded capacity core computers, diffractive optics HUD, enhanced envelope gunsight, GPS, improved leading-edge flap drive system, improved cockpit ergonomics, high gross weight landing gear, structural strengthening, increased performance battery and provision for improved EW equipment, including advanced interference blanker. LANTIRN targeting pod gives day/night standoff target identification, automatic target handoff for multiple launch of AGM-65 Maverick, autonomous laser-guided bomb delivery and precision air-to-ground laser ranging. LANTIRN navigation pod provides real-world IR view through HUD for night flight plus automatic/manual terrain following with dedicated radar sensor. Combat Edge pressure breathing system installed 1991 for higher pilot *g* tolerance.

A total of 39 Block 40 F-16C/Ds of the 31st FW was involved in a quick response capability (QRC) modification effort, known as 'Sure Strike', to install Improved Data Modem (IDM) equipment. Work was undertaken by a joint USAF/LMTAS team at Aviano AB, Italy, and was completed in December 1995, these being the first Block 40 aircraft to receive the IDM which was standard equipment on production Block 50 F-16s. In mid-1998, a demonstration programme was conducted to adapt existing IDM with Lockheed Martin kit to provide 'Gold Strike' system capable of two-way transmission of digitised video imagery of targets to enhance pilot's situational awareness.

First Block 40 F-16C/Ds issued in late 1990 to 363rd FW (Shaw AFB, South Carolina); first LANTIRN pods to 36th FS/51st FW at Osan, South Korea, in 1992. USAF Block 40/42 F-16Cs unofficially designated **F-16CG**. Following retirement of F-111F, Block 40/42 F-16Cs and F-16Ds with LANTIRN comprise more than 50 per cent of USAF night/precision strike force. All USAF F-16Cs and F-16Ds to receive FLIR targeting pod capability.

Block 50/52 (deliveries began with F-16C 90-0801 in October 1991 for operational testing) upgrades included F110-GE-129 and F100-PW-229 increased performance engines (IPE), AN/APG-68(V)5 radar with advanced programmable signal processor employing VHSIC technology, Have Quick IIA UHF radio and AN/ALR-56M advanced RWR. Changes initiated at **Block 50D/52D** in 1993 included full integration of AGM-88 HARM (high-speed anti-radiation missile) via HARM aircraft launcher interface computer (ALIC), improved data modem (IDM), upgraded programmable display generator with growth potential for colour and map, expanded data transfer cartridge, ring laser INS (Honeywell and Litton units both used) and improved VHF/FM antenna. AN/ALE-47 advanced chaff/flare dispenser fitted to all FMS Block 50 aircraft delivered after mid-1996 and incorporated as standard on USAF aircraft with effect from FY97 purchase; also retrofitted to earlier USAF Block 40/50 aircraft.

First Block 50D/52D (91-0360) delivered to USAF on 7 May 1993; optimised for defence suppression missions, having software for horizontal situation display on existing two MFDs and provision for AN/ASQ-213 HARM targeting system (HTS); sensor in pod on starboard side of engine inlet; HTS has capability similar to F-4G 'Wild Weasel' which it replaced in SEAD role. USAF has increased HTS inventory and incorporated software and hardware improvements enabling more targets to be tracked with enhanced ambiguity resolution and speedier reaction time.

Deliveries of Block 50/52 began to 4th FS of 388th FW at Hill AFB, Utah, from October 1992. Block 50D/52D aircraft initially to 309th FS (now 79th FS) of 363rd (now 20th) FW at Shaw AFB, South Carolina in 1993. Production for USAF was due to terminate with FY94 batch, but six additional F-16Cs funded in each of FY96 and FY97, plus three in FY98, one in FY99, 10 in FY00 and four in FY01; FY96 and subsequent aircraft to Block 50D standard. F-16s delivered from mid-2000 (FY97 and later) to improved configuration, incorporating modular mission computer by Raytheon (replacing three core avionics processors) that was developed for F-16A/B MLU programme, Honeywell colour liquid crystal multifunction displays (replacing monochrome CRT MFDs), Honeywell colour programmable display generator, Teac colour airborne videotape recorder, colour cockpit TV sensor and Litton onboard oxygen generating system (OBOGS). FY00 and subsequent aircraft have AN/APX-113 and associated avionics improvements. Majority of FY00 and FY01 aircraft delivered to USAF between April and December 2002, with final example (01-7053) receiving full CCIP upgrade before being handed over 18 March 2005. USAF Block 50/52 F-16Cs unofficially designated **F-16CJ**.

First Samsung-assembled F-16C Block 52D rolled out in South Korea on 7 November 1995; 140th and last delivered to Republic of Korea Air Force 20 August 2004. First flight of initial TAI-built F-16C Block 50D in late May 1996, with delivery to Turkish Air Force following on 29 July; last TAI-produced F-16 delivered October 1999. First Block 50D delivered to Greece 29 January 1997. First Block 52D delivered to Singapore 30 January 1998. First production lease (PL) Block 52D aircraft for Singapore was delivered 28 May 1998; this was under terms of commercial contract, with delivery achieved in less than 24 months from placing of order.

Advanced Block 50/52: Latest production versions, originally referred to as Block **50+/52+**. Basic configuration includes upgraded AN/APG-68(V)9 radar with 30 per cent

For details of the latest updates to *Jane's All the World's Aircraft* online and to discover the additional information available exclusively to online subscribers please visit
jawa.janes.com

greater air-to-air detection range and synthetic aperture radar (SAR) mode for high-resolution mapping and target detection/recognition. Is also compatible with latest FLIR navigation and targeting pod systems and has upgraded core avionics, including an improved modular mission computer, two 102 × 102 mm (4 × 4 in) colour cockpit displays, cockpit and exterior lighting compatible with night vision goggles, helmet-mounted cueing system, a digital terrain system, IFF interrogator/transponder, high off-boresight missile compatibility. Link 16 datalink and OBOGS. Available with a choice of internal electronic countermeasures equipment and able to take various customer-unique systems. Maximum take-off gross weight increased to 21,772 kg (48,000 lb). Can be fitted with low-drag conformal fuel tanks, with combined capacity of 1,705 litres (450 US gallons; 375 Imp gallons). Additional fuel in optional 2,271 litre (600 US gallon; 500 Imp gallon) auxiliary wing tanks. Two-seat aircraft have a rear cockpit configured for either a weapon system operator or instructor pilot (converted with a single switch), plus a dorsal avionics compartment that accommodates all of the systems of the single-seat aircraft, plus additional chaff/flare dispensers and specialised mission equipment.

First customer for Advanced Block 52 version was Greece, which revealed intention on 30 April 1999 to buy as many as 70 although subsequent contract covered only 50 aircraft, with fixed price option for up to 10 more that was converted to firm order on 14 September 2001. Deliveries began 31 October 2002, with formal inauguration ceremony at Forth Worth on 2 April 2003, when first five aircraft handed over. Initial aircraft ferried to Greece in May 2003, with deliveries completed in 2004, but further order covering another 30 aircraft announced in July 2005, with delivery to be effected in 2008-09. Other customers for Advanced Block 50/52 aircraft are Chile (Block 50), Oman (Block 50), Poland (Block 52) and Singapore (Block 52). First aircraft for Chile rolled out 14 April 2005 and made maiden flight 23 June; first two aircraft delivered to Chile on 24 January 2006, with balance to follow by year-end. First aircraft for Singapore made initial flight 26 February 2004, deliveries to Tengah beginning in July 2004. First flight of initial Omani aircraft accomplished 8 July 2005, with formal acceptance on 4 August, although first two aircraft did not arrive in Oman until October 2005. Maiden flight of first Polish aircraft (an F-16C) took place on 14 March 2006; initial delivery to Poland scheduled for 8 November 2006, with total of eight (five F-16C and three F-16D) due to have reached Poland by end of 2006.

USAF F-16C/D Retrofit Programmes: F-16 originally designed to fly 8,000 hours based on specified usage spectrum, but actual usage has in most cases been more severe, with aircraft regularly flying at higher operational weights than predicted. USAF F-16C/D aircraft now undergoing 'Falcon STAR' (structural augmentation roadmap). Modifications accomplished under this programme will ensure that aircraft achieve 8,000 hour service life, without depot inspection. USAF 'Falcon STAR' retrofit kit proofing conducted in 2003, with pilot production and installation beginning in 2004; first Falcon STAR aircraft delivered to 148th FW, Minnesota ANG, in February 2004. At least 10 other countries are involved in this programme.

ANG/AFRC Block 25/30/32 F-16C/Ds subject to combat upgrade plan integration details (CUPID) which completed by mid-2003. CUPID brought approximately 620 older F-16s to a standard close to that of the early Block 50/52 aircraft. Among the improvements are situation awareness datalink (SADL), improved airborne videotape recorder, colour camera, initial NVG-compatible cockpit lighting, LANTIRN and Rafael Litening II FLIR targeting pod capability, AN/ALQ-213 countermeasures control system and provisions for GPS/laser gyro INS. Subsequent enhancements include expanded central computer, joint helmet-mounted cueing system, AIM-9X missile, follow-on NVIS capability, PIDS-3 pylon upgrade for smart weapon compatibility, ACES II ejection seat improvements, enhanced main battery and software upgrades.

Block 40/42 F-16C/Ds are currently being upgraded to include NVG compatibility, MD-1295/A improved data modem, digital terrain system, AN/ALE-47 chaff dispenser, AN/ALE-50 towed decoy and smart weapons compatibility (including the GBU-27, JDAM, JSOW and WCMD). Block 50/52 F-16C/Ds already have these capabilities. Three squadrons of ANG Block 42 aircraft received F100-PW-229 engine as replacement for original F100-PW-220; first engines installed in mid-2002.

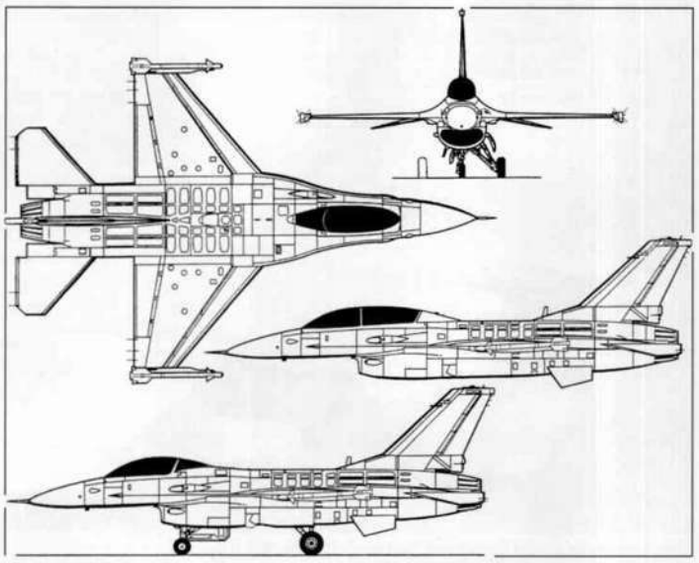
In June 1998, USAF launched an upgrade effort known as common configuration implementation program (CCIP), which is intended to provide common hardware and software capability to about 650 Block 40/42/50/52 aircraft. CCIP is a multiphase effort and is being implemented in stages, based on availability of subsystems. Work is being undertaken at the Ogden Air Logistics Center, Hill AFB, Utah, to where the first eight modification kits were shipped on 29 June 2001; these Phase 1 kits included the modular mission computer and colour MFDs applicable to 107 older aircraft of the Block 50/52 versions. The first aircraft to undergo CCIP was completed ahead of schedule and delivered to the 20th FW on 11 January 2002.

Phase 1A Block 50/52 kits include the AN/APX-113 combined electronic interrogator/transponder which gives autonomous BVR intercept capability. These aircraft also capable of alternative carriage of an advanced Lockheed Martin Sniper XR FLIR targeting pod in addition to the HARM targeting system pod. The first of about 250 aircraft to receive this capability was delivered in October 2002; first operational unit with Phase 1A aircraft was 389th Fighter Squadron at Mountain Home AFB, Idaho.

Phase 2, fielded in July 2003, adds Link 16 multifunctional information distribution system (MIDS) datalink, the Vision Systems International joint helmet-mounted cueing system (JHMCS) and an electronic horizontal situation indicator to 252 Block 50/52 aircraft. CCIP upgrade of USAF Block 50/52 aircraft completed in May 2006. By that time, work had begun on approximately 400 Block 40/42 Fighting Falcons that are to receive the full package of modifications detailed above, in Phase 3 of CCIP upgrade, which is expected to be completed in 2010. Delivery of the first upgraded Block 40/42 aircraft was made to Nellis AFB, Nevada, in February 2006. Several other F-16 operators are considering CCIP upgrade of their Block 40/50 aircraft.

F-16E/F: Originally known as Block 60 and redesignated as F-16E (single-seat) and F-16F (two-seat) in late 2003, this is the most advanced version yet and has Northrop Grumman AN/APG-80 multimode agile beam radar with active electronically scanned array (AESA) antenna, offering numerous advantages, including mode interleaving; also has internal Northrop Grumman AN/AAQ-32 internal FLIR navigation and targeting system, plus advanced cockpit layout, with three 127 × 178 mm (5 × 7 in) colour liquid crystal displays having picture-in-picture and moving map capability. New core avionics suite based on advanced mission computer utilising commercial hardware and software and a high-speed fibre optic databus. Other improvements include digital fuel management system, higher-capacity environmental control system, new air data system (eliminating probe on tip of nose) and expanded digital flight control system with additional automatic modes, such as terrain following. Specialised equipment includes Northrop Grumman Falcon Edge advanced internal ECM system and Thales secure radio and datalink. Power plant is General Electric F110-GE-132 engine in the 144.65 kN (32,500 lb st) class. High-capacity tyres and brakes, allowing maximum take-off gross weight to rise to 22,679 kg (50,000 lb). Many of the features introduced by Advanced Block 50/52 aircraft also adopted as standard on the F-16E/F, including conformal fuel tanks, dorsal avionics compartment and rear cockpit configured for weapon system operator.

United Arab Emirates announced selection of the F-16E/F **Desert Falcon** on 12 May 1998, although signature of contract for 80 aircraft delayed until first quarter of 2000. First flight (by F-16F 3001/N161LM) made 6 December 2003, with first three two-seaters used for flight testing. F-16E first flight accomplished on 6 August 2004 by 3026/N60019. Delivery to UAE began July 2004; at least 18 aircraft (seven F-16E; 11 F-16F) initially retained in US for pilot training with Arizona ANG 162nd FW at Tucson, Arizona. Training began 2 September 2004, with first delivery of aircraft to UAE occurring on 3 May 2005 when total of 10 arrived at Al Dhafra; final delivery set for 2007.



F-16C (GE F110 turbofan) with extra side view (top) of two-seat F-16D (P&W F100 turbofan) *(Paul Jackson)* 1158226

Initial deliveries to so-called Standard 0 configuration for pilot training in USA. First operational aircraft in Standard 1 configuration which marries Block 50 capability to new EW suite, advanced cockpit and new radar. Standard 2 available in early 2006 features advanced EW modes as well as terrain-following radar capability and additional weaponry; definitive Standard 3 version in 2007 will include BAE Systems TERPROM digital terrain avoidance and navigation system and, possibly, a helmet-mounted cueing system.

NF-16D: Variable stability in-flight simulator test aircraft (**VISTA**) modified from Block 30 F-16D (86-0048) ordered December 1988 to replace NT-33A testbed. Features include Calspan variable stability flight control system, fully programmable cockpit controls and displays, additional computer suite, permanent flight test data recording system, variable feel centrestick and sidestick in front cockpit, with latter also available for use in F-16 mode; safety pilot in rear cockpit. Internal gun, RWR and chaff/flare equipment removed, providing space for Phase II and III growth including additional computer, reprogrammable display generator and customer hardware allowance. Dorsal avionics compartment in bulged spine. NF-16D transferred to USAF Test Pilot School at Edwards AFB in 2001 to support TPS missions and various research and development activities. Aircraft participated in USAF Auto Air Collision Avoidance System (Auto ACAS) demonstration in mid-2003; USAF subsequently stated that Auto ACAS is technically feasible and could significantly reduce number of mid-air collisions as well as facilitate mixed-force operations of manned and unmanned aircraft.

F-16I: Two-seat version, basically similar to Advanced Block 52, for Israel, featuring Pratt & Whitney F100-PW-229 engine, conformal fuel tanks and SAR. Incorporates Northrop Grumman AN/APG-68(V)9 radar and significant amount of Israeli avionics, including EW suite, cockpit displays, helmet-mounted sight and advanced self-protection system (ASPS). EW suite, by Elisra, will include radar and missile approach warning systems plus jammers, while Elbit Systems to provide head-up display system, central mission computer, advanced display processor, DASH IV display and sight helmet system and stores management systems. RADA teamed with Smiths Aerospace to supply data acquisition system; Elop to provide HUD unit. Aircraft also to utilise Rafael Litening II targeting pod. Total of 50 initially purchased in USD2.5 billion deal; further 60 aircraft then on option, of which 52 converted to firm order on 19 December 2001. First aircraft completed in June 2003, thereafter being modified to accommodate flight test instrumentation. Roll-out and formal acceptance of first F-16I (401, marked as '253' to indicate the operating squadron) at Fort Worth 14 November 2003, with first flight (by fourth aircraft, also marked as 253) on 23 December 2003. First two aircraft delivered to Israel (for 253 Squadron) on 19 February 2004; balance to follow at rate of about two per month. In early 2004, however, it emerged that Israel was 'highly dissatisfied' with synthetic aperture mode of AN/APG-68 radar and that additional trials would be undertaken in Israel.

F-16N: US Navy supersonic adversary aircraft (SAA) modified from F-16C/D Block 30. Four of 26 were two-seat **TF-16N**. Entire fleet retired during 1994–95.

FS-X and TFS-X: F-16 design selected by Japan Defence Agency as basis for its FS-X (now F-2) requirement 19 October 1987; details under Mitsubishi in Japanese section.

F-16 Recce: Following trials with a prototype system in mid-1995, an LMTAS-designed reconnaissance pod for the US Air National Guard was flown for the first time on 29 September 1995 and subsequently tested on an F-16C (86-227) of the 149th Fighter Squadron, Virginia ANG. Four pods were built and then deployed with the 149th FS to Aviano AB, Italy, in May 1996 for operational validation in support of NATO missions over Bosnia. This successful trial culminated in decision to procure 20 podded systems for service with F-16C Block 30 aircraft of two ANG squadrons. The core of the programme, known as the BAE Systems Theater Airborne Reconnaissance System (TARS), is the Per Udsen MRP with USAF-supplied KS-87 cameras incorporating E-O video back instead of wet film; the Lockheed Martin Fairchild Systems medium-altitude E-O (MAEO) camera; an Ampex DCRsi-240 digital data recorder and a TERMA Elektronik cockpit control device. The TARS pods were delivered in 1999 and certified for operational use by the F-16 in first half of 2000; following operational deployment of 10 aircraft to Iraq in early 2004, USAF revealed that it was considering acquisition of additional TARS pods and also intending to integrate a datalink for relay of imagery in real time as well as adding synthetic aperture radar. Egypt ordered six TARS pods and two ground stations at beginning of 2003.

Elta EL/M-2060P pod also cleared for use by F-16 in 1999. System is contained in standard 300 US gallon drop tank and comprises autonomous, all-weather, day and night high-resolution reconnaissance synthetic aperture radar sensor with ability to transmit imagery to ground station via bidirectional datalink.

Most F-16s delivered since the early 1990s have provisions for a reconnaissance pod. Final 20 aircraft for South Korea (15 F-16C and 5 F-16D) configured for reconnaissance

mission, although decision on system delayed until 2005, when Elop LOROP pod selected. Omani F-16s to use BAE Systems F-9120 Advanced Airborne Reconnaissance System (AARS) and will receive two sensor pods and a ground exploitation station at a cost of about USD27.5 million. Poland has selected the Goodrich DB-110 EO reconnaissance pod and is understood to require seven pod systems and two ground exploitation stations (one of which will be mobile) as well as associated data recording, datalink and mission control systems.

F-16ES: Enhanced Strategic two-seat, long-range interdictor F-16 proposal; now defunct but provided basis for Advanced Block 50/52 and Israeli F-16I.

F-16U: Proposed two-seat version unsuccessfully offered to United Arab Emirates.

F-16 'Falcon 2000': Private venture design of early 1990s, similar to F-16U, which Lockheed Martin aimed at USAF as a follow-on to the F-16 before introduction of JSF. Also known as the **F-16X;** now defunct.

CUSTOMERS: See tables. Total 4,447 production aircraft ordered or requested to date, including planned USAF procurement of 2,230 and 28 embargoed Pakistan Air Force examples that were distributed equally between the USAF and US Navy, although two USAF aircraft were refurbished and delivered to Pakistan shortly before the end of 2005.

COSTS: Approximately USD40 million, flyaway, depending on configuration. Sale of 48 aircraft to Poland valued at USD3.5 billion. F-16E/F unit cost reported to be in region of USD50–55 million.

DESIGN FEATURES: Conceived as 'lo' complement to Boeing F-15 Eagle in hi-lo fighter mix; optimised for high agility in air combat. Cropped delta wings blended with fuselage, with highly swept vortex control strakes along fuselage forebody and joining wings to increase lift and improve directional stability at high angles of attack; wing section NACA 64A-204; leading-edge sweepback 40°; relaxed stability (rearward CG) to increase manoeuvrability; deep wingroots increase rigidity, save 113 kg (250 lb) structure weight and increase fuel volume; fixed geometry engine intake; pilot's ejection seat inclined 30° rearwards; single-piece birdproof forward canopy section; two ventral fins below wing trailing-edge.

Baseline F-16 airframe life planned as 8,000 hours with average usage of 55.5 per cent in air combat training, 20 per cent ground attack and 24.5 per cent general flying; structural strengthening programme for pre-Block 50 aircraft required during 1990s.

FLYING CONTROLS: Four-channel digital fly-by-wire (analogue in earlier variants); pitch/lateral control by pivoting monobloc tailerons and wing-mounted flaperons; maximum rate of flaperon movement 52°/s; automatic wing leading-edge manoeuvring flaps programmed for Mach number and angle of attack; flaperons and tailerons interchangeable left and right; sidestick control column with force feel replacing almost all stick movement.

STRUCTURE: Wing, mainly of light alloy, has 11 spars, five ribs and single-piece upper and lower skins; attached to fuse-lage by machined aluminium fittings; leading-edge flaps are one-piece bonded aluminium honeycomb and driven by rotary actuators; fin is multispar, multirib with graphite epoxy skins; brake parachute or ECM housed in fairing aft of fin root; tailerons have graphite epoxy laminate skins, attached to corrugated aluminium pivot shaft and removable full-depth aluminium honeycomb leading-edge; ventral fins have aluminium honeycomb and skins; split speedbrakes in fuselage extensions inboard of tailerons open to 60°. Nose radome by Brunswick Corporation.

LANDING GEAR: Goodrich (formerly Menasco) hydraulically retractable type, nose unit retracting rearward and main units forward into fuselage. Nosewheel is located aft of intake to reduce the risk of foreign objects being thrown into the engine during ground operation, and rotates 90° during retraction to lie horizontally under engine air intake duct. Oleo-pneumatic struts in all units. Aircraft Braking Systems mainwheels and brakes; Goodyear or Goodrich tubeless mainwheel tyres, size 27.75×8.75–14.5 (or 27.75×8.75R14.5) (24 ply), pressure 14.48 to 15.17 bar (210 to 220 lb/sq in) at T-O weights less than 13,608 kg (30,000 lb). Steerable nosewheel with Goodyear, Goodrich or Dunlop tubeless tyre, size 18×5.7–8 (18 ply), pressure 20.68 to 21.37 bar (300 to 310 lb/sq in) at T-O weights less than 13,608 kg (30,000 lb). All but two main unit components interchangeable. Brake-by-wire system on main gear, with Aircraft Braking Systems anti-skid units. Runway arresting hook under rear fuselage; Irvin 7.01 m (23 ft 0 in) diameter braking parachute fitted in Greek and Turkish (Block 30/40 only) F-16s. Israeli (F-16C/D models only) and Singaporean (F-16Ds) aircraft have braking parachute compartment configured for electronic equipment. Landing/taxying lights on nose landing gear door.

F-16 TABLES: Table 1 provides a rapid reference to customers and quantities; more detailed information on F-16C/D production block numbers appears in Table 2; F-16E/F/I production in Table 3.

Royal Air Force of Oman Lockheed Martin F-16C, the 4,300th F-16, handed over on 20 April 2006 1158219

Reheat take-off by a USAF Lockheed Martin F-16C ***(Paul Jackson)*** 1158218

Totals	**4,447**		**3,497**		**950**					

[1] Built by Sabca (Belgium); 222nd and last Sabca F-16 (BAF FA-136) delivered 22 October 1991
[2] One built by Fokker (Netherlands)
[3] Built by Fokker; 300th and last Fokker F-16 (RNethAF J-021) delivered 27 February 1992
[4] Two F-16Cs and six F-16Ds built by GD; remainder by TAI
[5] Two built by Fokker
[6] Four built by Sabca
[7] TAI production
[8] 12 built by GD, 36 CKD kits and 92 produced locally by Korea Aerospace Industries (formerly Samsung Aerospace)
[9] Deliveries completed 18 March 2005. Table excludes YF-16 prototypes (two) and full-scale development (FSD) aircraft (six F-16A and two F-16B)
[10] 28 aircraft embargoed, placed in storage at Davis-Monthan AFB, Arizona for several years until distributed between US Navy Strike and Air Warfare Center (10 F-16A and four F-16B) as adversary aircraft for tactics training and US Air Force (three F-16A and 11 F-16B) for test support duties. Two of these aircraft subsequently refurbished at Hill AFB, Utah, and delivered to Pakistan in December 2005, these being F-16As that had been in use with the USAF
[11] New production aircraft leased to Singapore for training in the USA

Notes: **Note A:** Currently operated by US Air Force Flight Test Center/412th Test Wing, Edwards AFB, California; US Air Force Air Armament Center/46th Test Wing, Eglin AFB, Florida; Air National Guard.

Note B: Currently operated by US Air Force Flight Test Center/412th Test Wing, Edwards AFB, California; US Air Force Air Armament Center/46th Test Wing, Eglin AFB, Florida; 8th FW, Kunsan AB, South Korea; 20th FW, Shaw AFB, South Carolina; 27th FW, Cannon AFB, New Mexico; 31st FW, Aviano AB, Italy; 35th FW, Misawa AB, Japan; 51st FW, Osan AB, South Korea; 52nd FW, Spangdahlem AB, Germany; 53rd W, Eglin AFB, Florida; 56th FW, Luke AFB, Arizona; 57th W, Nellis AFB, Nevada; 354th FW, Eielson AFB, Alaska; 366th W, Mountain Home AFB, Idaho; 388th FW, Hill AFB, Utah; and also five fighter squadrons of the Air Force Reserve Command and more than 25 Air National Guard fighter squadrons.Blocks 1 and 5 retrofitted to Block 10 standard 1982–84; Block 15 retrofitted to Block 15OCU (avionics standard only) from 1987. New-build F-16As are Block 15OCU from November 1987.Export programme codenames are: Bahrain — Peace Crown I-II; Chile — Peace Puma; Egypt — Peace Vector I, II, III, IIIA, IV, V and VI; Greece — Peace Xenia I-IV; Indonesia — Peace Bima-Sena; Israel— Peace Marble I-V; Italy — Peace Caesar; Jordan — Peace Falcon I-II; South Korea — Peace Bridge I-II and Korean Fighter Program I-II; Oman — Peace A'sama A'safiya (Blue Skies); Pakistan— Peace Gate I-IV; Poland — Peace Sky; Portugal — Peace Atlantis I-II; Singapore — Peace Carvin I-IV; Taiwan— Peace Fenghuang; Thailand — Peace Naresuan I-III; Turkey— Peace Onyx I-II (and CAE-Link simulator, Peace Onyx III); and Venezuela — Peace Delta.Recent orders Poland selected F-16 at beginning of 2003 and will receive 48 aircraft (36 F-16C and 12 F-16D) in 2006–08. Greece announced intention to acquire another 30 aircraft (20 F-16C and 10 F-16D) in July 2005, with option on further 10, although in early 2006 it announced it would not be converting option to firm order.Transfers: Israelreceived 36 F-16As and 14 F-16Bs from surplus USAF stocks August 1994 to March 1995 for 140, 144 and 253 Squadrons. **Denmark** received three ex-USAF F-16As in July 1994, plus three F-16As and one F-16B in 1997. **Jordan** accepted initial batch of ex-USAF ADF aircraft (12 F-16As and four F-16Bs) on lease basis (subsequently permanent transfer) in December 1997/April 1998 and took delivery of eight more ex-USAF aircraft (seven F-16As and one F-16B) in January and February 2003, with further nine F-16As following by end of 2003. In November 2005, Jordan concluded deal to obtain three F-16BM aircraft from the Netherlands, for delivery in October 2006, and followed this in April 2006 with further acquisition of 20 aircraft from Belgium (12, probably all to be F-16AM) and the Netherlands (eight, comprising five F-16AM and three F-16BM) for delivery in 2008. **Portugal** received 25 second-hand aircraft (21 F-16As and four F-16Bs, of which five F-16As to be broken-down for spares, with the rest receiving F-16 Mid-Life Update improvements); first upgraded aircraft rolled out at Alverca 26 June 2003; **Thailand** request for surplus USAF aircraft approved by US Congress at beginning of 2000, with delivery of 15 F-16As and one F-16B drawn from storage beginning in August 2002. In November 2004, it was announced that Thailand would receive seven surviving early model aircraft from Singapore (three F-16As and four F-16Bs) in return for providing training facilities; **Italy** received 30 F-16A and four F-16B ADF aircraft in 2003–04 on five-year lease arrangement, with five-year follow-on option; first aircraft rolled out at Hill AFB, Utah on 9 May 2003, with initial batch of five aircraft ferried to Trapani 17 July 2003 (deal includes extra four aircraft for use as spares source). Chile to obtain 18 surplus aircraft (11 F-16AM and 7 F-16BM) from Netherlands, with delivery to be completed in 2006-07. Romania has indicated intention to acquire unspecified number of surplus aircraft from Israel. Pakistan expected to take delivery of 26 refurbished F-16A and F-16B aircraft, in addition to new-build F-16C and F-16D models. Two F-16As from embargoed order delivered in December 2005, following service with USAF test organisations and subsequent refurbishment.

POWER PLANT: One 131.6 kN (29,588 lb st) General Electric F110-GE-129, or one 129.4 kN (29,100 lb st) Pratt & Whitney F100-PW-229 afterburning turbofan as alternative standard. These Increased Performance Engines (IPE) installed from late 1991 in Block 50 and Block 52 aircraft and retrofitted to about 50 Air National Guard Block 42 aircraft. Pratt & Whitney has proposed F100-PW-229A version, with new fan module among other radical improvements that will raise airflow by more than 10 per cent, lower turbine temperatures by almost 50°C (122°F) and permit inspection intervals to rise from 4,300 cycles to 6,000. New version offers potential to increase maximum augmented thrust rating to about 142 kN (31,860 lb st), although this would require larger inlet on F-16. General Electric also engaged in improvement efforts, using company funding to begin development of F110-GE-129 EFE (Enhanced Fighter Engine) in October 1997; EFE initially to be rated at up to 151.0 kN (33,945 lb st), with further growth potential to 160.0 kN (35,970 lb st); alternatively, improved thrust levels can be sacrificed for up to a 50 per cent increase in TBO and servicing intervals. Production derivative known as F110-GE-132 rated at 144.6 kN (32,500 lb st) installed in F-16E/F aircraft for UAE. Immediately prior standard was 128.9 kN (28,984 lb st) F110-GE-100 or 105.7 kN (23,770 lb st) F100-PW-220 in Blocks 40/42.

Of 1,446 F-16Cs and F-16Ds ordered by USAF, 556 with F100 and 890 with F110. Fixed geometry intake, with boundary layer splitter plate, beneath fuselage. Apart from first few, F110-powered aircraft have intake widened by 30 cm (1 ft 0 in) from 368th F-16C (86-0262); Israeli second-batch F-16D-30s have power plants locally modified by Bet-Shemesh Engines to F110-GE-110A with provision for up to 50 per cent emergency thrust at low level.

Standard fuel contained in wing and five seal-bonded fuselage cells which function as two tanks; 3,986 litres (1,053 US gallons; 876 Imp gallons) in single-seat aircraft; 3,297 litres (871 US gallons; 726 Imp gallons) in two-seat aircraft. Halon inerting system. In-flight refuelling receptacle in top of centre-fuselage, aft of cockpit. Auxiliary fuel can be carried in drop tanks: one 1,136 litre (300 US gallon; 250 Imp gallon) under fuselage; 1,402 litre (370 US gallon; 308 Imp gallon) under each wing. Optional Israel Military Industries 2,271 litre (600 US gallon; 500 Imp gallon) underwing tanks initially adopted only by Israel, but have since been selected by one or two other operators; also adopted for F-16E/F versions. Latter have conformal fuel tanks (CFTs) with a combined capacity of 1,703 litres (450 US gallons; 375 Imp gallons). CFTs available as optional equipment on Advanced Block 50/52.

ACCOMMODATION: Pilot only in F-16C, in pressurised and air conditioned cockpit. Boeing (formerly McDonnell Douglas) ACES II zero/zero ejection seat. Bubble canopy made of polycarbonate advanced plastics material. Inside of USAF F-16C/D canopy coated with gold film to dissipate radar energy. In conjunction with radar-absorbing materials in air intake, this reduces frontal radar signature by 40 per cent. Windscreen and forward canopy are an integral unit without a forward bow frame, and are separated from the aft canopy by a simple support structure which serves also as the breakpoint where the forward section pivots upward and aft to give access to the cockpit. A redundant safety lock feature prevents canopy loss. Windscreen/canopy design provides 360° all-round view, 195° fore and aft, 40° down over the side, and 15° down over the nose.

To enable the pilot to sustain high *g* forces, and for pilot comfort, the seat is inclined 30° aft and the heel line is raised. In normal operation the canopy is pivoted upward and aft by electrical power; the pilot is also able to unlatch the canopy manually and open it with a back-up handcrank. Emergency jettison is provided by explosive unlatching devices and two rockets. A limited displacement, force-sensing control stick is provided on the right-hand console, with a suitable armrest, to provide precise control inputs during combat manoeuvres.

The F-16D has two cockpits in tandem, equipped with all controls, displays, instruments, avionics and life support systems required to perform both training and combat missions. The layout of the F-16D second station is similar to the F-16C, and is fully systems-operational. A single-enclosure polycarbonate transparency, made in two pieces and spliced aft of the forward seat with a metal bow frame and lateral support member, provides outstanding view from both cockpits.

Advanced Block 50/52 F-16Ds, F-16Fs and F-16Is are configured with weapon system operator station in rear cockpit, plus a large dorsal equipment compartment extending from the rear of the canopy to the leading edge of the fin; compartment houses avionics unique to each operator, plus additional chaff/flare dispensers and an in-flight refuelling receptacle.

SYSTEMS: Regenerative 12 kW environmental control system, with digital electronic control, uses engine bleed air for pressurisation and cooling of crew station and avionics compartments. Two separate and independent hydraulic systems supply power for operation of the primary flight control surfaces and the utility functions. System pressure (each) 207 bar (3,000 lb/sq in), rated at 161 litres (42.5 US gallons; 35.4 Imp gallons)/min. Bootstrap-type reservoirs, rated at 5.79 bar (84 lb/sq in).

Electrical system powered by engine-driven 60 kVA main generator and 10 kVA standby generator (including ground annunciator panel for total electrical system fault reporting), with Hamilton Sundstrand constant speed drive and powered by a Hamilton Sundstrand accessory drive gearbox. 17 Ah battery. Four dedicated, sealed cell batteries provide transient electrical power protection for the fly-by-wire flight control system.

An onboard Hamilton Sundstrand/Solar jet fuel starter is provided for engine self-start capability. Simmonds fuel measuring system. AlliedSignal emergency power unit automatically drives a 5 kVA emergency generator and emergency pump to provide uninterrupted electrical and hydraulic power for control in the event of the engine or primary power systems becoming inoperative.

AVIONICS: *Comms:* Magnavox AN/ARC-164 UHF transceiver (AN/URC-126 Have Quick IIA in Block 50/52); provision for Magnavox KY-58 secure voice system; Rockwell Collins

AN/ARC-186 VHF AM/FM transceiver, ARC-190 HF radio, government-furnished AN/AIC-18/25 intercom and SCI advanced interference blanker, Teledyne Electronics AN/APX-101 IFF transponder with government-furnished IFF control, government-furnished National Security Agency KIT-1A/TSEC cryptographic equipment. F-16C/D Block 52 aircraft of Singapore and South Korea have Litton AN/APX-109+ advanced interrogator/transponder. AN/APX-113 advanced interrogator/transponder installed in Greek Block 50, Taiwanese Block 20 and Turkish Block 50 aircraft and is standard equipment on USAF aircraft procured in FY00 and FY01; is being retrofitted to earlier USAF aircraft as part of CCIP upgrade. Link 16 tactical datalink added by USAF in mid-2004, in concert with new M3+ connectivity software, following operational evaluation in March 2004.

Radar: Northrop Grumman AN/APG-68(V) pulse Doppler range and angle track radar, with mechanically scanned planar array in nose. Provides air-to-air modes for range-while-search, uplook search, velocity search with ranging, air combat, track-while-scan (10 targets), raid cluster resolution, single target track and pulse Doppler track to provide target illumination for AIM-7 missiles, plus air-to-surface modes for ground-mapping, Doppler

Total	**102**	**80**	**182**

beam-sharpening, ground moving target, sea target, fixed target track, target freeze after pop-up, beacon, and air-to-ground ranging. Improved AN/APG-68(V)9 radar installed on Advanced Block 50/52 aircraft; in August 2004, Northrop Grumman awarded USD22 million contract to develop an upgrade kit for USAF that will enable existing radars to be brought to latest standard, which has synthetic aperture radar (SAR) mapping and terrain following (TF) modes, plus interleaving of all modes; USAF expects to upgrade at least 280 F-16C/D aircraft. If internal FLIR targeting system is selected, this could share processor with ABR. F-16E/F aircraft for UAE have Northrop Grumman AN/APG-80 agile beam radar with active electronically scanned array (AESA). In late 2004, Turkey announced plans for major upgrade programme involving total of 218 aircraft (38 Block 30, 104 Block 40 and 76 Block 50), with Block 40 and Block 50 both to adopt AN/APG-68(V)9 radar.

Flight: Litton LN-39 standard inertial navigation system (ring laser Litton LN-93 or Honeywell H-423 in Block 50/52: LN-93 for Egypt, Indonesia, Israel, South Korea, Pakistan, Portugal and Taiwan, plus Netherlands retrofit and Greek second batch); Rockwell Collins AN/ARN-108 ILS, Rockwell Collins AN/ARN-118 Tacan, Rockwell Collins GPS, Honeywell central air data computer, Elbit Fort Worth enhanced stores management computer, Gould AN/APN-232 radar altimeter. Fairchild digital terrain system (incorporating BAE Systems Terprom algorithms) to be installed in all new USAF F-16s and USAF Reserve F-16C/Ds. Optional equipment includes Rockwell Collins VIR-130 VOR/ILS.

Instrumentation: Marconi wide-angle holographic electronic HUD with raster video capability (for LANTIRN) and integrated keyboard; data entry/cockpit interface and dedicated fault display by Litton Canada and Elbit Fort Worth; Astronautics cockpit/TV set. Cockpit lighting and external strip lighting compatible with night imaging systems.

Mission: Honeywell multifunction displays. Lockheed Martin LANTIRN package comprises AN/AAQ-13 (navigation) and AN/AAQ-14 (targeting) pods. Turkish aircraft (150+ modified by 1996) to share 60 LANTIRN pod systems; LANTIRN also purchased by Greece, South Korea and Singapore, although Singapore now seeking a replacement system. Sharpshooter pod (down-rated export version of AAQ-14 LANTIRN targeting system) acquired by Bahrain and Israel, but latter obtained indigenous Rafael Litening IR targeting and navigation pod as replacement. Total of 168 Litening II navigation/targeting pods ordered from Rafael and Northrop Grumman to equip Block 25/30/32/40/42 F-16C/Ds of the Air National Guard (136) and Air Force Reserve Command (32); programme called Precision Attack Targeting System, with first AFRC unit (457th FS at Fort Worth, Texas) receiving initial batch of four pods in February 2000; this and three more AFRC squadrons equipped by end of 2000. ANG accepted first pods during 2000; goal is to allocate eight pods to each 15-aircraft squadron. Litening ER (Extended Range) targeting and navigation pod system also being supplied to ANG, which received first eight (of 16) in fourth quarter of 2002; all delivered by end of year. Under CCIP modification programme, Block 40/42/50/52 aircraft of USAF adopting new Lockheed Martin AN/AAQ-33 Sniper XR advanced FLIR targeting pod system from late 2002 onwards; more than 500 pods could eventually be acquired, with total of 17 received by USAF by February 2004; deliveries of export equivalent to Norway have begun. Export version known as Pantera (Precision Attack Navigation and Targeting with Extended Range Acquisition) selected by Oman (seven pod systems) and Poland (22) by late 2003. Pantera one of several systems in contention to satisfy South Korea's requirement for new targeting pod system, which is expected to go to tender in about 2007.

Raytheon AN/ASQ-213 HARM Targeting System (HTS) pod introduced on Block 50D/52D aircraft and subsequently retrofitted to entire Block 50/52 fleet. Entered service 1994 and currently deployed by USAF units in USA, Japan and Germany.

Self-defence: Dalmo Victor AN/ALR-69 radar warning system replaced in USAF Block 50/52 by BAE Systems AN/ALR-56M advanced RWR, which also ordered for USAF Block 40/42 retrofit and (first export) Korean Block 52s. Korean aircraft retrofitted with the ITT Avionics/Northrop Grumman AN/ALQ-165 Airborne Self-Protection Jammer (ASPJ) from mid-2000. Provision for Northrop Grumman AN/ALQ-131 or Raytheon AN/ALQ-184 jamming pods. AN/ALQ-131 supplied to Bahrain and Egypt. Israeli Air Force F-16s extensively modified with locally designed and manufactured equipment, as well as optional US equipment to tailor them to the IAF defence role. This includes Elisra SPS 3000 self-protection jamming equipment in enlarged spines of F-16D-30s and Elta EL/L-8240 ECM in third batch of F-16C/Ds, replacing AN/ALQ-178(V)1 Rapport ECM in Israeli F-16As. Elisra Passive Airborne Warning System 2 (PAWS-2) IR-based missile defence system is being installed on F-16I following delivery to Israel. Chilean aircraft will have ITT Industries Advanced Integrated Defensive Electronic Warfare Suite (AIDEWS), incorporating radar warning and RF countermeasures. Northrop Grumman Falcon Edge integrated EW system installed on UAE F-16E/F.

BAE Systems AN/ALQ-178(V)3 Rapport III integral self-protection system in Turkish F-16C/Ds will almost certainly be replaced by improved AN/ALQ-178(V)5 system. In March 1993, Greece ordered Raytheon ASPIS (Advanced Self-Protection Integrated Suite) self-defence EW system, comprising Northrop Grumman AN/ALR-93 RWR, BAE Systems AN/ALE-47 chaff/flare dispensers and Raytheon AN/ALQ-187 I-DIAS jammer; enhanced version known as ASPIS II is being installed on Advanced Block 52 aircraft.

USAF Air National Guard procured Terma PIDS wing weapon pylon with additional chaff/flare dispensers.

BAE Systems AN/ALE-40(V)-4 chaff/flare dispensers (AN/ALE-47 in FY97 Block 50, FMS Block 20/50 since mid-1996 and for retrofit to Block 40/42 and 50/52 of USAF). Raytheon AN/ALE-50(V)2 towed decoy installed in AMRAAM missile pylons and adopted by USAF for all Block 40/42/50/52 aircraft was widely fielded in 1999; USAF to buy total of 961. USAF Air National Guard participated in wing weapon pylon upgrade programme that added MIL-STD-1760 interface to existing PIDS pylons.

ARMAMENT: General Dynamics M61A1 20 mm multibarrel cannon in the port side wing/body fairing, equipped with a General Dynamics ammunition handling system and an enhanced envelope gunsight (part of the head-up display system) and 511 rounds of ammunition. There is a mounting for an air-to-air missile at each wingtip, one underfuselage centreline hardpoint, and six underwing hardpoints for additional stores. For manoeuvring flight at 5.5 *g* the underfuselage station is stressed for a load of up to 1,000 kg (2,200 lb), the two inboard underwing stations for 2,041 kg (4,500 lb) each, the two centre underwing stations for 1,587 kg (3,500 lb) each, the two outboard underwing stations for 318 kg (700 lb) each, and the two wingtip stations for 193 kg (425 lb) each. For manoeuvring flight at 9 *g* the underfuselage station is stressed for a load of up to 544 kg (1,200 lb), the two inboard underwing stations for 1,134 kg (2,500 lb) each, the two centre underwing stations for 907 kg (2,000 lb) each, the two outboard underwing stations for 204 kg (450 lb) each, and the two wingtip stations for 193 kg (425 lb) each. There are mounting provisions on each side of the inlet shoulder dedicated to the carriage of sensor pods (electro-optical, FLIR and so on); each of these stations is stressed for 408 kg (900 lb) at 5.5 *g*, and 250 kg (550 lb) at 9 *g*.

Typical stores loads can include two wingtip-mounted AIM-9L/M/P Sidewinders, with up to four more on the outer underwing stations; Rafael Python 3 on Israeli F-16s from early 1991 and Python 4 from mid-1997; centreline GPU-5/A 30 mm cannon; drop tanks on the inboard underwing and underfuselage stations; HARM targeting system pod along the starboard side of the nacelle; and bombs, air-to-surface missiles or flare pods on the four inner underwing stations. Stores can be launched from Aircraft Hydro-Forming MAU-12C/A bomb ejector racks, Hughes LAU-88 launchers, Orgen triple or multiple ejector racks and Lucas Aerospace Flight Structures Twin Store Carrier (TSC). New BRU-57 dual-station 'smart' bomb racks fitted to Block 50/52 aircraft of USAF from fourth quarter of 2001; installed at mid-span hardpoint, each BRU-57 will be able to carry munitions such as JSOW, JDAM and WCMD; in April 2004, USAF certified Block 40/50 F-16s to carry AGM-158 Joint Air-to-Surface Standoff Missile (JASSM) and WCMD on BRU-57.

Weapons launched successfully from F-16s, in addition to AIM-9 Sidewinder and AIM-120A AMRAAM, include radar-guided AIM-7 Sparrow, Rafael Derby and Sky Flash BVR air-to-air missiles, AIM-132 ASRAAM and Magic 2 IR homing air-to-air missiles, AGM-65A/B/D/G Maverick air-to-surface missiles, AGM-88 HARM and AGM-45 Shrike anti-radiation missiles, AGM-84 Harpoon anti-ship missiles (clearance trials 1993–94) and, in Royal Norwegian Air Force service, the Penguin Mk 3 anti-ship missile. Israeli F-16s will soon have capability to operate with Rafael Spice PGM, which marries guidance kit (including control surfaces, EO sensor, GPS SatNav and datalink) to a 900 kg (2,000 lb) bomb; up to four weapons can be carried by F-16. LGBs include GBU-10, GBU-12, GBU-22, GBU-24 and GBU-27; F-16 can also deliver GBU-15 glide bomb, which used in conjunction with datalink pod. Israeli IMI STAR-1 anti-radiation weapon has also begun carriage trials on F-16D, although full-scale development is dependent upon receipt of a firm order; IMI runway attack munition (RAM) introduced into IDF/AF service in about 2000. CMS Defense Systems Autonomous Free-flight Dispenser System (AFDS) was tested at Eglin AFB, Florida, during 1992–93 and can be loaded with a variety of submunitions, including cratering bombs, shaped charge bomblets, anti-tank mines, area denial submunitions and general purpose bomblets.

Newest capability, introduced on Block 50/52 aircraft of USAF, incorporates 50T5 software upgrade, allowing F-16 to carry and deliver latest family of precision munitions; release to service occurred in mid-2000. New weapons comprise GBU-31 Joint Direct Attack Munition (JDAM), AGM-154 Joint StandOff Weapon (JSOW) and CBU-103, CBU-104 and CBU-105 wind-corrected munitions dispensers (WCMDs). First operational unit with JSOW and WCMD was 20th FW at Shaw AFB, South Carolina. GBU-38 227 kg (500 lb) JDAM capability added in late 2004, initially on Block 30/32 aircraft, followed by Block 40/42 and finally Block 50/52, with software changes incorporated on more than 1,250 aircraft by end of January 2005. Raytheon AIM-9X Sidewinder incorporated in Block 30/32 during 2005 and due to be added to Block 40/42 and Block 50/52 in first half of 2007.

DIMENSIONS, EXTERNAL (F-16C, D):

Data applicable to Block 50/52 versions:

- Wing span: over missile launchers ..... 9.45 m (31 ft 0 in)
- over missiles ..... 10.00 m (32 ft 9¾ in)
- Wing aspect ratio 3.2
- Length overall ..... 15.03 m (49 ft 4 in)
- Height overall ..... 5.09 m (16 ft 8½ in)
- Tailplane span ..... 5.58 m (18 ft 3¾ in)
- Wheel track ..... 2.36 m (7 ft 9 in)
- Wheelbase ..... 4.00 m (13 ft 1½ in)

AREAS (F-16C, D):

- Wings, gross ..... 27.87 m² (300.0 sq ft)
- Flaperons (total) ..... 2.91 m² (31.32 sq ft)
- Leading-edge flaps (total) ..... 3.41 m² (36.72 sq ft)
- Fin, incl dorsal fin ..... 4.00 m² (43.10 sq ft)
- Rudder ..... 1.08 m² (11.65 sq ft)
- Horizontal tail surfaces (total) ..... 5.92 m² (63.70 sq ft)

WEIGHTS AND LOADINGS:

- Weight empty:
  - F-16C: F100-PW-229:
    - with CFTs ..... 9,358 kg (20,631 lb)
    - without CFTs ..... 8,910 kg (19,643 lb)
  - F110-GE-129:
    - with CFTs ..... 9,466 kg (20,868 lb)
    - without CFTs ..... 9,017 kg (19,880 lb)
  - F-16D: F100-PW-229
    - with CFTs ..... 9,760 kg (21,517 lb)
    - without CFTs ..... 9,312 kg (20,529 lb)
  - F110-GE-129:
    - with CFTs ..... 9,867 kg (21,754 lb)
    - without CFTs ..... 9,419 kg (20,766 lb)
- Max internal fuel (JP-8): F-16C ..... 3,228 kg (7,116 lb)
- Max external fuel (JP-8), F-16C/D (with 300 US gallon centreline tank):
  - normal: with CFTs ..... 4,569 kg (10,072 lb)
  - without CFTs ..... 3,208 kg (7,072 lb)
  - optional: with CFTs ..... 5,879 kg (12,962 lb)
  - without CFTs ..... 4,519 kg (9,962 lb)
- Max external load (full internal fuel):
  - F-16C: F100-PW-229:
    - with CFTs ..... 9,635 kg (21,241 lb)
    - without CFTs ..... 8,855 kg (19,522 lb)
  - F110-GE-129:
    - with CFTs ..... 9,190 kg (20,260 lb)
    - without CFTs ..... 8,742 kg (19,272 lb)
- Typical combat weight (two AAMs, 50% fuel):
  - F-16C: F100-PW-229:
    - with CFTs ..... 12,254 kg (27,015 lb)
    - without CFTs ..... 11,125 kg (24,527 lb)
  - F110-GE-129:
    - with CFTs ..... 12,367 kg (27,265 lb)
    - without CFTs ..... 11,239 kg (24,777 lb)
- Max T-O weight with two AAMs, no tanks:
  - F-16C: F100-PW-229:
    - with CFTs ..... 14,548 kg (32,073 lb)
    - without CFTs ..... 12,723 kg (28,050 lb)

F110-GE-129:
with CFTs ..... 14,661 kg (32,323 lb)
without CFTs ..... 12,852 kg (28,335 lb)
with full external load:
F-16C/D Block 50/52 ..... 21,772 kg (48,000 lb)
Wing loading: at 12,927 kg (28,500 lb) AUW ..... 463.8 kg/m² (95.00 lb/sq ft)
at 19,187 kg (42,300 lb) AUW ..... 688.4 kg/m² (141.00 lb/sq ft)
at 21,772 kg (48,000 lb) AUW ..... 781.2 kg/m² (160.00 lb/sq ft)
Thrust/weight ratio (clean, without CFTs) ..... 1.03 to 1

PERFORMANCE:
Max level speed at 12,200 m (40,000 ft) ..... above M2.0
Service ceiling ..... more than 15,240 m (50,000 ft)
Radius of action:
F-16C Block 50, with CFTs, two 907 kg (2,000 lb) bombs, two Sidewinders, 3,940 litres (1,040 US gallons; 867 Imp gallons) external fuel, tanks retained, hi-lo-lo-hi ..... 735 n miles (1,361 km; 845 miles)
F-16C Block 50, with CFTs, armament as above, 5,542 litres (1,464 US gallons; 1,219 Imp gallons) external fuel, tanks retained, hi-lo-lo-hi ..... 845 n miles (1,565 km; 972 miles)
F-16C Block 50, two BVR missiles, two Sidewinders, 3,940 litres (1,040 US gallons; 867 Imp gallons) external fuel, not including CFTs, tanks dropped when empty, combat air patrol mission ..... 950 n miles (1,759 km; 1,093 miles)
Ferry range:
F-16C Block 50, with CFTs and 3,940 litres (1,040 US gallons; 867 Imp gallons) external fuel ..... 2,150 n miles (3,981 km; 2,474 miles)
F-16C Block 50, with 5,542 litres (1,464 US gallons; 1,219 Imp gallons) external fuel, not including CFTs ..... 2,415 n miles (4,472 km; 2,779 miles)
Symmetrical *g* limit with full internal fuel ..... +9

LOCKHEED MARTIN F-35 LIGHTNING II

TYPE: Multirole fighter.

PROGRAMME:

DEVELOPMENT MILESTONES

Requirement issued	Nov 94
Request for proposals	Dec 95
Programme launched	16 Nov 96
First prototype material cut	Sep 97
First flight (prototype)	24 Oct 00
Development go-ahead	26 Oct 01
First production material cut	10 Nov 03
First flight (production)	15 Dec 06

Origins of Joint Strike Fighter (JSF) programme vested in separate USAF/USN Joint Advanced Strike Technology (JAST) and Defense Advanced Research Project Agency (DARPA) Common Affordable Lightweight Fighter (CALF) projects of early 1990s.

Projects merged in November 1994, as JAST, after Congressional directive in mid-1994; programme renamed JSF in latter half of 1995. Previously, formal request for proposals (RFP) for preliminary research contracts released on 2 September 1994, stipulating industry response by 4 November and issue of contract awards by 16 December.

Some elements of US industry joined forces to win JAST/JSF work, with international collaboration in evidence. McDonnell Douglas led one team after signing October 1994 Memorandum of Understanding (MoU) with Northrop Grumman and British Aerospace; each company submitted individual bids, but all three would participate in event of securing contract. Boeing allied with Dassault of France on aspects of subsystem design effort.

Subsequent research contracts worth USD99.8 million distributed between four companies: Boeing (USD27.6 million), Lockheed Martin (USD19.9 million), McDonnell Douglas (USD28.2 million) and Northrop Grumman (USD24.1 million). Further USD28 million allocated for associated avionics, propulsion systems, structures and materials, and modelling and simulation.

Merger of JAST and CALF resulted in expanded flight test programme, involving two finalists; each to build two demonstrators, one with ASTOVL capability and the other to use conventional take-off and landing (CTOL).

Draft RFP issued December 1995, with USA and UK signing MoU on 20 December 1995, which committed UK to participate in four year weapons system concept demonstration (WSCD) phase. MoU also stipulated that UK must contribute some 10 per cent (approximately USD200 million) of demonstration phase costs as full collaborative partner.

Formal release of the final RFP for JSF was expected on 7 March 1996, but was delayed to June 1996, with contract award in November 1996.

All WSCD contenders chose Pratt & Whitney's F119 (later modified and redesignated F135) engine, although a General Electric/Allison/Rolls-Royce team secured a USD7 million contract in March 1996 to examine alternative power plants. These were based on the General Electric F110 and YF120 engines, with the latter chosen in May 1996 following Congressional directive aimed at fostering competition and also overcoming possible impact of developmental or operational problems with the F135. Further USD96 million multiyear contract awarded in February 1997 to cover technology maturation and core engine development of alternate engine over four-year period. Original intent was to begin full-scale EMD of F136 (as it was known) in about 2004, but budget cut in 2003 resulted in delay. F136 SDD eventually began with contract award in August 2005, with first flight of CTOL version targeted for October 2009, followed by STOVL version in April 2010. Production engines then expected to be available in early 2012, assuming that development continues in face of apparent US DoD intent to cancel that emerged in 2006 when FY07 budget request omitted funding for F136; subsequent Congressional review reinstated funds for FY07 and ensured survival of General Electric/Rolls-Royce engine in short term at least.

Lockheed Martin F-35A Lightning II at the moment of take-off 1185921

On 16 November 1996, US Secretary of Defense, William J Perry announced that Boeing and Lockheed Martin had been chosen to participate in WSCD. Simultaneously, Boeing was awarded a USD661.8 million contract for the X-32, while Lockheed Martin received USD718.8 million for the X-35; in addition, Pratt & Whitney secured a contract worth USD804 million for the associated Engine Ground and Flight Demonstration Program. Subsequently, Northrop Grumman and British Aerospace joined Lockheed Martin team.

Australia, Canada, France, Germany, Greece, Israel, Singapore, Spain and Sweden briefed on JSF programme. For System Development and Demonstration (SDD) phase, four partnership options were available. Most costly was Level 1, with responsibility for 10 per cent of cost; UK is only partner at this level. Italy and the Netherlands are Level 2 partners, each contributing about 5 per cent of cost. Level 3 involves payment of 1 to 2 per cent, with Denmark and Norway having teamed up to share burden, while Australia, Canada and Turkey meet the cost alone. Finally, Security Co-operation Participant (SCP) Level involves smaller contribution of about USD50 million; Israel and Singapore were first two SCP subscribers, signing letters of intent in February 2003 and letters of agreement thereafter. Greece, Poland and South Korea are potential future additions, while Spain and Taiwan may also acquire STOVL version in due course. Levels 1 and 2 entitled to receive contracts; Level 3 may receive subcontracts from Levels 1/2 participants; and SCP receive data only.

Lockheed Martin development included production of 91 per cent scale powered model of JAST demonstrator for wind-tunnel tests. Model JAST, with F100 engine, began trials at Pratt & Whitney's West Palm Beach, Florida, facility in February 1995; subsequently to outdoor hover test rig at NASA Ames and then installed in 24 × 36 m wind tunnel at Mountain View, California, for series of powered hover and transition tests which ran from December 1995 to 5 March 1996; total of 196 hours accumulated, representative of approximately 2,400 take-offs and landings with the vertical lift system. Midway through outdoor hover tests, design was reconfigured to eliminate canards.

Lockheed Martin design, development, construction and flight testing of full-scale demonstrator aircraft, required one initially to be flown as CTOL version (X-35A) to demonstrate land-based USAF model, before being reconfigured to serve as STOVL version (X-35B) for US Marine Corps, Royal Air Force and Royal Navy; other aircraft representative of carrier-capable US Navy model (X-35C). Although Fort Worth had leadership of team, both X-35 aircraft built at Palmdale, California.

Design of X-35 frozen as **Configuration 220** 13 June 1997 after Initial Design Review, at which time 11,000 hours of model testing accumulated. Development team joined by Northrop Grumman on 8 May 1997 and BAe (now BAE Systems) on 18 June 1997.

Release of engineering drawings in early September 1997 heralded start of parts production at Palmdale for demonstrator aircraft; by end of 1997, Lockheed Martin had completed about 70 per cent of required tooling and conducted second interim programme review. X-35 final design review completed in September 1998 and coincided with roll-out of full-scale mockup at Fort Worth. Assembly of first aircraft began in April 1998, with

First system development and demonstration (SDD) F-35A during its maiden flight on 15 December 2006 1185920

F-35A Lightning II flying near Fort Worth 1185922

main wing carry-through bulkhead installed in early August 1998, by which time manufacturing of large composites skins for upper and lower wing surfaces also complete; aircraft moved from assembly testing to factory floor on 18 September 1999, in readiness for installation of flight control surfaces and landing gear as well as systems checks.

Flight control system software tested on NF-16D VISTA in 1998 as part of integrated subsystem technology demonstration. Further trials using AFTI/F-16 in 1999–2000 involved all-electric flight control system and modular electric power system planned for JSF. JSF avionics also tested on Northrop Grumman's BAe One-Eleven Co-operative Avionics Test Bed (CATB), which was fitted with sensors, processors and software in 1999; trials begun of Northrop Grumman radar and distributed infra-red sensor system, Kaiser helmet-mounted display and Lockheed Martin core processor in first quarter 2000.

More than 100 hours of flight time accumulated by early September 2000 using CATB, when avionics development and integration process completed; successful demonstrations included automatic target cueing (ATC), whereby sensors acquire targets rapidly and automatically; electro-optical targeting system (EOTS); electronic warfare suite and electronically scanned radar. Subsequent testing included co-operative engagement between CATB and E-8C Joint STARS, demonstrating all-weather precision targeting and combat identification techniques for fixed and moving targets.

Design of JSF continued to be refined after selection of Configuration 230-1. By 1998, third version of **Configuration 230 (230-3)** had reduced area of USAF/USMC JSF wings by seven per cent, but increased USN variant's wing area by 11 per cent. Further redesign occurred in 1999, culminating in September with Configuration 230-5, with enlarged wing to satisfy sustained turn performance requirement and strengthened to meet 9 *g* stress requirement for the CTOL variant; further main change involved redesign of lift-fan nozzle from D-shape extendible box to venetian blind-type box, offering dual benefits of simpler design and reduced weight for the STOVL configuration.

Redesign process continued into 2000, with Configuration 230-5 benefiting from further refinements aimed at reducing weight and increasing payload bringback capability; resultant structural modification entailed weight reduction in several areas such as weapon bay and landing gear door assemblies. Configuration 230-5 finally submitted as Preferred Weapons System Concept design in mid-2000.

Significant events in latter part of 1998 and 1999 included first test run of basic Pratt & Whitney JSF119 engine (designated FX661) at West Palm Beach, Florida, facility on 11 June 1998; over 330 hours of developmental testing performed by end August 1999, validating complete X-35 flight envelope. Final altitude flight qualification testing undertaken with another engine (designated FX663) in fourth quarter of 1999. National Aerospace Laboratory low-speed wind tunnel in the Netherlands used to test scale models of JSF starting in June 1998; initial trials of lift fan system's clutch, fan and gearbox rigs at Indianapolis, Indiana, in May and June 1998; and installation of engine inlet duct in assembly tool at Palmdale at beginning of July 1998. Subsequently, also in July, over 50 hours of preliminary engine testing were completed at West Palm Beach, including vibration surveys, fan and core running-in, operating performance calibration and engine control stability assessment.

Testing of first STOVL engine (designated FX662) undertaken initially at West Palm Beach; first run with lift fan engaged accomplished on 10 November 1998, with operation to 100 per cent speed following on 22 November; first series of tests included stress surveys and performance calibration. Validation of STOVL propulsion system achieved in late August 1999, with high-power clutch engagement of shaft-driven lift fan, simulating seamless conversion from conventional wing-borne flight configuration to jet-borne flight configuration for STOVL approach ending with vertical landing.

Following this, on 9 December 1999, flight engine YF001 successfully installed on the X-35A demonstrator at Palmdale, with integration tests, including plumbing connections, data communications and electrical checks, beginning immediately thereafter.

In UK, DERA vectored-thrust advanced aircraft control (VAAC) Harrier T. Mk 4 completed 20 hour, 36 sortie, flight test programme in November 1998, during which a sidestick control column was evaluated by civilian and military pilots. Two-phase programme began with initial calibration to validate STOVL control laws and stick characteristics; subsequent evaluation included pattern work, approach and transition to hover and precision and aggressive hover tasks, resulting in confirmation that side-stick provided satisfactory control of STOVL aircraft at low speeds.

Lockheed Martin also reached preliminary agreement with partners over work-sharing arrangements to be implemented for large-scale production. Lockheed Martin has responsibility for forward fuselage, cockpit, wing edges and final assembly; Northrop Grumman to fabricate mid-fuselage and wing box, with BAE Systems producing tails and aft fuselage section.

Radar signature testing of full-scale pole model began in late 1999 at Helendale, California; this included measurement of radar cross-section, assessment of antenna performance and demonstration of the robustness of supportable low-observable materials.

Significant events in 2000 included X-35A flight readiness review in March. Subsequently, in April, testing associated with development and flight qualification of the JSF119-PW-611 engine for the X-35A and X-35C was completed after 193 hours of operating time. Final assembly and painting of X-35A in late May was followed by ground tests, including systems checkout, engine running at full military power and with full afterburner augmentation, and low- and medium-speed taxi tests. These extended into October and culminated in a successful first flight by X-35A Article 301 from Palmdale to Edwards on 24 October; by 6 November, further four flights had been made, including first by USAF pilot, and envelope had been expanded to 390 kt (722 km/h; 449 mph); first aerial refuelling (from KC-135) on 7 November; maiden supersonic flight 21 November, when 25 hours had been flown in 25 sorties. X-35A test programme completed on 22 November, whereupon Article 301 returned to Palmdale for conversion to X-35B. X-35C (Article 300) first flight took place on 16 December 2000 from Palmdale to Edwards AFB. Initial X-35C testing at Edwards completed in early February 2001, with aircraft making transcontinental ferry flight to Patuxent River, Maryland on 9–10 February for specialised trials.

Following installation of shaft-driven lift fan in late December 2000, X-35B STOVL version began hover-pit trials on 22 February 2001; these concluded 16 March and included 26 lift-fan clutch engagements from CTOL to STOVL mode at high rpm settings. Accelerated mission testing followed and was concluded on 6 April, with X-35B then being readied for flight trials; this process included installation of flight-ready lift fan. Taxi tests began 12 June 2001, followed by first brief vertical take-off and landing on 23 June, with sustained hover accomplished on next day. Initial testing at Palmdale completed successfully by 3 July, when X-35B flown to Edwards AFB for remainder of trials programme; notable events included first airborne transition from STOVL to conventional mode on 9 July; first vertical landing from wingborne flight on 16 July and 'Mission X' demonstrations involving short take-off, level supersonic dash and vertical landing on 20 and 26 July, before STOVL testing concluded on 30 July.

Both X-35 aircraft subsequently allocated to museums, with Article 300 going to the naval air museum at Patuxent River and Article 301 joining the Smithsonian collection in Washington, DC.

After study of test results and company proposals, the US Department of Defense announced on 26 October 2001 that Lockheed Martin would be awarded a USD19 billion contract to cover SDD of F-35. Originally scheduled to occupy 126 months (but since extended by at least two years), SDD began immediately. Simultaneously, it was revealed that Pratt & Whitney would receive a contract worth USD4 billion for development and production of the associated F135 engine. As a major partner, the UK is providing USD2 billion towards total SDD expenditures of approximately USD30 billion. Majority of preliminary design review successfully concluded on 27 March 2003, with a few items concerning aircraft weight and weapons integration not finally resolved until end of June. F-35A critical design review originally scheduled for 2005 postponed to February 2006; this and that of F-35B both successfully completed on 17 February.

A total of 15 fully instrumented flying aircraft will be built at Fort Worth and assigned to SDD. Six will emerge as **F-35As** (USAF CTOL version); four will be **F-35Cs** (US Navy CV version); and the remaining five will be **F-35Bs** (US Marine Corps/UK STOVL version). Further eight non-flying airframes: two of each version as static test articles, plus another F-35C for drop testing and one pole-test airframe for radar signature evaluation. Production of SDD aircraft began in 2004, with fabrication of the first composites upper wing starting on 6 February; assembly of first centre fuselage section by Northrop Grumman began in May, followed by start of assembly of first forward fuselage by Lockheed Martin on 14 July (completed 13 October) and first aft fuselage by BAE Systems on 24 August. Final assembly of this F-35A began May 2005, when centre fuselage supplied by Northrop Grumman mated with Lockheed Martin-produced wing assembly at Fort Worth; electrical power to aircraft switched on for first time on 7 September. Fins added on 28 November, followed by horizontal tail surfaces on 8 December to complete assembly of major structural components; engine delivered by Pratt & Whitney on 30 December 2005, allowing installation to take place on 13 February 2006. Work on first F-35B (Article BF-1) began with loading of initial jig on 6 September 2005.

First F-35A (Article AA-1) rolled off production line at Fort Worth on 19 February 2006 and initially used for fuel system check-out; AA-1 still unpainted at this time, but had been by 7 July, when formally unveiled by Lockheed Martin. Selection of Lightning II name announced on same day by USAF Chief of Staff General Michael Moseley. Maiden flight then planned for October, but further delay encountered and first engine run not accomplished until 15 September 2006, with full afterburner test taking place three days later, on 18 September. AA-1 moved under own power for first time on 7 December 2006, when successfully completed initial (low speed) taxi run at Fort Worth. Two more taxi tests took place on 12 December, during which the F-35 reached a maximum speed of 110 kt (204 km/h; 127 mph). First flight 15 December 2007 at Fort Worth marked only as 'AA-1'.

Just over 40 per cent of total planned flight testing by all JSF variants to be undertaken by F-35A. F-35B to fly in third quarter of 2007, with second F-35A following in early 2008 and first F-35C in first quarter of 2009. Flight trials will be undertaken by Lockheed Martin at Fort Worth as well as joint industry/service teams at Edwards AFB, California (USAF) and NAS Patuxent River, Maryland (US Navy). In anticipation of start of flight testing at Edwards AFB, USAF reactivated 461st Flight Test Squadron on 27 October 2006. Programme originally expected to involve almost 15,000 flight hours, although this reduced to about 11,000 hours over period of six years.

Avionics testing to be accomplished initially by Boeing 737-300 Co-operative Avionics Testbed with modified nose housing an F-35 radar as well as aerodynamically neutral canard surfaces on both sides of forward fuselage; later will carry antennae and sensors for electro-optical targeting system (EOTS) and electro-optical distributed aperture system (EODAS). This aircraft expected to fly for first time in early 2007, following extensive modification programme undertaken by BAE Systems at Mojave, California. Northrop Grumman-owned BAC One-Eleven testbed also contributing to trials programme and made

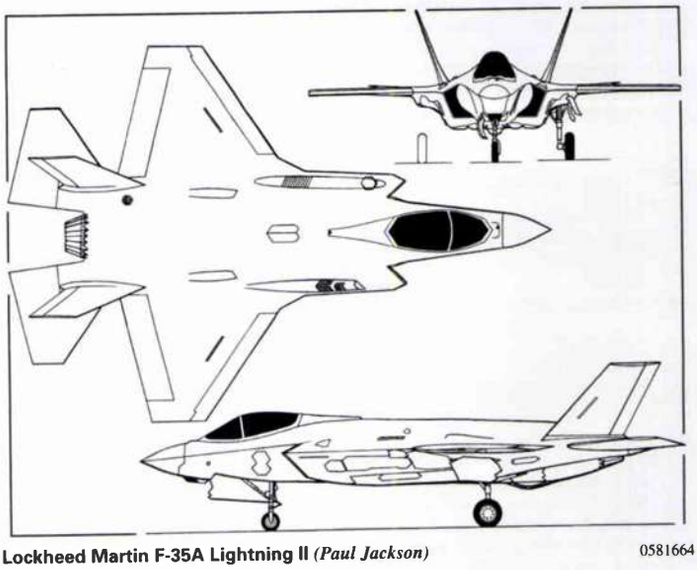
Lockheed Martin F-35A before painting 1185924



Lockheed Martin F-35A Lightning II *(Paul Jackson)* 0581664

first flight with AN/APG-81 AESA radar on 23 August 2005. Full funding for Low-Rate Initial Production (LRIP) was scheduled to begin in FY06 but has been delayed by about a year, with consequent effect on delivery of production aircraft. Projected IOC dates have also slipped, with the F-35B still expected to be first, in 2012, followed by F-35A and F-35C in 2013. Initial aircraft will be to Block 1 standard, with basic warfighting capability (including compatibility with JDAM and AIM-120 AMRAAM); additional weaponry for enhanced air-to-air, SEAD, close air support and interdiction will be added on Block 2 standard aircraft, while Block 3 will introduce more missiles and bombs and add deep strike capability. Lockheed Martin anticipates production rate of 17 aircraft per month at Fort Worth from 2011, but would like to achieve rate of 22 per month. With peak demand likely to be for about 30 a month, this could only be accomplished with second production centre. In early 2003, UK government commissioned Rand to perform feasibility study into creating second assembly line with BAE Systems in UK; one key finding was that creating second assembly line in UK would increase direct assembly bill for British aircraft by almost GBP47 million and indirectly raise US government costs by a further GBP30 million, principally arising from reduced efficiencies.

Italy also keen on establishing own assembly centre at Cameri; Lockheed Martin would probably sub-contract assembly process to Alenia Aeronautica if questions over handling of sensitive technology such as low-observables can satisfactorily be answered, but US government approval required if this to produce aircraft for other air arms; government-to-government discussions between Italy and USA in 2006 appear encouraging, although concerns over technology transfer still to be addressed, with US reluctant to divulge sensitive technological secrets. This at heart of dialogue between US and UK in late 2005 and early 2006, prompting UK threat to withdraw if not guaranteed access to technology needed to operate, sustain and upgrade aircraft, especially computer software codes; this eventually resolved in May 2006, but other customers (including Australia) share similar concerns. Current planning anticipates first low-rate initial production (LRIP) batch to comprise five F-35A for USAF, with LRIP 2 consisting of 18 aircraft (8 F-35A and 10 F-35B) for USAF and USMC; however, only two USAF F-35A included in FY07 budget request.

Formal signature of MoU covering plans for production, sustainment and follow-on development (PSFD) phase due by all eight partners in December 2006; this document will stipulate quantities to be acquired by each partner and give details of production centres. It may also contain information about the creation of regional maintenance facilities.

CURRENT VERSIONS (SPECIFIC): Details of version, projected first flight date and tasks assigned to SDD aircraft are as follows:

AA-1 F-35A: First SDD aircraft. Maiden flight originally expected in August 2006 but rescheduled to October 2006 and further delayed. To be used for initial airworthiness testing at speeds up to 350 kt (648 km/h; 403 mph) and 4*g* loads. On completion of these, will be employed for ground-based proof-load testing, allowing updating of software and installation of helmet-mounted display.

AF-1 F-35A: First flight planned for August 2008. Flutter and flying qualities.

AF-2 F-35A: First flight planned for July 2008. Loads testing.

AF-3 F-35A: First flight planned for November 2008. Mission systems trials.

AF-4 F-35A: First flight planned for June 2009. Mission systems trials.

AF-5 F-35A: First flight planned for July 2009. Mission systems trials.

BF-1 F-35B: First flight planned for February 2008. Assessment of flying qualities.

BF-2 F-35B: First flight planned for April 2008. Flutter and flying qualities.

BF-3 F-35B: First flight planned for April 2008. Will be first aircraft with mission-system software. To be used for loads testing.

BF-4 F-35B: First flight planned for December 2008. Mission systems trials.

BF-5 F-35B: First flight planned for April 2009. Flying qualities, climatic assessments and live firing trials.

CF-1 F-35C: First flight planned for January 2009. Flutter and flying qualities.

CF-2 F-35C: First flight planned for December 2008. Loads testing.

CF-3 F-35C: First flight planned for March 2009. Carrier suitability trials.

CF-4 F-35C: First flight planned for April 2009. Mission systems trials.

F-35A testing will be accomplished by 461st Flight Test Squadron, Air Force Flight Test Center at Edwards AFB, California. F-35B and F-35C versions to go to Naval Air Test Center at Patuxent River, Maryland.

CURRENT VERSIONS (GENERAL): Three variants of basic design, optimised for the mission requirements of different armed services. As currently envisaged, basic company designation for operational JSF is Configuration 240-3, with following variants expected to enter service with US armed forces.

F-35A: Land-based **CTOL** derivative for USAF. Evaluated by X-35A between 24 October and 22 November 2000.

F-35B: **STOVL** version for US Marine Corps, Royal Air Force and Royal Navy, with USAF revealing intention in February 2004 to acquire some F-35Bs; as many as 300 aircraft could be involved, almost certainly to the same configuration as those for the Marine Corps, but probably also incorporating internal GAU-12 gun rather than pod-mounted weapon specified for Marines. Engine-driven lifting fan behind cockpit replaces some fuel. Wing folding originally specified on Royal Navy version only, but requirement since dropped. Broader and higher spine behind cockpit to accommodate lifting fan and air intake; shortened cockpit canopy replaces blister-type glazing of F-35A and B. Evaluated by X-35B between 23 June and 30 July 2001; final flight on 6 August 2001 was from Edwards AFB to Lockheed Martin facility at Palmdale.

In fourth quarter of 2003, concerns emerged over weight of the F-35B version. Reviews of structural design eliminated some of the excess, but in early 2004, (by which time design had progressed to **configuration 240-3**), it was evident that further weight reduction initiatives would be necessary. These concerns were sufficiently serious in nature to warrant postponing the critical design review (CDR), with that for the F-35B now set to occur in mid-2006; equivalent CDRs for the F-35A and F-35C versions are scheduled to take place in November 2005 and early 2007 respectively.

Another unwelcome consequence was that it became necessary to delay the start of SDD testing, in order to give Lockheed Martin additional time to solve the weight problem. In May 2004, the extent of this became known when it was revealed that the STOVL version was about 1,500 kg (3,300 lb) overweight. A special task force known as SWAT (STOVL Weight Attack Team) was created by Lockheed Martin to investigate and, by September 2004, this had succeeded in removing about 1,225 kg (2,700 lb) of the unwanted weight.

This was accomplished through a mixture of airframe and engine design improvements as well as some compromise of customer requirements. Most of the extra weight was eradicated by a redesign that involved moving a number of internal elements, but additional benefit stemmed from a change in methods used for mating of fuselage sections and by positioning wing spars more closely together so as to permit use of thinner wing skin. Revisions to the air inlet and engine nozzle designs provided further benefit in the form of extra effect from installed thrust of the F135 engine.

It also proved necessary to modify the weapons bays, which, on the F-35B, have reverted to the size originally specified. Thus, internal carriage of weaponry will be limited to a pair of weapons in the 454 kg (1,000 lb) class (plus two AIM-120 AMRAAMs), rather than the two 900 kg (2,000 lb) weapons that may be carried internally by both the F-35A and F-35C.

In November 2004, Lockheed Martin received go-ahead to alter design schedule and build **F-35B1** version, which is 2,087 kg (4,600 lb) lighter than original conception; this will have improved thrust performance and aerodynamic qualities.

F-35C: Carrier-based CTOL (CV). Wing, fin and elevator areas increased by chord extension; ailerons in addition to flaperons on wing; enlarged control surfaces and modified control system; strengthened landing gear with catapult launch bar on twin-wheel nose leg; concealed arrester hook; and folding wing. Evaluated by X-35C between 16 December 2000 and 10 March 2001 from test centres at Edwards AFB and Patuxent River, Maryland (from 10 February 2001).

EA-35B: Unofficial designation relating to Lockheed Martin studies into potential two-seat electronic attack version (based on F-35C) that could replace Marine Corps EA-6B from about 2015. Would retain internal weapons carriage capability, with sensors and jamming equipment embedded in fuselage and wings. In late 2006, the Marine Corps announced that it would not be proceeding with the EA-35B, but would seek to enhance electronic attack capabilities of the F-35B.

Pilotless F-35: Proposal revealed by Lockheed Martin in mid-2006 for unmanned derivative, as well as optionally-piloted version; studies by Skunk Works said to have begun in about 2003, but further progress not now expected until after all three manned variants have flown. One concept of operations under study involves four unmanned F-35s being controlled by two manned F-35s (or F-22s), with sensor information relayed via datalink; this envisages deletion of sensors from pilotless aircraft, allowing it to be used purely as weapons carrier, thus offering cost saving of close to 30 per cent. Removal of cockpit would permit installation of additional fuel tank, extending range and/or mission duration.

CUSTOMERS: Two X-35 demonstrators. Initial planning called for some 3,000 F-35s for USA and UK, but US Navy and Marine Corps requirement cut significantly in 2003 (see table) and significant reduction now expected in eventual quantity for USAF, which on 10 August 2006 announced intent to station first F-35 unit at Eglin AFB, Florida; this will be 33rd Fighter Wing, which to transfer from Air Combat Command to Air Education and Training Command by 2010, when first F-35s expected to arrive. All three variants are to be assigned to 33rd FW, which will train pilots for USAF, US Navy/Marine Corps and allied nations. UK confirmed on 30 September 2002 that F-35B (STOVL) version will be procured for both RAF and Royal Navy, with service introduction of so-called Joint Combat Aircraft (JCA) then anticipated during 2012; however, in September 2004, it became apparent that UK delivery has been delayed until 2011, with service introduction with first operational unit now unlikely before 2014. In November 2005, it was revealed that Lossiemouth is almost certain to be the main operating base in the UK. Orders also expected from Australia (planning to buy at least 50 and possibly as many as 100 F-35As and could also obtain about 20 F-35Bs for use from proposed future amphibious landing ships), Canada, Denmark, Italy (requirement for about 130 F-35Bs and could also purchase up to 70 F-35As to partly replace Tornado force), the Netherlands (requires about 85, but introduction delayed by two years until 2014, although intends to order initial quantity of three aircraft for participation

in multinational test and evaluation programme), Norway and Turkey (requires 120 for delivery from 2013. Israel and Singapore also prospective customers, with former having stated intent to obtain up to 100 F-35s. Taiwan has expressed provisional interest in obtaining about 60 F-35Bs (contract award anticipated in 2010), followed by up to 150 F-35As (contract award likely in 2012).

US AND UK F-35 REQUIREMENTS
(as at October 2003)

Service	Qty	Remarks
US Air Force	1,763	Replaces A-10 and F-16; complements F-22 Raptor. Primarily F-35A but expected to include some F-35Bs
US Navy/Marine Corps	680	To include F-35B and F-35C versions
Royal Navy (UK)	60	Replaces Sea Harrier
Royal Air Force (UK)	90	Replaces Harrier
Total	**2,593**	

COSTS: At time of downselect for SDD phase, unit cost of USAF F-35A quoted as USD37.3 million, with CV/STOVL versions costing under USD50 million each. USD3.27 billion SDD funding for FY03, following USD1.52 billion appropriation in FY02; USD4.1 billion authorised for FY04 with USD4.37 billion in FY05 and USD5.02 billion requested for FY06. FY06 budget finally approved as USD4.79 billion, of which USD4.67 billion allocated for research and development, with USD120 million set aside for advance procurement of USAF aircraft. FY07 request totalled USD5.29 billion, but final figure likely to be around USD4.49 billion, including USD60 million in advance procurement funds. Total SDD bill origianally estimated at USD18 billion, but subsequent delay and programme stretch appears likely to increase total outlay to around USD40 billion. Fly away costs mentioned in connection with Italian involvement quoted as USD36.6 million for CTOL version, USD47.4 million for CV version and USD45.3 million for STOVL version. UK purchase of 150 F-35Bs estimated to cost around GBP10 billion. In May 2006, average cost of F-35A estimated by Lockheed Martin to be around USD50 million in 2006 dollars.

DESIGN FEATURES: Trapezoidal mid-wing configuration, optimised for low observability. Twin tailfins; internal weapon bays. Wing and tailplane leading-edges swept back approximately 33°; trailing-edges swept forward approximately 14°; fins swept back approximately 42° and each canted outward at tips by approximately 19° (compared with same 25° on earlier version of design). Twin 'divertless' fibre-placed graphite/epoxy composites engine air intakes with no moving parts produced by ATK. All-electric flight control system.

STOVL version employs a lifting fan behind the cockpit, driven by a shaft from the single engine; inlet and outlet are covered by doors, except when in use; original side-hinged bi-fold hatch of X-35B replaced in early 2003 by single-piece cantilever inlet door hinged at rear. Other changes related to thermal management also incorporated at this time, to satisfy requirement to operate on 49°C (120°F) day. The resultant cold air barrier prevents hot air from being reingested when on or near the ground.

FLYING CONTROLS: All-electric flight control system for movement of primary flight control surfaces (flaps, tailerons and rudder) incorporating Parker Hannifin electrohydrostatic actuators. Moog leading-edge flap drive system. Composite/titanium flaperons by Stork Aerospace. Carbon-fibre composites conventional edges for horizontal tail by Terma A/S of Denmark. Flight control computer originally to be supplied by Honeywell, but replaced by advanced Lockheed Martin unit in third quarter of 1998 to eliminate anticipated throughput problems arising from growth in flight control software.

LANDING GEAR: Retractable tricycle type; mainwheels retract inwards; nosewheel(s) forward. Single wheels on each unit, except twin nosewheels and catapult towbar on F-35C, which also has reinforced gear for deck landings. Tyres will feature embedded transponder including integrated circuit and capacitive pressure sensor to facilitate monitoring of pressure and condition. Dunlop selected to provide 34 × 11.OR16 radial main tyres for SDD phase of STOVL F-35B version; Honeywell to develop wheels and brakes, with Crane Hydro-Aire supplying brake control and anti-skid system. Arresting gear for F-35A and F-35C designed, developed and produced by Stork Aerospace of Netherlands.

POWER PLANT: One 178 kN (40,000 lb) class (111 kN; 25,000 lb st dry rating) Pratt & Whitney F135 (formerly JSF119-PW-611; F119 derivative) turbofan; documentation in public domain quote figures of 128.1 kN (28,800 lb st) in non-augmented mode and 191.3 kN (43,000 lb st) with full afterburner augmentation. Rolls-Royce three-bearing swivel-duct nozzle on -611S version to deflect thrust downwards for STOVL, plus a Rolls-Royce engine-driven fan behind cockpit and a bleed air reaction control valve in each wingroot to provide stability at low speeds. For F-35B, total vertical lift of 177 kN (39,700 lb st) comprises some 40 per cent from main nozzle, 48 per cent from fan and 12 per cent from reaction control valves. Ground testing of first of seven F135 engines (including four STOVL power plants) began at West Palm Beach, Florida, on 11 October 2003; first run of STOVL engine followed on 14 April 2004, although testing of latter halted in June after discovery of erosion damage in second-stage vanes of low-pressure turbine. By early September 2005, test engines had accumulated just over 3,400 hours of operation. First production F135 engines due for delivery in 2007. F-35A has in-flight refuelling receptacle on spine; US Navy and Marine Corps require retractable probe on starboard side. JP-5 or JP-8 fuel. General Electric/Rolls-Royce F136 turbofan with same performance characteristics under development as alternative interchangeable power plant. Ground testing of F136 began at Evendale, Ohio, on 22 July 2004, with primary phase of testing completed late February 2005. First STOVL F136 entered test in February 2005, with first clutch engagement of lift fan accomplished in late March. USD2.4 billion SDD contract award for 14 test examples of this power plant made in August 2005, with first flight targeted for October 2009. At that time, production standard F136 engines expected to be available with effect from LRIP Lot 4 aircraft, with service release expected in 2012. Subsequently, USDoD moved to cancel alternative engine programme by omitting it from FY07 budget request; funding registered by Congress, giving F136 a reprieve, but future remains uncertain, especially in view of rising costs of F-35 programme.

ACCOMMODATION: Pilot only; canopy by Sierracin; canopy frame assembly by Smiths Aerospace. STOVL versions have canopy of reduced length. Martin-Baker Mk 16E lightweight ejection seat in X-35s; US16E version to be used by SDD aircraft. Zero-zero test of definitive Martin-Baker escape system successfully undertaken at Chalgrove, UK in August 2005, followed by airborne test from Meteor at 165 kt (306 km/h; 190 mph) in October 2005.

SYSTEMS: Hamilton Sundstrand electrical power generating system (EPGS), comprising 80 kW engine-driven switched-reluctance starter/generator providing two independent channels of 270 V DC electrical power. Electrical power management system (EPMS) by Smiths Aerospace includes distribution units, power panels, power distribution centres, batteries and battery charger equipment; electrical wiring on SDD aircraft by Stork Aerospace of the Netherlands; Honeywell thermal- and energy-management module (T/EMM) combining functions of auxiliary and emergency power units and environmental control system; 270 V DC lithium ion emergency battery by Saft America Inc. Weapons bay door drive system by TRW Aeronautical Systems. 276 bar (4,000 lb/sq in) high pressure hydraulic power generation and distribution system by Eaton Corporation. Programmable prognostics and health management system (PHMS) with downlink facility monitors aircraft systems while airborne and is able to predict failures before they occur.

AVIONICS: *Comms:* Northrop Grumman Radio Systems to provide next-generation CNI (communications, navigation and identification) avionics for F-35; package will include VHF/UHF radio, Have Quick I/II, SINCGARS/SIP, UHF SatCom, IFF/SIF transponder, ILS, MLS, ACLS, Tacan, intra-flight data link, Link 4A, Link 16/JTIDS and weapons data link.

Radar: Northrop Grumman MIRFS/MFA (multifunction integrated RF system/multifunction nose array) combines AN/APG-81 active electronically scanned array (AESA) radar, electronic warfare and communications functions planned for production F-35.

Flight: Lockheed Martin Tactical Defense Systems Integrated Core Processor (ICP) incorporating open system architecture. JPALS (Joint Precision Approach Landing System).

Instrumentation: Rockwell Collins 508 × 203 mm (20 × 8 in) panoramic projection, touch-sensitive screen (two half-size screens functioning as single unit); display management subsystem and computer by L-3 Display Systems. Meggitt secondary flight display system. Vision Systems International (Rockwell Collins and Elbit Systems) selected in third quarter of 1999 to provide advanced integrated helmet-mounted display (HMD) system; alternative HMD being developed by BAE Systems, which delivered first helmet to Lockheed Martin at end of September 2004. UK design based on binocular helmet developed for Typhoon.

Mission: Electro-optical sensor system (EOSS) being developed jointly by Lockheed Martin and Northrop Grumman; latter responsible for electro-optical distributed aperture system (EODAS) with functions that include air-to-air search-and-track, target cueing and missile warning, and air-to-ground surface-target tracking; EODAS uses six CMC Electronics conformal compact lightweight imaging IR sensors around airframe and seventh in targeting system pod, with combined data providing all-aspect multifunction imaging to pilot via wide-angle helmet-mounted display, overlaid with target and threat data information. Second key element of EOSS is Lockheed Martin internal Electro-Optical Targeting System (EOTS); incorporating BAE Systems Avionics laser precision ranger/designator, this can be used when engaging targets on the ground and in the air.

Self-defence: EW capability incorporated into MIRFS/MFA. BAE Systems is prime contractor for digital EW equipment and integration and delivered first complete EW system to Lockheed Martin on 28 April 2006; Litton Amecom to supply low-cost ESM equipment.

ARMAMENT: Internal cannon (in port engine air intake trunk upper surface) specified by USAF for F-35A. Boeing/Mauser BK 27 originally selected, but replaced by General Dynamics GAU-12 25 mm weapon in fourth quarter of 2002. US Navy F-35C and Marine Corps and UK STOVL variants to have 'missionised' GAU-12 25 mm cannon in externally-mounted, low-observables pod. Internal weapon bays, incorporating pneumatic weapon suspension and release equipment by EDO; F-35A and F-35C internal weapons fit is two AIM-120C AMRAAMs and two GBU-31 JDAM bombs or two AIM-120s and up to eight small diameter bombs (SDBs). Other weapons expected to be used by the F-35 include CBU-105 WCMD Sensor Fuzed Weapon, GBU-12 Paveway II, AGM-154 JSOW, AIM-132 ASRAAM and GBU-32 JDAM, all for internal carriage; externally carried weapons are expected to include AGM-158 JASSM, Storm Shadow cruise missile, as many as 24 SDBs and the AIM-9X Sidewinder. Optional external stores on six hardpoints, which can accommodate fuel tanks or up to 6,800 kg (15,000 lb) additional ordnance. Station capacities, according to October 2003 briefing document, will be as follows; 1 and 11 (outer wing) 136 kg (250 lb); 2 and 10 (mid-wing) 1,134 KG (2,500 lb); 3 and 9 (inner wing) 2,268 kg (5,000 lb); 4 and 8 (internal) 1,134 kg (2,500 lb); 5 and 7 (internal) 159 kg (350 lb); and 6 (centreline) 454 kg (1,000 lb). By February 2004, company briefings were quoting 136 kg (300 lb); 907 kg (2,000 lb), 2,268 kg (5,000 lb), 907 kg (2,000 lb); 159 kg (350 lb); and 454 kg (1,000 lb), respectively. Internal capacity of F-35B will be lower, following reduction in size of weapons bays, with stations 4 and 8 limited to maximum of 454 kg (1,000 lb).

Data are provisional.

DIMENSIONS, EXTERNAL (estimated):

Wing span: F-35A, F-35B	10.67 m (35 ft 0 in)
F-35C (wings spread)	13.11 m (43 ft 0 in)
F-35C (wings folded)	9.47 m (31 ft 1 in)
Length overall: F-35A, F-35C	15.67 m (51 ft 5 in)
F-35B	15.59 m (51 ft 2 in)
Height overall: F-35A, F-35B	4.57 m (15 ft 0 in)
F-35C	4.72 m (15 ft 6 in)
Tailplane span: F-35A, F-35B	7.29 m (23 ft 11 in)
F-35C	8.64 m (28 ft 4 in)
Wheel track: F-35A, F-35B	4.34 m (14 ft 3 in)
F-35C	4.22 m (13 ft 10 in)
Wheelbase: F-35A, F-35B	6.02 m (19 ft 9 in)
F-35C	6.17 m (20 ft 3 in)

AREAS:

Wings, gross: F-35A, F-35B	42.73 m² (460.0 sq ft)
F-35C	58.34 m² (628.0 sq ft)

WEIGHTS AND LOADINGS (estimated):

Weight empty: F-35A	12,020 kg (26,500 lb)
F-35B, F-35C	13,608 kg (30,000 lb)
Max weapon load	more than 9,072 kg (20,000 lb)
Max internal fuel weight:	
F-35A	more than 8,165 kg (18,000 lb)
F-35B	more than 5,897 kg (13,000 lb)
F-35C	more than 8,618 kg (19,000 lb)
Max T-O weight class	27,215 kg (60,000 lb)
Max wing loading: F-35A, F-35B	636.8 kg/m² (130.43 lb/sq ft)
F-35C	466.5 kg/m² (95.54 lb/sq ft)

PERFORMANCE (estimated):

Max level speed: all	M1.6
Combat radius: F-35A	590 n miles (1,093 km; 679 miles)
F-35B	450 n miles (833 km; 517 miles)
F-35C	600 n miles (1,111 km; 690 miles)

LOCKWOOD

LOCKWOOD AVIATION INC

Tel: (+1 863) 655 51 00
Fax: (+1 863) 655 62 25
e-mail: info@lockwoodaviation.com
Web: **www.lockwoodaviation.com**
PRESIDENT: Phillip Lockwood

Phillip Lockwood, designer of the Air Cam, produced both that and the Maxair Drifter in the early 1990s. Lockwood Aviation then entered into partnership with Antonio Leza as Leza-Lockwood Aircraft; later, Leza purchased the design rights.

In June 2006, Lockwood Aviation regained the design rights, tooling and inventory of the Air Cam and Drifter from Leza and began construction of a 650 m² (7,000 sq ft) production facility. The company also sells spare parts for a range of light aircraft, as well as operating a repair plant and flying school.

LOCKWOOD DRIFTER and SUPER DRIFTER

TYPE: Tandem-seat ultralight kitbuilt.

PROGRAMME: Originated in 15 kW (20 hp) Maxair Hummer V-tail ultralight of early 1980s; Maxair Drifter marketed from 1984 by Lockwood Aviation Supply; also supplied in quantity to Antipodes as Austflight Drifter; production resumed by Leza-Lockwood in mid-1990s; transferred to Lockwood in 2006. Previously sold with Rotax XP505, 618 or 447 engine.

CURRENT VERSIONS: **Drifter MU582**: Baseline version; *as described.*

Super Drifter SD912XL: Higher-powered model with 59.6 kW (79.9 hp) Rotax 912 engine, electric start, flaps and hydraulic brakes.

CUSTOMERS: More than 1,100 of both models flying by November 2006.

COSTS: **MU582 USD21,635; SD912XL USD32,575, both including engine and propeller (2006).**

DESIGN FEATURES: **Circular tube fuselage; wings supported by cabane and V struts; wire-braced empennage. Noise fairing/windscreen for partial protection of pilot. Single-piece wing is removable for storage and transportation. Quoted assembly time 150 hours for Drifter and 200 hours for Super Drifter.**

FLYING CONTROLS: **Conventional and manual. Full-span ailerons on Drifter; flaps on Super Drifter.**

STRUCTURE: **Metal airframe with fabric-covered wings and empennage; composites nose fairing.**

LANDING GEAR: Generally as AirCam; Drifter has drum brakes and Super Drifter has hydraulic brakes. Steerable tailwheel. Optional floats.

POWER PLANT: *Drifter:* One 48.0 kW (64.4 hp) Rotax 582 driving a 1.52 m (5 ft 0 in) Warp Drive three-blade propeller. Fuel capacity 37.9 litres (10.0 US gallons; 8.3 Imp gallons).

Super Drifter: One 59.6 kW (79.9 hp) Rotax 912 driving a 1.73 m (5 ft 8 in) Warp Drive three-blade propeller. Fuel capacity as Drifter.

ACCOMMODATION: Pilot and passenger in tandem open cockpit.

SYSTEMS: **Super Drifter has electric starter.**

DIMENSIONS, EXTERNAL:

Wing span	**9.14 m (30 ft 0 in)**
Length overall	**6.55 m (21 ft 6 in)**
Height overall: Drifter	**2.82 m (9 ft 3 in)**
Super Drifter	**2.87 m (9 ft 5 in)**

AREAS:

Wings, gross	**13.94 m² (150.0 sq ft)**

WEIGHTS AND LOADINGS:

Weight empty: Drifter	193 kg (425 lb)
Super Drifter	225 kg (495 lb)
Max T-O weight: Drifter	408 kg (900 lb)
Super Drifter	453 kg (1,000 lb)

PERFORMANCE:

Never-exceed speed (V_{NE})	69 kt (128 km/h; 80 mph)
Normal cruising speed	61 kt (113 km/h; 70 mph)
Stalling speed: Drifter	34 kt (63 km/h; 39 mph)
Super Drifter	35 kt (65 km/h; 40 mph)
Max rate of climb at S/L	305 m (1,000 ft)/min
T-O run	61 m (200 ft)
Landing run	91 m (300 ft)
Range	200 n miles (370 km; 230 miles)

LOCKWOOD AIRCAM

TYPE: Two-seat kitbuilt twin.

PROGRAMME: Initially designed as camera platform for *National Geographic* magazine by Phillip Lockwood and first flew (N5084T) 1994. Redesigned as a kit and made public debut at Sun 'n' Fun 1996. First float-equipped version made initial flight 9 June 1999.

CUSTOMERS: More than 135 kits sold by November 2006; 73 on US register by November 2006. Export destinations include Australia, Costa Rica, Namibia and Zimbabwe.

COSTS: USD58,648 without engines; USD82,560 with Rotax 912 S engines (2005).

1040415

Lockwood Drifter tandem-seat ultralight *(Paul Jackson)*

1040412

Lockwood AirCam light twin *(Paul Jackson)*

DESIGN FEATURES: Configured for slow flight. Strut- and wire-braced wings and mid-mounted tailplane wire-braced to tall, narrow-chord fin. Quoted build time 800 hours.

FLYING CONTROLS: Conventional and manual. Full-width in-flight-adjustable trim tab on elevator. Pushrod-actuated ailerons taper at tips. Electric flaps.

STRUCTURE: All-metal monocoque fuselage with glass fibre cockpit enclosure. Constant chord, swept-tip wings of 6061-T6 aluminium tubing with aluminium spars and ribs, and fabric covering. Low-drag wing struts. Tailfin has glass fibre fillet and fabric-covered rudder and elevator with metal trim tab.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring steel cantilever mainwheel legs; Hegar wheels; differential hydraulic disc brakes and 6.00-6 in tyres. Maule steerable tailwheel. Full Lotus floats optional.

POWER PLANT: Two 47.8 kW (64.1 hp) Rotax 582s or two 73.5 kW (98.6 hp) Rotax 912 ULSs or mounted above wings, driving three-blade ground-adjustable Warp Drive pusher propellers. Optionally two 85.8 kW (115 hp) turbocharged Rotax 914s can be fitted. Fuel in two wing-mounted aluminium tanks, total capacity 106 litres (28.0 US gallons; 23.3 Imp gallons).

ACCOMMODATION: Pilot and passenger/observer in tandem seats within open cockpit. Lexan windshield. Dual controls. Open baggage compartment behind second seat.

AVIONICS: To customer's specification. Options include Terra T X 760D COM, TRT 250D transponder.

EQUIPMENT: Fire extinguisher standard.

DIMENSIONS, EXTERNAL:

Wing span	11.07 m (36 ft 4 in)
Wing aspect ratio	6.5
Length overall	8.23 m (27 ft 0 in)
Height overall	2.54 m (8 ft 4 in)
Tailplane span	3.96 m (13 ft 0 in)
Wheel track	2.59 m (8 ft 6 in)
Min distance between propeller blade tips	0.15 m (6 in)

DIMENSIONS, INTERNAL:

Baggage compartment: Length	1.07 m (3 ft 6 in)
Max width	0.63 m (2 ft 0¾ in)

AREAS:

Wings, gross	18.95 m² (204.0 sq ft)

WEIGHTS AND LOADINGS (Rotax 912):

Weight empty	472 kg (1,040 lb)
Max T-O weight	762 kg (1,680 lb)
Max wing loading	40.21 kg/m² (8.24 lb/sq ft)
Max power loading	5.19 kg/kW (8.52 lb/hp)

PERFORMANCE (Rotax 912):

Never-exceed speed (VNE)	95 kt (177 km/h; 110 mph)
Max operating speed	87 kt (161 km/h; 100 mph)
Normal cruising speed	43–87 kt (80–161 km/h; 50–100 mph)
Stalling speed, power off, flaps down	34 kt (63 km/h; 39 mph)
Max rate of climb at S/L	610 m (2,000 ft)/min
Rate of climb at S/L, OEI	91 m (300 ft)/min
Service ceiling	5,485 m (18,000 ft)
T-O run	less than 61 m (200 ft)
Landing run	91 m (300 ft)
Range at 57 kt (106 km/h; 70 mph)	295 n miles (547 km; 340 miles)
Endurance	6 h
g limits	±6

LOEHLE

LOEHLE AIRCRAFT CORPORATION

380 Shippmans Creek Road, Wartrace, Tennessee 37183
Tel: (+1 931) 857 34 19
Fax: (+1 931) 857 39 08
e-mail: aircraftkits@loehle.com
Web: www.loehle.com

In addition to its business of supplying materials to aircraft constructors, Loehle (pronounced 'low-lee') markets a range of lightplane and ultralight kits. These include the Sport Parasol and several scale warplanes, comprising SPAD XIII/Fokker D. VII/S.E. 5a (all based on common airframe), (Curtiss) Jenny, (Curtiss) P-40 'Flying Tiger', (North American) 5151 Mustang and KW-909 (Messerschmitt Bf 109/Focke-Wulf Fw 190). Most recent addition is a scale Supermarine Spitfire.

Partly-complete Loehle Spitfire Elite prototype *(Paul Jackson)* 1158592

LOEHLE SPITFIRE ELITE

TYPE: Single-seat sportplane kitbuilt.

PROGRAMME: Incomplete prototype exhibited at Sun 'n' Fun, Lakeland, April 2006.

COSTS: Kit USD34,995, less engine and tax, but including IFR instruments (2006).

DESIGN FEATURES: Three-quarters-scale Vickers Supermarine Spitfire; low-mounted elliptical wing; mid-mounted tailplane and rounded fin.

Quoted build time 750 hours. Wing and tailplane removable for storage.

FLYING CONTROLS: Conventional and manual. Horn-balanced rudder and elevators.

STRUCTURE: Wood. Monocoque forward fuselage; with glass fibre skin; lattice rear fuselage and fin, fabric-covered.

LANDING GEAR: Tailwheel type; retractable main legs; castoring, non-retractable tailwheel. Mainwheel brakes. Mainwheels retract outward into wings.

POWER PLANT: One 47.8 kW (64.1 hp) Rotax 582 piston engine standard; 58.8 kW (78.9 hp) Rotax 912 flat-four optional. Three-blade, ground-adjustable pitch propeller. Fuel capacity 57 litres (15.0 US gallons; 12.5 Imp gallons).

DIMENSIONS, EXTERNAL:

Wing span	8.31 m (27 ft 3 in)
Length overall	6.96 m (22 ft 10 in)

AREAS:

Wings, gross	12.26 m² (132.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	318 kg (700 lb)
Max T-O weight	544 kg (1,200 lb)

PERFORMANCE (estimated):

Normal cruising speed	91 kt (169 km/h; 105 mph)
Stalling speed	33 kt (62 km/h; 38 mph)
Max rate of climb at S/L (Rotax 582)	244 m (800 ft)/min
T-O run	61 m (200 ft)
Landing run	91 m (300 ft)
g limits	+4/–2

LOPRESTI

LOPRESTI AIRCRAFT COMPANY

2620 Airport North Drive, Vero Beach, Florida 32960
Tel: (+1 407) 778 51 33
Web (1): www.loprestifury.com
Web (2): www.speedmods.com
PRESIDENT: Curt LoPresti

Original LoPresti Piper Aircraft Engineering Co formed as Piper subsidiary, but operations suspended December 1990 when Piper abandoned programme because of financial problems; design team retained in LoPresti Speed Merchants (performance improvement kits for Piper small singles and twins and other aircraft) and LoPresti Flight Concepts, which formed in October 1991 to acquire rights to SwiftFury following Piper's bankruptcy and carry through to certification and production; LFC to have been floated as public company mid-1992, but programme suspended by lawsuit over SwiftFury intellectual property. Judgement given in favour of LoPresti but no further progress before death of founder, LeRoy LoPresti on 7 August 2002.

SwiftFury programme re-established in July 2006, under current name of Fury, when Greater Belen Ecomomic Development Corporation at Belen, New Mexico, announced it would build 9,290 m² (100,000 sq ft) assembly plant for LoPresti at Alexander Municipal Airport, beginning January 2007; first aircraft to be completed 21 months thereafter; planned workforce 300.

Prototype LoPresti LP-1 Fury 1158821

LOPRESTI LP-1 FURY

TYPE: Aerobatic two-seat lightplane.

PROGRAMME: Modernised, high-performance development of 1940s Globe/Temco GC-1B Swift, with airframe improvements and 149 kW (200 hp) Textron Lycoming IO-360 instead of 93 kW (125 hp) Teledyne Continental; originally developed in partnership with Piper; first flight (N315LP; later N207LP; later N217LP) of converted Swift (c/n 246) 23 March 1989. First production aircraft to be completed in late 2008.

Original Globe GC-1 Swift constructed of Duraloid (Bakelite-bonded plywood); two prototypes only before US involvement in Second World War; redesigned in metal as GC-1A and flown January 1945; certified 7 May 1946. Total 408 GC-1As (63.4 kW; 85 hp Continental) built under subcontract by Temco, which then obtained type certificate and produced 1,090 GC-1Bs (93 kW; 125 hp Continental) up to 1951. Type certificate then passed to Univair, then Swift Museum Foundation.

CUSTOMERS: Total 569 SwiftFuries ordered before Piper abandonment.

COSTS: USD335,000 (2007); but USD295,000 to original (LoPresti-Piper) customers reconfirming orders within first year.

DESIGN FEATURES: Low wing, 10.2 cm (4 in) farther forward than on original Globe design, with large root fillets; dihedral wings and tailplane. Wing sections NACA 23015 (root) and 23009 (tip); dihedral 6°; incidence 2°. Tailplane dihedral 8°.

FLYING CONTROLS: Conventional and manual. Ailerons, elevators and rudder mechanically actuated by pushrods in roller bearings; electrically operated trim tab in port elevator, anti-servo tab in starboard elevator; ground adjustable tab on rudder; aileron travel +12/-25°; electrically operated single-slotted flaps deflect up to 40°; optional electrically operated speedbrake in upper surface of each wing. Stall strip on each inboard wing leading-edge; fence at inboard end of each aileron. Small auxiliary fixed horizontal surface on each side of rear fuselage forward of tailplane leading-edge.

STRUCTURE: Conventional aluminium alloy stressed skin construction, butt-jointed and flush-riveted.

LANDING GEAR: Tailwheel type, retractable. Main units fully enclosed by sequenced doors when retracted, tailwheel remaining partially exposed. Prototype's tailwheel non-steerable, with solid tyre; production aircraft to have steerable tailwheel with pneumatic tyre. Dual redundant braking system.

POWER PLANT: One 149 kW (200 hp) Textron Lycoming IO-360-A1B6 flat-four engine, driving a McCauley two-blade constant-speed metal propeller. Integral fuel tank in each wing, combined usable capacity 227 litres (60.0 US gallons; 50.0 Imp gallons).

ACCOMMODATION: Two seats side by side, with dual control sticks embodying HOTAS technology. Wraparound windscreen; one-piece rearward sliding canopy. Space for baggage aft of seats.

AVIONICS: *Comms:* Garmin SL-30 interactive nav/com, Garmin 330 Mode S transponder.
Flight: Garmin 496 GPS.

DIMENSIONS, EXTERNAL:

Wing span	8.93 m (29 ft 3½ in)
Wing aspect ratio	6.2
Length overall	6.86 m (22 ft 6 in)
Height overall	1.80 m (5 ft 10¾ in)
Wheelbase	3.78 m (12 ft 5 in)

DIMENSIONS, INTERNAL:

Cockpit: Max width	1.12 m (3 ft 8 in)
Max height	1.14 m (3 ft 9 in)

AREAS:

Wings, gross	12.88 m² (138.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	658 kg (1450 lb)
Max baggage weight	45 kg (100 lb)
Max T-O weight	1043 kg (2300 lb)
Max wing loading	81.02 kg/m² (16.59 lb/sq ft)
Max power loading	7.00 kg/kW (11.50 lb/hp)

PERFORMANCE (estimated):

Never-exceed speed	235 knots (435 km/h; 270 mph)
Max level speed at S/L	192 knots (356 km/h; 221 mph)
Max cruising speed, 75% power	187 knots (346 km/h; 215 mph)
Max flying speed, wheels down	117 knots (217 km/h; 135 mph)
Stalling speed, flaps down	47 knots (87 km/h; 55 mph)
Max rate of climb at S/L	411 m (1350 ft)/min
Service ceiling	6,400 m (21,000 ft)
Max rate of roll	180°/s
Range with 45 min reserves	869 n miles (1,609 km; 1,000 miles)
g limits	+6/–3 (aerobatic)
	+9/–4 (ultimate)

LUSCOMBE

LUSCOMBE AIRCRAFT CORPORATION

Renamed Quartz Mountain Aerospace.

LUSCOMBE-SILVAIRE

LUSCOMBE-SILVAIRE AIRCRAFT COMPANY INC

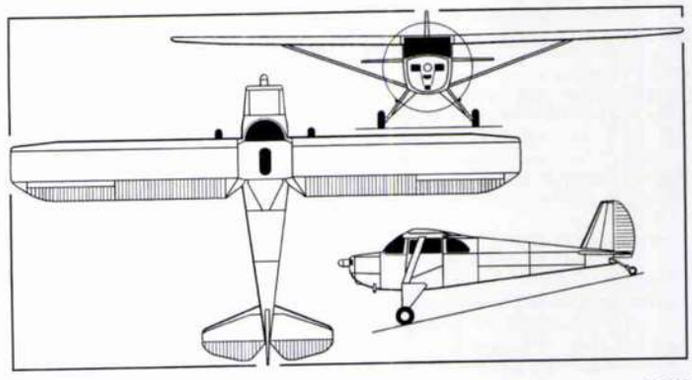
Originally known as Renaissance Aircraft; formed to relaunch production of the classic Luscombe 8F light aircraft. This was seriously delayed by a dispute over ownership of the Luscombe 8 Type Certificate and manufacturing tools, all of which were acquired through a legal judgment of 14 May 2004. However, Renaissance then began search for investors to finance manufacture of new aircraft; this having failed, closure of previous Cape Girardeau plant announced 12 November 2004.

Project re-launched in 2005 when Team Luscombe Inc appointed sole agent for Renaissance products and mounted joint exhibit at AirVenture, Oshkosh, July 2005. Plans for production of Light Sport Aircraft version of Luscombe 8 at Flabob Airport, Riverside, California, announced 17 May 2006. This revealed at AOPA Expo, Palm Springs, California, November 2005 shortly after award of LSA approval coincident with change of company name to Luscombe-Silvaire and return of original Luscombe shape.



Luscombe-Silvaire LSA-8 Renai *(Paul Jackson)* 1164292

LUSCOMBE-SILVAIRE LSA-8 RENAI

TYPE: Two-seat lightplane.

PROGRAMME: Luscombe Airplane Corp Model 8 Silvaire first flew 18 December 1938; progressed through several subvariants, built by Luscombe, Temco Engineering and Silvaire Aircraft until 1960; total of some 5,867 produced. In 1999, Renaissance company refurbished an original Luscombe 8F (N999RA) as prototype for relaunched production. First deliveries were due late 2000, but not effected. Assembly of first aircraft (N722J) began late July 2001 and the aircraft registered in mid-2005, although airworthiness certificate had not then been issued.

Marketing of Luscombe LSA in Light Sport Aircraft certification category was launched at the EAA convention at Oshkosh in July 2005, with production based at Flabob Airport, Riverside, California. Tricycle landing gear version planned for future development. Initial production rate 50 per year, rising to 100-150 per year by the end of the second full year. LSA approval announced November 2006, coincident with name change to Luscombe-Silvaire LSA-8 Renai, demonstrator N104LS shown at AOPA Expo same month, configuration having reverted to original rounded rudder trailing edge from Renaissance straight-edged design.

CUSTOMERS: More than 10 deposits placed by July 2001.

COSTS: Base price USD90,000 (2006).

DESIGN FEATURES: High-wing, all-metal touring lightplane of late 1930s technology, but incorporating modifications and some modern features. Changes include considerable increase in power from original 67.1 kW (90 hp) Continental C-90; 60 per cent more baggage area or optional seating for two children; additional fuel; revised rudder shape; and new cockpit interior.

Luscombe-Silvaire LSA-8 Renai demonstrator 1159765

FLYING CONTROLS: Conventional and manual. Flight-adjustable tab in port elevator; ground-adjustable tabs on both ailerons. No horn balances. Plain flaps; deflections 0, 10, 20 and 30°.

STRUCTURE: Alclad aluminium monocoque fuselage; oval section duralumin bulkhead stampings and riveted Alclad skin. Wings constructed on two I-type spars of extruded aluminium and ribs of riveted T-section extrusions with Alclad skin. Ailerons covered with beaded Alclad sheet riveted to a single duralumin spar. Wings attached to upper sides of cabin and braced by single streamlined strut each side. Wing struts and landing gear attached to aluminium forgings riveted to forward section of metal seat bottom on each side. Duralumin/Alclad tailplane bolted to fuselage. Steel tube main landing gear legs hinged at fuselage sides and with single oleo-spring unit within fuselage.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted, trousered, spring cantilever mainwheel legs with wheel fairings. Mainwheel tyres 6.00–6; toe-operated hydraulic brakes; optional speed fairings. Steerable tailwheel, size 2.30/2.50–4. Optional skis, floats or tundra tyres.

POWER PLANT: One 74.6 kW (100 hp) Teledyne Continental O-200 flat-four. Fuel tank in each wing, total 117 litres (30.0 US gallons; 25.0 Imp gallons).

ACCOMMODATION: Two, on individual leather seats, with dual controls. Forward-hinged door each side. Baggage compartment behind seats may be replaced by two child seats.

SYSTEMS: Electrical system with starter, ammeter and circuit breakers

AVIONICS: *Comms:* ELT standard. Optional Mode C VFR package includes Bendix/King Silver Crown KX 155 nav/com/glideslope with KI 209 VOR/LOC/GS head; KT 76C-10 transponder; KMA 12801 audio panel with intercom and push-to-talk switches on control columns, and Ameriking AK 350 encoder. Optional IFR package includes Mode C items as above and adds a second KX 155 with KI 1209 VOR/LOC/GS; KT 76C-10X transponder in place of KT 76C-10, and KA 33-00 cooling blower.

Flight: Optional Mode C VFR and IFR packages each include Bendix/King KMD 150-05 GPS with colour moving map display.

Instrumentation: Optional full gyro package includes engine-driven vacuum system and gauge; vacuum-driven directional gyro and attitude indicator; electric turn-and-bank indicator; ASI, OAT gauge and precision electric clock.

EQUIPMENT: Navigation, landing and wingtip strobe lights; vinyl and fabric cabin upholstery, and carved wood control column grips and fuel escutcheons, all standard. Combination EGT/CHT gauge, custom exterior paint; leather interior; thermal acoustic cabin insulation; custom wood instrument panel overlays with integral lighting, and interior and panel lights, all optional. Heated pitot tube included in optional IFR avionics package.

DIMENSIONS, EXTERNAL:

Wing span	6.71 m (35 ft 0 in)
Wing aspect ratio	8.8
Length overall	6.70 m (22 ft 0 in)
Height overall	2.13 m (7 ft 0 in)
Propeller diameter	1.88 m (6 ft 2 in)

DIMENSIONS, INTERNAL:
Cabin max width ..... 0.99 m (3 ft 3 in)
AREAS:
Wings, gross ..... 13.01 m² (140.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty ..... 449 kg (990 lb)
Max T-O weight: interim ..... 635 kg (1,400 lb)
planned ..... 793 kg (1,750 lb)
Max wing loading: interim ..... 48.8 kg/m² (10.00 lb/sq ft)
planned ..... 61.0 kg/m² (12.50 lb/sq ft)
Max power loading: interim ..... 5.68 kg/kW (9.33 lb/hp)
planned ..... 7.10 kg/kW (11.67 lb/hp)
PERFORMANCE:
Max level speed ..... 130 kt (241 km/h; 150 mph)
Max cruising speed at 75% power:
at S/L ..... 122 kg (225 km/h; 140 mph)
at FL80 ..... 126 kt (233 km/h; 145 mph)
Econ cruising speed at 65% power ..... 119 kt (220 km/h; 137 mph)
Stalling speed: flaps up ..... 41 kt (76 km/h; 47 mph)
flaps down ..... 38 kt (70 km/h; 43 mph)
Max rate of climb at S/L ..... 457 m (1,500 ft)/min
Service ceiling ..... 6,400 m (21,000 ft)
g limits ..... +4.6/–2.2

CHAIRMAN: June D Maule
DIRECTOR: Ray Maule
VICE-PRESIDENT: David Maule
ENGINEER: David Wright
SALES MANAGER: Brent Maule

Original Maule Aircraft Corporation formed in Michigan by the late Belford D Maule to produce M-4, extending existing business of manufacturing aircraft accessories. Company transferred to Moultrie, Georgia, 1968; Maule Air Inc formed 1984 to produce uprated M-5 Lunar Rocket and M-7 Super Rocket; Lunar Rocket discontinued, but modified M-4 returned to production in 2005. Delivered 27 aircraft in 2005.

MAULE M-4

TYPE: Two-seat lightplane.
PROGRAMME: First post Second World War design by Belford D Maule. Four-seat M-4 Bee Dee first flew February 1957 and received FAA certification on 10 August 1961. Produced in –145, –180,–210 and –220 versions (indicating power of Continental or Franklin engines), being named Jetasen and Rocket in later versions; some 471 manufactured up to replacement by M-5 from 1975.

In preparation for Light Sport Airplane licensing category, prototype **M-4-100 Sport 100** (c/n 54001C/N5505C) first flew 18 July 2003 with 73.5 kW (98.6 hp) Rotax 912S flat-four and made public debut at AirVenture, Oshkosh, on 29 July. Changes from original included lower-powered engine and deletion of flaps. This version not marketed; replaced by M-4-180V.

CURRENT VERSIONS: **M-4-180V:** Announced August 2004, month following first flight of initial aircraft (c/n 53001, N799ZZ). Designation indicates 'Vintage'. Flaps reinstated; higher-powered engine. Generally as MX-7-180, except M-4 empennage and accommodation. FAA certification 6 September 2005.
CUSTOMERS: One delivered in 2004 and seven in the first nine months of 2006.
COSTS: : USD128,900 fixed-pitch propeller; USD138,900 variable-pitch propeller (2006).
DESIGN FEATURES: High wing attached to upper longerons and braced to lower longerons by streamline V struts. Vortex generators along entire wing leading-edge. Curved fin and tailplane tips. Wire-braced tailplane and fin.

Wing section USA 35B (modified); dihedral 1°; incidence 30'.

FLYING CONTROLS: Conventional and manual. Cable actuation. Mass-balanced rudder; horn-balanced elevators. Flight-adjustable, metal trim tab in port elevator. Control surface movements; ailerons ±20°; elevators +25/–21°; rudder ±21°. Flap settings 0, 20, 35 and –7° for high-speed cruise.
STRUCTURE: Welded steel tube fuselage and integral fin with fabric covering, except aluminium doors and composites engine cowling; all-metal wing (including ailerons and flaps) built on two spars, but with composites tips.
LANDING GEAR: Tailwheel type; fixed. Two faired side Vs with half-axles sprung under fuselage with compressed rubber shock-absorbers. Maule steerable tailwheel. Speed Mainwheels 7.00-6; tailwheel 3.80/2.50-4. Hydraulic mainwheel brakes. 'Half' speed fairings to rear of tyres only.
POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-C4F flat-four driving a Sensenich 76EM8S5-0-56 or 76EM8S8-0-56 fixed-pitch propeller, or O-360-C1F driving a Hartzell HC-C2YR-1BF/F7666A constant-speed propeller. Fuel contained in tanks in wings; normal capacity 180 litres (47.6 US gallons; 39.7 Imp gallons), of which 163 litres (43.0 US gallons; 35.8 Imp gallons) usable; optional auxiliary wing tanks increase capacity to 276 litres (73.0 US gallons; 60.8 Imp gallons). Oil capacity 8 litres (2.0 US gallons; 1.7 Imp gallons).
ACCOMMODATION: Two seats, side by side. Baggage space to rear. Door each side. Dual controls standard.
AVIONICS: *Comms:* Garmin GTX 327 transponder; PS Engineering PM 1000II intercom; pilot and co-pilot PTT switches.

Flight: Garmin GNC 250XL GPS/comm.

DIMENSIONS, EXTERNAL:
Wing span ..... 9.40 m (30 ft 10 in)
Wing chord, constant ..... 1.60 m (5 ft 3 in)
Wing aspect ratio 6.2
Length overall ..... 6.88 m (22 ft 7 in)
Height overall ..... 1.89 m (6 ft 2 in)
Tailplane span ..... 2.97 m (9 ft 8¾ in)
Wheel track ..... 1.83 m (6 ft 0 in)
Wheelbase ..... 4.82 m (15 ft 10 in)
DIMENSIONS, INTERNAL:
Cabin max width ..... 1.08 m (3 ft 6½ in)
Baggage compartment volume ..... 0.51 m³ (18 cu ft)
AREAS:
Wings, gross ..... 14.67 m² (157.9 sq ft)
WEIGHTS AND LOADINGS:
Weight empty ..... 608 kg (1,340 lb)
Max baggage weight ..... 91 kg (200 lb)
Max T-O weight ..... 1,043 kg (2,300 lb)
Max wing loading ..... 71.1 kg/m² (14.57 lb/sq ft)
Max power loading ..... 7.78 kg/kW (12.78 lb/hp)
PERFORMANCE:
Cruising speed at 75% power ..... 109 kt (201 km/h; 125 mph)
Stalling speed, flaps down ..... 35 kt (65 km/h; 40 mph)
Service ceiling ..... 4,572 m (15,000 ft)
Max rate of climb at S/L ..... 280 m (920 ft)/min
T-O run ..... 168 m (550 ft)
T-O to 15 m (50 ft) ..... 366 m (1,200 ft)
Landing from 15 m (50 ft) ..... 183 m (600 ft)
Range ..... 821 n miles (1,520 km; 945 miles)

MAULE M-7 and M-9

TYPE: Light utility transport; light utility turboprop.
PROGRAMME: First certified 9 November 1983 as M-7-235 Super Rocket (prototype N5656A: based on M-6-235 but with extended cabin and additional windows). In May 2000, Maule received first of an initial batch of 10 SMA SR305 turbocharged diesel engines for installation in M-9s.
CURRENT VERSIONS: Produced with short (M-5), mid-length (M-6) or long (A Model) wing span and engine/landing gear options as detailed below; short option deleted on 1999 versions, while piston-engined and turboprop/nosewheel aircraft have only M-6 wing from that year, the turboprop/tailwheel variants employing A Model wings. Designation prefixes are T = tricycle and X = short span.

MX-7-180A Sportplane: Engineering designation 20. Certified 3 June 1993. As MX-7-160, but 134 kW (180 hp) Textron Lycoming O-360-C4F engine. Prototype N9225G. Two delivered in 2002 and one in 2003 and one in the first nine months of 2006.

MX-7-180AC Sportplane: Engineering designation 33. Certified 4 May 2000. As MX-7-180A, but spring aluminium landing gear. Three delivered in 2003, and three in 2004.

MXT-7-180A Comet: Engineering designation 21. Certified 3 June 1993. As MX-7-180, but tricycle landing gear and four seats standard. Introduced and first production aircraft (N1002N) flown 1996; optimised for flight training schools. Total of 18 delivered in 1999, six in 2000, one in 2001 and three in 2002, one in 2003, two in 2004, two in 2005, and one in the first nine months of 2006.

MX-7-180B Star Rocket: Engineering designation 22. Certified 12 July 1993. 134 kW (180 hp) Textron Lycoming O-360-C1F engine, Hartzell two-blade constant-speed metal propeller and five-position flaps. Two delivered in 2002, none in 2003, one in 2004, and one in the first nine months of 2006.

MX-7-180C: Engineering designation 28. Certified 27 August 1996. As MX-7-180B, but with spring aluminium main landing gear. Two delivered in 1999, two in 2000, one in 2001, two in 2002, three in 2003, one in 2004, and three in 2005.

MXT-7-180 Star Rocket: Engineering designation 14. Certified 9 November 1990. As MX-7-180B, but with tricycle landing gear. Previously known as Star Craft. One delivered in 1999, seven in 2000, and two in 2001; none delivered in 2002; one in 2003, six in 2004, two in 2005 and one in the first nine months of 2006.

MX-7-205C Rocket: Engineering designation 31. One 153 kW (205 hp) PZL-Franklin 6A-350-C1R engine, McCauley two-blade propeller. Prototype (N205MX) was being test flown by second quarter of 1999. Engine may be offered as an option on Textron Lycoming O-360-powered models. Not certified by 2004.

M-7-235B Super Rocket: Engineering designation 23. Certified 14 October 1993. Five-seater; choice of 175 kW (235 hp) carburetted Textron Lycoming O-540-J1A5, low-compression Mogas approved O-540-B4B5 or fuel-injected IO-540-W1A5 engines; McCauley constant-speed propeller, five-position flaps; fuselage raised 7.6 cm (3 in) at trailing-edge of wing and baggage area moved aft 12.7 cm (5 in) to accommodate fifth seat; recommended for high gross weight short-field operation, and for floatplane operation. Eight delivered in 1999, seven in 2000, five in 2001, six in 2002, three in 2003, two in 2004, seven in 2005, and five in the first nine months of 2006.

M-7-235C Orion: Engineering designation 25. Certified 10 October 1995. As for M-7-235B but with spring aluminium main landing gear. Sixteen delivered in 1999, 18 in 2000, 14 in 2001, 15 in 2002, nine in 2003, six in 2004, four in 2005, and two in the first nine months of 2006.

MT-7-235 Super Rocket: Engineering designation 18. Certified 20 March 1992. As M-7-235B, but tricycle landing gear, four-position flaps and IO-540-W1A5 engine only. Prototype N9226Y. Four delivered in 1999, five in 2000, 16 in 2001 and 12 in 2002, seven in 2003, one in 2004, two in 2005, and eight in the first nine months of 2006. Civil Air Patrol approved purchase of 15 in glider towing configuration mid-2000.

M-7-260 Super Rocket: Engineering designation 26. Certified 17 April 1998. As M-7-235B, but 194 kW (260 hp) Textron Lycoming IO-540-V4A5 engine; McCauley two-blade constant-speed propeller standard, Hartzell and MT propellers optional. Seven delivered in 1999, one in 2000, four in 2001, one in 2002, one in 2003, and two in 2005.

M-7-260C Orion: Engineering designation 30. Certified 19 October 1998. As M-7-235C, but 194 kW (260 hp) Textron Lycoming IO-540-V4A5 engine; McCauley two-blade constant-speed propeller standard, Hartzell and MT propellers optional. Eight delivered in 1999, seven each in 2000 and 2001, two in 2002, three in 2003, three in 2004, two in 2005, and one in the first nine months of 2006.

MT-7-260 Super Rocket: Engineering designation 27. Certified 17 April 1998. As MT-7-235, but 194 kW (260 hp) Textron Lycoming IO-540-V4A5 engine; McCauley two-blade constant-speed propeller standard, Hartzell and MT propellers optional. Three delivered in 1999, two in 2000, four in 2001, one in 2002, one in 2005, and four in the first nine months of 2006.

M-7-420AC: Engineering designation 29. Certified 17 December 1998. M-7 fuselage with long-span wings, 313 kW (420 shp) Rolls-Royce 250-B17C turboprop, spring aluminium tailwheel landing gear. One delivered in 1999, none in 2000, one each in 2001 and 2002, and one in 2003.

MT-7-420: Engineering designation 51. Certified 6 January 2003. As MT-7-260 but with 313 kW (420 shp) Rolls-Royce 250-B17C turboprop. First aircraft N683CE. Two delivered in 2004.

M-9-230: Engineering designation 44. M-7 with 169 kW (227 hp) SMA SR305-230 Diesel engine and LoPresti cowling; max take-off weight 1,270 kg (2,800 lb). Fuel capacity 322 litres (85.0 US gallons; 70.8 Imp gallons); estimated range more than 869 n miles (1,609 km; 1,000 miles). Prototype (c/n 44001/N305SR) first flown on 18 July 2003; public debut at EAA AirVenture Oshkosh 29 July 2003 at which time it had completed 18 hours' flying time. Estimated cost USD200,000 (2003).

Discontinued versions comprise MX-7-160 Sportplane, MXT-7-160 Comet, MX-7-160C Sportplane, MX-7-180, M-7-235, MX-7-235, M-7-420 and MX-7-420, all last described in 2005-06 *Jane's All the World's Aircraft*.

CUSTOMERS: Total of 990 produced by 31 March 2004, plus 908 of earlier M-5 and M-6 series. At 17 April 2001 Maule's order backlog stood at 100 aircraft, of which 10 were for SMA SR305-powered MX-9s.

COSTS: MXT-7-180A USD142,700; MX-7-180B USD145,900; MX-7-180C USD151,200; MXT-7-180 USD158,200; M-7-235B (O-540) USD162,200 (IO-540) USD170,200; M-7-

Notes: Versions not achieving series production have included M-7-235A, MX-7-205C, M-7-420, MT-7-420 and MXT-7-420

235C (O-540) USD168,500 (IO-540) USD176,800; M-7-260 USD182,200; MT-7-235 USD183,100; M-7-260C USD189,200; MT-7-260 USD194,900. All 2006, standard equipment.

DESIGN FEATURES: Rugged, STOL utility aircraft. High, constant chord, wing braced by V-struts; mid-mounted tailplane; large sweptback fin.

USA 35B (modified) wing section; dihedral 1°; incidence 0° 30'; cambered wingtips standard.

FLYING CONTROLS: Conventional and manual. Ailerons linked to rudder servo tab to reduce adverse yaw; trim tab in port elevator; rudder trim by spring to starboard rudder pedal; flap deflection 40° down for slow flight (further setting of 48° down on all except-420), 24° down, 0 and 7° up for improved cruise performance; underfin on floatplane and amphibious versions.

STRUCTURE: All-metal two-spar wing with dual struts and glass fibre tips; fuselage frame of welded 4130 steel tube with Ceconite covering aft of cabin and metal doors and skin forward of cabin; glass fibre engine cowling.

LANDING GEAR: Fixed; tailwheel or nosewheel type, with spring cantilever or oleo shock-absorbtion. Refer to table for current version application. Narrow-track versions have two faired-in side Vs hinged to lower longerons plus half-axles incorporating. Maule oleo-pneumatic shock-absorbers joined under centreline. Wide-track versions have fuselage mounted spring aluminium cantilever mainwheel legs. Maule steerable tailwheel or cantilever, steerable nosewheel. Cleveland mainwheels with Goodyear or McCreary tyres size 7.00-6, pressure 1.79 bar (26 lb/sq in). Tailwheel tyre size 8×3.5-4, pressure 1.03 to 1.38 bar (15 to 20 lb/sq in). Cleveland hydraulic disc brakes. Parking brake. Oversize tyres, size 20×8.0-6 or 20×8.5-6 (pressure 1.24 bar; 18 lb/sq in) optional; dual caliper brakes optional.

Provisions for fitting optional Aqua 2200 and 2400, Baumann 2720 or Wipline 2350 and 3000 floats, or Baumann 2750A or Wipline 2350A and 3000A amphibious floats (also available on some tricycle models). Float option available for MX-7-160, MX-7-180A/B/C, M-7-235B/C, M-7-260 and M-7-420AC. Ski option available for M-7-235B.

POWER PLANT: One flat-four or flat-six engine as described under Current Versions, driving a Sensenich two-blade fixed-pitch or Hartzell two-blade constant-speed propeller (three-blade McCauley propeller optional on 175 kW; 235 hp and 194 kW; 260 hp models); or Rolls-Royce 250-B17C turboprop with three-blade, Hartzell HC-B3TF-7A/T10173F-21R constant-speed feathering and reversing propeller in -420 models. Piston versions have four fuel tanks in wings with total usable capacity of 276 litres (73.0 US gallons; 60.8 Imp gallons). Turboprop versions have total fuel capacity of 322 litres (85.0 US gallons; 70.8 Imp gallons). Refuelling points on wing upper surface. Auto fuel STC available as option on O-360-C1F, O-360-C4F and O-540-B4B5 engined versions.

ACCOMMODATION: Four or five seats according to model, as described under Current Versions; individual, adjustable front seats; non-adjustable, rear seats. Dual controls and three-point shoulder harnesses standard. Baggage compartment, capacity 113 kg (250 lb), aft of seats; cargo capacity with passenger seats removed 349 kg (770 lb). One front-hinged door on port side; three doors on starboard side, forward and centre doors hinged at front edge, rear baggage door hinged at rear edge to form double cargo door providing an opening 1.30 m (4 ft 3 in) wide to facilitate loading of bulky cargo; aircraft may be flown with doors removed. Accommodation heated and ventilated.

SYSTEMS: Hydraulic system for brakes only; electrical system powered by 60 A engine-driven alternator; 12 V battery (24 V battery on turboprops).

AVIONICS: Standard SP-3 VFR package comprises Garmin GNC 250XL GPS/com (GNC 420 upgrade optional), GTX 327 digital transponder, PS Engineering PM 1000II four-place intercom. IFR-4 package comprises GNS 430 GPS/nav/com, GNC 250XL GPS/com, GI-106A CDI with GS, GTX 327 digital transponder, PS Engineering PMA 7000B stereo audio panel. IFR-4KX package deletes GNC 250XL and adds Bendix/King KX-155-42 nav/com/GS and KI-209-01 VOR/GS indicator. IFR-5 package adds second GNS 430 to IFR-4 package. GNS 530 replacing one GNS 430 optional in IFR packages. Optional avionics upgrades include 28 V system for IFR packages, Century NSD 360A-15 or 360A-26 non-slaved/slaved HSIs replacing one GI-106A in IFR packages; S-TEC System 20, System 30 or System 50 autopilots and heading bug directional gyro; Garmin GTX 330 Mode S transponder upgrade from GTX 327; Bose Headset X; Light Speed Technologies Twenty 3G ANR headset; and fifth-seat microphone and headset jack. All avionics packages include Narco AR-850 remote altitude encoder, Bendix/King KA 33-00 cooling blower (KA 33-01 optional), ELT, pilot and co-pilot PTT switches, radio master switch, broadband antenna, and transponder antenna; IFR packages also include second broadband antenna, marker antenna and triplexer.

Instrumentation: Standard equipment includes full gyro panel/vacuum system comprising attitude and directional gyros, electric turn co-ordinator, VSI, OAT gauge and suction gauge; ASI; altimeter; compass; audio/visual stall warning indicator; CHT gauge; tachometer; electric fuel gauge, manifold pressure gauge (constant-speed propeller models only); fuel pressure gauge; oil pressure and temperature gauges; ammeter, and clock. Options include TAS indicator, carburettor air temperature gauge, hour meter, and KS Mix-Mizer EGT probe.

EQUIPMENT: Standard equipment Includes instrument and dome lights, auxiliary cabin heater, auxiliary fuel pump, auxiliary power plug, heated pitot tube, vinyl seats with velour inserts, vinyl cabin side panels, cloth velour cabin headliner, cabin soundproofing, cabin overhead speaker, window vents, cabin steps, cargo tiedowns, smoke-tinted windscreen, windscreen defroster, landing light in port wing, navigation lights, wingtip strobe lights, seven fuel drains, tiedown rings, airframe powder coating, wing corrosion proofing, and standard external paint scheme in Glacier White or Dune White base colour with single-colour trim. Options include dynamically balanced propeller, Tanis engine heater, leather seats and interior trim, four-point shoulder harnesses for pilot and co-pilot, Oregon Aero seat cushion system for pilot and co-pilot, two-position middle seat, colour co-ordinated instrument panel, landing light in starboard wing, Precise Flight pulselight, Micro Aerodynamics Inc vortex generators, dual tailplane struts (for glider towing), ground service plug, fuselage grab handles, Halon fire extinguisher, Schweizer or Tost glider tow/release kit, aircraft towbar, observation door, camera port, observation window, skylight, co-pilot's swing-out window, smoke-tinted cabin windows, and additional external trim colours.

DIMENSIONS, EXTERNAL:

Wing span: all except M-7-420AC ..... 10.03 m (32 ft 11 in)
M-7-420AC ..... 10.26 m (33 ft 8 in)
Wing chord, constant: all ..... 1.60 m (5 ft 3 in)
Wing aspect ratio: all versions except M-7-420AC 6.5
M-7-420AC 6.7
Length overall:
piston-engined versions ..... 7.21 m (23 ft 8 in)

M-7-420AC ..... 7.32 m (24 ft 0 in)

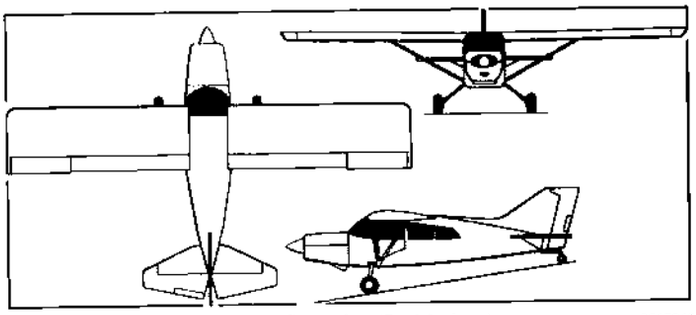
Max wing loading:
MX-7-160, MX-7-160C, MXT-7-160 ..... 64.86 kg/m² (13.28 lb/sq ft)
MX-7-180A, MX-7-180AC, MXT-7-180A ..... 76.76 kg/m² (14.49 lb/sq ft)
MX-7-180B, MX-7-180C, MXT-7-180, M-7-235B, M-7-235C, MT-7-235, M-7-260, M-7-260C, MT-7-260, MT-7-420 ..... 73.71 kg/m² (15.10 lb/sq ft)
M-7-420AC ..... 72.14 kg/m² (14.78 lb/sq ft)
Max power loading:
MX-7-160, MX-7-160C, MXT-7-160 ..... 8.37 kg/kW (13.75 lb/hp)
MX-7-180A, MX-7-180AC, MXT-7-180A ..... 8.12 kg/kW (13.33 lb/hp)
MX-7-180B, MX-7-180C, MXT-7-180 ..... 8.45 kg/kW (13.89 lb/hp)
M-7-235B, M-7-235C, MX-7-235 ..... 6.47 kg/kW (10.64 lb/hp)
M-7-260, MJ-7-260 ..... 5.85 kg/kW (9.61 lb/hp)
MX-7-420AC, MJ-7-420 ..... 3.62 kg/kW (5.95 lb/shp)

PERFORMANCE:
Cruising speed at 75% power at optimum altitude:
MX-7-160, MX-7-160C, MXT-7-160 ..... 104 kt (193 km/h; 120 mph)
MX-7-180A, MX-7-180AC, MXT-7-180A ..... 117 kt (217 km/h; 135 mph)
MX-7-180B, MX-7-180C, MXT-7-180 ..... 126 kt (233 km/h; 145 mph)
M-7-235B, M-7-235C, MT-7-235 ..... 139 kt (257 km/h; 160 mph)



Typical Maule M-7 tailwheel configuration *(Paul Jackson)* 0567240

M-7-260, M-7-260C, MT-7-260 ..... 142 kt (264 km/h; 164 mph)
M-7-420AC, MT-7-420 ..... 165 kt (306 km/h; 190 mph)
Stalling speed, flaps down, power off:
MX-7-160, MX-7-160C, MX-7-180A, MX-7-180AC, MX-7-180C, MXT-7-180A, MX-7-180B, MXT-7-180, M-7-235B, M-7-235C, MT-7-235, M-7-260, M-7-260C, MT-7-260 ..... 35 kt (64 km/h; 40 mph)
MX-7-420AC, MT-7-420 ..... 44 kt (81 km/h; 50 mph)
Max rate of climb at S/L:
MX-7-160, MX-7-160C, MXT-7-160 ..... 251 m (825 ft)/min
MX-7-180A, MX-7-180AC, MXT-7-180A ..... 280 m (920 ft)/min
MX-7-180B, MX-7-180C, MXT-7-180 ..... 365 m (1,200 ft)/min
M-7-235B, M-7-235C, MT-7-235 ..... 457 m (1,500 ft)/min
M-7-260, M-7-260C, MT-7-260 ..... 503 m (1,650 ft)/min
MX-7-420AC, MT-7-420 ..... 853 m (2,800 ft)/min
Service ceiling:
MX-7-160, MX-7-160C, MXT-7-160 ..... 3,965 m (13,000 ft)
MX-7-180A, MX-7-180AC, MX-7-180C, MXT-7-180A, MX-7-180B, MX-7-180C, MXT-7-180 ..... 4,575 m (15,000 ft)
M-7-235B, MT-7-235, M-7-235C, M-7-260, M-7-260C, MT-7-260, M-7-420AC, MT-7-420 ..... 6,100 m (20,000 ft)
T-O run (solo, half fuel):
MX-7-160, MX-7-160C, MXT-7-160 ..... 183 m (600 ft)
MX-7-180C, MX-7-180B, MXT-7-180 ..... 92 m (300 ft)
MX-7-420AC, MT-7-420 ..... 61 m (200 ft)
MX-7-180A, MX-7-180AC, MXT-7-180A ..... 168 m (550 ft)
M-7-235B, M-7-235C, MT-7-235, M-7-260, M-7-260C, MT-7-260 ..... 76 m (250 ft)
M-7-420AC, MT-7-420 ..... 61 m (200 ft)
T-O to 15 m (50 ft):
MX-7-160, MX-7-160C, MXT-7-160 ..... 360 m (1,180 ft)
MX-7-180A, MX-7-180AC, MXT-7-180A ..... 350 m (1,150 ft)
MX-7-180B, MX-7-180C, MXT-7-180, M-7-235B, M-7-235C, MT-7-235, M-7-260, MT-7-260, M-7-420AC, MT-7-420 ..... 183 m (600 ft)
Landing from 15 m (50 ft):
all landplane models ..... 152 m (500 ft)
Range with main tank fuel only, optimum altitude, 30 min reserves:
MX-7-160, MXT-7-160 ..... 469 n miles (869 km; 540 miles)
MX-7-180A, MXT-7-180A ..... 434 n miles (804 km; 500 miles)
MXT-7-180, all tanks ..... 825 n miles (1,528 km; 950 miles)
Range with max fuel, no reserves:
MX-7-180C ..... 951 n miles (1,762 km; 1,095 miles)
M-7-235B:
O-540 engine ..... 792 n miles (1,467 km; 912 miles)
IO-540 engine ..... 829 n miles (1,537 km; 955 miles)
M-7-235C:
O-540 engine ..... 792 n miles (1,467 km; 912 miles)
IO-540 engine ..... 864 n miles (1,601 km; 995 miles)
M-7-235B floatplane:
O-540 engine ..... 708 n miles (1,311 km; 815 miles)
IO-540 engine ..... 772 n miles (1,430 km; 889 miles)
MX-7-420:
at 75% power ..... 551 n miles (1,022 km; 635 miles)
at 50% power ..... 782 n miles (1,448 km; 900 miles)

MAVERICK

MAVERICK JETS INC

1371 General Aviation Drive, Melbourne, Florida 32935

Fax: (+1 321) 752 44 55
e-mail: info@maverickjets.com
Web: www.maverickjets.com
PRESIDENT AND CEO: Jim McCotter
CHIEF ENGINEER: Mark M Bettosini
MEDIA DIRECTOR: Mark McCotter

The Maverick Air company moved into new premises in May 1998 and immediately began manufacture of the first Twinjet. In early 2001, Colorado businessman Jim McCotter acquired a majority share in Maverick Air Inc, renaming it Maverick Jets, and announced plans to establish a new company, known as McCotter Aviation, to develop a six-seat, factory-built, FAA-certified version of the Leader, designated MC2400. Development has been delayed by loss of the prototype.

In 2006, Maverick launched a new version of Leader, known as SmartJet; and single-engine variant confusingly labelled Leader 2.

MAVERICK LEADER

TYPE: Private jet.
PROGRAMME: Launched at EAA Convention at Oshkosh, Wisconsin, July 1997; then known as Twinjet 1200; construction of proof-of-concept prototype, undertaken by Maverick Air of Pueblo, Colorado started September 1999; first flight (N750TJ) 4 August 1999; designated TJ-1500 Twinjet 1500; public debut at EAA AirVenture, Oshkosh, August 2000. Became Maverick Leader in 2002. Prototype destroyed in fatal crash 24 January 2003. FAA/JAA certification planned for 2004.

Planned production by Tbilaviamsheni in Georgia terminated by TAM in early 2004.
CUSTOMERS: In 2006, Maverick announced that a Leader currently under construction for an unidentified foreign VIP would be the last of "several flying" first-generation Leaders to be produced. *Jane's* has been unable to identify any of these aircraft, except the prototype.

MAVERICK LEADER 2

TYPE: Personal jet.
PROGRAMME: Announced 2006; also publicised as Solo Jet.
DESIGN FEATURES: Lightest of Maverick family. Single-engine derivative of Leader (retrospectively Leader 1), but with several major changes, including internal engine with 'pen nib' fairing above exhaust and low wing. Retains T tail and two ventral strakes below rear fuselage.
FLYING CONTROLS: Conventional and manual.
STRUCTURE: Generally of composites.
LANDING GEAR: Tricycle type; retractable.
POWER PLANT: One 14.19 kN (3,190 lb st) Pratt & Whitney JT-15-5 turbofan. Fuel capacity more than 1,137 litres (300 US gallons; 250 Imp gallons).
ACCOMMODATION: Five persons, comprising two pilots and three on bench seat to rear. Forward hinged door each side. Single-piece windscreen; door window and rear window each side.
SYSTEMS: Autopilot.
EQUIPMENT: Optional ballistic recovery parachute.

DIMENSIONS, EXTERNAL:
- Wing span ... 10.97 m (36 ft 0 in)
- Wing aspect ratio ... 8.1
- Length overall ... 11.10 m (33 ft 5 in)

DIMENSIONS, INTERNAL:
- Cockpit: Length ... 2.74 m (9 ft 0 in)
- Max width ... 1.37 m (4 ft 6 in)
- Max height ... 1.17 m (3 ft 10 in)

AREAS:
- Wings, gross ... 14.86 m² (160.0 sq ft)

WEIGHTS AND LOADINGS (estimated):
- Weight empty ... 1,633 kg (3,600 lb)
- Max baggage weight ... 91 kg (200 lb)
- Max T-O weight ... 2,789 kg (6,150 lb)
- Max wing loading ... 187.7 kg/m² (38.44 lb/sq ft)
- Max power loading ... 197 kg/kN (1.93 lb/lb st)

PERFORMANCE (estimated):
- Never-exceed speed (VNE) ... 450 kt (833 km/h; 517 mph)
- Max operating Mach No. at FL310 ... 0.82
- Max level speed at S/L ... 350 kt (648 km/h; 402 mph)
- Stalling speed ... 71 kt (132 km/h; 82 mph)
- Max rate of climb at S/L ... 2,423 m (7,950 ft)/min
- T-O run: no flaps ... 480 m (1,575 ft)
- 10° flap ... 348 m (1,140 ft)
- Landing run ... 561 m (1,840 ft)
- Range ... 1,200 n miles (2,222 km; 1,380 miles)
- *g* limits ... +4.3/–1.75

MAVERICK SMARTJET

TYPE: Personal jet.

PROGRAMME: Announced 2006.

CURRENT VERSIONS: **SJ-1:** Baseline version.

SJ-2: Lighter, lower-powered version; reduced weight and fuel.

DESIGN FEATURES: Development of Maverick Leader; mid-size of Maverick family. Mid-mounted, unswept, constant-chord wings with upturned tips; sweptback fin with T-tail; two large ventral strakes. Pod-mounted engines on shoulders of rear fuselage.

FLYING CONTROLS: Conventional and manual.

STRUCTURE: Generally of composites.

LANDING GEAR: Tricycle type; retractable.

POWER PLANT: Two turbofans. Fuel capacity 796 litres (210 US gallons; 175 Imp gallons) in SJ-1; 606 litres (160 US gallons; 133 Imp gallons) in SJ-2.

ACCOMMODATION: Five persons, comprising two pilots and three on bench seat to rear. Forward hinged door each side. Single-piece windscreen; door window and rear window each side.

SYSTEMS: Autopilot.

EQUIPMENT: Optional ballistic recovery parachute.

DIMENSIONS, EXTERNAL:
- Wing span ... 10.26 m (33 ft 8 in)
- Wing aspect ratio ... 8.4
- Length overall ... 8.50 m (27 ft 10½ in)

DIMENSIONS, INTERNAL:
- Cockpit: Length ... 2.03 m (6 ft 8 in)
- Max width ... 1.37 m (4 ft 6 in)
- Max height ... 1.22 m (4 ft 0 in)

AREAS:
- Wings, gross ... 12.52 m² (134.75 sq ft)

WEIGHTS AND LOADINGS (estimated):
- Weight empty: SJ-1, SJ-2 ... 975 kg (2,150 lb)
- Max baggage weight: SJ-1, SJ-2 ... 45 kg (100 lb)
- Max T-O weight: SJ-1 ... 1,887 kg (4,160 lb)
- SJ-2 ... 1,719 kg (3,790 lb)
- Max wing loading: SJ-1 ... 150.7 kg/m² (30.87 lb/sq ft)
- SJ-2 ... 137.3 kg/m² (28.13 lb/sq ft)

PERFORMANCE (estimated):
- Never-exceed speed (VNE): SJ-1, SJ-2 ... 300 kt (555 km/h; 345 mph)
- Max level speed at S/L: SJ-1 ... 250 kt (463 km/h; 288 mph)
- SJ-2 ... 225 kt (417 km/h; 259 mph)
- Cruising speed at FL220: max: SJ-1 ... 290 kt (537 kmh; 334 mph)
- SJ-2 ... 244 kt (452 km/h; 280 mph)
- normal: SJ-1 ... 277 kt (513 km/h; 319 mph)
- SJ-2 ... 235 kt (435 km/h; 270 mph)
- Stalling speed: SJ-1 ... 67 kt (124 km/h; 78 mph)
- SJ-2 ... 65 kt (121 km/h; 75 mph)
- Max rate of climb at S/L: SJ-1 ... 853 m (2,800 ft)/min
- SJ-2 ... 716 m (2,350 ft)/min
- Max rate of climb at S/L, OEI: SJ-1 ... 351 m (1,150 ft)/min
- SJ-2 ... 267 m (876 ft)/min
- T-O run to 15 m (50 ft): SJ-1 ... 402 m (1,320 ft)
- SJ-2 ... 522 m (1,710 ft)
- Landing run: SJ-1 ... 442 m (1,450 ft)
- SJ-2 ... 401 m (1,315 ft)
- Range: SJ-1 ... 1,250 n miles (2,325 km; 1,438 miles)
- SJ-2 ... 1,050 n miles (1,944 km; 1,208 miles)

Artist's impression of Maverick SmartJet 1040545

MAVERICK CRUISER JET

TYPE: Personal jet.

PROGRAMME: Announced 2006. Artist's impressions show prototype registered N570TJ, which reserved in September 2006 by Cirrus Design (manufacturer of SR 20 and SR 22 and known to have light jet under development).

CURRENT VERSIONS: **Cruiser Jet:** *As described.*

Sea Jet: Flying boat hull; MTOW 2,721 kg (6,000 lb); max level speed 265 kt (491 km/h; 304 mph) at S/L; M0.6 at FL310; range 1,450 n miles (2,685 km; 1,668 miles).

Military: Basic trainer and light attack jet; hinged, wholly glazed canopy; engines 7.56 kN (1,700 lb st) each. Empty weight 1,383 kg (3,050 lb); MTOW 2,540 kg (5,600 lb); fuel more than 1,326 litres (350 US gallons; 292 Imp gallons).

DESIGN FEATURES: Development of Maverick Leader; heaviest of Maverick family. Mid-mounted, unswept, constant-chord wings with upturned tips; sweptback fin with T-tail; two large ventral strakes. Pod-mounted engines on shoulders of rear fuselage.

FLYING CONTROLS: Conventional and manual.

STRUCTURE: Generally of composites.

LANDING GEAR: Tricycle type; retractable.

POWER PLANT: Two 6.67 kN (1,500 lb st) turbofans. Fuel capacity more than 1,137 litres (300 US gallons; 250 Imp gallons).

ACCOMMODATION: Five persons, comprising two pilots and three on bench seat to rear. Forward hinged door each side. Single-piece windscreen; door window and rear window each side.

SYSTEMS: Autopilot.

EQUIPMENT: Optional ballistic recovery parachute.

DIMENSIONS, EXTERNAL:
- Wing span ... 10.97 m (36 ft 0 in)
- Wing aspect ratio ... 8.1
- Length overall ... 9.62 m (31 ft 7 in)

DIMENSIONS, INTERNAL:
- Cockpit: Length ... 2.43 m (8 ft 0 in)
- Max width ... 1.37 m (4 ft 6 in)
- Max height ... 1.17 m (3 ft 10 in)

AREAS:
- Wings, gross ... 14.86 m² (160.0 sq ft)

WEIGHTS AND LOADINGS (estimated):
- Weight empty ... 1,746 kg (3,850 lb)
- Max baggage weight ... 91 kg (200 lb)
- Max T-O weight ... 2,630 kg (5,800 lb)
- Max wing loading ... 177.0 kg/m² (36.25 lb/sq ft)
- Max power loading ... 197 kg/kN (1.93 lb/lb st)

PERFORMANCE (estimated):
- Never-exceed speed (VNE) ... 450 kt (833 km/h; 518 mph)
- Max operating Mach No. at FL310 ... 0.82
- Max level speed at S/L ... 325 kt (602 km/h; 374 mph)
- Stalling speed ... 69 kt (128 km/h; 80 mph)
- Max rate of climb at S/L ... 1,981 m (6,500 ft)/min

Artist's impression of Maverick Cruiser Jet 1040544

Projected Maverick Sea Jet 1040547

Max rate of climb at S/L, OEI ..... 533 m (1,750 ft)/min
T-O run: no flaps ..... 586 m (1,920 ft)
10° flap ..... 402 m (1,320 ft)
Landing run ..... 1,295 m (2,450 ft)
Range ..... 1,450 n miles (2,685 km; 1,668 miles)
g limits ..... +4.4/–1.76

VICE-PRESIDENT OF SALES AND MARKETING: Colin Whicher
MARKETING MANAGER: Mike McNabb

McDonnell Douglas' line of light helicopters, derived from the Hughes company's products, was acquired by Boeing as part of its purchase of the former company in August 1997. Having no part in the Boeing business strategy, all except the AH-64 Apache were offered for sale and in January 1999 it was announced that Netherlands-based holding company MD Helicopters, owned by the Rotterdam Dockyard Company (RDC), had been successful in its bid.

MD now owns all production jigs and tooling for the MD 500, 530F, 520N, 600N and Explorer, as well as a licence to employ the NOTAR system in future helicopters (the technology remaining in Boeing ownership) and in August 2000 acquired the former Boeing facility at Falcon Field, Mesa, Arizona, and began a 6,975 m^2 (75,000 sq ft) expansion to include a spares warehouse, completion and delivery centre and customer training facility.

Production Certificate 714NM issued to MDHI on 18 February 1999, covering interim manufacture of two MD 500Es (c/n 0542 and 0543), four MD 530Fs (c/n 0134 to 0137), four MD 520Ns (c/n LN086 to LN089) and three MD 600Ns (c/n RN047, 052 and 054. PC 715NM issued 5 November 1999 for all subsequent production (including MD 600s c/n RN053 and 055 upwards).

In April 2000, Kaman was contracted to build fuselages for MD's single-engine product range at its Moosup and Jacksonville plants, deliveries beginning June 2000 and, in July 2000, was contracted also to supply rotor blades for the MD Explorer. Composite Solutions of Auburn, Washington, supplies tailbooms for the NOTAR range of helicopters. TAI of Turkey is building Explorer fuselages at Akinci.

Hongdu MD Helicopters established in early 2003 as 60:40 venture between Chinese manufacturer and MD's parent (RDM Holdings); RDM then said to be investing USD10 million for Chinese assembly line for MD 500 and MD 600 at Nanchang. However, no subsequent news of this venture had emerged by late 2005.

In July 2005, New York-based financial firm Patriarch Partners acquired a controlling interest in MD Helicopters, with RDC retaining a minority share; this expected to result in acceleration of previously slow production. In November 2005 MD Helicopters extended an earlier agreement by signing a long-term contract with Kaman Aerospace for the supply of fuselage structures for the MD500 and MD600 and composites rotor blades for the MD Explorer.

MD Helicopters delivered 33 aircraft in 1999 (five MD 500Es, six MD 530Fs, five MD 520Ns, six MD 600Ns and 11 Explorers), 41 in 2000 (11 MD 500Es, three MD 530Fs, four MD 520Ns, seven MD 600Ns and 16 Explorers), 28 in 2001 (four MD 500Es, two MD 520Ns, two MD 600Ns and 20 Explorers), 15 in 2002 (five MD 500Es, four MD 520Ns, two MD 600Ns and four Explorers), 15 in 2003 (three MD 500Es, three MD 530Fs, one MD 600N, and eight Explorers), 11 in 2004 (two MD500Es, one MD 530F, four MD 600N and four Explorers), and three in 2005 (two MD 520Ns and one MD 600).

Total fleet time of all MD *NOTAR* helicopters exceeded 500,000 hours by December 2003. High-time airframe was an MD 520N operated by the Phoenix Police Department in Arizona.

MD 500 and MD 530

TYPE: Light utility helicopter.

PROGRAMME: Derived from Hughes OH-6A/civil Model 500 first flown in 1963; US certification 30 June 1964; earlier versions produced for military and civil (engineering designations 369H, 369HM, 369HS, 369HE and 369D) use. First flight MD 500E (N5294A) 28 January 1982; first flight MD 530F, 22 October 1982.

CURRENT VERSIONS: **MD 500E:** Replaced MD 500D in production 1982; deliveries started following issue of Type Certificate on 15 December 1982; Rolls-Royce 250-C20R became optional replacement for standard 250-C20B in late 1988; window area of forward canopy increased in 1991 model. MD 500E introduced many cabin improvements including more space for front and rear seat occupants, lower bulkhead between front and rear seats, T tail and optional four-blade Quiet Knight tail rotor.

MD 530F Lifter: Powered by Rolls-Royce 250-C30; transmission rating increased from 280 kW (375 shp) to 317 kW (425 shp) from 11 July 1985; diameter of main rotor increased by 0.3 m (1 ft 0 in) and of tail rotor by 5 cm (2 in); cargo hook kit for 907 kg (2,000 lb) external load available; certified 29 July 1983; first delivery 20 January 1984. Upgraded drive system in **369FF** , certified 11 July 1985.

Detailed description applies to MD 500E and 530F, except where indicated.

MD 500/530 Defender: No longer in production.

MD 500N: Produced as MD 520N.

Mexican Navy MD Helicopters MD 500E 1159701

CUSTOMERS: Some 4,670 OH-6/MD 500/530 series (excluding licensed manufacture) produced by late 2004. Total of 568 MD 500Es, plus 145 MD 530Fs, delivered by end of 2006. The Police Departments of Mesa, Arizona, Columbus, Ohio, Wichita, Kansas, and Atlanta, Georgia; and the Xiongying Aero Club of Zhongshan, China, each took delivery of an MD500E during 2002; the Metropolitan Police Department of Las Vegas, Nevada, has three MD 530Fs. Mesa fleet rose to three in December 2002 while Oklahoma City's fleet simultaneously increased to two.

COSTS: Typical MD 500E USD860,000; MD 530F USD1.1 million (2002). Direct operating cost: MD 500E USD211, MD 530F USD237 per hour (both 2002).

DESIGN FEATURES: Fully articulated five-blade main rotor with blades retained by stack of laminated steel straps; blade aerofoil section NACA 015; blades can be folded after removing retention pins; two-blade tail rotor with optional X-pattern four-blade Quiet Knight tail rotor to reduce external noise; optional high-skid landing gear to protect tail rotor in rough country; protective skid on base of lower fin; narrow chord fin with high-set tailplane and endplate fins introduced with MD 500D. Main rotor rpm (500E/530F) 492/477 normal; main rotor tip speed 207 to 208 m (680 to 684 ft)/s; tail rotor rpm, 2,933/2,848.

FLYING CONTROLS: Plain mechanical without hydraulic boost.

STRUCTURE: Airframe based on two A frames from rotor head to landing gear legs, enclosing rear-seat occupants; front-seat occupants protected within straight line joining rotor hub and forward tips of landing skids; engine mounted inclined in rear of fuselage pod, with access through clamshell doors; main rotor blades have extruded aluminium spar hot-bonded to wraparound aluminium skin; tail rotor blades have swaged tubular spar and metal skin. Thicker fuselage skins, to reduce surface rippling, introduced during 2001.

LANDING GEAR: Tubular skids carried on oleo-pneumatic shock-absorbers. Utility floats, snow skis and emergency inflatable floats optional.

POWER PLANT: *MD 500E:* One 313 kW (420 shp) Rolls-Royce 250-C20B or 335.5 kW (450 shp) 250-C20R turboshaft, derated in both cases to 280 kW (375 shp) for T-O (5 minutes); maximum continuous rating 261 kW (350 shp).

MD 530F: One 485 kW (650 shp) Rolls-Royce 250-C30 turboshaft, derated to 317 kW (425 shp) up to 50 kt (92 km/h; 57 mph) and 280 kW (375 shp) above 50 kt (92 km/h; 57 mph) and for maximum continuous power (MCP).

MCP transmission rating 261 kW (350 shp); improved, heavy-duty transmission, rating 447 kW (600 shp), derated to 280 kW (375 shp) optional on production aircraft or for retrofit from June 1995.

Two interconnected bladder fuel tanks with combined usable capacity of 242 litres (64.0 US gallons; 53.3 Imp gallons). Self-sealing fuel tank optional. Refuelling point on starboard side of fuselage. Auxiliary fuel system, with 79.5 litre (21.0 US gallon; 17.5 Imp gallon) internal tank, available optionally. Oil capacity 5.7 litres (1.5 US gallons; 1.2 Imp gallons). Greater capacity internal fuel tanks also available.

ACCOMMODATION: Forward bench seat for pilot and two passengers, with two or four passengers, or two litter patients and one medical attendant, in rear portion of cabin. Pilot sits on left instead of normal right-hand seating. Low-back front seats and individual rear seats, with fabric or leather upholstery, optional. Baggage space, capacity 0.31 m^3 (11 cu ft), under and behind rear seat in five-seat form. Clear space for 1.2 m^3 (42 cu ft) of cargo or baggage with only three front seats in place. Two doors on each side. Interior soundproofing optional.

SYSTEMS: Aero Engineering Corporation air conditioning system or Fargo pod-mounted air conditioner optional.

AVIONICS (MD 500E): Optional avionics listed below.

Comms: Dual Bendix/King KY 195 or Rockwell Collins VHF-251 transceivers; Bendix/King KT 76 or Rockwell Collins TDR-950 transponder; intercom system, headsets, microphones; and optional public address system.

Radar: Optional installation.

Flight: Dual Bendix/King KX 175 or Rockwell Collins VHF-251/231 nav receivers, latter with IND-350 nav indicator; Bendix/King KR 85 or Rockwell Collins ADF-650 ADF.

Instrumentation: Basic VFR instruments and night flying lighting, attitude and directional gyros and rate of climb indicator.

Mission: Optional, FLIR and 30 Mcd Spectrolab SX-16 Nightsun searchlight.

EQUIPMENT: Optional equipment includes shatterproof glass, heating/demisting system, nylon mesh seats, dual controls, cargo hook, cargo racks, underfuselage cargo pod, heated pitot tube, extended landing gear, blade storage rack, litter kit, emergency inflatable floats and inflated utility floats.

DIMENSIONS, EXTERNAL:

Main rotor diameter: 500E ..... 8.05 m (26 ft 5 in)
530F ..... 8.33 m (27 ft 4 in)
Main rotor blade chord ..... 0.171 m (6¾ in)
Tail rotor diameter: 500E ..... 1.37 m (4 ft 6 in)
530F ..... 1.42 m (4 ft 8 in)
Distance between rotor centres: 500E ..... 4.67 m (15 ft 4 in)
530F ..... 4.88 m (16 ft 0 in)
Length overall, rotors turning: 500E ..... 8.61 m (28 ft 3 in)
530F ..... 9.94 m (32 ft 7¼ in)
Length of fuselage ..... 7.49 m (24 ft 7 in)
Height to top of rotor head: standard skids ..... 2.67 m (8 ft 9 in)
extended skids ..... 2.97 m (9 ft 8¾ in)
Tailplane span ..... 1.65 m (5 ft 5 in)
Skid track (standard) ..... 1.91 m (6 ft 3 in)
Cabin doors (each): Height ..... 1.13 m (3 ft 8½ in)
Max width ..... 0.76 m (2 ft 6 in)
Height to sill: 500E ..... 0.79 m (2 ft 7 in)
530F ..... 0.76 m (2 ft 6 in)
Cargo compartment doors (each): Height ..... 1.12 m (3 ft 8¼ in)
Width ..... 0.88 m (2 ft 10½ in)
Height to sill: 500E ..... 0.71 m (2 ft 4 in)
530F ..... 0.66 m (2 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin: Length ..... 2.44 m (8 ft 0 in)
Max width ..... 1.31 m (4 ft 3½ in)
Max height ..... 1.52 m (5 ft 0 in)

AREAS:

Main rotor blades (each): 500E ..... 0.62 m^2 (6.67 sq ft)
530F ..... 0.65 m^2 (6.96 sq ft)

Tail rotor blades (each): 500E ..... 0.063 m² (0.675 sq ft)
530F ..... 0.066 m² (0.711 sq ft)
Main rotor disc: 500E ..... 50.89 m² (547.8 sq ft)
530F ..... 54.58 m² (587.5 sq ft)
Tail rotor disc: 500E ..... 1.53 m² (16.47 sq ft)
530F ..... 1.65 m² (17.72 sq ft)
Fin ..... 0.56 m² (6.05 sq ft)
Tailplane ..... 0.76 m² (8.18 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: 500E ..... 672 kg (1,481 lb)
530F ..... 722 kg (1,591 lb)
Max normal T-O weight: 500E ..... 1,361 kg (3,000 lb)
530F ..... 1,406 kg (3,100 lb)
Max overload T-O weight: 500E, 530F ..... 1,610 kg (3,550 lb)
Max T-O weight, external load: 530F ..... 1,701 kg (3,750 lb)
Max hook capacity: 530F ..... 907 kg (2,000 lb)
Disc loading at max normal T-O weight: 500E ..... 26.8 kg/m² (5.48 lb/sq ft)
530F ..... 25.8 kg/m² (5.28 lb/sq ft)
Transmission loading at max T-O weight and power: 500E standard ..... 5.22 kg/kW (8.57 lb/shp)
500E optional ..... 4.87 kg/kW (8.00 lb/shp)
530F standard ..... 5.39 kg/kW (8.86 lb/shp)
530F optional ..... 5.03 kg/kW (8.27 lb/shp)

PERFORMANCE (at max normal T-O weight, except where indicated):
Never-exceed speed (VNE) at S/L:
500E, 530F ..... 152 kt (282 km/h; 175 mph)
Max cruising speed at S/L:
500E ..... 135 kt (250 km/h; 155 mph)
530F ..... 134 kt (248 km/h; 154 mph)
Max cruising speed at FL50:
500E ..... 132 kt (245 km/h; 152 mph)
530F ..... 135 kt (249 km/h; 155 mph)
Econ cruising speed at S/L:
500E ..... 129 kt (239 km/h; 149 mph)
530F ..... 131 kt (243 km/h; 151 mph)
Econ cruising speed at FL50:
500E, 530F ..... 123 kt (228 km/h; 142 mph)
Max rate of climb at S/L, ISA:
500E ..... 536 m (1,760 ft)/min
530F ..... 631 m (2,070 ft)/min
Max rate of climb at S/L, ISA+20°C:
530F ..... 628 m (2,061 ft)/min
Vertical rate of climb at S/L: 500E ..... 248 m (813 ft)/min
530F ..... 446 m (1,462 ft)/min
Service ceiling: 500E ..... 4,575 m (15,000 ft)
530F ..... 5,700 m (18,700 ft)
Hovering ceiling IGE: ISA: 500E ..... 2,621 m (8,600 ft)
530F ..... 4,875 m (16,000 ft)
ISA+20°C: 500E ..... 1,830 m (6,000 ft)
530F ..... 4,358 m (14,300 ft)
Hovering ceiling OGE: ISA: 500E ..... 2,073 m (6,800 ft)
530F ..... 4,389 m (14,400 ft)
ISA+20°C: 500E ..... 975 m (3,200 ft)
530F ..... 3,535 m (11,600 ft)
Range, 2 min warm-up, standard fuel, no reserves:
500E at S/L ..... 233 n miles (431 km; 268 miles)
530F at S/L ..... 200 n miles (371 km; 231 miles)
500E at FL50 ..... 290 n miles (334 km; 537 miles)
530F at FL50 ..... 232 n miles (429 km; 267 miles)
Endurance, 530F at S/L ..... 2 h 0 min

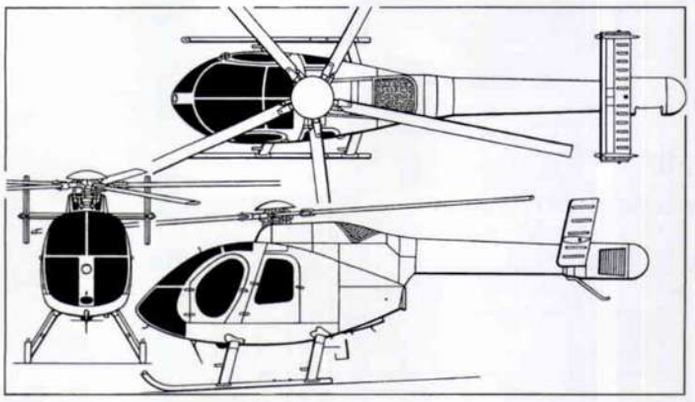
MD 520N

Engineering designation: MD 500N

TYPE: Light utility helicopter.

PROGRAMME: First flight OH-6A NOTAR (no tail rotor) testbed 17 December 1981; extensive modifications during 1985 with second blowing slot, new fan, 250-C20B engine and MD 500E nose; flight testing resumed 12 March 1986 and completed in June; retired to UcS Army Aviation Museum, Fort Rucker, Alabama, October 1990. Commercial MD 520N and uprated (485 kW; 650 shp Rolls Royce 250-C30) MD 530N NOTAR helicopters announced February 1988 and officially launched January 1989; first flight of MD 530N (N530NT) 29 December 1989, but this variant not pursued; first flight 520N (N520NT) 1 May 1990 and first production 520N 28 June 1991; 520N certified 12 September 1991 on MD500 type certificate; first production 520N (N521FB) delivered to Phoenix Police Department 31 October 1991. MD 520N set new Paris to London speed record in September 1992, at 1 hour 22 minutes 29 seconds. Now certified in 21 countries.

MD Helicopters MD 520N operated by Phoenix Police Department 1159702



MD 520N five-seat NOTAR helicopter *(Mike Keep)* 1159688

CURRENT VERSIONS: **MD 520N:** NOTAR version of MD 500, offering more power, higher operating altitude and greater maximum T-O weight than MD 500E. Engineering designation is **MD 500N**.

Description applies to 520N.

MD 600N: Stretched version, described separately.

MD 520N Defender: Military variant, being developed.

CUSTOMERS: Delivery of 100th MD 520N took place on 28 March 2005 to GALS Russian Helicopter Company; 104th registered late 2006. Law enforcement agencies flying MD 520Ns include Phoenix, Arizona (first operator; two more delivered in early 2002); Burbank, Glendale, Huntington Beach, Los Angeles, Ontario and San Jose, California; Hernando County, Florida; Orange County, Florida; Jefferson County, Kentucky, which took delivery of one in March 2002; Prince George County, Clinton, Maryland, which took delivery of two on 4 October 2000; Hamilton County, Ohio, which has seven 520Ns; El Salvador, whose Policia Nacional Civil took delivery of two in 1996; San Juan, Puerto Rico; Honolulu, Hawaii; and Calgary, Alberta, Canada. Other operators include the Tata Group of Mumbai, India, Weetabix Ltd, UK, and Belgian Gendarmerie (two).

COSTS: US$980,000 (2002). Direct operating cost US$224.71 per hour (2002).

DESIGN FEATURES: NOTAR system provides anti-torque and steering control without an external tail rotor, thus eliminating the danger of tail strikes; air emerging through Coanda slots and steering louvres is cool and at low velocity. Believed to be currently the quietest turbine helicopter, based on FAA certification test noise figures. Main rotor rpm 477; main rotor tip speed 208 m (684 ft)/s; NOTAR system fan rpm 5,388. Emergency floats among options. Redesigned diffuser in NOTAR tailboom and revised fan rigging introduced from early 2000 and available for retrofit; combined with uprated Rolls-Royce 250-C20R+ engine (see below); these improvements increase the aircraft's payload capability.

FLYING CONTROLS: Unboosted mechanical, as in earlier versions. Rotor downwash over tailboom deflected to port by two Coanda-type slots fed with low-pressure air from engine-driven variable-pitch fan in root of tailboom; this counters normal rotor torque; some fan air is also vented at tail through variable-aperture louvres controlled by pilot's foot pedals, giving steering control in hover and forward flight. Port moving fin on tailplane connected to foot pedals, primarily to increase directional control during autorotation and allow touchdown at under 20 kt (37 km/h; 23 mph); starboard fin operated independently by yaw damper.

STRUCTURE: Same as for MD 500E/530F, except graphite composites tailboom; metal tailplane and fins; new high-efficiency fan with composites blades fitted in production aircraft. NOTAR system components now have twice the lifespan of conventional tail rotor system assemblies. During 1993, NOTAR system components' warranty increased from two to three years. Thicker fuselage skins, to reduce surface rippling, will be introduced during 2001.

POWER PLANT: One Rolls-Royce 250-C20R turboshaft, derated to 317 kW (425 shp) for T-O (5 minutes) and 280 kW (375 shp) maximum continuous. Improved, heavy-duty transmission, rating 447 kW (600 shp), derated to 317 kW (425 shp) for T-O, 280 kW (375 hp) maximum continuous, on production aircraft from June 1995. Rolls-Royce 250-C20R+ engine, providing improved hot weather performance and 3 to 5 per cent more power, introduced from early 2000. Fuel capacity 235 litres (62.0 US gallons; 51.6 Imp gallons).

SYSTEMS: Electrical system includes 87 Ah starter-generator. Aero Aire air conditioning system optional.

EQUIPMENT: Phoenix Police Department pioneered use of MD 520Ns for firefighting, using 341 litre (90.0 US gallon; 75.0 Imp gallon) 'Bambi' buckets to drop 151,416 litres (40,000 US gallons; 33,307 Imp gallons) of water on fires in remote desert and mountain areas.

DIMENSIONS, EXTERNAL:
Rotor diameter ..... 8.33 m (27 ft 4 in)
Length: overall, rotor turning ..... 9.78 m (32 ft 1¼ in)
fuselage ..... 7.77 m (25 ft 6 in)
Height to top of rotor head:
standard skids ..... 2.74 m (9 ft 0 in)
extended skids ..... 3.01 m (9 ft 10¾ in)
Height to top of fins ..... 2.83 m (9 ft 3½ in)
Tailplane span ..... 2.01 m (6 ft 7¼ in)
Skid track ..... 1.92 m (6 ft 3½ in)

AREAS:
Rotor disc ..... 54.51 m² (586.8 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: standard ..... 719 kg (1,586 lb)
Max fuel weight ..... 183 kg (404 lb)
Max hook capacity ..... 1,004 kg (2,214 lb)
Max T-O weight: normal ..... 1,519 kg (3,350 lb)
with external load ..... 1,746 kg (3,850 lb)
Max normal disc loading ..... 27.9 kg/m² (5.71 lb/sq ft)
Transmission loading at max T-O weight and power ..... 4.80 kg/kW (7.88 lb/shp)

PERFORMANCE (at normal max T-O weight, ISA, except where indicated):
Never-exceed speed (VNE) ..... 152 kt (281 km/h; 175 mph)
Max cruising speed at S/L ..... 123 kt (228 km/h; 141 mph)
Max rate of climb at S/L: ISA ..... 564 m (1,850 ft)/min
ISA + 20°C ..... 480 m (1,575 ft)/min
Service ceiling ..... 4,320 m (14,175 ft)
Hovering ceiling IGE ..... 2,835 m (9,300 ft)

Hovering ceiling OGE: ISA ..... 1,707 m (5,600 ft)
ISA +20°C ..... 1,292 m (4,240 ft)
Range at S/L ..... 253 n miles (469 km; 291 miles)
Endurance at S/L ..... 2 h 24 min
OPERATIONAL NOISE LEVELS:
T-O ..... 85.4 EPNdB
Approach ..... 87.9 EPNdB
Flyover ..... 80.2 EPNdB

MD 600N

TYPE: Light utility helicopter.

PROGRAMME: Stretched version of MD 520N. Announced as 'concept', 8 November 1994; prototype, then known as MD 630N (N630N, converted from MD 530F demonstrator), first flight 22 November 1994, 138 days after project approval; public debut at Heli-Expo in Las Vegas January 1995; production go-head 28 March 1995, at which time designation changed to MD 600N; prototype first flown with production standard engine and rotor system 6 November 1995; production prototype (N600RN) first flown 15 December 1995, and became certification test vehicle leading to FAR Pt 27 certification, but was destroyed in ground fire 28 May 1996, following emergency landing after rotor/tailboom strike during abrupt control reversal tests. This resulted in changes to tailboom/rotor clearance; third prototype (N605AS) flown 9 August 1996; further accidents to N630N on 4 and 21 November 1996 and on 18 January 1997, all during autorotational descents, culminated in total loss and delayed certification and first delivery, originally scheduled for 18 December 1996, to 15 May and 6 June 1997, respectively. MD 600N certified on MD500 certificate.

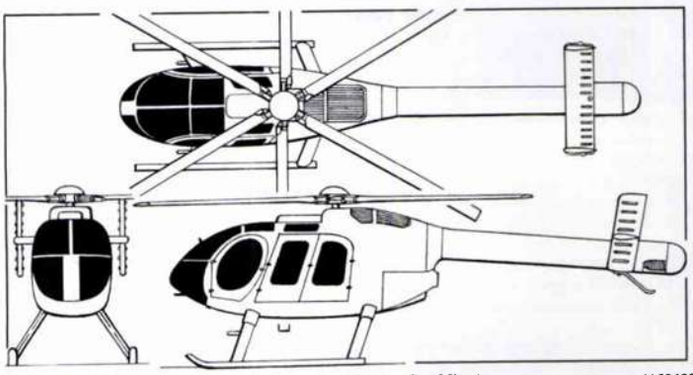
In July 1998, Boeing completed a year-long envelope expansion programme for the MD 600N leading to FAA approval for operation at a density altitude of 2,135 m (7,000 ft) at a T-O weight of 1,746 kg (3,850 lb) and at a density altitude of 1,220 m (4,000 ft) at a T-O weight of 1,860 kg (4,100 lb). Other performance enhancements approved by the FAA included provision for doors-off operation at speeds up to 115 kt (213 km/h; 132 mph), operation at temperatures -40°C/52°C (-40°F/126°F), lifting up to 968 kg (2,134 lb) on the external cargo hook, making slope landings up to 10° in any direction, operation with emergency floats and for installation of a movable landing light and additional wire strike protection on the fuselage. The MD 600N also completed HIRF trials at NAS Patuxent River, Maryland. Yaw-stability augmentation system (Y-SAS) under development during 2000, aimed at reducing pilot workload during extended flights and in turbulent conditions; Y-SAS was expected to be available from March 2001, following FAA certification, and will be field-installable.

CUSTOMERS: Total of 70 registered by mid-2006. Launch customer AirStar Helicopter of Arizona (two, of which first delivered 6 June 1997); Saab Helikopter AB of Sweden and Rotair Limited of Hong Kong ordered one each in June 1995; other customers include Guangdong General Aviation Company (GGAC) of the People's Republic of China, which took delivery of one MD 600N in November 2000, during Airshow China 2000 in Zhuhai, Los Angeles County Sheriff's Department Aero Bureau (three), Orange County, California, Sheriff's Department, Indianapolis, Indiana, Police Department (one), Presta Services of France (one), Turkish National Police, which ordered 10 in December 2000 for delivery during 2002 (subsequently postponed to 2003), UND (University of North Dakota) Aerospace (one), West Virginia State Police (one) and the US Border Patrol (45, of which 11 delivered by end of 1998, when procurement halted pending evaluation of UAVs for border patrol role).

COSTS: USD1.315 million (2002). Direct operating cost USD269 per hour (2002).

DESIGN FEATURES: Stretched MD 520N airframe (less than 1 per cent new parts) by means of 0.76 m (2 ft 6 in) plug aft of cockpit/cabin bulkhead and 0.71 m (2 ft 4 in) plug in tailboom, combined with more powerful engine, uprated transmission and six-blade main rotor. Cabin has flat floor to assist cargo handling, and will feature quick-change interior configurations

MD Helicopters MD 600N used for power line inspection 1159703



MD 600N eight-seat NOTAR helicopter *(James Goulding)* 1159689

to suit multiple-use operators. Intended for civil, utility, offshore, executive transport, medevac, aerial news gathering, touring, law enforcement and other noise-sensitive operations; also adaptable for armed scout, utility and other military missions.

Description generally as for MD 520N except as follows:

POWER PLANT: One 603 kW (808 shp) Rolls-Royce 250-C47M turboshaft, derated to 447 kW (600 shp) for T-O (5 minutes) and 395 kW (530 shp) maximum continuous, with FADEC. Transmission manufactured from WE43A magnesium alloy for lower weight, greater strength and enhanced corrosion resistance, rating 447 kW (600 shp). Fuel contained in two crashworthy bladder tanks in lower fuselage, total capacity 440 litres (116 US gallons; 96.8 Imp gallons), of which 434 litres (115 US gallons; 95.5 Imp gallons) are usable.

ACCOMMODATION: Standard seating for eight, including pilot, in 3+3+2 configuration with centre bench; alternative six-seat club and coach layouts; utility with main cabin seats removed; EMS with accommodation for pilot, one stretcher case and two medical attendants; or electronic news gathering, with accommodation for pilot and passenger in cockpit and operator with cabin and monitor in cabin. All facilitated by quick-release seat mechanisms. Two removable centre-opening doors on each side of cabin; door to cockpit on each side. Bubble 'comfort' windows and sliding windows for cabin, custom soundproofing and Integrated Flight Systems Inc air conditioning optional.

SYSTEMS: Electrical system comprises 28 V 200 Ah starter-generator and 28 V 17 Ah Ni/Cd battery. 24 V auxiliary power receptacle inside starboard cockpit door standard.

AVIONICS: To customer's choice, including VHF/UHF/FM/AM transceivers, GPS, transponder, ELT, intercom, stereo tape system and PA system.

EQUIPMENT: Optional equipment includes dual controls, particle separator, heated pitot tube, rotor brake, cargo hook, wire strike kit and emergency floats.

DIMENSIONS, EXTERNAL:
Rotor diameter ..... 8.38 m (27 ft 6 in)
Rotor ground clearance ..... 2.65 m (8 ft 8½ in)
Length: overall, rotor turning ..... 10.79 m (35 ft 4¾ in)
fuselage ..... 8.99 m (29 ft 6 in)
Fuselage width at cabin ..... 1.40 m (4 ft 7 in)
Height to top of rotor head:
standard skids ..... 2.65 m (8 ft 8½ in)
extended skids ..... 2.74 m (9 ft 0 in)
Height to top of fins:
standard skids ..... 2.68 m (8 ft 9½ in)
extended skids ..... 2.83 m (9 ft 3½ in)
Fuselage ground clearance, extended skids ..... 0.58 m (1 ft 10¾ in)
Skid track ..... 2.47 m (8 ft 1¼ in)
Tailplane span, over fins ..... 2.01 m (6 ft 7¼ in)
DIMENSIONS, INTERNAL:
Cabin, excl cockpit: Length ..... 1.83 m (6 ft 0 in)
Width ..... 1.22 m (4 ft 0 in)
Height ..... 1.22 m (4 ft 0 in)
AREAS:
Rotor disc ..... 55.18 m² (594.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty, standard ..... 952 kg (2,100 lb)
Useful load: internal ..... 907 kg (2,000 lb)
external ..... 1,179 kg (2,600 lb)
Max hook capacity ..... 1,361 kg (3,000 lb)
Max T-O weight: internal load ..... 1,859 kg (4,100 lb)
slung load ..... 2,131 kg (4,700 lb)
Max disc loading:
internal load ..... 33.7 kg/m² (6.90 lb/sq ft)
slung load ..... 38.6 kg/m² (7.91 lb/sq ft)
Transmission loading at max T-O weight and power:
internal load ..... 4.16 kg/kW (6.83 lb/shp)
slung load ..... 4.77 kg/kW (7.83 lb/shp)
PERFORMANCE:
Never-exceed speed (VNE) ..... 135 kt (250 km/h; 155 mph)
Max cruising speed, S/L to FL50, ISA ..... 134 kt (248 km/h; 154 mph)
Max rate of climb at S/L, ISA ..... 411 m (1,350 ft)/min
Max operating altitude ..... 6,100 m (20,000 ft)
Hovering ceiling, ISA: IGE ..... 3,383 m (11,100 ft)
OGE ..... 1,829 m (6,000 ft)
Max range:
at S/L ..... 342 n miles (633 km; 393 miles)
at FL50, ISA ..... 382 n miles (707 km; 439 miles)
Endurance: at S/L ..... 3 h 36 min
at FL50 ..... 3 h 54 min

MD EXPLORER

US Coast Guard designation: MH-90 Enforcer

TYPE: Light utility helicopter.

PROGRAMME: Initially known as MDX, then MD 900 (proposed MD 901 with Turbomeca engines was not pursued); McDonnell Douglas design; announced February 1988; launched January 1989; Hawker de Havilland of Australia designed and manufactures airframe; Canadian Marconi tested initial version of integrated instrumentation display system (IIDS) early 1992; Kawasaki completed 50 hour test of transmission early 1992. Other partners include Aim Aviation (interior), IAI (cowling and seats) and Lucas Aerospace (actuators). Ten prototypes and trials aircraft, of which seven (Nos. 1, 3-7 and 9) for static tests; first flight (No.2/N900MD) 18 December 1992, followed by No.8/N900MH 17 September 1993 and No.10/N9208V 16 December 1993; first production/demonstrator Explorer (No.11/N92011) flown 3 August 1994. FAA certification 2 December 1994; first delivery 16 December 1994; JAA certification July 1996; FAA certification for single-pilot IFR operation achieved January 1997. Type certificate transferred to MDHI on 18 February 1999.

FAA certification of uprated PW207E engine achieved in July 2000, providing 11 per cent more power for take-off and 610 m (2,000 ft) increase in hovering capability OEI in hot-and-high conditions; first delivery of PW207E-engined Explorer to Police Aviation Services, UK, 27 September 2000. "100th production" Explorer (actually 89th overall, including prototypes) delivered 1 March 2002 to Tomen Aerospace Corporation of Japan for ENG operations by Aero Asahi of Hiroshima. Total fleet time stood at more than 120,000 hours by December 2002.

CURRENT VERSIONS: **MD Explorer:** Initial civilian utility version, as described.

Details apply to civilian version except where indicated.

MD Enhanced Explorer: Improved version, announced September 1996; originally MD 902, but now known as "902 Configuration". Main features include Pratt & Whitney Canada PW206E engines with increased OEI ratings; transmission approved for dry running for 30 minutes at 50 per cent power; improved engine air inlets, NOTAR inlet design and engine fire suppression system, and more powerful stabiliser control system, resulting in 7 per cent increase in range, 4 per cent increase in endurance and 113 kg (250 lb) increase in payload over Explorer. First flight (N9224U; c/n 900-0051, 41st Explorer) 5 September 1997. FAA certification to Category A performance standards (including continued take-off with one failed engine) and single-pilot IFR operation achieved 11 February 1998; JAA certification for Category A performance achieved July 1998. Retrofit kits to convert Explorers to Category A standard. First Enhanced Explorer delivery in May 1998 to Tomen Aerospace of Japan. PW206E replaced by PW207E from late 2000, beginning at c/n 900-0077, allowing further MTOW increase to 2,948 kg (6,500 lb).

MH-90 Enforcer: Beginning March 1999, under a programme code-named Operation New Frontier, the US Coast Guard used two leased MD 900 Explorers for shipboard anti-drug smuggling operations. Armed with a pintle-mounted M240 7.62 mm minigun at the door station. In September 1999 the MD900s were exchanged for two leased MD 902 Enhanced Explorers. These subsequently replaced by Agusta A 109s. Six delivered to Mexican Navy at Acapulco (two each respectively in May and December 1999 and April 2000) for anti-drug operations, equipped with 0.50 in General Dynamics GAU-19/A Gatling guns, and 70 mm rocket pods; further four in process of delivery. Weapons qualification trials were completed at Fort Bliss, Texas in November 2000.

CUSTOMERS: Market estimated at 800 to 1,000 in first decade; however, only 103 registered and built by end of 2003; followed by 104th in August 2006. First delivery 16 December 1994 to Petroleum Helicopters Inc (PHI) which ordered five; second delivery (N901CF) December 1994 to Rocky Mountain Helicopters for EMS duties with affiliate Care Flight unit of Regional Emergency Medical Services Authority (REMSA) in Reno, Nevada. Total of two delivered in 1994, 12 in 1995, 15 in 1996, one in 1997, four in 1998, 11 in 1999, 16 in 2000, 20 in 2001, four in 2002, eight in 2003, and four in 2004; initial (MD 900) series comprised 40 aircraft, including three flying prototypes; PW207E engine from 64th production (67th overall) aircraft.

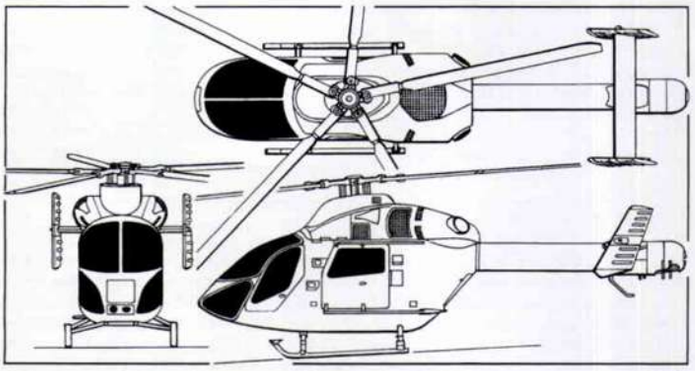
The US Drug Enforcement Administration took delivery of one on 21 January 2004.

COSTS: USD2.285 million (2002); direct operating cost USD408.11 (2002) per hour.

DESIGN FEATURES: NOTAR anti-torque system; all-composites five-blade rotor of tapered thickness with parabolic swept outer tip with bearingless flexbeam retention and pitch case; tuned fixed rotor mast and mounting truss for vibration reduction; replaceable rotor tips; maximum rotor speed 392 rpm; modified A-frame construction from rotor mounting to landing skids protects passenger cabin; energy-absorbing seats absorb 20 *g* vertically and 16 *g* fore and aft; onboard health monitoring, exceedance recording and blade track/balance.

FLYING CONTROLS: NOTAR tailboom (see details under MD 520N); mechanical engine control from collective pitch lever is back-up for electronic FADEC. Automatic stabilisation and autopilot available for IFR operation.

STRUCTURE: Cockpit, cabin and tail largely carbon fibre; top fairings Kevlar composites; no magnesium; lightning strike protection embedded in composites skin. Transmission overhaul life 5,000 hours; glass fibre blades have titanium leading-edge abrasion strip and are attached to bearingless hub by carbon fibre encased glass fibre flexbeams; rotor blades and hub on condition.



MD Explorer eight-seat commercial helicopter *(Mike Keep)* 1159690

LANDING GEAR: Fixed skids with replaceable abrasion pads; emergency floats optional.

POWER PLANT: Baseline MD 900 powered by two Pratt & Whitney Canada PW206E turboshafts with FADEC, each rated at 463 kW (621 shp) for 5 minutes for T-O, 489 kW (656 shp) for 2½ minutes OEI and 410 kW (550 shp) maximum continuous. Transmission rating 820 kW (1,100 shp) for T-O, 746 kW (1,000 shp) maximum continuous, 507 kW (680 shp) for 2½ minutes OEI and 462 kW (620 shp) maximum continuous OEI.

Fuel contained in single tank under passenger cabin, capacity 564 litres (149 US gallons; 124 Imp gallons), of which 553 litres (146 US gallons; 122 Imp gallons) are usable. single-point refuelling; self-sealing fuel lines.

ACCOMMODATION: Two pilots or pilot/passenger in front on energy-absorbing adjustable crew seats with five-point shoulder harnesses/seat belts; six passengers in club-type energy-absorbing seating with three-point restraints; rear baggage compartment accessible through rear door; cabin can accept long loads reaching from flight deck to rear door; hinged, jettisonable door to cockpit on each side; sliding door to cabin on each side.

SYSTEMS: Hydraulic system, operating pressure 34.475 bar (500 lb/sq in).

AVIONICS: Full IFR capability for single- or two-pilot operation.

Comms: Two headsets standard. Bendix/King Silver Crown VHF transceiver, audio control panel, ELT, cockpit voice recorder and Wulfsberg Flexcomm II optional.

Radar: Honeywell RDR 2000 vertical profile colour weather radar optional with IFR package.

Flight: Optional equipment includes Bendix/King Silver Crown VOR/ILS, HSI, ADF, DME, marker beacon receiver, radar altimeter, Loran C and KLN 90B GPS. Coupled three-axis autopilot optional.

Instrumentation: single- or two-pilot instrument panels incorporate Canadian Marconi integrated instrumentation display system (IIDS) with high-resolution sunlight-readable LCD screen displaying engine and system information including engine condition trend monitoring, exceedance recording, caution annunciators, onboard track and balance of rotor and fan, weight on cargo hook, outside air temperature, digital clock, running time meter and RS-232 download modem interface for personal computer. Other standard instrumentation includes airspeed indicator, encoding altimeter, vertical speed indicator, turn and slip indicator, wet compass and clock. EFIS 40 electronic flight information system and parallel IIDS monitor for long-line hook operations from left seat optional.

Mission: Law enforcement panel with space for FLIR screen available. Avionics and equipment options for law enforcement conversions are described in *Jane's Aircraft Upgrades*.

EQUIPMENT: Standard equipment includes magnetic chip detectors on engines, tiedown fittings, flush-mounted cargo tiedowns, rotor blade tiedowns, right side passenger step, utility beige colour carpet, trim, wall and ceiling panels, soundproofing, tinted windows, map case, recessed hover and approach light, wander and white dome lights in cockpit, white dome light in cabin, utility light in baggage compartment, single 28 V DC power outlet each in cockpit and cabin, single colour external paint with two-colour accent stripes, FOD covers, pitot tube cover and cockpit fire extinguisher.

Optional equipment includes dual controls, heated pitot head, rotor brake, pilot-activated engine fire extinguisher, engine air particle separator, maintenance hand pump for hydraulics, external cargo hook with 1,361 kg (3,000 lb) capacity 272 kg (600 lb) personnel

Belgian Police MD Explorer *(Paul Jackson)* 1159737

hoist, wire strike kit, emergency floats for skids, retractable landing light, port side cabin step, landing gear and rotor fairing canopy cover, heater/defogger, vapour-cycle air conditioner, upgraded soundproofing, passenger service unit with air gaspers and reading lights, window reveal panels, matching close-out panel for aft baggage area, upgraded passenger seats, smoke detector in baggage compartment, jack-point fittings and ground handling wheels.

DIMENSIONS, EXTERNAL:

Rotor diameter	10.31 m (33 ft 10 in)
Length: overall, rotor turning	11.83 m (38 ft 10 in)
fuselage	9.85 m (32 ft 4 in)
Fuselage width at cabin	1.63 m (5 ft 4 in)
Height: to top of rotor head	3.66 m (12 ft 0 in)
to top of fins	2.79 m (9 ft 2 in)
Min fuselage ground clearance	0.38 m (1 ft 3 in)
Tailplane span	2.84 m (9 ft 4 in)
Skid track	2.24 m (7 ft 4 in)
Cabin door width	1.27 m (4 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin:	
Length: overall, incl baggage compartment	3.93 m (12 ft 10¾ in)
passenger compartment only	1.91 m (6 ft 3 in)
Max height	1.24 m (4 ft 1 in)
Max width	1.45 m (4 ft 9 in)
Volume	4.9 m^3 (173 cu ft)
Baggage (if closed off)	1.39 m^3 (49 cu ft)

AREAS:

Rotor disc	83.52 m^2 (899.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, standard configuration	1,531 kg (3,375 lb)
Standard fuel load	489 kg (1,078 lb)
Max internal payload	1,292 kg (2,848 lb)
Max slung load	1,361 kg (3,000 lb)
Max T-O weight: internal load	2,835 kg (6,250 lb)
external load	3,129 kg (6,900 lb)
Max disc loading: internal load	33.9 kg/m^2 (6.95 lb/sq ft)
external load	37.5 kg/m^2 (7.68 lb/sq ft)
Transmission loading at max T-O weight and power:	
internal load	3.80 kg/kW (6.25 lb/shp)
external load	3.82 kg/kW (6.27 lb/shp)

PERFORMANCE (at max internal load T-O weight, ISA, except where indicated):

Never-exceed speed (VNE) at S/L, ISA	140 kt (259 km/h; 161 mph)
Max cruising speed at S/L, 38°C (100°F)	134 kt (248 km/h; 154 mph)
Max rate of climb at S/L	579 m (1,900 ft)/min
Vertical rate of climb at S/L	411 m (1,350 ft)/min
Rate of climb at S/L, OEI	305 m (1,000 ft)/min
Service ceiling: both engines	5,335 m (17,500 ft)
OEI	3,200 m (10,500 ft)
Hovering ceiling: IGE, ISA	3,353 m (11,000 ft)
IGE, ISA + 20°C	2,042 m (6,700 ft)
OGE, ISA	2,743 m (9,000 ft)
OGE, ISA + 20°C	1,433 m (4,700 ft)
Hovering ceiling, OEI:	
IGE, ISA at 87% max T-O weight	1,220 m (4,000 ft)
Max range: at S/L	257 n miles (476 km; 295 miles)
at FL50, ISA	293 n miles (542 km; 337 miles)
Max endurance: at S/L	2 h 54 min
at FL50, ISA	3 h 12 min

OPERATIONAL NOISE LEVELS:

T-O	84.1 EPNdB
Approach	88.9 EPNdB
Flyover	83.1 EPNdB

ME 262 PROJECT

ME 262 PROJECT

Paine Field, Building 221, 10728 36th Place West, Everett, Washington 98204
Tel: (+1 425) 290 78 78
Fax: (+1 425) 355 13 23
e-mail: me262project@juno.com
Web: www.stormbirds.com
PROJECT MANAGER: Bob Hammer
PRODUCTION CO-ORDINATOR: Jim Byron

Founded by the late Stephen L Snyder, Classic Fighter Industries Inc launched a programme in 1993 to build five exact flying replicas of a Second World War German jet fighter, the Messerschmitt Me 262. Work was originally contracted to the Texas Airplane Factory, but halted during 1997 because of a legal dispute. The production line was relocated to Paine Field (Snohomish County Airport) in early 1999; renamed Me 262 Project in 2001; first aircraft flew in late 2002 but was damaged soon after; it has since been repaired, second aircraft flown and a third rolled out in October 2006.

In May 2005, the company began restoration of two Bf 109F-4s for Air Assets International.

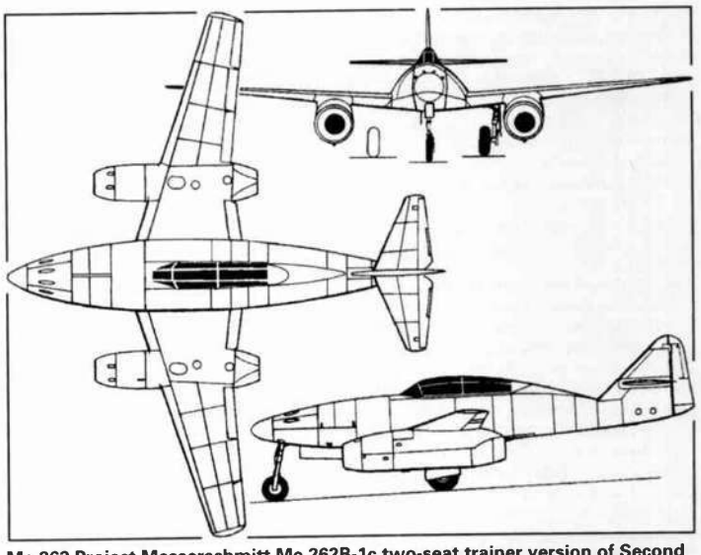
MESSERSCHMITT Me 262

TYPE: Two-seat jet sportplane.

PROGRAMME: Original prototype first flew 25 March 1942; entered operational service June 1944; flying terminated May 1945, except for limited number assigned to Allied technical evaluation or flown by Czechoslovak Air Force. Total of 1,443 built by Messerschmitt.

Classic programme based on reverse-engineering of WkNr 110639, former US Me 262B-1a evaluation aircraft, refurbished by Classic from 1993 onwards and redelivered to US Navy at Willow Grove, Pennsylvania, on 8 September 2000. Completion of first new-build aircraft rescheduled to 2002, due to company restructuring. First taxi testing undertaken 25 June 2002, following engine tests conducted from February 2002. Maiden flight (following earlier short 'hops') (N262AZ) 20 December 2002, but damaged in landing accident on 18 January 2003; repairs undertaken during 2003 and made its second 'first' flight (actually third individual flight) on 29 June 2004. Second aircraft was in final assembly in April 2004 and first flew 15 August 2005. Both aircraft delivered: 501244 'Tango Tango' on 19 January 2006 and 501241 'White 1' on 11 June 2006; third aircraft around 80 per cent complete by November 2006, having been rolled out on 10 October.

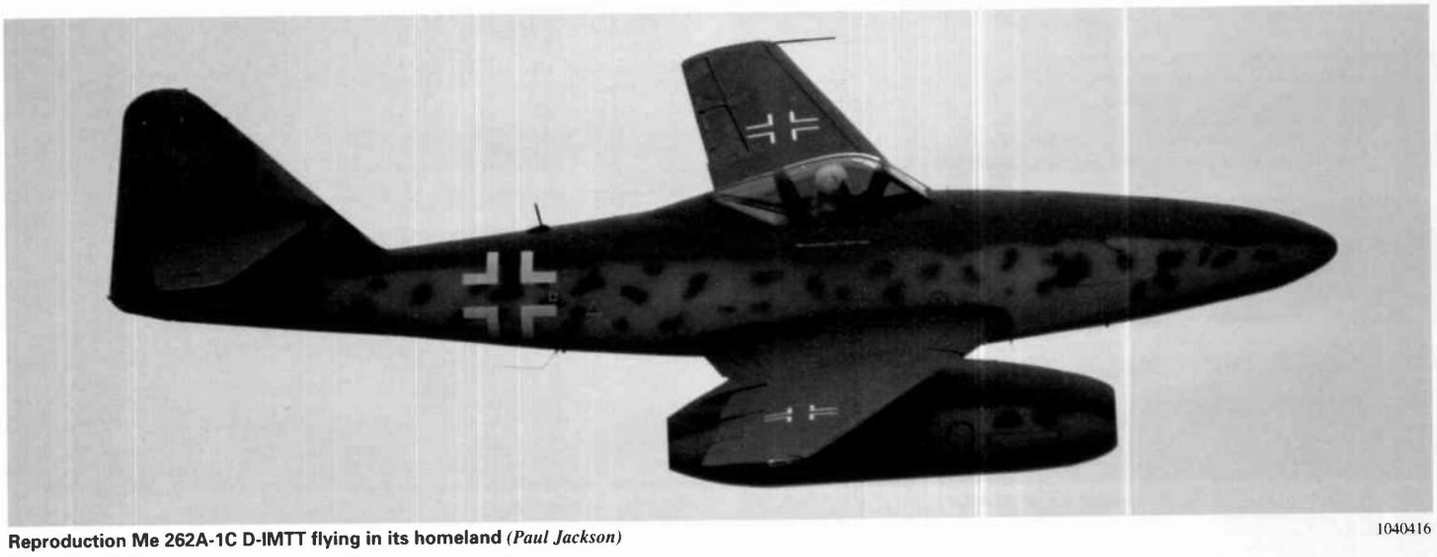
CURRENT VERSIONS: **Me 262A-1c**: Single-seat version; one (501245/'Red 13') under construction by Classic; 80 per cent complete in November 2006.



Me 262 Project Messerschmitt Me 262B-1c two-seat trainer version of Second World War jet fighter *(Paul Jackson)* 1158951

Me 262B-1c: Two-seat trainer; two (501241/N262AZ/'White 1' and 501242/'White ') under construction; first airframe for private owner in US; second 55 per cent complete, but suspended.

'Me 262A/B-1c': Further two aircraft (501243/'White 8' and 501244/N262MS 'Tango Tango'); can be converted to either of above variants. N262MS was second to fly on 15 August 2005, finished as A-1C; for Messerschmitt Foundation, Germany; following shipping to Germany it was reassembled and flown (as D-IMTT) on 25 April 2006; appeared at ILA (Berlin air show) in following month.



Reproduction Me 262A-1C D-IMTT flying in its homeland *(Paul Jackson)* 1040416

Current production aircraft assigned 'c' type suffix by Messerschmitt Foundation to indicate employment of J85 engine; maker's serial numbers follow on from German 1945 production.

Descriptions of Me 262 appear in 1945-46 Jane's All the World's Aircraft *and in various historical references. Differences from original are noted below.*

COSTS: Around USD2.5 million for flying example and USD1.5 million for static display example, excluding engines and avionics (2006).

DESIGN FEATURES: Modifications minimal, except where required to enhance safety. Replacement of Jumo 004 engine involves smaller, lighter and more powerful GE J85 being located in rear of original-sized nacelles; interior air duct and false Jumo engine exterior shape below access panels restore weight to original for aerodynamic and balance purposes. Landing gear mountings strengthened to obviate original weakness; modern disc brakes within mainwheel hubs; nosewheel brake deleted.

POWER PLANT: Two 12.7 kN (2,850 lb st) General Electric J85 turbojets; soft throttle stop at 8.0 kN (1,800 lb st) to emulate Jumo engine max output; full estimated installed thrust rating of up to 11.1 kN (2,500 lb st) employed for initiating (only) take-off roll and may be re-engaged above 226 kt (418 km/h; 260 mph) asymmetric safety speed.

PERFORMANCE:

Never-exceed speed (VNE)	434 kt (804 km/h; 500 mph)[1]
Max level speed (estimated)	539 kt (998 km/h; 620 mph)
Range with max fuel	more than 869 n miles (1,609 km; 1,000 miles)

[1] *Voluntary limitation*

MICCO

MICCO AIRCRAFT COMPANY

Hangar 7, Frank Phillips Field, 407 Northwest Wiley Post Road, Bartlesville, Oklahoma 74003

e-mail: deckijbeckett@miccoaircraft.com
Web: www.miccoaircraft.com
CEO: James E Billie
PRESIDENT: F DeWitt Beckett
MARKETING DIRECTOR: Decki J Beckett

Micco company originally formed by the Seminole tribe of native Americans and as descendant of the Meyers company, founded in 1936, which produced the OTW (102 built), MAC-125/145 (22 built), Meyers 200 (46 built) and Meyers 400 Interceptor turboprop; after purchase by Rockwell in July 1965, the Meyers 200 became the Aero Commander 200 (88 built), until production ceased in 1967. Type certificate transferred to Interceptor Corporation in 1969; to Prop-Jets Inc 1977; Nydia Myers Trust 1981; Ralph Haven 1987; New Myers 21 March 1991; and to Estumketda Ltd on 18 January 1995.

New Meyers renamed Micco (Seminole for chief) in 1997, remaining under Estumketda ownership. Had 3,720 m^2 (40,000 sq ft) of factory space and 465 m^2 (5,000 sq ft) of engineering and administrative offices at Fort Pierce, Florida, and employed 73 people in 2000. Production of the SP20 and its derivative, the SP26, ceased in November 2001 because of poor order book. Type certificate was sold to LanShe (at same address) on 22 February 2003, but this company closed in June 2004. Type certificate to Aero Acquisitions on 12 September 2005.

On 25 July 2005, Micco announced it had entered into an agreement for the acquisition of the type certificate, tooling, fixtures and inventory assets for the SP26. Production facilities established in Bartlesville, Oklahoma, where new aircraft deliveries planned from first quarter of 2007. Certificate was duly transferred to Micco Aircraft on 1 September 2006.

MICCO SP26

TYPE: Aerobatic two-seat lightplane.

PROGRAMME: Based on original 1947 Meyers MAC-145A, certified 2 November 1948, and 22 built (including two MAC-125s), but with increased power. Redesign started by Micco Aircraft March 1994, using converted MAC-145 (N520SP); construction started June 1995 and prototype (N720SP) first flown 17 December 1997. First production aircraft (N820SP) construction started January 1999. Certification to FAR Pt 23 issued 5 January 2000, with deliveries soon after. Second production aircraft shown at Sun 'n' Fun, Lakeland, Florida, April 2000, before delivery to TE Aero, Texas; third production aircraft to Clipper Aviation of Oneonta, New York, June 2000. Aircraft registered using MAC-145A (SP20) and MAC-145B (SP26) type certificates.

CURRENT VERSIONS: **SP20:** Baseline version. Not intended for manufacture by current company. One 149 kW (200 hp) Textron Lycoming IO-360-C1E6 flat-four driving a three-blade, constant-speed McCauley QZP (B3D36C424/74SA-0) propeller.

SP26: Updated and uprated aerobatic version. Six-cylinder engine in longer cowling, but firewall moved rearwards by identical distance (30 cm; 12 in), resulting in no overall change of fuselage length. Prominent strakes ahead of tailplane on prototype have now been removed. Prototype converted from N820SP; debut at Sun 'n' Fun, April 2000. Certification in Utility category granted on 19 October 2000 for 113 kg (250 lb) extension of MTOW over SP20. First production aircraft (N201MA) flew 15 November 2000 and delivered on 26 December 2000 to Andrew Spaulding of Cumberland, Maine. Aerobatic certification achieved 4 March 2002.

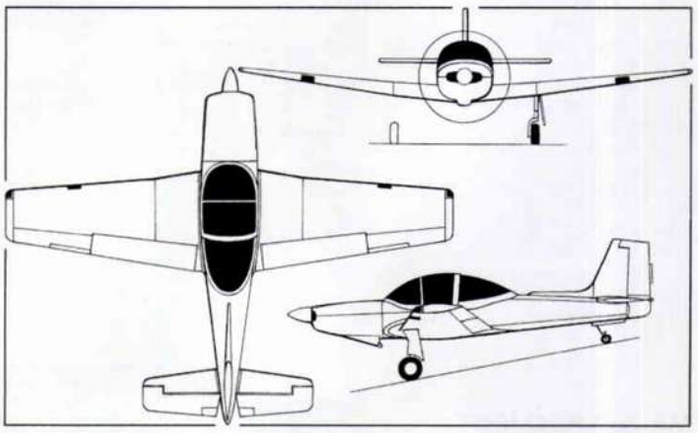
CUSTOMERS: Total 19 by late 2004. Seven SP-20s, including prototypes, built by Micro up to 2001; none by LanShe. Micro produced 10 SP-26s (excluding converted SP-26 acting as prototype); two built in 2003 under LanShe, comprising N179MA (apparently uncompleted) and N585SK. Last-mentioned offered for sale by new Micco in 2006.

DESIGN FEATURES: Low-wing, high-performance, metal sport aircraft; low development cost achieved by employment of existing design. Major changes from MAC-145A include replacement of the 108 kW (145 hp) Continental engine; substitution of a Meyers 200 fin and rudder; wings and flaps from the Meyers 400 Interceptor; and provision of a sliding canopy in place of the fixed canopy and side doors.

FLYING CONTROLS: Conventional and manual. Horn-balanced cable-operated rudder with ground-adjustable trim tab; horn-balanced push/pull tube-controlled elevators with flight-adjustable tabs in each. Control movements: elevator +28/-20°; ailerons +22/-12°; rudder ±22°. Electrically operated Fowler flaps, max deflection 30°.

STRUCTURE: 4130 steel tube centre section and all-aluminium wings.

Micco SP-26 built in 2001 by the original Micco company 1158996



Micco SP-26 aerobatic lightplane *(James Goulding)* 1158947

LANDING GEAR: Tailwheel type; main units retract inward into wings, tailwheel rearward; mainwheel doors cover legs only when retracted, wheel wells remaining exposed. Electrohydraulic Parker Hannifin hydraulic brakes and leaf spring shock-absorbers. 6.00-6 tyres on mainwheels; 10 cm (4 in) solid tailwheel. Ground turning radius about wingtip 6.07 m (19 ft 11 in).

POWER PLANT: One 149 kW (200 hp) Textron Lycoming IO-360-C1E6 flat-four driving a three-blade, constant-speed McCauley QZP (B3D36C424/74SA-0) propeller.

Fuel in integral wing tanks, combined capacity 273 litres (72.0 US gallons; 60.0 Imp gallons), of which 257 litres (68.0 US gallons; 56.6 Imp gallons) are usable. Three drain points. Oil capacity 9.5 litres (2.5 US gallons; 2.1 Imp gallons). Aerobatic versions have two additional 57 litre (15.0 US gallon; 12.5 Imp gallon) tanks located in the centre-section outboard of cabin area.

ACCOMMODATION: Two, side by side, under rearward-sliding canopy. Baggage area behind seats.

SYSTEMS: 28 V 70 A alternator and battery; landing lights.

AVIONICS: VFR or IFR standards available, recommended Trimble Terra suite; S-Tec 30 two-axis autopilot and Apollo MX20 multifunction display optional.

EQUIPMENT: Landing/taxying light in each wing leading-edge.

DIMENSIONS, EXTERNAL:

Wing span	9.25 m (30 ft 4 in)
Wing chord: at root	2.29 m (7 ft 6 in)
at tip	1.02 m (3 ft 4 in)
Wing aspect ratio	5.9
Length overall	7.34 m (24 ft 1 in)
Max diameter of fuselage	1.22 m (4 ft 0 in)
Height overall	1.98 m (6 ft 6 in)
Tailplane span	3.76 m (12 ft 4 in)
Wheel track	3.15 m (10 ft 4 in)
Wheelbase	4.02 m (13 ft 2¼ in)
Propeller diameter	1.98 m (6 ft 6 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.65 m (5 ft 5 in)
Max width	1.09 m (3 ft 7 in)
Max height	0.99 m (3 ft 3 in)
Baggage volume	0.40 m^3 (14.0 cu ft)

AREAS:

Wings, gross	14.55 m^2 (156.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	925 kg (2,040 lb)
Baggage capacity	45 kg (100 lb)
Max aerobatic weight	1,202 kg (2,650 lb)
Max T-O weight	1,292 kg (2,850 lb)
Max landing weight	1,243 kg (2,742 lb)
Max wing loading	88.9 kg/m^2 (18.20 lb/sq ft)
Max power loading: SP26	6.67 kg/kW (10.96 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE): SP26	195 kt (361 km/h; 224 mph)
Max level speed	165 kt (306 km/h; 190 mph)
Max cruising speed at 75% power: SP26	155 kt (287 km/h; 178 mph)
Normal cruising speed at 65% power	148 kt (274 km/h; 170 mph)
Econ cruising speed at 55% power	135 kt (250 km/h; 155 mph)
Stalling speed, power off: flaps and landing gear up	55 kt (102 km/h; 64 mph)
flaps and landing gear down	49 kt (91 km/h; 57 mph)
Max rate of climb at S/L	458 m (1,500 ft)/min
Service ceiling	5,486 m (18,000 ft)
T-O run	244 m (800 ft)
T-O to 15 m (50 ft)	335 m (1,100 ft)
Landing from 15 m (50 ft)	610 m (2,000 ft)
Landing run	213 m (700 ft)
Range with 30 min reserves: at max level speed	750 n miles (1,389 km; 863 miles)
at econ cruising speed	1,040 n miles (1,926 km; 1,196 miles)
g limits	+6/–3

MILLENNIUM

MILLENNIUM AEROSPACE CORPORATION

(subsidiary of Millennium International Group)

c/o Guzin & Steier Law Offices
4525 Wilshire Boulevard, Suite 201, Los Angeles, California 90010
Tel: (+1 323) 932 1600
e-mail: foxjet@dslextreme.com

PRODUCT DEVELOPMENT DIRECTOR: Barry Marshall

In May 2006, Millennium Aerospace of California purchased Foxjet International and its rights to the Foxjet light business jet which had been developed by Tony Fox during the late 1970s but which had not reached the prototype stage. Company is investigating locations for possible manufacturing plants, primarily in Gulf Coast region, and plans further aviation-related ventures.

MILLENNIUM FOXJET II

TYPE: Light business jet.

PROGRAMME: Original Foxjet F600 announced in 1977; retrospectively hailed as first of 'very light jets'; 73 orders by 1978; four full-size mockups produced for test and demonstration; production planned by Aeronca of Middletown, Ohio, at rate of 44 per month; optimum Williams WR44-800 high-bypass turbofan was also selected for use in cruise missiles and its civilian employment was then refused by US government; lack of alternative engine forced abandonment of the project after few parts for prototype had been manufactured and half of engineering work completed; Fox returned USD1 million of deposits, including that for order placed by Bill Lear of Lear Jet; associated DialJet on-demand air taxi operation was also abandoned; last entry in *Jane's All the World's Aircraft* was 1980-81 edition.

Millennium purchased Foxjet rights as means to acquire nearly complete design; proposed modifications restricted to some use of carbon fibre; modern avionics; and new power plant. Revised design exhibited at AOPA Expo, Palm Springs, California, November 2006. Exceptionally tight development schedule includes first flight in mid-2007, followed by certification in 2008.

CUSTOMERS: Millennium revealed 100 deposits from air taxi operators and private owners had been taken by November 2006.

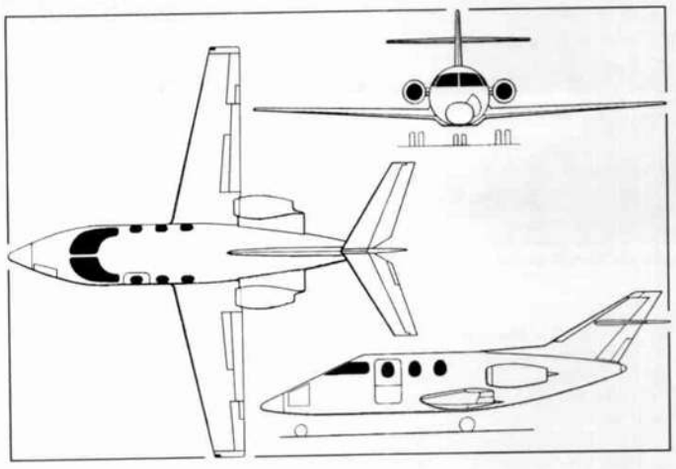
COSTS: Target price USD1.7 million (2006).

DESIGN FEATURES: Objectives of the 1970s project included lowering business jet fuel costs to some 9 cents/mile compared with 48 cents for similar aircraft (at cost of USD0.50 per US gallon); producing a business jet operable at nearly 9,000 US airfields (including grass) compared with only 900 available to larger aircraft; and unit cost of USD500,000 to 700,000, or about half the cost of then-competitors.

Cantilever low-wing monoplane with engines in pods, each side of rear fuselage; moderate leading-edge sweepback; straight trailing-edge; sweptback fin and cruciform, sweptback, variable incidence tailplane. Tab in rudder. Wing design by Branson Aircraft Corp; NACA 65 Series laminar flow section, commercial name 'Foxjet Super-Flow'; available for simple modification to supercritical form when required by future power increase.

FLYING CONTROLS: Conventional and manual. Trim tab in port aileron. Electrically operated, modified Fowler type single-slotted light alloy trailing-edge flaps. Hydraulically operated spoilers, forward of flaps, serve also as airbrakes.

Full-scale mockup of original Foxjet 1154694



Original Foxjet F600 *(Dennis Punnett)* 1158928

STRUCTURE: Generally fail-safe light alloy structure, but carbon fibre in selected areas. Semi-monocoque fuselage of circular cross-section; honeycomb pressure bulkheads and baggage deck.

LANDING GEAR: Tricycle type; retractable. Twin wheels on each unit. Hydraulic retraction; main units retract inward; nose unit aft. Manually operated emergency hydraulic system. Oleo-pneumatic shock absorbers. Main wheels have low-pressure tires size 5.00-5. Hydraulically steerable nosewheel unit, with water-chine, tire size 11x4.00-5. Hydraulic disc brakes on main wheels.

POWER PLANT: Two 6.01 kW (1,350 lb st) Pratt & Whitney Canada PW615 turbofan engines. Integral wing fuel tanks, total capacity 826 litres (218 US gallons; 182 Imp gallons); refuelling port above each wing.

ACCOMMODATION: Pilot and three to five passengers, in pairs. Dual controls optional. Current interior design by Porsche. Two-piece door (upward-hinged top, and downward-hinged lower portion with integral steps) on port side forward of wing. Emergency exit starboard side Accommodation air-conditioned and pressurised. Birdproof windscreen with pneumatic system for rain removal, defogging and defrosting. Equipment access door on port side of nose. Baggage hold aft of cabin.

SYSTEMS: Electrical anti-icing of each wing leading-edge at root and engine air intakes; optional pneumatic de-icing boots for remainder of leading-edges. Pressurisation system with max differential of 0.59 bar (8.5 lb/sq in), providing a cabin altitude of 2,440 m (8,000 ft) to FL410. Electrical system. Hydraulic system, with hydraulic backup. Pneumatic system. Oxygen system.

AVIONICS: Under revision.

DIMENSIONS, EXTERNAL:

Wing span	9.64 m (31 ft 7¾ in)
Wing aspect ratio	8.0
Length overall	6.265 m (20 ft 6½ in)
Max diameter of fuselage	1.40 m (4 ft 7 in)
Height overall	3.12 m (10 ft 2¾ in)
Tailplane span	4.06 m (13 ft 4 in)

DIMENSION, INTERNAL:

Cabin length	3.66 m (12 ft 0 in)

AREAS:

Wings, gross	11.61 m^2 (125.0 sq ft)

WEIGHTS AND LOADINGS:

Max fuel weight	652 kg (1,418 lb)
Max T-O weight	2,154 kg (4,750 lb)
Max wing loading	185.5 kg/m^2 (38.00 lb/sq ft)
Max power loading	179 kg/kN (1.76 lb/lb st)

PERFORMANCE:

Max level speed	356 kt (660 km/h; 410 mph)
Normal cruising speed	320 kt (593 km/h; 368 mph)
Stalling speed, flaps down	74 kt (137 km/h; 86 mph)
Range with max fuel	1,215 n miles (2,250 km; 1,400 miles)

Original Mooney Aircraft Corporation formed in Wichita, Kansas, 1948; produced single-seat M-18 Mite until 1952 (total 282); M20 family in production since then, briefly augmented in 1969-70 by 61 M10 Cadets (Alon A-2A Ercoupe with distinctive Mooney fin). Mooney and Aerospatiale (Socata) announced joint development of TBM 700 June 1987 (see under Socata in French section), but Mooney withdrew in 1991.

Mooney Aircraft Corporation filed for Chapter 11 bankruptcy protection on 27 July 2001, continuing production while restructuring the company; delivered 29 aircraft in 2001 against year's target of 70. Announced on 16 November 2001 that extended financing had been received to continue operations, including spares support, pending sale of the company. On 8 February 2002 AASI announced it had purchased Congress Financial Corporation's position as senior creditor and intended restarting production as well as moving its own production facility to Kerrville.

AASI subsequently reorganised as Mooney Aerospace Group, Ltd, with Mooney Airplane Company as wholly owned subsidiary. On 1 August 2003 Mooney signed an agreement with BAE Systems, Foxton Investments, the Kaskol Group of Russia, and Venture Industries, to form an international partnership for the development and marketing of a range of new-generation aircraft under the Mooney name. In late May 2004, Allen Holding Finance Ltd bought the stock of Mooney Airplane Company from its parent Mooney Aerospace Group Ltd for USD4 million. Under the terms of the agreement Allen Holding assumed more than USD21 million of MAC's debt owed to the secured debenture holders and also agreed to provide D4 million of new capital within 30 days. MAC received FAA production certificate on 26 June 2002 for Eagle 2, Ovation 2 and Bravo 2. Employment at Kerville totalled 186 in May 2004. Total of 10 aircraft delivered in 2002, all in final quarter, 36 in 2003, 36 in 2004, 85 in 2005, and 56 in the first nine months of 2006.

On 23 February 2006, Mooney marked its 60th anniversary with delivery of the 11,000th aircraft produced since the first M-18 Mite was delivered in 1948. The milestone aircraft was an Ovation2 GX delivered to a customer in New Jersey.

MOONEY M20M BRAVO

TYPE: Four-seat lightplane.

PROGRAMME: Wood-winged M20 prototype first flew 10 August 1953; some 700 of early series built before design translated into all-metal with M20B, introduced in 1961. Progressed through several further subvariants, of which M20M announced 2 February 1989 as TLS (Turbo Lycoming Sabre, with 201 kW; 270 hp TIO-540-AF1A); Bravo introduced in 1996, followed by Bravo DX on 2 April 2003 and Bravo GX in February 2004.

Mooney M20M Bravo DX *(Paul Jackson)* 1159738

CURRENT VERSIONS: **Bravo DX:** Introduced at EAA Sun 'n' Fun at Lakeland 2 April 2003. Features Garmin avionics suite including GNS 530/430, GDL 49 Nexrad weather uplink, GTX 330 Mode S transponder and Bendix/King KFC 225 autopilot/flight director, 3.28 m^3 (115.7 cu ft) oxygen system, Precise Flight speedbrakes, and six-way adjustable leather seats as standard; Honeywell K1825 electronic HSI, TKS anti-icing system and electric 17,000 BTU air conditioning system optional.

Bravo GX: Announced 10 February 2004. Features Garmin G1000 all-glass integrated avionics comprising dual 10.4 in XGA high-resolution colour LCD primary flight (PFD) and multifunction (MFD) displays; digital audio control panel with integrated marker beacon and clearance playback capability; dual integrated radio modules that provide IFR oceanic-approved GPS, VHF navigation with ILS and VHF communication, with 16-watt transceivers and 8.33 kHz channel spacing; Mode S transponder with Traffic Information Service; advanced solid-state Attitude and Heading Reference System (AHRS) with rapid alignment whether on the ground or in the air; digital air data computer; Mid-Continent 3400 backup attitude indicator; worldwide terrain database depicting topographic information and relative terrain; and (US specification aircraft only) XM satellite radio receiver featuring full-colour, graphical weather information via digital datalink and 101 channels of CD-quality audio. The G1000 installation adds 16 kg (36 lb) to the aircraft's empty weight. Deliveries from third quarter 2004.

Bravo GX 60th Anniversary Edition: Limited edition to mark company 60th anniversary, announced 3 November 2005. New interior features include redesigned door latches, handles and armrests, optional rear bench seat with seat belts for two adults or three children, redesigned console with new cup holders, redesigned seat cushions, bolsters and stitching, overhead lights and air outlets integrated into a new brushed metal assembly, relocated air outlets at pilot's feet, and new exterior colour schemes.

CUSTOMERS: Total of 315 TLS/Bravos delivered by June 2001 halt of production. Deliveries resumed in July 2002. Da Kine, Hawaii Inc of Hood River, Oregon, became the first customer for a Mooney Airplane Company-built aircraft (a Bravo), with an order announced on 25 July 2002. Five delivered in 2003, nine in 2004, including one to German customer, 20 in 2005, and five in the first nine months of 2006.

COSTS: Bravo DX USD439,950 (2004); Bravo GX USD475,000 (2006), both standard equipped.

DESIGN FEATURES: High-efficiency touring aircraft, originally designed by Mooney brothers. Low wing and mid-mounted tailplane; flying surfaces of characteristic Mooney 'reversed' configuration with unswept leading-edges and sharply forward-swept trailing-edges.

Wing section NACA $63_2$182-215 at root, $64_1$181-412 at tip; dihedral 5° 30'; incidence 2° 30' at root, 1° at tip; wing swept forward 2° 29' at quarter chord.

FLYING CONTROLS: Conventional and manual. Sealed gap, differential ailerons; fin and tailplane integral so that both tilt, varying tailplane incidence for trimming; no trim tabs; electrically actuated single-slotted flaps; electric rudder trim; Precise Flight speed brakes. Control surface movements: ailerons +14° 30'/-8°, elevator ±22°, rudder ±24°, flaps -10° T-O and -33° landing.

STRUCTURE: Single-spar wing with auxiliary spar out to mid-position of flaps; wing and tail surfaces covered with stretch-formed wraparound skins. Steel tube cabin section covered with light alloy skin; semi-monocoque rear fuse-lage with extruded stringers and sheet metal frames.

LANDING GEAR: Electrically retractable levered suspension tricycle type with airspeed safety switch bypass. Nosewheel retracts rearward, main units inward into wings. Rubber disc shock-absorbers in main units. Cleveland mainwheels, size 6.00-6 (6-ply), and steerable nosewheel, size 5.00-5 (6-ply). Tyre pressure, mainwheels 2.07 bar (30 lb/sq in), nosewheel 3.38 bar (49 lb/sq in). Cleveland hydraulic single-disc (double optional) brakes on mainwheels. Parking brake.

POWER PLANT: One 201 kW (270 hp) turbocharged Textron Lycoming TIO-540-AF1B flat-six engine, driving a McCauley B3D32C417/82NRD-7 three-blade, metal propeller. Two integral fuel tanks in inboard wing leading-edges, with a combined capacity of 386 litres (102 US gallons; 84.9 Imp gallons); optional additional tank increases capacity to 492 litres (130 US gallons; 108 Imp gallons). Two-piece nose cowling is of glass fibre/graphite composites construction.

ACCOMMODATION: Cabin accommodates four persons in pairs on individual vertically adjusting seats with reclining back, armrests, lumbar support and headrests; side armrests removable in rear seats. Front seats have inertia reel shoulder harnesses. Dual controls standard. Overhead ventilation system. Cabin heating and cooling system, with adjustable outlets and illuminated control. One-piece wraparound windscreen. Tinted Plexiglas windows. Rear seats removable for freight stowage. Rear seats fold forward for carrying cargo. Single door on starboard side. Compartment for 54 kg (120 lb) baggage behind cabin, with access from cabin or through door on starboard side. Amsafe inflatable restraint seatbelts optional from third quarter 2004.

SYSTEMS: Dual 70 Ah 28 V alternators, dual 24 V 10 Ah batteries, voltage regulator and warning lights, together with protective circuit breakers. Oxygen system, capacity 3,259 litres (115 cu ft), with masks and overhead outlets, standard. TKS known ice protection system and air conditioning optional.

AVIONICS: Standard equipment (Bravo) comprises Garmin GNS 530 nav/com/GPS, GNS 430 with GI 106A indicator, transponder/encoder, two-axis autopilot, and slaved HSI. Goodrich WX-500 Stormscope and SkyWatch optional. Bravo DX avionics as under Current Versions, above.

EQUIPMENT: Standard equipment includes attitude indicator, IFR directional gyro, two electric fuel quantity gauges, electric OAT gauge, CHT and EGT gauges, Precise Flight speed brakes, push-pull tube-actuated flight control system, annunciator panel; navigation lights, wing-mounted dual landing/taxying lights, internally lit instruments with rheostat; sound-damping composites interior, vertically adjusting front seats, wing jackpoints and external tiedowns, fuel tank quick drains, auxiliary power plug, heated pitot tube, polished propeller spinner, epoxy polyimide and conversion anti-corrosion treatment, external polyurethane paint finish, dual static ports with drains, and alternate static air source.

The following data refer to the Bravo GX:

at FL250 ..... 214 kt (396 km/h; 246 mph)
Stalling speed: flaps and wheels up ..... 66 kt (122 km/h; 76 mph)
flaps and wheels down ..... 59 kt (109 km/h; 68 mph)
T-O to 15 m (50 ft) ..... 671 m (2,200 ft)
Max rate of climb at S/L ..... 344 m (1,130 ft)/min
Max certified altitude ..... 7,620 m (25,000 ft)
Max range with standard fuel, with reserves ..... 1,150 n miles (2,130 km; 1,323 miles)
Endurance ..... 6 h 42 min
Max range with optional fuel, with reserves ..... 1,500 n miles (2,778 km; 1,726 miles)

MOONEY M20R OVATION

TYPE: Four-seat lightplane.

PROGRAMME: Prototype (N20XR) rolled out April 1994; first flight May 1994; FAA certification June 1994. Similar M20S Eagle certified February 1999, but discontinued in 2003.

CURRENT VERSIONS: **M20R Ovation2:** Baseline version, superseded Ovation; unveiled at the AOPA Convention on 22 October 1999. A limited edition Mooney Ovation2 Platinum Edition, with advanced avionics and instrumentation, plus airframe and cabin upgrades, has been introduced. An Ovation2 which made its first flight on 18 June 2002 was the first new production Mooney following the formation of Mooney Aerospace Group, Ltd.

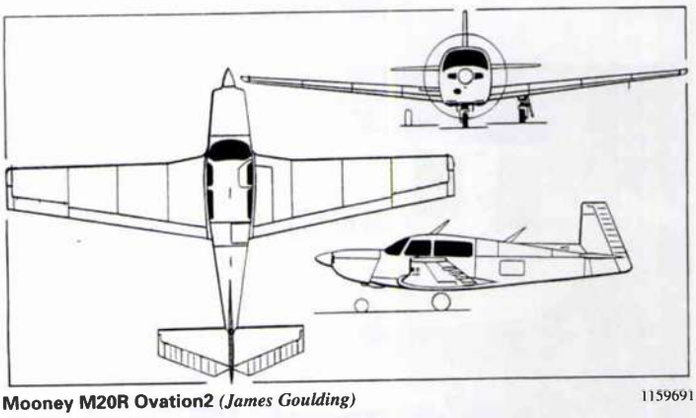
Ovation2 DX Freedom: Limited edition introduced at EAA Sun 'n' Fun at Lakeland 2 April 2003. Features thin-blade, McCauley two-blade propeller providing a 6 kt (11 km/h; 7 mph) increase in cruising speed at FL80; Garmin avionics suite including GNS 530/430, GDL 49 Nexrad weather uplink, GTX 330 Mode S transponder and Bendix/King KFC 225 autopilot flight director; six-way adjustable leather seats with adjustable lumbar support and Precise Flight speedbrakes as standard; 3.28 m³ (115.7 cu ft) oxygen system, TKS anti-icing system and 25,000 BTU air conditioning system optional.

Ovation2 GX: Announced 10 February 2004. Features Garmin G1000 all-glass integrated avionics comprising dual 264 mm (10.4 in) XGA high-resolution colour LCD primary flight (PFD) and multifunction (MFD) displays; digital audio control panel with integrated marker beacon and clearance playback capability; dual integrated radio modules that provide IFR oceanic-approved GPS, VHF navigation with ILS and VHF communication, with 16-watt transceivers and 8.33 kHz channel spacing; Mode S transponder with Traffic Information Service; advanced solid-state attitude and heading reference system (AHRS) with rapid alignment whether on the ground or in the air; digital air data computer; worldwide terrain database depicting topographic information and relative terrain; (US specification aircraft only) XM satellite radio receiver featuring full-colour, graphical weather information via digital datalink and 101 channels of CD-quality audio; and Mid-Continent 3400 backup electric attitude indicator. The G1000 installation adds 16 kg (36 lb). First Ovation2 GX is c/n 29-0333.

Ovation3: Announced 1 June 2006. Based on Ovation2 GX airframe and equipment, as described, but with 231 kW (310 hp) Teledyne Continental Platinum IO-550-G/AP normally aspirated engine affording up to 9 kt (17 km/h; 10 mph) increase in maximum cruising speed at optimal altitude and reduced take-off run. Max T-O weight 1,530 kg (3,374 lb); max wing loading 94.1 kg/m (19.28 lb/sq ft); max power loading 6.62 kg/kW (10.88 lb/hp); cruising speed at 2,438 m (8,000 ft) 196 kt (363 km/h; 226 mph); T-O run 274 m (900 ft); max rate of climb at S/L 396 m (1,300 ft)/min; max range with standard fuel and reserves 1,860 n miles (3,445 km; 2,140 miles); max range with optional fuel and reserves 2,400 nm (4,445 km; 2,762 miles). First delivery June 2006.

Ovation2 GX 60th Anniversary Edition: Limited edition to mark company's 60th anniversary, announced 3 November 2005. New interior features include redesigned door latches, handles and armrests, optional rear bench seat with seat belts for two adults or three children, redesigned console with new cup holders, redesigned seat cushions, bolsters and stitching, overhead lights and air outlets integrated into a new brushed metal assembly, relocated air outlets at pilot's feet, and new exterior colour schemes.

Mooney M20R Ovation2 DX Freedom *(Paul Jackson)* 1159743



Mooney M20R Ovation2 *(James Goulding)* 1159691

CUSTOMERS: Most sold in USA, but others exported to Brazil, France, Germany, Israel, Italy, Paraguay, South Africa, Switzerland, Thailand and UK; orders include three for Western Michigan University. Total of 280 Ovations and 62 Eagles had been registered before Mooney reconstituted in February 2002; 65th and final Eagle completed in 2003. Ten delivered in 2002, comprising eight Ovations and two Eagles, 19 Ovation2s, 11 Ovation2 DXs, and one Eagle 2 in 2003, 28 Ovation2 DXs in 2004, one Ovation2 DX and 64 Ovation2 GXs in 2005, and 51 Ovation2 GXs in the first nine months of 2006. An Ovation2 GX (N903DS, c/n 29-0421) delivered on 23 February 2006 to Dennis F Strigl of New Jersey was the 11,000th Mooney produced since the first M-18 Mite was delivered in 1948.

COSTS: Ovation USD319,950; Ovation2 DX USD389,950; (both 2004); Ovation2 GX USD425,000 (2006); Ovation3 USD453,000 (2007).

DESIGN FEATURES: Combines airframe of M20M Bravo (which see) with normally aspirated flat-six engine. Completely restyled instrument panel, seats and cabin interior with sandwich-core rigid trim/soundproofing panels and leather and wool fabric upholstery.

POWER PLANT: M20R Ovation2 has one 224 kW (300 hp) Teledyne Continental IO-550-G5B flat-six engine, derated to 209 kW (280 hp), driving a McCauley 3A32C418-G/82NRC-9 three-blade, constant-speed metal propeller; Ovation2 GX has Hartzell propeller giving slight performance improvement. Standard fuel capacity 386 litres (102 US gallons; 84.9 Imp gallons); optional 492 litres (130 US gallons; 108 Imp gallons).

AVIONICS: Generally as for Mooney M20M Bravo.

EQUIPMENT: Generally as for M20M Bravo, except as detailed under Current Versions.

The following data refer to the Ovation2 GX:

DIMENSIONS, EXTERNAL:
Propeller diameter ..... 1.85 m (6 ft 1 in)

WEIGHTS AND LOADINGS:
Weight empty ..... 1,025 kg (2,260 lb)
Baggage capacity ..... 54 kg (120 lb)
Max usable fuel ..... 242 kg (534 lb)
Max T-O weight ..... 1,528 kg (3,368 lb)
Max landing weight ..... 1,451 kg (3,200 lb)
Max wing loading ..... 94.0 kg/m² (19.25 lb/sq ft)
Max power loading ..... 7.32 kg/kW (12.03 lb/hp)

PERFORMANCE:
Max cruising speed ..... 190 kt (352 km/h; 219 mph)
Stalling speed:
flaps and wheels up ..... 66 kt (123 km/h; 76 mph)
flaps and wheels down ..... 59 kt (110 km/h; 68 mph)

Mooney M20R Ovation2 GX *(Paul Jackson)* 1159741

T-O to 15 m (50 ft) ..... 494 m (1,620 ft)
Max rate of climb at S/L ..... 378 m (1,240 ft)/min
Service ceiling ..... 6,100 m (20,000 ft)
Max range with standard fuel and reserves ..... 1,860 n miles (3,445 km; 2,140 miles)
Max range with optional fuel and reserves ..... 2,400 n miles (4,444 km; 2,761 miles)

MOONEY M20TN ACCLAIM

TYPE: Four-seat lightplane.

PROGRAMME: First flown (N311TN) 16 March 2006. Announced 4 April 2006 at EAA Sun 'n' Fun Fly-In at Lakeland, Florida, where second aircraft (N312TN/c/n 31-0002) displayed. FAA certification achieved 4 January 2007, with first deliveries scheduled to follow immediately. Acclaim (Mooney Type No 31) will replace the Bravo in the Mooney range.

The description of the Mooney Bravo GX applies also to the Acclaim except as follows.

COSTS: USD495,000 standard equipped (2006).

STRUCTURE: 'Mini-fin' winglets standard.

POWER PLANT: One 208.8 kW (280 hp) Teledyne Continental TSIO-550-G turbo-normalised engine equipped with twin turbochargers and dual intercoolers, driving a Hartzell three-blade constant-speed propeller.

AVIONICS: Garmin G1000 as core system.

DIMENSIONS, EXTERNAL:
Wing span ..... 11.10 m (36 ft 5 in)

WEIGHTS AND LOADINGS:
Weight empty ..... 1,067 kg (2,353 lb)
Max power loading ..... 5.11 kg/kW (8.40 lb/hp)

PERFORMANCE:
Max cruising speed at FL250 ..... 230 kt (426 km/h; 265 mph)
Cruising speed at FL100 ..... 200 kt (370 km/h; 230 mph)
Max rate of climb at S/L ..... 378 m (1,240 ft)/min
T-O to 15 m (50 ft) ..... 494 m (1,620 ft)
Range, with reserves: standard fuel ..... 1,200 n miles (2,222 km; 1,381 miles)
optional fuel ..... 1,615 n miles (2,991 km; 1,858 miles)

Third Mooney M20TN Acclaim displayed at NBAA Convention, Orlando, October 2006 *(Paul Jackson)* 1159739

MXR

MXR TECHNOLOGIES INC

10862 Denoeu Road, Boynton Beach, Florida 33437
Tel: (+1 561) 737 63 06
e-mail: sales@mx2aircraft.com
Web: www.mx2aircraft.com
CEO & DESIGNER: Chris Meyer

Having previously built and flown a Giles G-202, Mr Meyer obtained the jigs and tools for production of that aircraft when the Giles company ceased operations in 2000. Following redesign, the resultant MX2 was marketed from 2005 onwards.

MXR MX2

TYPE: Aerobatic two-seat sportplane.

PROGRAMME: Akrotech Giles G-202 first flew 22 December 1995 as two-seat version of G-200; marketed as kit, while factory-built CAP 222 briefly offered in Europe by CAP Aviation of France.

MX2 design began 2000; prototype (N22120) first flew May 2002 as conversion of G-202 c/n 60; following further two years of development, first aircraft of initial production batch of five (N262MX, c/n 1) flew in April 2005 and made type's public debut at AirVenture, Oshkosh, July 2005. Fourth production airframe assembled by Gary Ward for McGyver Air Shows and awarded airworthiness certificate in March 2006. Third production (N263MX) completed August 2006; second then yet to fly.

CURRENT VERSIONS: **MX2:** *As described*

MXS: Single-seat; under development for 2007 Red Bull Air Races. Redesigned fuselage; increased agility.

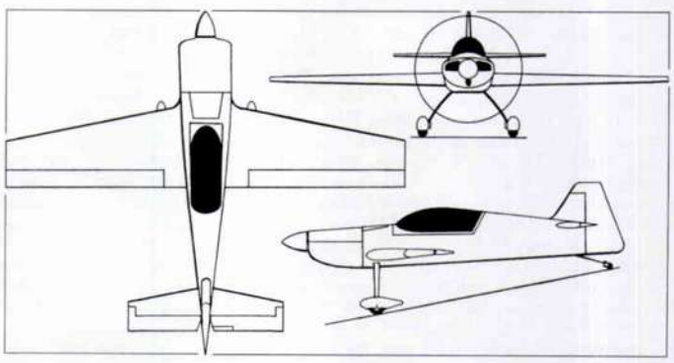
DESIGN FEATURES: Optimised for agility and speed. Robust airframe with low wing and mid-set tailplane, each with sweptback leading-edge.

Changes from G-202 include increased wing and tailplane span; lengthened nose; and redesigned interior. Roll rate more than 400°/s.

Initially marketed semi-complete, with fuselage having landing gear installed; quoted assembly time 1,000 hours; kit version may be introduced later.

FLYING CONTROLS: Full-span ailerons, each with underslung, spade-type balance; mass- and horn-balanced rudder; no flaps or aileron droop. Ailerons and elevators actuated by pushrods; rudder by cables. Trim tab on starboard elevator. Control deflections: ailerons ±25°; elevators ±33°; rudder ±30°.

First production MXR MX2 aerobatic sportplane *(Paul Jackson)* 1037974



MXR MX2 aerobatic two-seat sportplane *(Paul Jackson)* 1159829

STRUCTURE: Wholly of Toray carbon fibre, except engine mount, control hardware and landing gear.

LANDING GEAR: Fuselage-mounted spring aluminium cantilever mainwheel legs; mainwheels 5.00-5; steerable, solid tailwheel. Mainwheel speed fairings.

POWER PLANT: One 194 kW (260 hp) Textron Lycoming IO-540 flat-six as standard; uprated versions up to 283 kW (380 hp) optional. MT-Propeller MTV-9-B/C-203-20d constant-speed (hydraulic), three-blade, metal propeller. Two wing fuel tanks, each of 76 litres (20.0 US gallons; 16.7 Imp gallons) standard, 114 litres (30.0 US gallons; 25.0 Imp gallons) optional, plus fuselage tank of 68 litres (18.0 US gallons; 15.0 Imp gallons). Standard capacity 220 litres (58.0 US gallons; 48.3 Imp gallons).

ACCOMMODATION: Two pilots in tandem on 45° reclining seats under single-piece, starboard-hinged canopy/windscreen.

DIMENSIONS, EXTERNAL:
Wing span ..... 7.32 m (24 ft 0 in)
Wing aspect ratio 5.6
Length overall ..... 6.55 m (21 ft 6 in)
Height overall ..... 1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:
Cockpit width: max ..... 0.71 m (2 ft 4 in)
min ..... 0.58 m (1 ft 11 in)

AREAS:
Wings, gross ..... 9.48 m² (102.0 sq ft)

WEIGHTS AND LOADINGS:
Weight empty ..... 584 kg (1,287 lb)
Max T-O weight: Aerobatic ..... 839 kg (1,850 lb)
Normal ..... 975 kg (2,150 lb)
Max wing loading: Aerobatic ..... 88.6 kg/m² (18.14 lb/sq ft)
Normal ..... 102.9 kg/m² (21.08 lb/sq ft)
Max power loading: Aerobatic ..... 4.33 kg/kW (7.11 lb/hp)
Normal ..... 5.03 kg/kW (8.26 lb/hp)

PERFORMANCE:
Never-exceed speed (VNE) ..... 220 kt (407 km/h; 253 mph)
Stalling speed ..... 58 kt (108 km/h; 67 mph)
g limits, Aerobatic weight ..... ±14

NAGY

IMRE NAGY

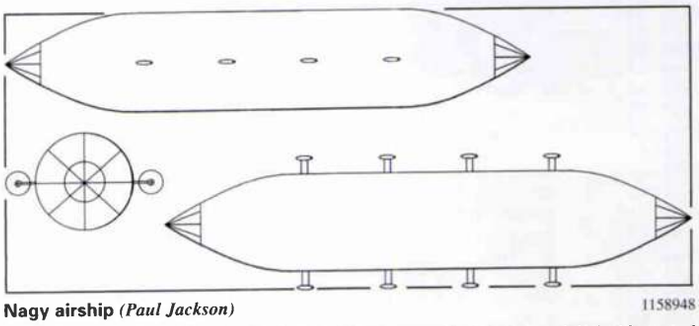
32148 Shirey Road #A, Escondido, San Diego, California 92026-4716
Tel: (+1 760) 723 37 15
e-mail: nagyairship@aol.com
Web: www.nagyairship.com
DESIGNER: Imre Nagy

Mr Nagy has applied for an international patent for an airship of innovative design, a small prototype of which has begun construction.

NAGY HIGH-SPEED AIRSHIP

TYPE: Helium rigid airship.
PROGRAMME: First reported in mid-2003. Prototype of 2-ton version (c/n 001) registered as N241H on 1 June 2004 and said to be nearing completion in September 2004, but delayed by processing of patent application. As of September 2006, efforts were being made to complete prototype by year-end. All R & D completed; all versions said to be production-ready on receipt of order.
CURRENT VERSIONS: **2-ton version:** 20-passenger prototype/POC vehicle for projected larger versions. Potential as air patrol, rescue, ambulance or media vehicle, or as 'flying home'.
10-ton version: Projected 100-passenger version. Additional applications could include airborne hospital, coast guard, military or homeland security vehicle.
100-ton version: Projected 1,000-passenger version. Possible high-density cargo or military transport or luxury travel vehicle.
COSTS: Basic unit price USD6 million for 2-ton, USD10 million for 10-ton, USD30 million for 100-ton (2004).
DESIGN FEATURES: Mainly cylindrical hull, tapering to pointed cone at each end. Crew and passenger accommodation entirely internal. Vectored-thrust propulsion units (360° travel) mounted on external outriggers each side, fore and aft. Payload capability quoted as up to 85 per cent of total body volume. Requires no ground handling crew.
FLYING CONTROLS: Computer-controlled, with GPS-based navigation. Helium recovery system eliminates need for ballast.
STRUCTURE: Described only as 'space-age stronger-than-steel fabrics' and 'stronger than rigid' frame body. Helium contained in multiple independent cells ("can not crash, even if cut in half").
Following data all provisional.

Artist's impression of Nagy High-Speed Airship 1047198



Nagy airship *(Paul Jackson)* 1158948

POWER PLANT: Four 447 kW (600 hp) engines (type unspecified) in 2-ton, eight in 10-ton and 12 in 100-ton versions. Fuel capacity (all versions) adequate for non-stop global circumnavigation.
EQUIPMENT: Hoist to upload or download passengers or cargo where landings are not possible.
DIMENSIONS, EXTERNAL (A: 2-ton, B: 10-ton, C: 100-ton):
Length overall: A ..... 45.72 m (150 ft)
B ..... 82.30 m (270 ft)
C ..... 167.64 m (550 ft)
Diameter: A ..... 10.67 m (35 ft)
B ..... 16.76 m (55 ft)
C ..... 33.53 m (110 ft)
DIMENSIONS, INTERNAL:
Total volume: A ..... 2,720 m^3 (96,000 cu ft)
B ..... 11,600 m^3 (410,000 cu ft)
C ..... 116,100 m^3 (4,100,000 cu ft)
Passenger compartment:
Length: A ..... 42.67 m (140 ft)
B ..... 76.20 m (250 ft)
C ..... 152.40 m (500 ft)
Width: A ..... 3.05 m (10 ft)
B ..... 6.10 m (20 ft)
C ..... 9.14 m (30 ft)
Height: A ..... 3.05 m (10 ft)
B ..... 6.10 m (20 ft)
C ..... 9.14 m (30 ft)
Floor area: A ..... 130.1 m^2 (1,400 sq ft)
B (2 floors, total) ..... 929.0 m^2 (10,000 sq ft)
C (3 floors, total) ..... 4,180.6 m^2 (45,000 sq ft)
WEIGHTS AND LOADINGS:
Max T-O weight: A ..... 1,814 kg (4,000 lb)
B ..... 9,071 kg (20,000 lb)
C ..... 90,718 kg (200,000 lb)
PERFORMANCE (estimated):
Max level speed: A, B, C ..... more than 173 kt (321 km/h; 200 mph)
Absolute ceiling: A, B, C ..... 21,340 m (70,000 ft)

NASA

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

300 E Street SW, Washington, DC 20546-0001
Tel: (+1 202) 358 00 00
Fax: (+1 202) 358 32 51

ASSOCIATE ADMINISTRATOR, AERONAUTICS: Lisa J Porter
CHIEF FINANCIAL OFFICER: Gwendolyn Sykes
PRESS OFFICER: Doc Mirelson

NASA continues to undertake research and development allied to aerospace technology but space science and space flight activity continues to absorb the greater share of the annual budget. For FY07, total of USD16.8 billion requested, including USD724 million for aeronautics technology. Prime NASA concerns have traditionally been, and continue to be, R&D, rather than operationally driven. In addition to programmes described here in detail, NASA funds are also allocated to a variety of projects and concept studies, including research into 'quiet' sonic booms (with Northrop Grumman), air traffic management and UAVs.

NASA AIRCRAFT TRIALS PROGRAMMES

Of some 100 aircraft operated by NASA, most are standard types assigned to specific research programmes. The fleet comprises about 35 dedicated to research and 65 to programme support; most carry civilian registrations. Main operating bases of NASA's Aerospace Technology division are:
Ames Research Center, Moffett Federal Airfield, California
Dryden Flight Research Center, Edwards AFB, California
Glenn Research Center, Cleveland-Hopkins IAP, Ohio
Langley Research Center, Langley AFB, Hampton, Virginia
Other significant aircraft operations bases are:
Johnson Space Center, Ellington ANGB, Houston, Texas
Wallops Flight Facility, Wallops Island, Virginia

Notes: Aircraft registered to NASA are not necessarily all airworthy at any one time. Does not include some temporary military assignments or B-52H 61-0025 and C-20A 83-0502

Details follow of some significant research projects.

Boeing F-15B: Original F-15B prototype (NASA837/71-0290) modified for ACTIVE (Advanced Control Technology for Integrated Vehicles) project involving thrust vectoring nozzles developed by Pratt & Whitney. Series of trials, in non-reversionary mode, undertaken in 1999, included take-offs and landings using vectoring only as well as flight to unlimited angles of attack and speeds of M2. New nozzles can turn up to 20° in any direction, permitting thrust control in pitch and yaw. ACTIVE programme is a joint venture involving NASA, the USAF's Wright Laboratory, Boeing (formerly McDonnell Douglas) and Pratt & Whitney.

ACTIVE F-15B also used to evaluate 'neural network'-based controller as opening part of intelligent flight control system (IFCS) programme; total of 15 flights accomplished during March and April 1999. Additional flights conducted by third quarter of 2003, when evaluation completed; latter phase included revolutionary 'self-learning' FCS with potential to allow damaged aircraft to be safely recovered by automatic adjustment of FCS to take into account damaged or defective surfaces and systems.

A second F-15B (NASA836/74-0141), known as the Aerodynamic Flight Facility and equipped with a flight test fixture (airborne test-bench) on the centreline pylon, flew seven sorties between 26 February and 1 April 1996 to test materials for the X-33's thermal protection system; used during 1999 for investigation of supersonic natural laminar flow of advanced wing design, carrying 0.91 by 1.22 m (3 by 4 ft) test article on centreline pylon during four test flights at speeds approaching M2 and altitudes of up to 13,715 m (45,000 ft). This aircraft recently involved in experiments into gust monitoring and aeroelasticity, with 0.45 m (1 ft 6 in) long, flexible, test wing mounted on the flight test fixture. Future projects include trials of Pulse Detonation Engine; these will involve an experimental engine suspended from a new centreline Propulsion Flight Test Fixture (PFTF) that was flown for the first time in late 2001.

One of NASA's two vintage Martin WB-57Fs, used for earth surveillance

1158810

Boeing F/A-18: F/A-18A NASA853 refurbished to serve as testbed for Active Aeroelastic Wing (AAW) programme that examines use of 'flexible wings' to research airflow over the wing and assess how this affects controllability. Following modification, aircraft rolled out at Dryden on 27 March 2002 and made initial flight on 15 November 2002, this being one of 51 sorties performed in the first phase of testing which was accomplished in 2003. Second series of trials incorporating wing-warping was intended for early 2004, after development of new flight control laws allowing wing to be twisted; this phase planned to last for three to four months. However, flying did not resume until December 2004; total of 25 flights undertaken at subsonic and supersonic speeds, with results of these permitting further alterations to control laws before final few sorties intended to demonstrate improved roll control at M1.2 and 6,100 m (20,000 ft) as well as load alleviation in wind-up turns.

Two NASA F/A-18As (NASA843 and NASA847) used for demonstration of autonomous close formation flight in 2001. Achieved automatic 61 m (200 ft) horizontal and 15 m (50 ft) lateral separation on 21 February 2001 on seventh of planned 12 sorties. This test effort also included study of wingtip vortex effect, confirming that close formation flying could offer significant fuel economies; in one test, one F/A-18 flew in wingtip vortex of another F/A-18, with subsequent analysis revealing that trailing aircraft consumed 270 kg (600 lb) less fuel than a third F/A-18 which was not part of the formation. This equates to about a 14 per cent reduction in fuel burn.

Same pair of aircraft used in early 2003 for initial phase of test project intended to ultimately develop viable automated air-to-air refuelling system for use by unmanned air vehicles. Subsequently, on 30 August 2006, one F/A-18 successfully formatted with an Omega Air Boeing 707 tanker and made contact under automatic control; several contacts were made with trailing drogue during which fuel was transferred. This demonstration was accomplished with the aid of an Octec optical tracking system employing a camera mounted on the refuelling probe that identified and locked on to drogue basket before guiding the F/A-18 into position to make contact.

Boeing 747SP: Engineering work under way to build Stratospheric Observatory For Infra-red Astronomy (SOFIA) with 2.69 m (8 ft 10 in) telescope housed in unpressurised cavity in aft fuselage and looking to port; partner is German Ministry of Science (BMFT), which delivered telescope to USA on 4 September 2002; cruise altitude 12,500 to 13,700 m (41,000 to 45,000 ft); to fly up to 160 sorties (8 hours each) per year for 20 years. US$484 million, 10 year contract secured in December 1996 by a team led by Universities Space Research Association (USRA) to design, assemble, test and operate SOFIA. Former United Airlines Boeing 747SP (N145UA) chosen from several in storage at Las Vegas, Nevada, and ferried to San Francisco in February 1997 for attention by United before being handed over to NASA; following acceptance, 747SP delivered to Waco, Texas, in May 1997 for modification and fitting out by Raytheon E-Systems; suspension assembly for telescope successfully installed by end of first quarter 2003, with new upper rigid door fitted on 20 December 2004.Several months of testing of telescope and associated systems will

NASA F/A-18B N845NA conducting its first automatic refuelling from a Boeing 707 on 30 August 2006 ***(Jim Ross, NASA)***

1158809

presage delivery to NASA Ames, from where scientific observation missions were expected to begin in 2005, although aircraft placed in storage upon completion of modification work in April 2005.

Boeing NB-52B Stratofortress: Used for aerial launch of test vehicles, with most recent activity involving X-43A Hyper-X project. After more than 40 years of service as launch platform, NB-52B was formally retired on 17 December 2004 and replaced by a B-52H (61-0025) which was delivered on 30 July 2001 and then flown to Tinker AFB, Oklahoma for programmed depot maintenance, returning on 17 April 2002. B-52H has universal pylon able to accept different adaptors and initially accommodate loads of up to 11,340 kg (25,000 lb), although it is planned to increase payload capability to more than 31,750 kg (70,000 lb).

McDonnell Douglas DC-8-72: Assigned to Airborne Science Program at Dryden, following outfitting with Jet Propulsion Laboratory (Pasadena, California) advanced airborne synthetic aperture radar and other sensor systems including imaging spectroradiometer and thermal emission and reflection radiometer. Used for convection and moisture experiments, Earth science studies and also supporting NASA investigation into ozone depletion. In first quarter of 2002, used for ice and snow studies, employing synthetic aperture radar and other sensors to gather data on how the snow process works. Previously, the DC-8 (N817NA) had deployed to the Pacific Rim to conduct studies of volcanic activity. Most recent task, in January and February 2005, involved measurement of atmospheric quality in the Arctic. Aircraft was reassigned to Wallops Island facility in late 2005 as N436NA.

NEMESIS

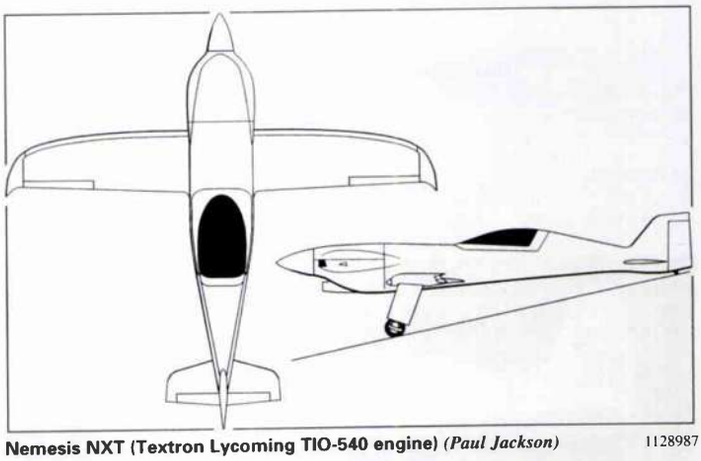
NEMESIS AIR RACING

17329 Roper Street, Mojave, California 93501
Tel: (+1 661) 824 03 33
Fax: (+1 561) 760 62 32
e-mail: info@nemesisnxt.com
PRESIDENT AND DESIGNER: Jon Sharp
DESIGN ENGINEER: Kevin Luttge

Current NXT originated in Sharp DR 90 Nemesis air racer (N18JS), built in 1991 from pressure-moulded graphite/epoxy foam core sandwich and powered by a 74.6 kW (100 hp) Continental O-200 engine; other innovations in Formula 1 racing class included natural laminar flow wing, computer lofted drawings, sidestick control, onboard data system and single-piece centre section including wing and landing gear. Won 45 of 48 contests entered between 1991 and retirement to Smithsonian National Air and Space Museum in 1999; exceeded 16 class speed records.

NEMESIS NXT

TYPE: Side-by-side sportplane kitbuilt.
PROGRAMME: Announced June 2000 as successor to Sharp DR 90 Nemesis; designation indicates Neoteric eXperimental Technology. First flight (N333XT) 10 July 2004.
CUSTOMERS: Total six kits delivered by early 2006, of which three (including prototype) then flying.
COSTS: Kit USD129,550 (2006).
DESIGN FEATURES: Formula 1 air racer; robust structure and low drag among design objectives. Low wing with progressive sweepback and medium aspect ratio; sweptback fin and tailplane; broad, flattened forward fuselage accommodating engine; cockpit behind wings. Wing section modified NASA laminar flow.
FLYING CONTROLS: Conventional and manual. Balanced ailerons; inset elevators without tabs; rudder without tab. Split flaps with 'piano' hinges. Electric trimming of rudder and elevator.
STRUCTURE: Carbon fibre airframe of FiberCote E760 pre-preg material manufactured to high degree of accuracy in Perfect Fit Technology procedure to save assembly time. Wing top and bottom skins incorporate integral spar caps; fuselage right and left sides have integral longerons and incorporate low dielectric fin; tailplane assembled from top and bottom halves; integral rollover structure. Wing permanently attached at assembly.
LANDING GEAR: Tailwheel type; mainwheels retractable. Solid tailwheel mounted in lower surface of rudder, lower half only protruding; no provision for castoring. Mainwheel legs, incorporating oleo-damped, levered suspension wheels, retract inwards by electro-hydraulic, mechanically-timed mechanism including emergency hand-pump. Mainwheel tyres 5.00-5; Grove wheels with heavy-duty axles and hydraulic brakes.
POWER PLANT: One 261 kW (350 hp) Textron Lycoming TIO-540-NXT flat-six driving a Hartzell FC7291X three-blade, 'scimitar', constant-speed propeller. Alternatively 305 kW (409 hp) TSIO-540-NXT. Fuel capacity 341 litres (90.0 US gallons; 75.0 Imp gallons).



Nemesis NXT (Textron Lycoming TIO-540 engine) ***(Paul Jackson)*** 1128987

ACCOMMODATION: Two persons, side by side in staggered seats beneath single-piece, starboard-hinged canopy/windscreen. Central sidestick control.
DIMENSIONS, EXTERNAL:
Wing span ..... 7.32 m (24 ft 0 in)
Wing aspect ratio 8.2
Length overall ..... 7.01 m (23 ft 0 in)
DIMENSIONS, INTERNAL:
Cockpit height ..... 0.89 m (2 ft 11 in)
AREAS:
Wings, gross ..... 6.50 m² (70.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty ..... 726 kg (1,600 lb)
Max T-O weight ..... 1,179 kg (2,600 lb)
Max wing loading ..... 181.3 kg/m² (37.14 lb/sq ft)
Max power loading ..... 4.52 kg/kW (7.43 lb/hp)
PERFORMANCE:
Cruising speed ..... 282 kt (523 km/h; 325 mph) IAS
Stalling speed ..... 79 kt (145 km/h; 90 mph) IAS
Max rate of climb at S/L ..... 914 m (3,000 ft)/min
T-O run ..... 762 m (2,500 ft)
Landing run ..... 1,067 m (3,500 ft)
g limits ..... +6/–4

NEW CENTURY

NEW CENTURY AEROSPORT INC

30 Leawood Drive, New Century, Kansas 66031
WORKS: New Century Airport, Olathe, Kansas
Tel: (+1 913) 390 89 00
e-mail: info@radialrocket.com
Web: www.radialrocket.com
DIRECTORS:
Jeff Ackland
Mark Burrow

New Century's Radial Rocket high-powered kitplane was first exhibited at the 2004 AirVenture at Oshkosh. Promotion was continuing in 2006, although no sales had been reported.

NEW CENTURY RADIAL ROCKET

TYPE: Tandem-seat sportplane kitbuilt.
PROGRAMME: Prototype (N364R) exhibited at AirVenture, Oshkosh, July 2004, shortly after its maiden flight.
COSTS: Kit USD49,950, excluding engine and instruments (2006). Fast-build option extra USD13,925.
DESIGN FEATURES: High-performance kitbuilt. Low, moderately tapered wing; rounded fin with low-set tailplane. Laminar flow wing designed by Jeff Viken.

New Century Radial Rocket prototype *(Paul Jackson)* 1037977

FLYING CONTROLS: Conventional and manual. Rudder and tailplane horn balances; inset aileron hinges. 'Semi-Fowler' flaps. Three-axis electric trim.
STRUCTURE: Generally of composites. Pre-moulded outer skins use pre-preg materials that are vacuum-bagged and oven-cured, thus optimised for light weight, high strength, and aerodynamic cleanliness. Carbon fibre materials in selected areas of the airframe, including wing spar caps and fuselage longerons. Fuselage consists of left and right halves, incorporating vertical stabilizer. Pre-moulded overlapping joggles for quick and accurate fuselage shell assembly. Flat pre-moulded, honeycomb core panels incorporated in fabrication of internal ribs and bulkheads for fuselage and flying surfaces. One-piece wing is supplied with forward and aft spars completed and installed; 'wet wing' fuel bays sealed with an epoxy. Ailerons and flaps are built in place on the wing fixture, for accurate alignment to the aerofoil. Optional carbon fibre skins for flight control surfaces.
LANDING GEAR: Tailwheel type; fixed or retractable. Wing-mounted, tall, streamlined cantilever main legs with integral shock-absorbers. Steerable tailwheel. Mainwheel 5.00-5 on prototype; 6.00-6 on production aircraft.
POWER PLANT: One 265 kW (355 hp) VOKBM M-14P nine-cylinder radial engine driving an MT-Propeller three-blade, constant-speed propeller. Fuel in integral wing tanks, combined capacity 318 litres (84.0 US gallons; 70.0 Imp gallons).
DIMENSIONS, EXTERNAL:

Wing span: prototype	6.71 m (22 ft 0 in)
production	7.65 m (25 ft 2½ in)
Wing aspect ratio	7.0
Length overall	6.77 m (22 ft 2½ in)
Wheel track	2.57 m (8 ft 5 in)
Tailplane span: prototype	2.44 m (8 ft 0 in)
production	3.20 m (10 ft 6 in)
Propeller diameter	2.49 m (8 ft 2 in)

DIMENSIONS, INTERNAL:

Cockpit max width: front	0.86 m (2 ft 10 in)
rear	0.76 m (2 ft 6 in)

AREAS:

Wings, gross: prototype	7.62 m² (82.0 sq ft)
production	8.36 m² (90.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	748 kg (1,650 lb)
Max T-O weight	1,111 kg (2,450 lb)

PERFORMANCE:

Never-exceed speed (VNE)	243 kt (450 km/h; 280 mph)
Max level speed	200 kt (370 km/h; 230 mph)
Econ cruising speed	174 kt (322 km/h; 200 mph)
Stalling speed: flaps up	73 kt (136 km/h; 84 mph)
flaps down	59 kt (110 km/h; 68 mph)
Max rate of climb at S/L	610 m (2,000 ft)/min
Range with 30 min reserves	1,042 n miles (1,931 km; 1,200 miles)
g limits	+6/–4

NEXAER

NEXAER

7890 Cessna Drive, Meadow Lane Airport, Peyton, Colorado 80831
Tel: (+1 719) 683 50 60
Fax: (+1 719) 683 51 90
e-mail: jeff.thomas@nexaer.com
Web: www.nexaer.com
PRESIDENT AND CEO: Paul M Klahn

Nexaer was established in August 2001 and showed a mockup of its first aircraft at AirVenture, Oshkosh, in July 2005. Prototype, built by Composicraft Inc, completed mid-2006. Workforce six in 2006.

NEXAER LS1

TYPE: Two-seat lightplane.
PROGRAMME: First flight planned October 2005, but not achieved by target date. Prototype (N103XR) completed May 2006; first 'flight' on 16 October 2006 was brief runway hop.
CURRENT VERSIONS: **SE:** Standard Edition. Optimised for US LSA category. Jabiru 2200 engine; single controls; mechanical flight instruments, including Garmin SL40 nav/com and GTX 327 transponder.
TE: Trainer Edition. Jabiru 2200 engine; dual controls; mechanical flight instruments, including SL30 and GTX 327; ballistic recovery parachute.
LE: Luxury Edition. Jabiru 3300 engine; single controls; dual EFIS; SL40, GTX 330 transponder; two-axis digital autopilot; dual GPS; ballistic parachute; luxury internal and external finish.
DESIGN FEATURES: Low-mounted, moderately sweptback wings and tailplane; sweptback fin.
FLYING CONTROLS: Conventional and manual. No flaps.
STRUCTURE: Composites, including carbon fibre cabin and Kevlar fuel tank. Ribless wing structure.
LANDING GEAR: Tricycle type; fixed.
POWER PLANT: One 59.7 kW (80 hp) Jabiru 2200 flat-four or 89 kW (120 hp) Jabiru 3300 flat-six piston engine and fixed-pitch propeller, according to version. Fuel tank in fuselage, capacity 102 litres (27.0 US gallons; 22.5 Imp gallons). Airframe also suitable for installation of Rotax 912, Teledyne Continental O-200 or Textron Lycoming O-235 engines.
ACCOMMODATION: Two persons, side by side with baggage area at rear. Upward-hinged canopy each side; fixed windscreen. Accommodation heated and ventilated.
EQUIPMENT: Exterior lighting standard.

Initial hop of Nexaer LS1 on 16 October 2006 1158849

DIMENSIONS, EXTERNAL:

Wing span	8.99 m (29 ft 6 in)
Wing aspect ratio	7.1
Length overall	7.09 m (23 ft 3 in)
Height overall	2.39 m (4 ft 6 in)

DIMENSIONS, INTERNAL:

Cockpit max width	1.37 m (4 ft 6 in)

AREAS:

Wings, gross	11.52 m² (124.0 sq ft)

WEIGHTS AND LOADINGS (Jabiru 3300 engine):

Weight empty	340 kg (750 lb)
Max T-O weight	598 kg (1,320 lb)
Max wing loading	52.0 kg/m² (10.65 lb/sq ft)
Max power loading	6.70 kg/kW (11.00 lb/hp)

PERFORMANCE (Jabiru 3300 engine):

Never-exceed speed (VNE)	160 kt (296 km/h; 184 mph)
Max level speed	120 kt (222 km/h; 138 mph)
Manoeuvring speed	105 kt (194 km/h; 121 mph)
Stalling speed	44 kt (82 km/h; 51 mph)
Max rate of climb at S/L	457 m (1,500 ft)/min
T-O run	107 m (350 ft)
Range	477 n miles (885 km; 550 miles)
g limits	+4.5/–2.0

NORTHROP GRUMMAN

NORTHROP GRUMMAN CORPORATION

1840 Century Park East, Los Angeles, California 90067-2199
Tel: (+1 310) 553 62 62
Fax: (+1 310) 201 30 23
Web: www.northropgrumman.com
CHAIRMAN, CEO AND PRESIDENT: Dr Ronald D Sugar
CORPORATE VICE-PRESIDENT AND CHIEF FINANCIAL OFFICER: Wesley G Bush
CORPORATE VICE-PRESIDENT, COMMUNICATIONS: Rosanne P O'Brien

Northrop company formed 1939 to produce military aircraft; activities extended to missiles, target drones, electronics, space technology, communications, support services and commercial products. Grumman Aircraft Engineering Corporation incorporated 6 December 1929; became major supplier of carrierborne aircraft to US Navy.

Acquisition of Grumman by Northrop completed 1 May 1994 and new corporation formed 18 May. Northrop Grumman subsequently completed acquisition of Vought Aircraft Company, with USD130 million purchase of Carlyle Group's 51 per cent interest, in August 1994. Further expansion announced on 3 January 1996, when Northrop Grumman revealed agreement to acquire the defence and electronic systems businesses of the Westinghouse Electric Corporation for USD3 billion. Finalisation of this purchase in March 1996 resulted in significant increase in products and technologies offered by Northrop Grumman. A major addition, finalised in July 1999, was that of Teledyne Ryan Aeronautical at cost of approximately USD140 million. Subsequently, in early April 2001, Northrop Grumman completed acquisition of Litton Industries Inc; value of this acquisition estimated at USD5.1 billion (including USD1.3 billion net debt). Another acquisition, announced on 20 April 2001, involved purchase of Electronic and Information Systems Group of Aerojet-General Corporation for USD315 million. Further growth followed on 30 November 2001, with acquisition of Newport News Shipbuilding, manufacturer of nuclear-powered submarines and aircraft carriers. In first quarter of 2002, Northrop Grumman announced merger with TRW Inc; deal finalised by 1 July, when Northrop Grumman revealed details of USD7.8 billion purchase. TRW Systems renamed Northrop Grumman Mission Systems and TRW Space and Electronics renamed Northrop Grumman Space Technology. Agreement concluded in January 2006 with Hindustan Aeronautics Ltd of India, that could lead to HAL eventually producing aircraft assemblies and components for the E-2 Hawkeye. Workforce totalled 125,000 in early 2005. Revenue of USD29,853 million achieved in 2004, compared with USD26,396 million in 2003 and USD17,406 million in 2002.

Northrop Grumman now organised into seven operating sectors as follows:

ELECTRONIC SYSTEMS Responsibilities include the development and production of radar and electronic systems for installation in the F-16 Fighting Falcon, F-22 Raptor, B-1B Lancer, AH-64D Apache Longbow, C-130 Hercules, E-3 Sentry and Boeing 737 AWACS and E-8C Joint STARS. Teamed with Rafael of Israel for sale and production of Litening II target-designation and navigation pod. Revenues for 2004 were USD6,417 million, compared with USD6,039 million in 2003 and USD5,326 million in 2002. Headquartered at Linthicum, Maryland; workforce totalled 22,000 in December 2002. Development, integration and manufacturing expertise also embraces military airborne, space and undersea radar, surveillance and reconnaissance systems, air defence systems, tactical communications equipment, anti-submarine warfare sensors and systems, submersibles, mine countermeasures equipment, marine systems and shipboard instrumentation. Radar systems are produced for civil air traffic control agencies in the USA, Europe, Africa, the Middle and Far East, Asia and Latin America.

INFORMATION TECHNOLOGY Headquartered at McClean, Virginia. Wholly owned subsidiary, now including much of Litton, provides technical engineering, project management and support resource services for information technology systems, plus technical and professional services in operations and maintenance.

MISSION SYSTEMS At Reston, Virginia.

INTEGRATED SYSTEMS *As described.*

SHIP SYSTEMS At Pascagoula, Mississippi.

NEWPORT NEWS Production and assembly of nuclear-powered submarines, warships and aircraft carriers.

SPACE TECHNOLOGY At Redondo Beach, California.

INTEGRATED SYSTEMS

Tel: (+1 310) 332 10 00
Fax: (+1 310) 332 73 10
Web: www.is.northropgrumman.com
CORPORATE VICE-PRESIDENT AND PRESIDENT, INTEGRATED SYSTEMS: Scott J Seymour
DIRECTOR OF COMMUNICATIONS: Wendell D Bugg

Having divested itself of the aerostructures business, Integrated Systems now functions as prime contractor for the B-2A Spirit stealth bomber and the E-8C Joint STARS airborne targeting and battlefield management system, while continuing production of the E-2C Hawkeye for the US Navy. Serves as principal subcontractor for the F/A-18 (see Boeing) and is teamed with Lockheed Martin on the F-35 JSF programme. Other work includes modification and support of the EA-6B Prowler, F-5 Tiger II and Fairchild A-10 Thunderbolt II. Also engaged in production and support of UAVs for reconnaissance, surveillance and deception as well as aerial target systems.

Revenues for 2004 were USD4,747 million, compared with USD3,851 million in 2003; workforce totalled 13,400 in early 2004.

Operating elements of Integrated Systems are organised into business areas, with responsibilities as described.

Air Combat Systems

1 Northrop Grumman Avenue, El Segundo, California 90245-2804
Tel: (+1 310) 331 36 16
SECTOR VICE-PRESIDENT: Gary Ervin
MANAGER, COMMUNICATIONS: James F Hart

B-2 Spirit, F/A-18 Hornet/Super Hornet, F-35 Joint Strike Fighter and F-5 Tiger II/T-38 Talon. Has sites at Palmdale and San Diego, California; New Town, North Dakota; Whiteman AFB, Missouri; Tinker AFB, Oklahoma; and Hill AFB, Utah.

Airborne Early Warning And Electronic Warfare Systems

South Oyster Bay Road, Bethpage, New York 11714-3582
Tel: (+1 516) 575 51 19
SECTOR VICE-PRESIDENT: Philip A Teel
MANAGER, COMMUNICATIONS: John Vosilla

Production and continued development of E-2 Hawkeye, plus modification, repair and support of other types, including EA-6B Prowler, A-10 Thunderbolt II, C-2 Greyhound, F-5 Tiger II and S-2T Turbo-Tracker. Has sites at St Augustine and Cecil Field, Florida; Point Mugu, California, plus field support services at many other locations.

Airborne Ground Surveillance And Battle Management Systems

2000 NASA Boulevard, Melbourne, Florida 32904
Tel: (+1 321) 726 75 26
SECTOR VICE-PRESIDENT: Alan J Doshier
MANAGER, COMMUNICATIONS: James Stratford

Support and upgrading of E-8C Joint STARS, plus associated advanced surveillance and battle management systems; currently developing new surveillance systems as part of Multi-Platform Radar Technology Insertion Program (MP-RTIP) for USAF E-10A multisensor command and control aircraft. Has additional site at Lake Charles, Louisiana.

Unmanned Systems

340-2C Building 2, 17066 Goldentop Road, San Diego, California 92127
SECTOR VICE-PRESIDENT: Christopher M Hernandez
MANAGER, COMMUNICATIONS: Cynthia J Curiel

Responsible for development and production of unmanned air vehicles, including Global Hawk, Fire Scout and BQM-74E. Has sites at Edwards AFB and Palmdale, California.

NORTHROP GRUMMAN E-2 HAWKEYE

TYPE: Airborne early warning and control system.

PROGRAMME:

DEVELOPMENT MILESTONES

E-2A	
First flight	21 Oct 60
First delivery	19 Jan 64
Subsequent versions	
E-2C	
First flight	20 Jan 71
First flight, production	23 Sep 72
Entered service (US Navy)	Nov 73
E-2D	
Official go-ahead (SDD contract award)	Aug 04

First flight of first of three prototypes 21 October 1960; total 59 production E-2As, of which 51 updated to E-2B by end 1971 apart from two TE-2A trainers and two converted to E-2C prototypes; first flight of E-2C prototype 20 January 1971; production started mid-1971; first flight production aircraft 23 September 1972; 219 of all E-2C versions ordered, of which 211 had been delivered by the first quarter of 2006. Flying hours by that time exceeded one million.

Northrop Grumman E-2C Hawkeye retrofitted with Hamilton Sundstrand eight-blade propellers *(Paul Jackson)* 1158240

VAW-116 (squadron) Northrop Grumman E-2C Hawkeye
(PMA Ronald A Dallatorre, USN) 1158232

CURRENT VERSIONS: **E-2C:** Current service and production version (*as detailed*). Baseline aircraft (65 built) had AN/APS-120 or AN/APS-125 radar; replaced in production by 'Group 0' version (35 built) with AN/APS-138 radar. In closing stages of 2004, US Navy possessed only four active 'Group 0' aircraft; assigned to VAW-77 at Atlanta, Georgia, these have since been retired from service.

AN/APS-139 and Allison T56-A-427 engines formed **Group I** update; first operational aircraft (163538) delivered to VAW-112 on 8 August 1989; 18 built; AN/APS-139 could detect cruise missiles at ranges exceeding 100 n miles (185 km; 115 miles); also monitored maritime traffic; radar coverage extended by AN/ALR-73 passive detection system (PDS), detecting electronic emitters at twice radar detection range. All Group I aircraft subsequently modified to either TE-2C or Group II standard. AN/APS-145 in **Group II** aircraft from December 1991; other enhancements give Group II 96 per cent expansion in radar volume, 400 per cent extra target tracking capability, 40 per cent more radar and identification range and 960 per cent increase in numbers of targets displayed. Group II added JTIDS in 1993–94; also has GPS. Final Group II aircraft for US Navy delivered in mid-2001; one since modified to TE-2C configuration. Retrofit with eight-blade propellers was due to start in 2001, with first operational example expected in fourth quarter; however, vibration problems encountered in testing caused delay and new propeller did not enter service until mid-2004. On 15 August 2005, Northrop Grumman announced completion of Group II Mission Computer Replacement Program (MCRP), whereby approximately 48 aircraft were upgraded; this involved installation of new processor and open systems, Commercial Off-The-Shelf (COTS) hardware. Benefits include predicted MTBF in excess of 8,000 hours for mission computer; reduced hardware weight from 318 kg (700 lb) to 48 kg (105 lb); lowered heat dissipation from 1,700 W to 80 W; and reduced central processing unit load time to below 30 seconds (previously in excess of 2.5 minutes).

TE-2C: Training model, based on E-2C; two conversions (158639, 158648) originally undertaken, of which one (158639) was later assigned to JTIDS development with Northrop Grumman. At least four further conversions (159105, 163029, 163848, 164110) subsequently made for training purposes with VAW-120 at Norfolk, Virginia, of which only the last mentioned was in service in October 2005. Five new-build examples to be acquired in FY04–07, with these lacking radar, but including wiring and hardware systems to facilitate future conversion.

E-2T: Originally reported to be conversion of E-2B for Taiwan, but new-build aircraft equivalent to E-2C Group I actually supplied; AN/APS-138 radar and electronic warfare upgrades. Delivery began in 1995, with further two obtained following agreement in July 1999; these to Hawkeye 2000E standard, with AN/APS-145 radar, but lacking CEC and satcom equipment. Delivery of first accomplished in USA 10 August 2004, with second following by end of year; both subsequently shipped to Taiwan, arriving there 19 May 2005. Original four aircraft being upgraded to Hawkeye 2000E standard during 2006-07. Alternative, unofficial, designation of latest Taiwanese aircraft is **E-2K**, derived from Hawkeye 2000 (E-2C 2K).

Hawkeye 2000: In December 1994, company received US$155 million contract to redefine E-2C as the Hawkeye 2000. Key element is mission computer upgrade (MCU), with new equipment based on Raytheon's Model 940.

Initial trials of upgraded mission computer installed on second Group II aircraft (164109) began with first flight on 24 January 1997 and were completed in July 1997, at which time authorisation given for low-rate initial production of new mission computer. However, early flight trials revealed software problems that delayed production of new mission computer by about a year. More ambitious technical and operational evaluations undertaken with five modified aircraft in 1999–2001. All were Group II aircraft fitted with MCU and ACIS (see below) elements of proposed Hawkeye 2000; first two delivered to Patuxent River for initial evaluation by May 1999. At least four to Point Mugu from August 1999, joining VAW-117 for operational evaluation from October, with latter phase including deployed duty aboard a carrier for full battlegroup operations. In meantime, another E-2C (163849) used as testbed for satcom, vapour-cycle cooling upgrade and Navy's USG-3 co-operative engagement capability (CEC) package, following first flight in April 1998; latter results in addition of 1.37 m (4 ft 6 in) antenna dish under belly containing omnidirectional transceiver that connects with command centres on parent aircraft carrier and surface combatant warships; provision of satcom evident through addition of cone-shaped fairing on top of rotodome.

New mission computer is less than half the weight of L-304, one-third of volume, and offers 15 times the processing power; other improvements for Hawkeye 2000 include government-furnished advanced control indicator set (ACIS), satellite-based voice and data communications capability, a new Honeywell vapour-cycle cooling system, air-to-air refuelling capability (if required) and inclusion of equipment and systems that form part of Navy CEC package. MCU and ACIS make use of commercial off-the-shelf technology incorporating open architecture.

In April 1999, contract awarded for 24 aircraft for US Navy (21 Hawkeye 2000s) as five-year procurement package, Taiwan (two Hawkeye 2000Es) and France (one Group II Hawkeye); in early 2003, US Navy announced intention to award second multiyear procurement contract, for total of eight aircraft to be acquired at rate of two per year during FY04 to FY07, with first delivery programmed for January 2007. Five will be configured as TE-2C trainers, lacking mission system. First deployment of Hawkeye 2000 with US Navy by VAW-117 squadron in 2003. Export-configured Hawkeye 2000s lack CEC and satcom facilities.

E-2D: Originally known as **Advanced Hawkeye**, with E-2D designation formally assigned in July 2004, but not officially announced until March 2005. Full-scale development began in early August 2003, following award of system development and demonstration (SDD) contract to Northrop Grumman. Total of USD1.9 billion to be invested in new version by 2012, of which USD413.5 million will go towards developing new space-time adaptive UHF radar; Lockheed Martin Naval Electronics and Surveillance Systems is prime contractor for radar, with Northrop Grumman Electronic Systems furnishing multiple solid-state transmitters and Raytheon providing receivers. The new radar, designated AN/APY-9 by 2006, will feature an L-3 Communications Randtron Antenna Systems UHF electronically scanned ADS-18S array in the existing rotodome and is expected to have twice the range of the current AN/APS-145 radar, as well as superior performance in eliminating clutter and ability to track small targets like cruise missiles. BAE Systems responsible for IFF system. Critical design review (CDR) of new radar undertaken in early 2005 and was reported to be 'very successful'; overall aircraft CDR completed in November 2005.

Other features include surveillance infra-red search and track (SIRST) system, modular communications equipment, multisensor integration and tactical ('glass') cockpit featuring three flat-panel displays, with latter enabling co-pilot to augment mission system operators by performing some tactical functions. Airframe structure strengthened and lightened through application of improved manufacturing techniques, but without recourse to composites. US Navy is prime customer, but another potential buyer is UK Royal Navy, which has emerging requirement for new AEW platform to operate from future aircraft carrier. US planning calls for E-2D to augment traditional AEW roles with increasing emphasis on battle management, land-sea-air connectivity, surveillance, electronic support measures, SAR, emergency air traffic control and border and EEZ patrol.

Communication suite to be greatly expanded and include additional satellite communication systems, plus multiple AN/ARC-210 radios with MIDS tactical datalink and Block 2 CEC sensor datalink. E-2D also planned to be first US Navy aircraft to have Joint Tactical Radio System (replacing AN/ARC-210 units). Upgraded IFF to be produced by BAE Systems.

Power plant will be T56-A-427A version of existing Hawkeye engine, with digital electronic engine control and eight-blade Hamilton Sundstrand NP2000 propellers from outset. MTOW will exceed 25,850 kg (57,000 lb) with maximum landing weight increased to about 20,412 kg (45,000 lb). Hamilton Sundstrand also to provide new 255 kVA generator. Following tanker proximity trials, installation judged possible of refuelling probe above cockpit and funding requested in 2006.

Northrop Grumman received USD49 million pre-systems development and demonstration contract for E-2C RMP (Radar Modernization Program) in late 2001; work done under this 12-month contract concerned definition of physical architecture of future mission system. Northrop Grumman also conducted initial flight testing of new radar's transmitter, receiver, antenna and rotary coupler on an NC-130H Hercules.

Two E-2D prototypes will be utilised for SDD; keel of first aircraft laid May 2005. First flight of first development aircraft expected to take place in August 2007. Subsequent deployment planning anticipates starting procurement in FY09, with an initial batch of four aircraft for operational evaluation in 2011. Further batches of four aircraft are planned for FY10 and FY11, with additional 57 in later years, giving US Navy total fleet of 75, the minimum needed to sustain carrier battle group operations at projected levels. Peak production rate not expected to exceed eight aircraft per year. IOC expected in 2011, with full operational capability due between 2015 and 2017.

CUSTOMERS: US Navy orders for E-2C had totalled 139 by FY92, of which all delivered by March 1994. Further procurement authorised December 1994, when Northrop Grumman awarded USD122.5 million contract for start-up of new assembly line at St Augustine, Florida. Initial orders for seven Group II aircraft (four with FY95 funds, three with FY96 funds); first of these new aircraft (165293) was rolled out on 24 February 1997, flew on 22 March, and was delivered to VAW-120 at Norfolk, Virginia. Further contract in December 1996 to cover advance acquisition costs of four Group II aircraft with FY97 funds; four more ordered before April 1999 award of multiyear contract for 24 aircraft for US Navy (21), France (one) and Taiwan (two). Delivery of first new-build Hawkeye 2000 to US Navy accomplished in October 2001. Five Hawkeye 2000s delivered in 2002, then five in 2003 and three in 2004, with remainder following by second quarter of 2006; additional eight aircraft (three E-2C and five TE-2C) to follow, with delivery programmed to take place between January 2007 and September 2009. Current US Navy programme status in adjacent table:

Variant	Quantity	First aircraft
E-2C Baseline	65	158638
E-2C 'Group 0'	35	161341
E-2C Group I	18[1]	163029
E-2C Group II	36	164108
E-2C Hawkeye 2000	29[2]	165648
Total	**183**	

[1] Two aircraft later converted to TE-2C and 16 upgraded to Group II standard
[2] Includes eight aircraft for procurement in FY04-07 to sustain production until E-2D becomes available; five of these to be completed as TE-2C trainers

Major retrofit programme for USN aircraft to Group II standard was planned from FY95, but 1994 defence review established new E-2Cs more economical than retrofit; however, 16 Group I E-2Cs were upgraded to Group II at St Augustine, Florida; first returned to service on 21 December 1995. First operational squadron with upgraded Group II E-2C was VAW-123 which accepted its fourth and final aircraft on 29 April 1996.

E-2C entered service with VAW-123 at NAS Norfolk, Virginia, November 1973 and went to sea on board USS *Saratoga* late 1974; E-2C issued to 19 other squadrons, including three of Naval Reserve; current squadrons are VAW-112, 113, 116 and 117 at Point Mugu, California; VAW-115 at Atsugi, Japan; VAW-120, 121, 123 to 126 at Norfolk, Virginia, plus VAW-77 of Reserves at Atlanta, Georgia, for anti-drug smuggling surveillance duty. VAW-120 is training unit. Miramar was base of first Group II squadron, VAW-113, June 1992. VAW-113 first operational evaluation cruise in USS *Carl Vinson*, 1993. New Build Group II aircraft also issued to VAW-110 (disbanded September 1994), 112, 116 and 117. Hawkeye 2000 in process of delivery to US Navy; first operational squadron was VAW-117. VAW-116 and VAW-125 both also using Hawkeye 2000 by end of 2004, when about 15 aircraft had been accepted. VAW-113 subsequently transitioned to Hawkeye 2000 in 2005.

See table for exports. Singaporean aircraft with AN/APS-138 radar; Taiwan received E-2T with AN/APS-138 radar. Follow-on Taiwan order, for two Hawkeye 2000Es, placed in 1999, with first example handed over at St Augustine, Florida, on 10 August 2004. Israeli aircraft in storage by 1994, with three sold to Mexico in 2002; these refurbished by Israel Aircraft Industries, with first aircraft (AMP-100) handed over in Israel on 21 January 2004. Following training of Mexican personnel, this and second aircraft ferried to Mexico in June

2004; third example delivered via UK in November 2004. France signed Letter of Offer and Acceptance (LOA) in June 1995 for two aircraft; first flight of first Aéronavale aircraft on 12 March 1998, with formal roll-out ceremony at St Augustine, Florida, on 28 April 1998. Both aircraft initially retained in USA for crew training, with first E-2C (actually No 2/165456) delivered to Lann-Bihoué, France, on 14 December 1998; second in April 1999. Operating unit, 4 Flottille, formed at Lann-Bihoué January 1999. French Navy given authorisation in 1998 to purchase third Group II Hawkeye, which was delivered in late 2003 and ferried to Lann-Bihoué in February 2004.

Italy a potential customer in longer term, with requirement for at least two AEW aircraft by 2007. Egypt and Singapore said to be considering acquisition of surplus US Navy aircraft in mid-2000, with former subsequently signing contract for single example as attrition replacement; this delivered in February 2003, following upgrade to Hawkeye 2000 standard.

United Arab Emirates expected to obtain five refurbished Hawkeye 2000 aircraft from surplus US Navy stocks; possibility of sale at estimated cost of USD400 million notified to Congress on 4 September 2002. Contract was expected to be signed in first quarter of 2004, but concerns over technology transfer have caused delay and deal still not finalised by March 2006, although still then under discussion, with intention of mid-2007 purchase; aircraft will probably be fitted with in-flight refuelling probe above cockpit. India reported in early 2004 to be evaluating Hawkeye; Hawkeye 2000 demonstrated at Aero India 2005 show and apparently a candidate to satisfy Indian Navy requirement for up to six AEW aircraft, plus Coast Guard need for at least two; discussions continuing in mid-2006 but no formal request made up to that time. Malaysia also said to be contemplating purchase of E-2 in early 2005.

COSTS: Procurement of 21 new Hawkeye 2000s for US Navy cost USD1.47 billion; follow-on order for eight aircraft valued at USD706 million. Upgrading of 13 Japanese aircraft to Hawkeye 2000 standard expected to cost approximately USD400 million, with cost of Egyptian upgrade of six aircraft valued at USD174 million. System Development and Demonstration (SDD) of E-2D predicted to cost USD2.1 billion between 2009 and 2012.

DESIGN FEATURES: E-2C can cover naval task force in all weathers flying at 9,150 m (30,000 ft) and can detect and assess approaching aircraft at in excess of 300 n miles (556 km; 345 miles); AN/APS-145 has total radiation aperture control antenna (TRAC-A) to reduce sidelobes to offset jamming; radar sweeps 6 million cu mile envelope and simultaneously monitors surface ships; long-range, automatic target track initiation and high-speed processing enable each E-2C to track more than 2,000 targets simultaneously and automatically, and control more than 40 intercepts; Randtron Systems AN/APA-171 antenna housed in 7.32 m (24 ft) diameter radome, rotating at 5 to 6 rpm above rear fuselage; antenna arrays in rotodome provide radar sum and difference signals and IFF.

High-mounted tapered wing; moderately sweptback tailplane with pronounced dihedral; twin fins and twin auxiliary fins, all with sweptback leading-edges and at right angles to tailplane. Rotating, circular radar housing mounted on cabane above rear fuselage; Hawkeye 2000 has satcom antenna housing on top of radome. Nose-tow catapult attachment, arrester hook and tail bumper; wings fold hydraulically on skewed hinges to lie parallel to fuselage.

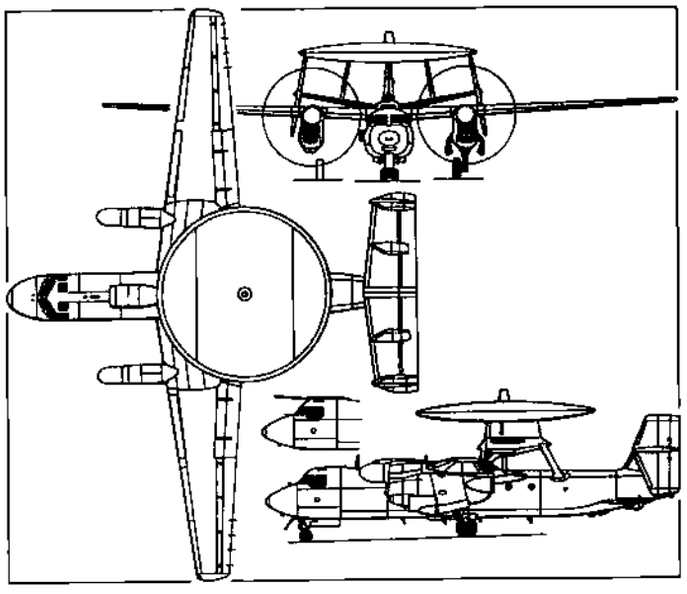
Wing incidence 4° at root, 1° at tip.

FLYING CONTROLS: Conventional and fully powered, with artificial feel; tailplane has 11° dihedral; four fins and three double-hinged rudders; long-span ailerons droop automatically when hydraulically operated Fowler flaps are extended; autopilot provides autostabilisation or full flight control. Empennage (including horizontal stabilisers, elevators, rudders, vertical fins and tabs) produced by Potez Aéronautique of France, following award of contract in mid-1997 for initial batch of five assemblies; first completed assembly delivered in second quarter of 1999.

STRUCTURE: Wing centre-section has three beams, ribs and machined skins; hinged leading-edge provides access to flying and engine controls. Fuselage conventional light metal. Composites used in parts of tail.

LANDING GEAR: Hydraulically retractable tricycle type. Pneumatic emergency extension. Steerable nosewheel unit retracts rearward. Mainwheels retract forward and rotate to lie flat in bottom of nacelles. Twin wheels on nose unit only. Oleo-pneumatic shock-absorbers. Mainwheel tyres size 36×11 (24 ply) tubeless, pressure 17.93 bar (260 lb/sq in) on ship, 14.48 bar (210 lb/sq in) ashore. Nosewheel tyres 20×5.5 (12/14 ply) tubeless. Hydraulic brakes. Hydraulically operated retractable tailskid. A-frame arrester hook under tail.

POWER PLANT: Two 3,803 kW (5,100 ehp) Allison T56-A-427 turboprops, driving Hamilton Sundstrand Type 54460-1 four-blade fully feathering reversible-pitch constant-speed propellers. These have foam-filled blades which have a steel spar and glass fibre shell. T56-A-427 engines provide 15 per cent improvement in efficiency, compared with -425 installed before 1989. US Navy and Northrop Grumman seeking to extend mission duration and undertook in-flight refuelling trials in late 2004, using F/A-18 Hornet as tanker; previously, only Israel had configured Hawkeye to be refuelled in flight; further trials accomplished by test squadron VX-20 in December 2005 and January 2006, using E-2C 165294, which fitted with test probe above cockpit. December 2005 trial involved total of 16 dry connections with drogue trailed by KC-130J Super Hercules tanker, while January 2006 programme involved F/A-18E Super Hornet deploying drogue from refuelling pod. Additional testing is expected to be performed by Naval Air Systems Command. Hamilton Sundstrand/Ratier Figeac NP2000 eight-blade, all-composites propeller flight tested on E-2C 163535 starting on 19 April 2001, following successful ground running on T56 and completion of critical design review in September 1998, with carrier suitability evaluation in USS *John F Kennedy* in November 2003. Fleet introduction began in 2004, with VAW-124 being one of first operational squadrons to receive new propeller; entire fleet to be retrofitted by end of 2006, with NP2000 also installed on French and Taiwanese Hawkeyes in 2005. In 2002, US Navy requested Northrop Grumman to undertake studies into possibility of adopting a new engine, although current plans do not include a change of engine. E-2D will have option to incorporate additional fuel cells in fixed outer wing section, extending mission duration by three hours.



Northrop Grumman E-2C Hawkeye (T56 turboprop engines) with additional scrap view of proposed refuelling probe *(James Goulding)* 1159220

ACCOMMODATION: Normal crew of five, consisting of pilot and co-pilot on flight deck, plus ATDS Combat Information Center (CIC) staff of combat information centre officer, air control officer and radar operator. Downward-hinged door, with built-in steps, on port side of centre-fuselage and three overhead escape hatches.

SYSTEMS: Pneumatic boot de-icing on wings, tailplane and fins. Spinners and blades incorporate electric anti-icing. Hamilton Sundstrand 255 kVA generator to be installed on E-2D.

AVIONICS: *Comms:* AN/AIC-14A intercom. AN/ARC-210 wideband/narrowband radio installed on Hawkeye 2000.

Radar: Lockheed Martin AN/APS-145 advanced radar processing system (ARPS) with fully automatic overland/overwater detection capability, Randtron AN/APA-171 rotodome (radar and IFF antennas). New Lockheed Martin AN/APY-9 radar being developed for installation on E-2D.

Flight: Lockheed Martin AN/ASN-92 CAINS carrier aircraft inertial navigation system, GPS, AN/ASN-50 heading and attitude reference system, Rockwell Collins AN/ARA-50 UHF ADF, AN/ASW-25B ACLS, BAE Systems standard central air data computer, ASM-400 in-flight performance monitor, Honeywell AN/APN-171(V) radar altimeter.

Instrumentation: Smiths Aerospace flight management and integrated standby instrument systems to be installed on E-2D.

Mission: BAE Systems/Hazeltine AN/APA-172 control indicator group with Lockheed Martin enhanced (colour) main display units (EMDU), which being replaced by L-3 Communications flat panel display screen during 2000–07; Litton OL-77/ASQ computer programmer (L-304) with Lockheed Martin enhanced high-speed processor, BAE Systems/Hazeltine OL-483/AP airborne interrogator system, Litton AN/ALR-73 passive detection system, AN/ARC-158 UHF datalink, AN/ARQ-34 HF datalink and JTIDS Class 2 HP terminal. Barco Display Systems graphics controllers with radar display capability and colour flat panel displays on Hawkeye 2000. Hawkeye 2000 also has AN/ALQ-217 ESM in place of AN/ALR-73 and Multi-Mission Advanced Tactical Terminal (MATT) for data communications.

DIMENSIONS, EXTERNAL:

Wing span	24.56 m (80 ft 7 in)
Wing chord: at root	3.96 m (13 ft 0 in)
at tip	1.32 m (4 ft 4 in)
Wing aspect ratio	9.3
Width, wings folded	8.94 m (29 ft 4 in)
Length overall	17.60 m (57 ft 8¾ in)
Height overall	5.58 m (18 ft 3¾ in)
Diameter of rotodome	7.32 m (24 ft 0 in)
Tailplane span	7.99 m (26 ft 2½ in)
Wheel track	5.93 m (19 ft 5¾ in)
Wheelbase	7.06 m (23 ft 2 in)
Propeller diameter	4.11 m (13 ft 6 in)

[1] Israeli aircraft withdrawn from use in 1994; three sold to Mexico in 2002 and refurbished by IAI before delivery in 2004

[2] Japanese aircraft being upgraded to Hawkeye 2000 standard; first flight of first upgraded aircraft 14 July 2004

[3] Taiwanese aircraft known as E-2Ts; initial four aircraft to be upgraded to Hawkeye 2000E standard in 2006-07.

[4] Five of the original Egyptian aircraft being upgraded to Hawkeye 2000 standard; a sixth, former US Navy aircraft, was first to be upgraded and was delivered to Egypt in February 2003 (not included in table); second upgraded aircraft delivered August 2004, with remaining four to follow by April 2007

AREAS:
- Wings, gross ... 65.03 m² (700.0 sq ft)
- Ailerons (total) ... 5.76 m² (62.00 sq ft)
- Trailing-edge flaps (total) ... 11.03 m² (118.75 sq ft)
- Fins, incl rudders and tabs:
  - outboard (total) ... 10.25 m² (110.36 sq ft)
  - inboard (total) ... 4.76 m² (51.26 sq ft)
- Tailplane ... 11.62 m² (125.07 sq ft)
- Elevators (total) ... 3.72 m² (40.06 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ... 18,363 kg (40,484 lb)
- Max fuel weight (internal, usable) ... 5,624 kg (12,400 lb)
- Max T-O weight ... 24,687 kg (54,426 lb)
- Max wing loading ... 379.6 kg/m² (77.75 lb/sq ft)
- Max power loading ... 3.25 kg/kW (5.34 lb/ehp)

PERFORMANCE:
- Max level speed ... 338 kt (626 km/h; 389 mph)
- Max cruising speed ... 325 kt (602 km/h; 374 mph)
- Cruising speed: normal ... 259 kt (480 km/h; 298 mph)
  - ferry ... 268 kt (496 km/h; 308 mph)
- Approach speed ... 103 kt (191 km/h; 119 mph)
- Stalling speed (landing configuration) ... 75 kt (138 km/h; 86 mph)
- Service ceiling ... 11,275 m (37,000 ft)
- Min T-O run ... 564 m (1,850 ft)
- T-O to 15 m (50 ft) ... 793 m (2,600 ft)
- Min landing run ... 439 m (1,440 ft)
- Ferry range ... 1,541 n miles (2,854 km; 1,773 miles)
- Time on station, 175 n miles (320 km; 200 miles) from base ... 4 h 24 min
- Endurance with max fuel ... 6 h 15 min

NORTHROP GRUMMAN E-10

TYPE: Airborne multisensor command and control system.

PROGRAMME: Now in doubt, following withdrawal of funding, programme launched when Boeing 767-400ER selected by USAF in second quarter of 2002 to serve as testbed for next-generation multisensor command and control aircraft (MC2A); may also have been chosen as platform for production system, for which decision originally expected in about July 2005 as part of Milestone B approval process, although now unlikely until after 2008 as consequence of continued uncertainty over future direction of programme and repeated substantial cuts in funding. On 14 May 2003, Northrop Grumman and Raytheon received a pre-system development and demonstration contract, worth USD215 million, for weapon system integration. E-10 will be equipped with Northrop Grumman Multi-Platform Radar Technology Insertion Program (MP-RTIP) J-band radar; this merges moving target indicator over synthetic aperture radar, resulting in enhanced ground moving target indicator capability.

Trials intended to validate this new concept of intelligence gathering undertaken with a Boeing 707 (N404PA) that flew for the first time in modified form on 18 April 2002; known as *Paul Revere*, this aircraft performed a series of operational test flights in mid-2002, including some as part of the Joint Expeditionary Forces experiment at Nellis AFB, Nevada. Key objectives to be addressed by *Paul Revere* comprise directing activities of manned and unmanned air and space sensor systems used for surveillance and reconnaissance; integration and monitoring of all-source sensor data; location, identification, designation and tracking of targets using multisensor integration software techniques; undertaking weapon-target matching; establishing tactical priorities and objectives when engaging time-sensitive targets; and accomplishment of rapid and timely bomb damage assessment following an attack.

Total procurement of E-10 was dependent upon whether USAF chose to add AMTI (airborne moving target indicator) capability or deploy another type of platform to replace the E-3 Sentry from 2035 onwards. At present, notional Increment 2 E-10 aircraft will not feature AMTI sensor (radar), but may have the potential for integrating AMTI data obtained from external source. However, recent changes in programme direction have seen mission focusing almost exclusively on detection of cruise missiles and moving ground targets.

The 767-400ER testbed was the subject of a USD126 million contract awarded to Boeing in August 2003. Delivery of the 'green' aircraft was then expected in December 2006, at which time to have been flown to Northrop Grumman's facility at Lake Charles, Louisiana, for modification to E-10 configuration. To have been fitted with prototype systems tasked with battle management, command, control, communications and intelligence. Development of this subsystem was expected to take five years and cost in excess of USD400 million.

The system development and demonstration (SDD) phase was originally due to begin in mid-2004, but was delayed by at least two years. In the interval, work continued on the key MP-RTIP sensor, with Northrop Grumman receiving a USD888 million contract in April 2004 for Phase 2 SDD work that was expected to result in application to the E-10 as well as the RQ-4 Global Hawk UAV.

Solicitation for the E-10 battle management command and control (BMC2) system began in June 2003. Three teams, headed by Boeing, Lockheed Martin and Northrop Grumman, were in competition, with all three invited in April 2004 to bid for the SDD contract. Formal submission of proposals followed in May 2004, with Northrop Grumman's system being selected in September 2004, at which time development cost was projected to be slightly over USD300 million.

In August 2006, E-10 was excluded from FY08 Program Objective Memorandum, a document outlining proposed Air Force spending plans for the period FY08 to FY13, implying its abandonment. Development continued, however, and between 7 and 9 October 2006, the contractor 'flew' a fully functional mock-up of its proposed battle management command and control (BMC2) subsystem as the central node in a network of simulated battlefield sensors, command and control elements and precision strike elements.

Critical platform design review completed mid-November 2006 to ensure all design requirements identified and that initial design by the customer/contractor team reflected those requirements; this leading to detail design; final design review; and start of modification of Boeing 767-400ER testbed airframe, which was due for delivery in unmodified state in December 2007. On 8 January 2007, Northrop Grumman announced receipt of USD256 million contract for design and analysis of E-10A Technology Development Program (TDP) through initial design review, then scheduled for May 2007. Thereafter, no further funds assigned, and programme expected to stagnate.

CURRENT VERSIONS: Three basic versions in prospect, although only the **E-10A** was funded; this will feature the primary MP-RTIP sensor and have cruise missile defence as a cornerstone capability. Under original schedule, system testbed, with MP-RTIP, expected to make maiden flight in 2009; followed by first two production aircraft in 2012 and remaining two in 2013. However, budget cut of USD115 million for FY05 appropriation imposed by Congress, with consequent impact on deployment operationally; in late 2004, in-service date expected to be 2015, while further reductions in funding being considered in early 2005 likely to delay IOC until 2018. Deployment now unlikely.

E-10B: perceived as a replacement for E-3 Sentry with enhanced air moving target indicator capability if it comes to fruition, while **E-10C** viewed as a replacement for RC-135 Rivet Joint, with enhanced sigint/comint gathering capability.

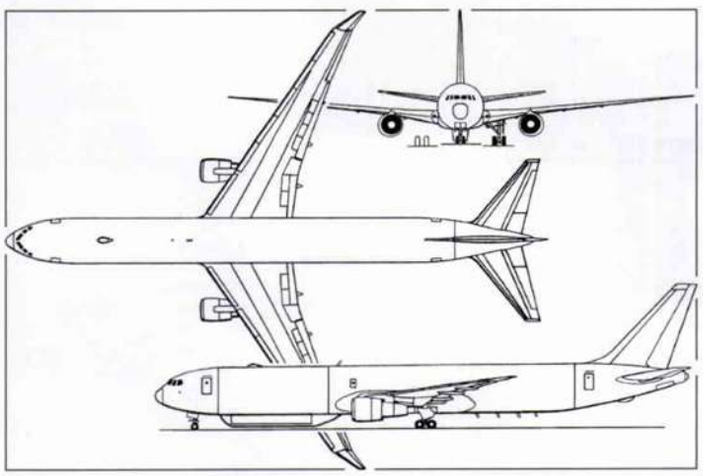
COSTS: Development and production of a system testbed and four operational E-10 aircraft as originally proposed estimated to be USD5.3 billion.

POWER PLANT: Two 282 kN (63,500 lb st) General Electric CF6-80C2B8F high-bypass turbofans.

ACCOMMODATION: BMC2 system of basic E-10A expected to require about 25 operators in addition to flight deck crew. Additional personnel will be required on E-10B and E-10C versions.

SYSTEMS: Supplemental electric power system by Hamilton Sundstrand. 1 MW auxiliary power unit located in aft cargo hold.

AVIONICS: Northrop Grumman MP-RTIP J-band radar sensor accommodated in 6.09 m (20 ft 0 in) ventral housing beneath forward fuselage section.



Northrop Grumman E-10A command and control system *(Paul Jackson)*

1164881

NORTHROP GRUMMAN OFW

TYPE: Technology demonstrator.

PROGRAMME: Oblique Flying Wing (OFW) project announced 23 March 2006 with award of USD10.3 million, 20-month DARPA Phase 1 contract to Northrop Grumman Integrated Systems. Purpose is to design an experimental, tail-less, supersonic, variable-sweep flying wing, nicknamed Switchblade, to demonstrate feasibility of such an aircraft for future military missions. Two such missions typified in 2005 programme document: (1) intelligence, surveillance and reconnaissance (ISR) with range of 5,000 n miles (9,260 km; 5,753 miles) at subsonic speed at 18,280 m (60,000 ft) with a 1,814 kg (4,000 lb) payload; and (2) bombing mission at same range with 6,804 kg (15,000 lb) payload, cruising at M1.6 and with dash speed of M2.0.

First phase ends in November 2007 and will include recommendations on whether OFW will be manned, unmanned or both; could be followed by second phase to finalise design, build and fly prototype in about 2010 or 2011. Wing span of this expected to be "at least 12 m" (39.4 ft), according to DARPA.

DESIGN FEATURES: Depending upon its speed, aircraft would vary angle of wing's leading-edge relative to the direction of flight: relatively low sweep at low speeds to highly swept at high speeds, reducing supersonic wave drag. Theoretically, an OFW could maximise its performance in every flight regime – take-off or landing, high or low altitude, supersonic or subsonic speed – offering potential benefits for missions requiring rapid deployment, long range and long endurance.

All previous oblique wing or oblique flying wing research aircraft have been subsonic. As well as being supersonic, the Switchblade demonstrator will be the first such aircraft with no tail surfaces.

Computerised impression of possible OFW configuration 1040429

OHIO

OHIO AIRSHIPS INC

PO Box 70, Mantua, Ohio 44255
Tel: (+1 866) 568 06 52
e-mail: contactus@dynalifter.com
Web (1): www.ohio-airships.com
Web (2): www.dynalifter.com
PRESIDENT: Robert Rist
VICE-PRESIDENT AND CORPORATION STRATEGIST: Brian Martin
VICE-PRESIDENT AND CHIEF FINANCIAL OFFICER: Scott Gindlesberg
ENGINEERING ADVISER: Don VanFossen

This company, founded in 1999, has the Dynalifter hybrid semi-rigid in the development stage. Design assistance is being given by Conceptual Research Corporation, Analytical Methods Inc and Composite Engineering Inc. Maiden flight was anticipated during 2006.

OHIO DYNALIFTER

TYPE: Hybrid rigid air vehicle.

PROGRAMME: Announced in 2000, following taxi tests of 14.16 m^3 (500 cu ft) subscale prototype which began in March of that year. US Patent No. 6, 311, 925 for internal structure awarded in 2001. Design concept (by Daniel Raymer) is scalable, with four different sized versions undergoing design development. CFD analysis completed in 2003. Pentagon interest reported in late 2002 as potential addition to US Civil Reserve Air Fleet; interest from Department of Homeland Security in 2004.

Barber Airport in Alliance, Ohio, selected in July 2003 as site for 30.5 m (100 ft) long, 4,645 m^2 (50,000 sq ft) shelter where, in December 2003, 36.58 m (120 ft) long Dynalifter 1 began construction; this then expected to fly late 2004 or early 2005, but not rolled out (N141DL) until 21 September 2005. Slow- and high-speed taxi tests during first half of 2006; FAA experimental airworthiness certificate awarded 10 July 2006, at which time described as "poised to begin flight testing", though maiden flight still awaited more than six months later.

CURRENT VERSIONS (PROJECTED): **PSC-1 Freighter:** Outsize, 500 US ton (446.4 UK ton) carrier, half of which is payload. Potential applications include time-definite shipping market; parcels shipping; sealed intermodal containers; discounted international shipping across oceans or undeveloped areas; light, high-volume goods; or long-loiter patrol and surveillance.

PSC-2 Sightseer/Transport: Smaller version (one-fifth size of Freighter) for advertising; coastal patrol; tundra transportation; tourist transport and passenger ferry; or other civil applications.

PSC-3: International-range version with detachable 1,699 m^3 (60,000 cu ft) cargo bay; MTOW 158,757 kg (350,000 lb); payload in 65 US ton (58 UK ton) range.

PSC-4 Dynalifter 1: Small (two-person) prototype/PoC aircraft; patroller with 454 kg (1,000 lb) payload; aimed at most tasks currently performed by helicopters.

DESIGN FEATURES: Flattened oval hull shape, of approximately aerofoil shape in side elevation, with detachable, container-loaded ventral cargo bay; option for ramp-loaded bay on PSC-1. Low/mid-mounted wings, with winglets, just aft of CG; low-mounted foreplanes at nose; engines (see Power Plant paragraph) mounted on wings and foreplanes. Conventional tail surfaces, with twin fins above and below tailplane halves.

Design allows concentrated wing lift, concentrated cargo lift, and high *g* loading from landing gear. Power/weight ratio said to be similar to that of powered sailplane and about one-fifth that of typical turboprop cargo aircraft. Ground handling weight is 75 per cent of maximum in-flight weight.

Company designates Dynalifter concept not as an airship but as a new category of helium-assisted cargo aircraft, combining static (helium) and dynamic (wings/foreplanes) lift in equal proportions, permitting it to be smaller than traditional airship for given weight of payload and to offer capability for higher speeds. It also has STOL capabilities, using medium-sized runways, and detachable nature of cargo bay can shorten turnaround times.

FLYING CONTROLS: Honeywell FBW actuators. Hull provides about one-third of total dynamic lift.

STRUCTURE: Ohio Airships (US patented) cable stay-bridge suspension. Helium cells (32 in PSC-4) of aluminium-coated nylon.

LANDING GEAR: *PSC-1:* Quadricycle type, comprising four six-wheel (46×16) bogies mounted equidistant from CG; complete steering rotation by 100° in each direction.

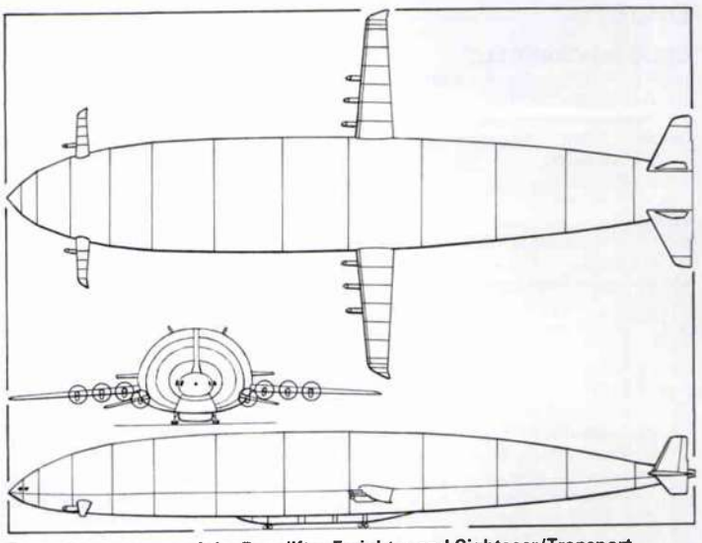
PSC-2: As PSC-1 except bogies are two-wheel (36×11).

PSC-4: Two 68.6 kW (92 hp) Rotax piston engines.

POWER PLANT: *PSC-1:* Eight 3,803 kW (5,100 shp) Rolls-Royce (Allison) T56-A-427 turboprops (three on each wing and one on each canard), each driving a four-blade propeller.

PSC-2: Four 1,864 kW (2,500 shp) Pratt & Whitney Canada PW127 turboprops (one on each wing and one on each canard).

Roll-out of prototype PSC-4 Dynalifter 1 1151474



General appearance of the Dynalifter Freighter and Sightseer/Transport *(James Goulding)* 0567103

PSC-4: Two 68.6 kW (92 hp) Rotax piston engines.

ACCOMMODATION: Minimum flight crew of four pilots in PSC-1 (two for take-off and landing, two for in-flight duties); two-person ground crew for container operation. Take-off and landing pilots only in PSC-2, and no ground crew.

SYSTEMS: Dual 207 bar (3,000 lb/sq in) engine-driven hydraulic systems, one in each wing; third (back-up) system driven by pair of redundant APUs in rear of hull. AC electrical power from four 90 kVA generators.

AVIONICS: Commercial off-the-shelf.

DIMENSIONS, EXTERNAL:

Hull:	
Length: PSC-1	302.6 m (992.8 ft)
PSC-2	176.8 m (580.0 ft)
Max width: PSC-1	51.2 m (168.0 ft)
PSC-2	29.9 m (98.0 ft)
Max depth: PSC-1	36.9 m (121.0 ft)
PSC-2	21.6 m (71.0 ft)
Fineness ratio: PSC-1, PSC-2	7
Wing span: PSC-1	163.2 m (535.5 ft)
PSC-2	73.2 m (240.0 ft)

DIMENSIONS, INTERNAL:

Hull volume: PSC-1	311,485 m^3 (11 million cu ft)
PSC-2	63,430 m^3 (2.24 million cu ft)
Cargo hold:	
Length: PSC-1	45.72 m (150.0 ft)
PSC-2	25.91 m (85.0 ft)
Width: PSC-1	12.19 m (40.0 ft)
PSC-2	6.10 m (20.0 ft)
Height: PSC-1	4.57 m (15.0 ft)
PSC-2	4.27 m (14.0 ft)
Volume: PSC-1	2,548.5 m^3 (90,000 cu ft)
PSC-2	673.9 m^3 (23,800 cu ft)

WEIGHTS AND LOADINGS:

Weight empty: PSC-1	188,618 kg (415,832 lb)
PSC-2	48,693 kg (107,350 lb)
Fuel weight: PSC-1	105,430 kg (232,432 lb)
PSC-2	21,144 kg (46,615 lb)
Payload weight:	
PSC-1: for 5,000 n mile range	102,058 kg (225,000 lb)
max	158,757 kg (350,000 lb)
PSC-2: for 3,200 n mile range	6,350 kg (14,000 lb)
max	20,412 kg (45,000 lb)
Static displacement lift: PSC-1	226,796 kg (500,000 lb)
PSC-2	45,359 kg (100,000 lb)
Dynamic lift at designed airspeed:	
PSC-1	226,796 kg (500,000 lb)
PSC-2	45,359 kg (100,000 lb)
Max T-O weight: PSC-1	453,592 kg (1,000,000 lb)
PSC-2	90,718 kg (200,000 lb)

PERFORMANCE (estimated):

Max level speed:	
PSC-1, PSC-2	120 kt (222 km/h; 138 mph)
Cruising speed: PSC-2	90 kt (167 km/h; 104 mph)
Stalling speed: PSC-1, PSC-2	40 kt (75 km/h; 47 mph)
Cruise altitude/pressure ceiling:	
PSC-2	3,050 m (10,000 ft)
Range with max payload:	
PSC-1	3,200 n miles (5,926 km; 3,682 miles)
PSC-2	1,800 n miles (3,333 km; 2,071 miles)
Range with reduced payload:	
PSC-1 with 102,058 kg (225,000 lb)	5,000 n miles (9,260 km; 5,754 miles)
PSC-2 with 6,350 kg (14,000 lb)	3,200 n miles (5,926 km; 3,682 miles)
Endurance:	
PSC-1 with 11,340 kg (25,000 lb) payload	more than 2.5 days
PSC-2 at 3,050 m (10,000 ft) with max payload	18 h

OPUS

OPUS AIRCRAFT LLC

Rockingham County/Shiloh Airport, Stoneville, North Carolina 27048
Tel: (+1 336) 882 18 31
Web: www.opusaircraft.com
OWNERS:
Frank Auman Jr
Tony Dawson

Opus purchased the rights to the Super2, originally produced by ARV, on 8 October 2004 and announced that it was to restart production at Shiloh Airport the following year. It intended to recruit a workforce of 20 and build up to 50 aircraft per year. Its aircraft have been re-engined with Rotax and Jabiru power plants.

OPUS ARV SUPER2

TYPE: Side-by-side ultralight/kitbuilt.

PROGRAMME: Initial production in UK from assembly of Scottish-built kits. Original prototype Island Aircraft ARV-1 Super2 (G-OARV) first flew 11 March 1985; see 2000–01 and earlier *Jane's All the World's Aircraft* for other non-US history.

Design rights acquired by Highlander in USA; company started construction of US prototype in September 1995 and this (N280KT) flew for first time in February 1996. By August 1996, Highlander had sold six kits, two of which were flying by year end. Programme transferred to SkyCraft in 1999. No known production by last-mentioned. Opus took over production rights in October 2004 and announced intention to resume production; two aircraft (both apparently from original UK production) registered by November 2006.

Description applies to US-built version, unless otherwise stated.

CUSTOMERS: Total of 32 (including kits) Super2s built by early 1994 (seven by Aviation Scotland). UK production then discontinued. Aircraft c/n 033 to Sweden in October 1994 as SE-KYP for demonstrations. Total of 37 aircraft believed built by early 2001. One aircraft registered in Canada in 2002 with serial number CAN-002.

COSTS: Quick-build kit USD18,950; factory-built version USD130,000 (2002).

DESIGN FEATURES: Design objective low initial cost and low maintenance cost; engine with aluminium radiator in recessed duct in rear fuselage; superplastically formed aluminium alloy pressings to save weight; shoulder location of wing with forward sweep, low panel line and close cowling of small engine combine to provide optimum view from cabin, particularly in turns. Designed to BCAR Section K and FAR Pt 21.91; intended to be suitable for home building in kit form; quoted build time 900 hours.

Wing section NACA 2415 (modified); 5° forward sweep, 2° dihedral and 3° incidence.

FLYING CONTROLS: Conventional and manual. Mass-balanced ailerons operated by torque tube through leading-edge of manually operated, three-position, plain flaps; mass-balanced rudder and elevator with trim tab.

STRUCTURE: Single-spar aluminium alloy wing, cold bonded and flush riveted. Single uncompromised main bulkhead carries wings, bracing struts, controls, seats, fuel tank and main landing gear; conventional double beam forward of main bulkhead carries firewall, nose landing gear and engine; front fuselage skinning in four panels; rear fuselage of aluminium alloy with single curvature skinning. Cowlings, fairings and wingtips of glass fibre. Tail unit conventional aluminium alloy structure with three-spar fixed surfaces; single-spar rudder and elevator. Airframe corrosion-treated.

LANDING GEAR: Non-retractable tricycle type. Cantilever main legs of tapered steel leaf spring. All three wheels size 3.50×6.0, with tyres size 13×4.00–6, pressure 1.72 bar (25 lb/sq in). Hydraulic single disc brakes. Steerable nose leg has rubber shock rings and gas-filled damper.

POWER PLANT: One 59.6 kW (79.9 hp) Rotax 912 UL flat-four engine driving two-blade propeller. Mid-West AE110 rotary engine reinstated as option in 1998, along with 2SI three-cylinder two-stroke and Jabiru 2200 four-cylinder four-stroke engines; Opus only marketing Rotax and Jabiru options. Fuel capacity 76 litres (20.0 US gallons; 16.7 Imp gallons) in single fuselage tank. Oil capacity 1.9 litres (0.5 US gallon; 0.4 Imp gallon).

ACCOMMODATION: Rearward-hinged one-piece Perspex canopy. Dual controls standard.

AVIONICS: To customers' requirements.

Comms: Optional Honeywell or Becker nav/com, Narco transponder.

Instrumentation: Three basic flight instruments plus engine instruments. Optional vacuum instruments driven by dual venturis mounted under front fuselage.

DIMENSIONS, EXTERNAL:

Wing span	8.99 m (29 ft 6 in)
Length overall	5.49 m (18 ft 0 in)
Height overall	2.29 m (7 ft 6 in)
Propeller diameter	1.07 m (3 ft 6 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.27 m (4 ft 2 in)
Max width	0.99 m (3 ft 3 in)
Max height	1.09 m (3 ft 7 in)

AREAS:

Wings, gross	8.59 m² (92.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	313 kg (690 lb)
Max T-O and landing weight	529 kg (1,168 lb)
Max wing loading	61.7 kg/m² (12.63 lb/sq ft)
Max power loading	8.89 kg/kW (14.60 lb/hp)

PERFORMANCE (at max T-O weight):

Never-exceed speed (VNE)	131 kt (243 km/h; 151 mph)
Max level speed	119 kt (220 km/h; 137 mph)
Cruising speed at 75% power	100 kt (185 km/h; 115 mph)
Stalling speed, power off, 40° flap	40 kt (73 km/h; 45 mph)
Max rate of climb at S/L	244 m (800 ft)/min
Service ceiling	3,050 m (10,000 ft)
T-O and landing run	138 m (450 ft)
T-O to 15 m (50 ft)	423 m (1,387 ft)
Landing from 15 m (50 ft)	442 m (1,450 ft)
Range	499 n miles (925 km; 575 miles)
g limits	+3.8/–2.0

PAM Group was founded in 1998 and is developing an individual lifting vehicle. There are no reports of sales or production.

'Hands off' demonstration of stability by prototype PAM 100B Individual Lifting Vehicle 1040433

PARABOUNCE

ONE GIANT LEAP LLC

PO Box 461845, Los Angeles, California 90046
Tel: (+1 323) 876 67 72
Fax: (+1 323) 882 61 72
e-mail: AGiantLeap@aol.com
Web: www.parabounce.com
PRESIDENT AND CEO: Stephen Meadows

Parabounce manufactures recreational balloons filled with sufficient helium to permit their users to leap up to 38 m (125 ft) into the air before floating back down to the ground. In late 2002, it introduced the Propbike, a small, human-powered airship. At least one example has been produced for use by the originating company, but commercial promotion does not appear to have taken place.

PRESIDENT: Ron Willocks

Previously at Longmont, Colorado, Pawnee moved to its current location in January 2005. It is marketing the Chief two-seat helicopter, although its development has been delayed by an accident.

PAWNEE CHIEF

TYPE: Three-seat helicopter kitbuilt.

PROGRAMME: Prototype (N505PA) completed in 1998. Series manufacture to be undertaken at new premises in Nebraska. Single-seat Warrior used as proof of concept development. Prototype made first flight 12 December 2005 but was later destroyed in roll-over accident. Second aircraft reported almost complete in August 2006.

DESIGN FEATURES: Optimised for higher operating altitudes and weights than most other kit helicopters.

Two-blade main and tail rotors. Cog belt drive from engine to secondary drive shaft, which turns both rotors. Right-angle transmission to main rotor through pressure-lubricated gearbox; six-bearing drive shaft to tail rotor.

Quoted built time 150 to 200 hours.

STRUCTURE: Composites pod with firewall and floor of aluminium honeycomb. Welded 4130 steel tube fuselage of triangular section, unenclosed.

LANDING GEAR: Skid type; fixed.

POWER PLANT: One 224 kW (300 hp) Perfomance Parts Ram Jet V-8 converted motorcar engine, derated from 265 kW (355 hp). Welded metal fuel tanks each side of engine, combined capacity 121 litres (32.0 US gallons; 26.6 Imp gallons).

ACCOMMODATION: Two persons, side by side. Door each side.

DIMENSIONS, EXTERNAL:

Main rotor diameter	9.14 m (30 ft 0 in)
Length overall	9.83 m (32 ft 3 in)
Height overall	2.49 m (8 ft 2 in)

DIMENSIONS, INTERNAL:

Cockpit max width	1.47 m (4 ft 10 in)

Pawnee Chief three-seat helicopter *(Paul Jackson)* 1040413

AREAS:

Main rotor disc	65.68 m² (706.9 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	689 kg (1,520 lb)
Max T-O weight	1,088 kg (2,400 lb)
Max disc loading	16.6 kg/m² (3.40 lb/sq ft)
Max power loading	4.87 kg/kW (8.00 lb/hp)

PERFORMANCE:

Cruising speed	74 kt (137 km/h; 85 mph)
Max rate of climb at S/L	305 m (1,000 ft)/min
Service ceiling	3,050 m (10,000 ft)
Range	217 n miles (402 km; 250 miles)

PIASECKI

PIASECKI AIRCRAFT CORPORATION

Second Street West, Essington, Pennsylvania 19029-0360
Tel: (+1 610) 521 57 00
Fax: (+1 610) 521 59 35
e-mail: piasecki_jw@piasecki.com
Web: www.piasecki.com
PRESIDENT: Frank N Piasecki
VICE-PRESIDENTS:
Frederick W Piasecki (Technology)
John W Piasecki (Contracts)
DIRECTOR, MILITARY REQUIREMENTS: Jimmy R Hayes
DIRECTOR, PROGRAM REQUIREMENTS: Joseph P Cosgrove

Frank Piasecki developed and flew the USA's second successful helicopter on 11 April 1943 and the world's first tandem rotor helicopter on 7 March 1945; created Piasecki Helicopter Corporation in 1946, this forming subsidiary Piasecki Aircraft Corporation in 1955, following which the original company was sold to Boeing.

Piasecki assisted PZL-Świdnik of Poland (which see) in FAA certification of the W-3A helicopter, which was awarded in May 1993. Piasecki has exclusive sales agreement for W-3A in the Americas and Pacific Rim countries. W-3A Sokół complies with FAR Pt 29, is certified for full IFR operations and has US instrumentation. Also designs and builds Air Guard and Air Scout UAV demonstrators for US Army FCS programme under contracts awarded in August 2005.

AirGuard demonstrator based on BRC 540C autogyro built by William Harris and powered by Subaru piston engine. First flight (N540CX) announced 12 July 2006; completed initial series of tests 11 September 2006; world's first autonomous autogyro, although flown with safety pilot.

Piasecki Air Guard demonstrator 1159704

PIASECKI VECTORED THRUST DUCTED PROPELLER (VTDP)

US military designation: X-49A

TYPE: New-concept rotorcraft.

PROGRAMME: Began with US Army contract to develop a compound helicopter incorporating the Piasecki VTDP concept for the AH-64 Apache and AH-1W SuperCobra. Programme

Computer-generated image of H-60/VTDP compound helicopter 0563225

objectives were met or exceeded by both the AH-64 VTCAD (Vectored Thrust Combat Agility Demonstrator) and AH-1W VTCAD configurations, resulting in increased maximum level flight speed; 50 per cent improvement in longitudinal acceleration and deceleration capability in level flight; 50 per cent decrease in turn and pull-up radii at speeds in excess of 95 kt (176 km/h; 109 mph); and handling qualities at least as good as those of the baseline AH-64A and AH-1W. In addition, tactical simulations confirmed superiority of the VTCADs over the standard Apache and AH-1W SuperCobra. Is currently a US Army programme directed towards Sikorsky UH-60 improvements.

A separate US Navy contract, awarded in 1995 and valued at USD16.1 million, involved investigation into application of VTDP technology to the AH-1W(4BW)/AH-1Z four-blade rotor configuration. The Navy contract included ground testing of the full-scale VTDP and additional flight controls simulation and testing of the 4BW/VTDP configuration.

Piasecki then proposed flight demonstration of this technology to the Navy on an AH-1W(4BW), but instead was awarded a four-year USD26.1 million Advanced Technology Demonstration (ATD) contract on 28 September 2000 for integration, testing and flight demonstration of VTDP on a modified Sikorsky YSH-60F (BuAer 163283). This flight test programme, to have begun in 2005, but not announced by late 2006, will be conducted by Piasecki under an FAA experimental flight certificate, US civil registration N40VT (owner registered as US Navy). The VTDP concept is being investigated by the DoD as an affordable means of upgrading the capabilities extending the service life of existing single main rotor helicopters such as the UH-1, UH/SH-60 and AH-64, until the follow-on Joint Replacement Aircraft is fielded some time after 2030. Most recently, the US Air Force selected the H-60/VTDP concept unofficially known as SpeedHawk, as one of a number of alternatives being considered as an upgrade or replacement, to be fielded by 2010, for its ageing HH-60G combat search and rescue helicopters.

By mid-2000, Piasecki had constructed and completed ground testing of a full-scale 2.44 m (8 ft 0 in) diameter duct and integrated five-blade propeller. In addition to installation of this unit, modifications to the YSH-60F will include addition of lifting wings (from a Piper Aerostar business aircraft) with flaperons and integration of VTDP controls into the helicopter's existing mechanical control system, all of which is expected to add some 726 kg (1,600 lb) to the demonstrator's empty weight. The increase in empty weight will be lower in production versions, which will employ a supplementary power unit (SPU) that will provide an increase in hover payload to offset the increased empty weight. By mid-2005, the drive system, including the SPU, has successfully completed endurance testing, all critical structural tests had been completed, and modification of the test aircraft was 80 per cent complete.

DESIGN FEATURES: The VTDP comprises a ducted propeller with integral vanes and spherical sectors to vector propeller thrust. It provides lateral thrust for anti-torque and lateral control, in lieu of a tail rotor, as well as forward thrust for auxiliary propulsion. Combined with the lifting wing, it provides for increasing speed to more than 200 kt (370 km/h; 230 mph); greater manoeuvrability; reduced vibration and fatigue loads; and consequent improvement in component lives and reduction in maintenance requirements and life cycle costs.

Piasecki estimated that a VTDP-based H-60 compound helicopter would have an unrefuelled combat radius of 762 n miles (1,411 km; 876 miles) following a rolling take-off, and 520 n miles (963 km; 598 miles) after a vertical take-off, representing a three-fold increase over the standard H-60.

PIPER

PIPER AIRCRAFT INC

2926 Piper Drive, Vero Beach, Florida 32960
Tel: (+1 561) 567 43 61

MARKETING AND SALES DIRECTOR: Larry Bardon
CORPORATE COMMUNICATIONS DIRECTOR: Mark S Miller

In July 1995, after Piper had stabilised its financial position during four years of Chapter 11 protection, the US Bankruptcy Court approved a new reorganisation plan under which Piper's assets were bought for US$95 million by Newco Pac Inc, a new company jointly owned by Philadelphia-based investment firm Dimeling, Schreiber and Park, Teledyne Continental Motors (which was Piper's largest creditor), and the remaining creditors. Under this ownership, The New Piper Aircraft Inc was established; company name changed to Piper Aircraft Inc in September 2006. Earlier history of Piper last appeared in the 1995–96 *Jane's*.

During 1999, Piper delivered 329 aircraft, 395 in 2000; 441 in 2001, 290 in 2002, 229 in 2003, 189 in 2004 and 233 in 2005. Workforce 680 in March 2003. Sales revenue totalled USD243 million in 2001, up from USD157 million in 2000.

In July 2003, American Capital Strategies Ltd bought USD57 million of Piper's debt to acquire 94 per cent of the company; the remaining 6 per cent was acquired by affiliates of Exeter Capital Partners, a long-time investor in New Piper.

Kits and parts for classic Pipers are available from other outlets, not necessarily with Piper's approval. These include:

J3 Cub: Wag-Aero Sport trainer. Replacement fuselages (standard and with additional 10 cm; 4 in cockpit width) from Airframes Inc of Alaska (www.supercubs.com); flyaway from Legend Cub as AL3C-100.

PA-11 Cub Special: Available as Cub Crafters Sport Cub Legend Cub AL11C-100; kits from Smith Aviation of Canada (www.supercubkits.ca)

PA-12 Super Cruiser: Fuselages manufactured by Dakota Air Frame Inc of Iowa (www.dakotaairframe.com).

PA-14 Family Cruiser: Wag-Aero Sportsman.

PA-15 Vagabond: Wag-Aero Wag-A-Bond.

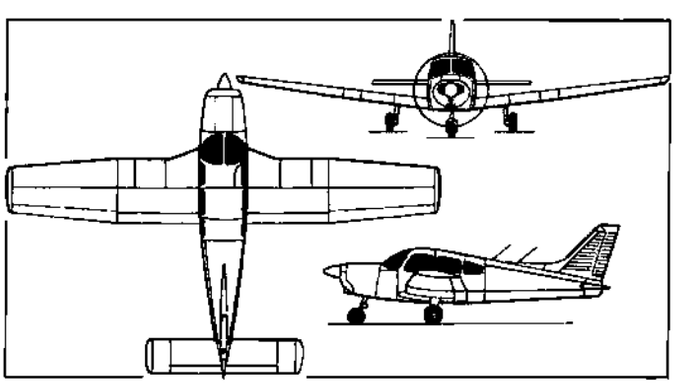
PA-18 Super Cub: Fuselages from Airframes Inc (as for J3 Cub); kits from Smith Aviation of Canada and Dakota Cub Aircraft of South Dakota (www.dakotacub.com); complete aircraft from Cub Crafters.

PIPER PA-28-161 WARRIOR III

TYPE: Four-seat lightplane.

PROGRAMME: As replacement for Cherokee 140 series, Piper redesigned airframe with several refinements, including fuselage stretch and new wing; first flight of prototype PA-28-151 17 October 1972; FAA certification 9 August 1973; PA-28-161 Warrior II first flown 27 August 1976; two/four-seat Cadet trainer version introduced April 1988, but no longer in production; Warrior III introduced late 1994.

CUSTOMERS: Five delivered in 1996, seven in 1997, 20 in 1998, 25 in 1999, 43 in 2000, 32 in 2001, 29 in 2002, 31 in 2003, 18 in 2004, 37 in 2005, and 18 in the first nine months of 2006. Piper has built some 30,000 of PA-28 series since prototype Cherokee flew on 10 January 1960. Recent customers include Dowling College's School of Aviation, which took delivery of two in November 2004; Ohio University, which ordered seven Avidyne FlightMax Entegra-equipped Warriors in December 2004; and the University of North Dakota, which took delivery of the first of seven Entegra-equipped aircraft at EAA AirVenture, Oshkosh, on 25 July 2005.



Piper PA-28-161 Warrior III (Lycoming O-320 flat-four) *(James Goulding)*

1159826

COSTS: Standard equipped price USD195,300 (2006).

DESIGN FEATURES: Classic tourer and trainer. Low, moderately tapered wing (with root glove) and low-set tailplane; sweptback fin.

NACA 65_2-415 wing section on inboard panels, Mod No. 5 of NACA TN 2228 on leading-edge of outboard panels; dihedral 7°, incidence 2° at root, −1° at tip; sweepback at quarter-chord 5°.

FLYING CONTROLS: Manual. Conventional ailerons and rudder, plus all-moving tailplane with combined anti-servo and trim tab. four-position manually operated flaps (0, 10, 25 and 40°).

STRUCTURE: Conventional light alloy, with semi-monocoque fuselage, single-spar wings and ribbed light alloy skins on fin and tailplane; glass fibre nose cowl and wing/tailplane/fintips.

LANDING GEAR: Tricycle type; fixed. Wing-mounted, trousered, cantilever main legs with Piper oleo-pneumatic shock-absorbers; single wheel, with glass fibre speed fairing, on each unit. Cleveland disc brakes and wheels with tyres size 6.00–6 (4 ply) on main units, pressure 1.65 bar (24 lb/sq in). Cleveland steerable nosewheel and tyre size 5.00–5 (4 ply), pressure 2.06 bar (30 lb/sq in). Parking brake.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320-D3G flat-four engine, driving a Sensenich 74DM6-0-60 two-blade fixed-pitch metal propeller. Fuel in two wing tanks, with total capacity of 189 litres (50.0 US gallons; 41.6 Imp gallons), of which 181.5 litres (48.0 US gallons; 40.0 Imp gallons) are usable. Refuelling point on upper surface of each wing. Oil capacity 7.5 litres (2.0 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Four persons in pairs in enclosed cabin. Individual horizontally adjustable front seats with seat belts and shoulder harnesses; bench-type rear seat with seat belts and shoulder harnesses. Dual controls standard. Large door on starboard side. Baggage compartment at rear of cabin, with external baggage door on starboard side. Heating, ventilation and windscreen defrosting standard.

SYSTEMS: Hydraulic system for brakes only. Electrical system powered by 28 V 60 A engine-driven alternator. 24 V 10 Ah battery standard.

AVIONICS: Standard and optional Advanced packages by Garmin/Meggitt, as described. Avidyne FlightMax Entegra integrated flight deck available as option from late 2004.

Comms: Standard: Garmin GNS-430 com/nav/IFR GPS; GMA-340 audio panel with marker beacon lights and four-position intercom; GTX-330 transponder; ELT; avionics master switch; cabin speaker; Telex 100T microphone and Airman 760 headset. Advanced Training Group: as above but with dual GNS-430.

Flight: Standard: GI-106A VOR/LOC/GS/GPS indicator; Narco AR-850 altitude reporter. Advanced package as above, plus dual GNS-430 and GI-106A and single RCR 650D ADF with IND 650A indicator. ST-180 HSI with slaved compass system, and DME 450, optional.

Instrumentation: Piper true airspeed indicator, magnetic compass, sensitive altimeter, gyro horizon, directional gyro, rate of turn indicator, rate of climb indicator, OAT gauge, digital ammeter, electric clock, annunciator panel with push-to-test, recording tachometer, three-way oil temperature/pressure and fuel-pressure gauge, dual fuel quantity gauges and vacuum gauge.

Optional Avidyne FlightMax Entegra integrated flight deck comprises two 264 mm (10.4 in) high-resolution, sunlight-readable colour displays for PFD and MFD functions and EMax engine instrumentation system. EXP5000 PFD with solid-state air data and attitude/heading reference system (ADAHRS) presents standard flight information including EADI, EHSI, altitude, primary engine instruments, airspeed and vertical speed; EX5000 MFD provides situational awareness data on an integrated display that includes moving map with Jeppesen NavData Americas and International databases, lightning detection, terrain, traffic engine information and optional Narrowcast datalink with Nexrad weather information. EMax displays manifold pressure, rpm, fuel flow and oil pressure on the PFD, fuel totaliser, automatic learning function, percentage horsepower, fuel remaining, all-cylinders CHT, EGT, oil temperature, OAT and electrical bus voltages, and computes nautical miles per gallon, fuel-to-waypoint and fuel-to-destination on the MFD, plus data logging of critical engine parameters which are downloadable via a dataport in a standard spreadsheet format. Entegra provides full integrated S-Tec 55X autopilot control and mode annunciations, with altitude capture, vertical speed selection and heading control, and L3 Skywatch and L3 WX 500 Stormscope interfaces.

EQUIPMENT: Standard equipment includes engine hour recorder, alternate static source, heated pitot head, colour co-ordinated control wheels, internally lit rocker switches, external power receptacle, electrical engine primer system, instrument panel lighting package, cabin dome light, navigation lights, landing/taxying light, wingtip Comet strobe lights, avionics dimming switch, pilot's and co-pilot's vertically adjustable seats in fabric and vinyl with magazine storage pockets on backs, rear bench seat, four floor-mounted cabin fresh-air vents, vinyl cabin side panels, wall-to-wall carpet and headliner, crew armrests, pilot's storm window, two sun visors, two map pockets, 'Quietised' soundproofing, carpeted baggage compartment with security straps, halon fire extinguisher, tiedown points, jack

1159783

Piper PA-28-161 Warrior III with UK registration *(Paul Jackson)*

pads, static discharge wicks, and Du Pont Imron polyurethane exterior paint in base colour with two contrasting trim stripes. S-Tec electric trim, carburettor ice detector, second altimeter, wingtip recognition lights, low profile tail strobe light, two-tone base colour exterior paint, metallic paint, and foreign certification gross weight kit optional.

DIMENSIONS, EXTERNAL:

Wing span	10.67 m (35 ft 0 in)
Wing chord: at root, excl glove	1.60 m (5 ft 3 in)
at tip	1.07 m (3 ft 6¼ in)
Wing aspect ratio	7.2
Length overall	7.25 m (23 ft 9½ in)
Height overall	2.22 m (7 ft 3½ in)
Tailplane span	3.96 m (12 ft 11¾ in)
Wheel track	3.05 m (10 ft 0 in)
Wheelbase	2.03 m (6 ft 8 in)
Propeller diameter	1.88 m (6 ft 2 in)
Propeller ground clearance	0.21 m (8¼ in)
Cabin door: Height	0.89 m (2 ft 11 in)
Width	0.91 m (3 ft 0 in)
Baggage door: Height	0.51 m (1 ft 8 in)
Max width	0.56 m (1 ft 10 in)
Height to sill	0.71 m (2 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin (instrument panel to rear bulkhead):	
Length	2.49 m (8 ft 2 in)
Max width	1.05 m (3 ft 5¼ in)
Max height	1.14 m (3 ft 8¾ in)
Floor area	2.28 m^2 (24.5 sq ft)
Volume (incl baggage)	3.0 m^3 (106 cu ft)
Baggage compartment volume	0.68 m^3 (24.0 cu ft)

AREAS:

Wings, gross	15.79 m^2 (170.0 sq ft)
Ailerons (total)	1.23 m^2 (13.20 sq ft)
Trailing-edge flaps (total)	1.36 m^2 (14.60 sq ft)
Fin	0.69 m^2 (7.40 sq ft)
Rudder	0.38 m^2 (4.10 sq ft)
Tailplane, incl tab	2.76 m^2 (29.70 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	701 kg (1,545 lb)
Baggage capacity	91 kg (200 lb)
Max T-O weight	1,106 kg (2,440 lb)
Max ramp weight	1,110 kg (2,447 lb)
Max wing loading	70.1 kg/m^2 (14.35 lb/sq ft)
Max power loading	9.28 kg/kW (15.25 lb/hp)

PERFORMANCE:

Max level speed	117 kt (216 km/h; 134 mph)
Normal cruising speed at 75% power	115 kt (213 km/h; 132 mph)
Stalling speed: flaps up	50 kt (93 km/h; 58 mph)
flaps down	44 kt (82 km/h; 51 mph)
Max rate of climb at S/L	196 m (644 ft)/min
Service ceiling	3,355 m (11,000 ft)
T-O to 15 m (50 ft)	494 m (1,620 ft)
Landing from 15 m (50 ft)	354 m (1,160 ft)
Range, 45 min reserves:	
at 75% power	426 n miles (789 km; 490 miles)
at 55% power at FL100	513 n miles (950 km; 590 miles)

PIPER PA-28-181 ARCHER III

TYPE: Four-seat lightplane.

PROGRAMME: Introduced (as Cherokee Challenger 180) 9 October 1972 as successor to Cherokee 180; Archer 180, featuring minor changes, available from 1974; PA-28-181 Archer II launched 1976, and since 1978 has featured the tapered wings of Warrior II; Archer III from 1994, with axisymmetric engine inlets, redesigned windscreen and cabin side windows, plus interior restyling and improvements.

1159784

Piper PA-28-181 Archer III *(Paul Jackson)*

CUSTOMERS: 37 Archer IIIs delivered in 1995, and 45 each in 1996 and 1997; 91 in 1998; 100 in 1999, 102 in 2000, 88 in 2001, 38 in 2002, 49 in 2003, 19 in 2004, 16 in 2005, and 22 in the first nine months of 2006.

Description of the Warrior III applies also to Archer III except as follows:

COSTS: Standard, equipped USD227,700 (2006).

LANDING GEAR: Tricycle type. Tyres size 6.00–6 (4 ply), on all three wheels. Mainwheel tyre pressure 1.65 bar (24 lb/sq in), nosewheel 1.24 bar (18 lb/sq in). Cleveland high-capacity disc brakes. Parking brake. Wheel speed fairings standard.

POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-A4M flat-four engine, driving a Sensenich 76EM8S14-O-62 two-blade fixed-pitch metal propeller. Fuel in two tanks in wing leading-edges, with total capacity of 189 litres (50.0 US gallons; 41.6 Imp gallons), of which 181.5 litres (48.0 US gallons; 40.0 Imp gallons) are usable. Oil capacity 7.5 litres (2.0 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Four persons in pairs in enclosed cabin. Individual adjustable front seats, with dual controls; individual rear seats. Large door on starboard side. Baggage compartment at rear of cabin; door on starboard side. Rear seats removable to provide 1.3 m^3 (44 cu ft) cargo space. Accommodation heated and ventilated. Windscreen defrosting.

SYSTEMS: 28 V 70 A alternator and 24 V 10 Ah battery.

AVIONICS: Standard Garmin International and Meggitt package, as for Warrior III. Optional Premium Select package adds second GNS-430 and GI-106A VOR/LOC/GS/GPS indicator, S-Tec System 55X dual-axis autopilot with automatic electric trim, DG with heading bug and trim indicator and Meggitt ST-360 altitude preselect. Avidyne FlightMax Entegra integrated flight deck available as option from late 2004 (details as for Warrior III).

Comms: Garmin GMA-340 audio panel with marker beacon receiver and stereo intercom; GTX-330 solid-state transponder; Telex 100T microphone and Airman 760 headset.

Flight: GI-106A VOR/LOC/GS/COM/GPS indicator standard. ADI/HSI, RCR 650D ADF and DME 450, optional.

Instrumentation: Standard GNS-430 high-resolution colour LCD MFD with GI-106A VOR/LOC/GS/GPS indicator. WX500 Stormscope, Sky 497 Skywatch with GNS interface, and ST-360 altitude select/alerter optional.

EQUIPMENT: Standard equipment generally as for Warrior III except: polished propeller spinner, metal instrument panel, illuminated side-mounted OAT gauge, overhead switch panel, EGT gauge, flush locking fuel caps, overhead vent fan system, restyled windscreen and window lines with tinted transparencies, full chemical corrosion protection, Aztec Silver interior decor, DuPont Imron 6000 clearcoat/basecoat and exterior paint with choice of non-metallic or metallic colours for trim stripes, wool carpeting and Hobnail side panels, passenger armrests and headrests. Additional options include Piper Aire air conditioning, carburettor ice detector, stainless steel cowling fasteners; Meggitt electric trim, low-noise exhaust system and leather seats in choice of three colours.

DIMENSIONS, EXTERNAL: As for Warrior III except:

Length overall	7.32 m (24 ft 0 in)
Tailplane span	3.92 m (12 ft 10½ in)
Wheelbase	2.00 m (6 ft 7 in)
Propeller diameter	1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL: As for Warrior III except:

Cabin Length:	2.49 m (8 ft 2 in)
Width	1.06 m (3 ft 5¾ in)
Height	1.14 m (3 ft 9 in)
Baggage compartment volume, incl hatshelf	0.74 m^3 (26.0 cu ft)

Piper PA-28-181 Archer III *(Paul Jackson)* 0589370

AREAS: As for Warrior III
WEIGHTS AND LOADINGS:
Weight empty, equipped ..... 764 kg (1,684 lb)
Baggage capacity ..... 90 kg (200 lb)
Max T-O weight ..... 1,156 kg (2,550 lb)
Max ramp weight ..... 1,160 kg (2,558 lb)
Max wing loading ..... 73.2 kg/m² (15.00 lb/sq ft)
Max power loading ..... 8.62 kg/kW (14.17 lb/hp)
PERFORMANCE:
Max level speed ..... 133 kt (246 km/h; 153 mph)
Normal cruising speed at 75% power at FL79 ..... 128 kt (237 km/h; 147 mph)
Stalling speed, flaps down ..... 45 kt (84 km/h; 52 mph)
Max rate of climb at S/L ..... 211 m (692 ft)/min
Service ceiling ..... 4,300 m (14,100 ft)
T-O run ..... 346 m (1,135 ft)
T-O to 15 m (50 ft) ..... 490 m (1,608 ft)
Landing from 15 m (50 ft) ..... 427 m (1,400 ft)
Landing run ..... 280 m (920 ft)
Range at S/L, allowances for taxi, T-O, climb and descent and 45 min reserves, at FL60:
at 75% power ..... 444 n miles (822 km; 511 miles)
at 65% power ..... 487 n miles (901 km; 560 miles)
at 55% power ..... 522 n miles (966 km; 600 miles)

PIPER PA-28R-201 ARROW

TYPE: Four-seat lightplane.

PROGRAMME: Derived from Cherokee Archer II, but with retractable landing gear, more powerful engine and untapered wings of 1975 PA-28-180 Archer; replaced original retractable gear Cherokee, the PA-28R Arrow 180, which had first flown 1 February 1967; PA-28R-201 Arrow III with increased span, tapered wings first flown 16 September 1975; first production aircraft 7 January 1977; new Arrow IV and Turbo Arrow IV models introduced 1979 with all-moving T tails; these subsequently discontinued and earlier low-tail **Arrow III** version restored to production.

CUSTOMERS: Seven delivered in 1996, two in 1997, two in 1998, six in 1999, 18 in 2000, 23 in 2001, 26 in 2002, 16 in 2003, 12 in 2004, nine in 2005, and two in the first nine months of 2006. Recent customers include the University of North Dakota, which ordered one in April 2003.

Description of Archer III applies also to Arrow except as follows:

COSTS: Standard, equipped USD307,000 (2006).

LANDING GEAR: Tricycle type; retractable. Hydraulic actuation by an electrically operated pump. Main units retract inward into wings, nose unit rearward. All units fitted with oleo-pneumatic shock-absorbers. Mainwheels and tyres size 6.00–6 (6 ply), pressure 2.07 bar (30 lb/sq in). Nosewheel and tyre size 5.00–5 (4 ply), pressure 1.86 bar (27 lb/sq in). High-capacity dual hydraulic disc brakes and parking brake.

POWER PLANT: One 149 kW (200 hp) Textron Lycoming IO-360-C1C6 flat-four engine, driving a McCauley two-blade constant-speed metal propeller. Fuel tanks in wing leading-edges with total capacity of 291 litres (77.0 US gallons; 64.1 Imp gallons), of which 273 litres (72.0 US gallons; 60.0 Imp gallons) are usable. Oil capacity 7.5 litres (2.0 US gallons; 1.7 Imp gallons).

SYSTEMS: Generally as for Archer III and Warrior III except for electrohydraulic system for landing gear actuation.

AVIONICS: Standard and Deluxe avionics packages by Garmin, as described. Avidyne FlightMax Entegra integrated flight deck available as option from late 2004 (details as for Warrior III).

Comms: Standard package comprises Garmin GNS 430 com/nav/GPS, GMA 340 audio with marker beacon receiver and intercom, GTX-327, Telex 100T noise cancelling microphone and Telex Airman 760 headset. DeLuxe package adds second GNS 430.

Flight: Standard package comprises single GI-106A VOR/LOC/GSA/GPS indicator. DeLuxe package adds second GNS 430, GI-106A and VOR/LOC/GPS/HSI indicator with slaved compass system, replacing standard directional gyro. Optional equipment includes S-Tec System 55X dual-axis autopilot with automatic electric trim, turn indicator and DG with heading bug; ST-361 ADI; DME 40; and RCR 650D ADF with IND-650A indicator.

EQUIPMENT: Generally as for Warrior III and Archer III.

DIMENSIONS, EXTERNAL:
Wing span ..... 10.80 m (35 ft 5 in)
Wing chord: at root, excl glove ..... 1.60 m (5 ft 3 in)
at tip ..... 1.07 m (3 ft 6¼ in)
Wing aspect ratio 7.4
Length overall ..... 7.52 m (24 ft 8¼ in)
Height overall ..... 2.39 m (7 ft 10¼ in)
Tailplane span ..... 3.92 m (12 ft 10½ in)
Wheel track ..... 3.19 m (10 ft 5½ in)
Wheelbase ..... 2.39 m (7 ft 10¼ in)
AREAS:
Wings, gross ..... 15.79 m² (170.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty, equipped ..... 814 kg (1,795 lb)
Max T-O weight ..... 1,247 kg (2,750 lb)
Max ramp weight ..... 1,251 kg (2,758 lb)
Max wing loading ..... 79.0 kg/m² (16.18 lb/sq ft)
Max power loading ..... 8.37 kg/kW (13.75 lb/hp)
PERFORMANCE:
Max level speed ..... 145 kt (268 km/h; 166 mph)
Normal cruising speed ..... 137 kt (253 km/h; 157 mph)
Stalling speed: flaps up ..... 60 kt (112 km/h; 69 mph)
flaps down ..... 55 kt (102 km/h; 64 mph)
Max rate of climb at S/L ..... 253 m (831 ft)/min
Service ceiling ..... 4,935 m (16,200 ft)
T-O to 15 m (50 ft) ..... 488 m (1,600 ft)
Landing from 15 m (50 ft) ..... 463 m (1,520 ft)
Cruising range at 55% power, at FL90, 45 min reserves .....
880 n miles (1,630 km; 1,013 miles)

PIPER PA-32R-301 SARATOGA II HP

TYPE: Six-seat utility transport.

PROGRAMME: Saratoga family of fixed and retractable landing gear light aircraft announced 17 December 1979 to replace earlier PA-32 Cherokee SIX 300 and T-tail Lance series (using PA-32 Type Certificate issued 4 March 1965); fixed-gear versions were discontinued, but reinstated in 2003, becoming Piper 6X and 6XT.

Saratoga SP certified 7 November 1979; fixed-gear Saratoga followed on 9 January 1980. Saratoga II HP certified 26 May 1993, featuring axisymmetric engine inlets, aerodynamic clean-up and interior improvements and restyling.

CURRENT VERSIONS: **Saratoga II HP:** Standard version, *as described.*

Saratoga II TC: Turbocharged version with Textron Lycoming TIO-540 engine; *described separately.*

6X: fixed-gear version; *described separately.*

CUSTOMERS: Total of 38 HPs delivered in 1997, 28 in 1998, 30 in 1999, 28 in 2000, 22 in 2001, five in 2002, nine in 2003, nine in 2004, eight in 2005, and nine in the first nine months of 2006.

Piper has built over 7,200 of PA-32 family since prototype first flew on 6 December 1963.

COSTS: Standard, equipped USD529,200 (2006).

DESIGN FEATURES: Larger counterpart to PA-28 series, featuring stretched fuselage. Saratoga versions have 'semi-tapered' wing, with root glove, unswept inboard panel and tapered outer panel with small fence inboard of tip.

Wing section NACA 66_2-415, dihedral 7°, thickness/chord ratio 15 per cent, twist 2°, incidence 2°, washout 0°.

FLYING CONTROLS: Conventional. Ailerons, rudder and all-moving tailplane with combined anti-servo and trim tab. Rudder trim; four-position electrically actuated flaps with preselect. Control surface max deflections: ailerons +28/–22°; tailplane +14° 30'/–5° 30'; rudder ±28°; flaps 40°.

STRUCTURE: Conventional light alloy, with semi-monocoque fuselage, single-spar wings and ribbed light alloy skins on fin and tailplane; glass fibre nose cowl and wing/tailplane/fintips.

Retractable landing gear Piper PA-28R-210 Arrow *(Paul Jackson)* 1159785

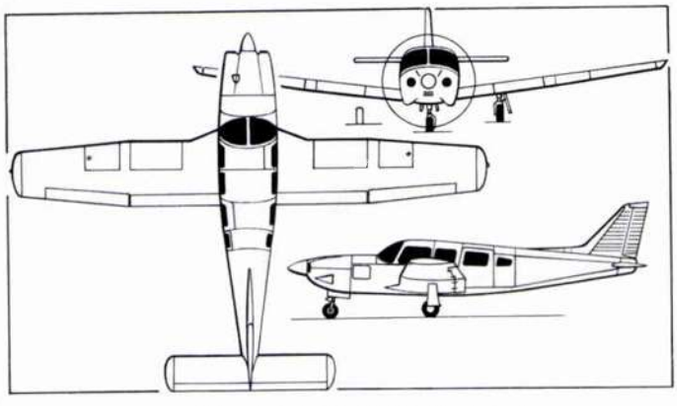
1129465

Piper PA-32R-301 Saratoga II HP *(Paul Jackson)*



General arrangement of the Piper PA-32R-301 Saratoga II HP
(James Goulding)

1159825

LANDING GEAR: Hydraulically retractable tricycle type with single wheel on each unit. Main units retract inward, nosewheel aft. Emergency free-fall extension system. Piper oleo-pneumatic shock-absorbers. Steerable nosewheel. Mainwheels and tyres size 6.00–6 (8 ply), pressure 2.62 bar (38 lb/sq in). Nosewheel and tyre size 5.00–5 (6 ply), pressure 2.41 bar (35 lb/sq in).

POWER PLANT: One 224 kW (300 hp) Textron Lycoming IO-540-K1G5 flat-six engine, driving a Hartzell HC-I3YR-1RF/F7663DR three-blade, constant-speed, metal propeller with C3575-1 spinner. Two fuel tanks in each wing with combined capacity of 405 litres (107 US gallons; 89.1 Imp gallons), of which 386 litres (102 US gallons; 84.9 Imp gallons) are usable. Refuelling points on wing upper surface. Oil capacity 11.5 litres (3.0 US gallons; 2.5 Imp gallons).

ACCOMMODATION: Enclosed cabin seating six people, rear four in club arrangement; dual controls standard. Two forward-hinged doors, one on starboard side forward, overwing, and one on port side at rear end of cabin. Space for 45 kg (100 lb) baggage at rear of cabin, with external, lockable baggage/utility door on port side. Additional baggage space, capacity 45 kg (100 lb), between engine fireproof bulkhead and instrument panel, with external door on starboard side. Pilot's storm window. Accommodation heated and ventilated. Piper Aire air conditioning system optional. Windscreen defroster standard.

SYSTEMS: Electrically driven hydraulic pump for landing gear actuation. Electrical system includes 28 V 90 A engine-driven alternator and 24 V 10 Ah battery. Standby vacuum system standard. Optional oxygen system and Piper Aire air conditioning. Optional Piper Inadvertent Icing Protection System (PIIPS), is based on the TKS 'weeping wing' system, providing emergency de-icing of wing and horizontal tail leading-edges and propeller.

AVIONICS: Standard Avidyne FlightMax Entegra package.

Comms: Garmin GMA-340 audio panel with marker beacon receiver and intercom and stereo intercom; Garmin GTX-330 digital transponder with traffic information system; control wheel microphone switch, Telex Airman headset and 100T microphone, four PS Engineering headsets, and ELT, all standard.

Flight: Dual Garmin GNS-430 integrated COM/NAV/GS/GPS; S-Tec System 55× autopilot with electric trim, standard. Garmin GI-106A VOR/LOC/GS/GPS indicator, BFGoodrich Skywatch and WX-500 Stormscope, co-pilot's electric trim, optional.

Instrumentation: Avidyne FlightMax Entegra integrated flight deck comprising two 264 mm (10.4 in) high-resolution, sunlight readable, landscape format displays for PFD and MFD functions, and E-Max engine indicating system. EXP5000 PFD with solid-state air data and attitude/heading reference system presents standard flight indications including EADI, EHSI, airspeed, vertical speed, altitude, primary engine instrumentation, navigation and wind vector pointer; EX5000 MFD presents navigation data, engine monitoring, trip information, and optional lightning detection, traffic/terrain alerting, and datalink services including Multilink XM Satellite Weather and Narrowcast, C-Max electronic approach charts, two-way text messaging and flight tracking. EMax EICAS provides graphic representations of engine performance including manifold pressure, rpm, fuel flow and oil pressure on the PFD, fuel totaliser, automatic leaning function, percentage horsepower, fuel remaining, all-cylinders CHT, EGT, oil temperature, OAT and electrical bus voltages, and computes nautical-miles-per-gallon, fuel to waypoint and fuel to destination on the MFD, plus data logging of critical engine parameters which are downloadable via a dataport in standard spreadsheet format. FlightMax Entegra provides fully integrated autopilot control and mode annunciations, with altitude capture, vertical speed selection and heading control. Standby mechanical flight instruments standard. Bendix King KR 87 ADF with KI 227 indicator and KN 63 DME, optional.

EQUIPMENT: Standard equipment includes engine hour recorder, alternate static source, electric clock, internally lit rocker switches, heated pitot head, resettable circuit breakers in CB panel, standby electric vacuum pump, electric emergency fuel pump, external power receptacle, instrument panel lighting package, avionics dimming, map lights, navigation lights, landing/taxying light, wingtip strobe lights, pulsating recognition lights, pilot's and co-pilot's vertically adjustable all-leather seats, pilot's vent window, sun visors, four all-leather passenger seats with headrests, shoulder harnesses, seat belts, and quick-release facility, fold-down armrests (fifth and sixth seats), refreshment console, executive writing table, Hobnail fabric side panels, super 'Quietised' soundproofing, utility door for rear baggage access and cargo loading, static discharge wicks, and Du Pont Imron 6000 clearcoat/basecoat exterior paint. Optional equipment includes entertainment/executive console; provision for AM/FM radio and CD player, multimedia entertainment system and laptop computer workstation; optional exterior trim stripe patterns, and metallic paint as lower base colour.

DIMENSIONS, EXTERNAL:

Wing span	11.02 m (36 ft 2 in)
Wing aspect ratio	7.3
Length overall	8.43 m (27 ft 8 in)
Height overall	2.59 m (8 ft 6 in)
Tailplane span	3.94 m (12 ft 11 in)
Wheel track	3.38 m (11 ft 1 in)
Wheelbase	2.41 m (7 ft 11 in)
Cabin door (fwd, stbd): Height	0.89 m (2 ft 11 in)
Width	0.91 m (3 ft 0 in)
Cabin door (rear, port): Height	0.72 m (2 ft 4½ in)
Width	0.71 m (2 ft 4 in)
Baggage door (fwd): Height	0.41 m (1 ft 4 in)
Width	0.56 m (1 ft 10 in)
Baggage/utility door (fwd): Height	0.52 m (1 ft 8½ in)
Width	0.66 m (2 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin: Length (instrument panel to rear bulkhead)	3.16 m (10 ft 4¼ in)
Max width	1.24 m (4 ft 0¾ in)
Max height	1.07 m (3 ft 6 in)
Volume (incl rear baggage area)	5.5 m³ (195 cu ft)
Baggage compartment volume:	
forward	0.20 m³ (7.0 cu ft)
rear	0.49 m³ (17.3 cu ft)

AREAS:

Wings, gross	16.56 m² (178.3 sq ft)
Ailerons (total)	0.98 m² (10.60 sq ft)
Trailing-edge flaps (total)	1.36 m² (14.60 sq ft)
Fin	0.70 m² (7.50 sq ft)
Rudder, incl tab	0.40 m² (4.30 sq ft)
Horizontal tail surfaces (total)	2.94 m² (31.60 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,094 kg (2,411 lb)
Baggage capacity	91 kg (200 lb)
Max T-O and landing weight	1,633 kg (3,600 lb)
Max ramp weight	1,639 kg (3,615 lb)
Max wing loading	98.6 kg/m² (20.19 lb/sq ft)
Max power loading	7.30 kg/kW (12.00 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	191 kt (353 km/h; 219 mph)
Max level speed	175 kt (324 km/h; 201 mph)
Normal cruising speed	166 kt (307 km/h; 191 mph)
Stalling speed: flaps up	67 kt (124 km/h; 78 mph) CAS
flaps down	63 kt (117 km/h; 73 mph)
Max rate of climb at S/L	398 m (1,305 ft)/min
Service ceiling	4,751 m (15,588 ft)
T-O run	366 m (1,200 ft)
T-O to 15 m (50 ft)	540 m (1,770 ft)
Landing from 15 m (50 ft)	464 m (1,520 ft)
Landing run	195 m (640 ft)
Range, long-range cruise power, allowances for start, taxi, T-O, climb and descent, and 45 min reserves	859 n miles (1,590 km; 988 miles)

PIPER PA-32-301FT 6X

TYPE: Six-seat utility transport.

PROGRAMME: First flight (N1326X) 24 February 2003. Announced at EAA Sun 'n' Fun at Lakeland, Florida 2 April 2003. FAA certification 22 July 2003.

CURRENT VERSIONS: **6X**: Standard version, *as described.*

6XT: Turbocharged version; *described separately.*

Piper PA-32-301FT 6X *(Paul Jackson)* 1159790

CUSTOMERS: 10 delivered in 2003, 24 in 2004, 18 in 2005, and eight in the first nine months of 2006.

COSTS: Standard, equipped, VFR, USD396,300 (2006).

The description for the Saratoga II HP applies also to the Piper 6X except:

DESIGN FEATURES: Generally similar to Saratoga II HP except for fixed landing gear, deletion of rearmost cabin window on each side and NASA air intake port side of nose.

POWER PLANT: One 224 kW (300 hp) Textron Lycoming IO-540-K1G5 flat-six engine, driving a Hartzell F7663D three-blade, constant-speed, metal propeller. Two interconnected fuel tanks in each wing, combined usable capacity 386 litres (102 US gallons; 84.9 Imp gallons).

LANDING GEAR: Non-retractable tricycle type. Speed fairings standard.

AVIONICS: Avidyne FlightMax Entegra integrated flight deck, as described under Saratoga II HP.

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,005 kg (2,216 lb)
Standard useful load	635 kg (1,399 lb)

PERFORMANCE:

Never-exceed speed (VNE)	189 kt (350 km/h; 217 mph)
Max level speed	155 kt (287 km/h; 178 mph)
Normal cruising speed at FL72	148 kt (274 km/h; 170 mph)
Stalling speed, flaps down	59 kt (109 km/h; 68 mph)
Service ceiling	5,242 m (17,200 ft)
T-O run	391 m (1,284 ft)
T-O to 15 m (50 ft)	618 m (2,028 ft)
Landing from 15 m (50 ft)	555 m (1,822 ft)
Landing run	278 m (911 ft)
Range, long-range cruise power, at FL110, 45 min reserves	804 n miles (1,489 km; 925 miles)

PIPER PA-32R-301T SARATOGA II TC

TYPE: Six-seat utility transport.

PROGRAMME: Turbocharged parallel to Saratoga II HP; PA-32RT-300T Turbo Lance II certified 20 April 1978, followed by PA-32R-301T Turbo Saratoga SP on 7 November 1979 and fixed-gear Turbo Saratoga on 9 January 1980.

Current Saratoga II TC certified 9 July 1997; first customer deliveries August 1997.

CURRENT VERSIONS: **Saratoga IITC:** Standard version, *as described.*

6XT: Fixed-gear, *described separately.*

CUSTOMERS: Total of 26 delivered in 1997, 48 in 1998, 46 in 1999, 70 in 2000, 68 in 2001, 45 in 2002, 28 in 2003, 31 in 2004, 37 in 2005, and 34 in the first nine months of 2006.

COSTS: Standard, equipped USD572,400.

The description for the Saratoga II HP applies also to the Saratoga II TC except:

DESIGN FEATURES: New interior and relocated battery and ground power receptacle.

POWER PLANT: One 224 kW (300 hp) Textron Lycoming TIO-540-AH1A turbocharged flat-six engine, with automatic wastegate, driving a Hartzell HC-I3YR-1RF/F7663DR three-blade, constant-speed, metal propeller. Fuel as for Saratoga II HP.

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,125 kg (2,481 lb)

PERFORMANCE:

Never-exceed speed (VNE)	191 kt (353 km/h; 219 mph)
Max level speed	187 kt (346 km/h; 215 mph)
Cruising speed:	
at FL80	172 kt (318 km/h; 198 mph)
at FL100	175 kt (324 km/h; 201 mph)
at FL150	185 kt (343 km/h; 213 mph)
Max certified altitude	6,100 m (20,000 ft)
T-O run	338 m (1,110 ft)
T-O to 15 m (50 ft)	552 m (1,810 ft)
Landing from 15 m (50 ft)	519 m (1,700 ft)
Landing run	269 m (880 ft)
Range, 45 min reserves and normal allowances, normal (N) or long-range (LR) cruise power: N at FL100	948 n miles (1,755 km; 1,091 miles)
LR at FL80	950 n miles (1,759 km; 1,093 miles)

PIPER PA-32-301XTC 6XT

TYPE: Six-seat utility transport.

PROGRAMME: Announced at EAA Sun 'n' Fun at Lakeland, Florida, 2 April 2003. Prototype (N326XT) flew shortly thereafter. FAA certification awarded 28 August 2003.

CUSTOMERS: 11 delivered in 2003, 14 in 2004, 16 in 2005, and nine in the first nine months of 2006.

COSTS: Standard, equipped, VFR, USD415,700.

The description for the Piper 6X applies also to the Piper 6XT except:

POWER PLANT: One 224 kW (300 hp) Textron Lycoming TIO-540-AH1A turbocharged flat-six engine, driving a Hartzell three-blade, constant-speed, metal propeller.

EQUIPMENT: Oxygen system optional.

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,037 kg (2,286 lb)
Standard useful load	603 kg (1,329 lb)

PERFORMANCE:

Never-exceed speed (VNE)	189 kt (350 km/h; 217 mph)
Max level speed at mid-cruise weight	172 kt (319 km/h; 198 mph)
High cruising speed at FL100	161 kt (298 km/h; 185 mph)
Service ceiling	6,100 m (20,000 ft)
T-O run	426 m (1,397 ft)
T-O to 15 m (50 ft)	575 m (1,888 ft)
Landing from 15 m (50 ft)	555 m (1,822 ft)
Landing run	278 m (911 ft)
Range, long-range cruise power, 45 min reserves	931 n miles (1,724 km; 1,071 miles)

Piper 6XT, showing forward baggage space *(Paul Jackson)* 1159789

Piper PA-32R-301T Saratoga II TC *(Paul Jackson)* 1159788

PIPER PA-34-220T SENECA V

TYPE: Six-seat utility twin.

PROGRAMME: Original PA-34 Seneca certified 7 May 1971 and announced 23 September 1971, having been preceded by prototypes of fixed-gear PA-34-180 Twin Six (flown 25 April 1967) and retractable gear version in following year; 149 kW (200 hp) engines; redesignated Seneca II with increased MTOW, certified 18 July 1974 and introduced for 1975; improved Seneca III with more powerful counter-rotating (C/R) engines certified 17 December 1980 and introduced 15 February 1981; Seneca IV with axisymmetric engine inlets, aerodynamic refinements and interior improvements and restyling certified 17 November 1993 and introduced in 1994. Seneca V with L/TSIO-360-RB engines unveiled 16 January 1997 (having been secretly certified on 11 December 1996); engines, equipped with intercoolers and density control system (automatic wastegate), maintain S/L rated power to 5,945 m (19,500 ft). Other new features include redesigned instrument panel with digital display monitoring panel (DDMP), overhead switch/dome light/speaker panel, entertainment/executive console with extendable work table and in-flight phone/fax option replacing the second row seat on the starboard side. Senecas have also been built in Brazil and Poland.

CUSTOMERS: Total of 28 Seneca IVs delivered in 1995, and 18 in 1996; 39 Seneca Vs delivered in 1997, 55 each in 1998 and 1999, 42 in 2000, 38 in 2001, 43 in 2002, 28 in 2003, 10 in 2004, 12 in 2005, and 22 in the first nine months of 2006. Widely used as twin-conversion trainer; recent customers include Sabena Airlines, which took delivery of two in 1999 for its training centre at Scottsdale, Arizona.

Production of the PA-34 series in the USA totals some 4,700; the prototype first flew on 30 August 1968.

COSTS: Standard equipped price USD735,000 (2006).

DESIGN FEATURES: Twin-engined version of Cherokee SIX/Saratoga. Low-mounted, constant-chord wings and tailplane; leading-edge gloves inboard of engines; constant-chord tailplane.

Wing section NACA 65_2-415; dihedral 7°; thickness/chord ratio 15 per cent; washout 0° 41'; twist 2° 41'.

FLYING CONTROLS: Manual. Frise ailerons, rudder and one-piece all-moving tailplane with combined anti-balance and trim tab; anti-servo tab in rudder; wide-span electrically operated slotted flaps. Control surface movements: ailerons +35/–20°; tailplane +12° 3'/–7° 30'; rudder ±35°. Maximum flap deflection 40°.

STRUCTURE: Conventional light alloy, with semi-monocoque fuselage; single-spar wings; glass fibre wingtips.

LANDING GEAR: Hydraulically retractable tricycle type. Main units retract inward, nose unit forward. Oleo-pneumatic shock-absorbers. Steerable nosewheel. Emergency free-fall extension system. Mainwheels and tyres size 6.00–6 (8 ply), pressure 3.79 bar (55 lb/sq in); nosewheel and tyre size 6.00–6 (6 ply), pressure 2.76 bar (40 lb/sq in). Nosewheel safety mirror. High-capacity disc brakes. Parking brake.

POWER PLANT: One 164 kW (220 hp) Teledyne Continental TSIO-360-RB (port) and one 164 kW (220 hp) LTSIO-360-RB (starboard) flat-six turbocharged counter-rotating engine, each driving a Hartzell BHC-C2YF-2/FC8459(B)-8R (port) or /FJC8459(B)-8R (starboard) two-blade, constant-speed, fully feathering metal propeller; McCauley 82NJA-6 and L82NJA-6 three-blade propellers optional, but mandatory when de-icing equipment installed. Propeller synchrophasers standard. Fuel in four tanks in wings, with a total capacity of 485 litres (128 US gallons; 107 Imp gallons), of which 462 litres (122 US gallons; 102 Imp gallons) are usable. Oil capacity 7.5 litres (2.0 US gallons; 1.7 Imp gallons). Glass fibre engine cowlings.

ACCOMMODATION: Enclosed cabin, seating five people on individual seats with 0.25 m (10 in) centre aisle; sixth seat (second row, starboard side) optional, replacing entertainment/executive console. Dual controls standard. Pilot's storm window. Two forward-hinged doors, one on starboard side at front, the other on port side at rear. Large utility door adjacent rear cabin door provides an extra-wide opening for loading bulky items. Passenger seats easily removable to provide different seating/baggage/cargo combinations. Space for 39 kg (85 lb) baggage at rear of cabin, and for 45 kg (100 lb) in nose compartment with external door on port side. Cabin heated and ventilated. Windscreen defrosters standard.

SYSTEMS: Electrohydraulic system for landing gear actuation. Electrical system powered by two 28 V 85 A alternators; 24 V 19 Ah battery. Optional pneumatic de-icing boots on wing, tailplane and fin leading-edges. Oxygen system optional.

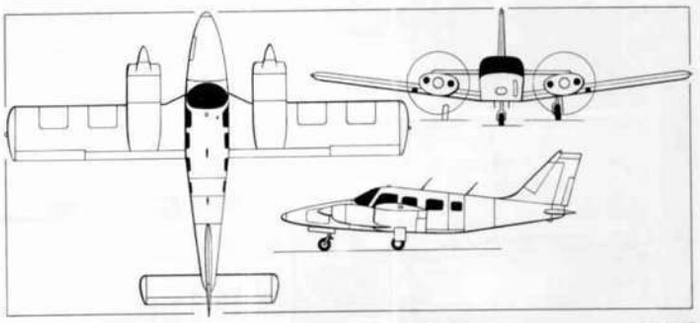
AVIONICS: Standard Avidyne FlightMax Entegra integrated flight deck, as described for Saratoga II HP.

EQUIPMENT: Standard equipment as listed for Saratoga II HP, plus emergency landing gear extension system, cabin dome light, pilot's storm window, sun visors with power setting table and checklist, chemical corrosion protection, flush fuel caps and nose gear safety mirror. Piper Aire air conditioning system, built-in oxygen system and foreign certification gross weight kit optional.

DIMENSIONS, EXTERNAL:

Wing span	11.85 m (38 ft 10¾ in)
Wing chord, constant	1.60 m (5 ft 3 in)
Wing aspect ratio	7.3
Length overall	8.72 m (28 ft 7½ in)
Height overall	3.02 m (9 ft 10¾ in)
Tailplane span	4.14 m (13 ft 6¾ in)
Wheel track	3.38 m (11 ft 1 in)
Wheelbase	2.13 m (7 ft 0 in)
Propeller diameter	1.93 m (6 ft 4 in)
Distance between propeller centres	3.80 m (12 ft 5½ in)
Cabin door (stbd, fwd): Height	0.89 m (2 ft 11 in)
Width	0.91 m (3 ft 0 in)
Cabin door (port, rear): Height	0.72 m (2 ft 4½ in)
Width	0.71 m (2 ft 4 in)
Baggage door (stbd, rear): Height	0.52 m (1 ft 8½ in)
Width	0.66 m (2 ft 2 in)
Baggage door (port, fwd): Height	0.53 m (1 ft 9 in)
Width	0.61 m (2 ft 0 in)

Piper PA-34-220T Seneca V *(Paul Jackson)* 1159791



Piper PA-34-220T Seneca V six-seat twin *(James Goulding)* 0016212

DIMENSIONS, INTERNAL:

Cabin (incl flight deck): Length	3.15 m (10 ft 4¼ in)
Max width	1.24 m (4 ft 0¾ in)
Max height	1.07 m (3 ft 6 in)
Volume	5.5 m^3 (195 cu ft)
Baggage compartment volume:	
forward	0.43 m^3 (15.3 cu ft)
rear	0.49 m^3 (17.3 cu ft)

AREAS:

Wings, gross	19.39 m^2 (208.7 sq ft)
Ailerons, incl tab (total)	1.17 m^2 (12.60 sq ft)
Trailing-edge flaps (total)	1.94 m^2 (20.84 sq ft)
Fin	1.14 m^2 (12.32 sq ft)
Rudder, incl tab	0.71 m^2 (7.62 sq ft)
Horizontal tail surfaces (total)	3.60 m^2 (38.74 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,545 kg (3,406 lb)
Baggage capacity	91 kg (200 lb)
Max T-O weight	2,154 kg (4,750 lb)
Max ramp weight	2,165 kg (4,773 lb)
Max zero-fuel weight	2,031 kg (4,479 lb)
Max landing weight	2,047 kg (4,513 lb)
Max wing loading	111.1 kg/m^2 (22.76 lb/sq ft)
Max power loading	6.57 kg/kW (10.80 lb/hp)

PERFORMANCE:

Max level speed	218 kt (404 km/h; 251 mph)
Cruising speed: at FL100: at max cruise power	182 kt (337 km/h; 209 mph)
at normal cruise power	176 kt (326 km/h; 202 mph)
at FL185: at max cruise power	197 kt (365 km/h; 227 mph)
Stalling speed, flaps down	64 kt (119 km/h; 74 mph)/IAS
Max rate of climb at S/L	446 m (1,462 ft)/min
Rate of climb at S/L, OEI	76 m (250 ft)/min
Max certified altitude	7,620 m (25,000 ft)
Service ceiling, OEI	5,030 m (16,500 ft)
T-O run	349 m (1,145 ft)
T-O to 15 m (50 ft)	521 m (1,710 ft)
Landing from 15 m (50 ft)	665 m (2,180 ft)
Landing run	427 m (1,400 ft)
Range at long-range cruise power, incl allowance for taxi, T-O, climb and 45 min reserves:	
at FL100	812 n miles (1,503 km; 934 miles)
at FL150	828 n miles (1,533 km; 952 miles)
at FL185	819 n miles (1,516 km; 942 miles)

PIPER PA-44-180 SEMINOLE

TYPE: Four-seat utility twin.

PROGRAMME: Prototype first flown May 1976; production version announced 21 February 1978; FAA certification 10 March 1978; two versions, Seminole, and Turbo Seminole (latter certified 29 November 1979), produced until 1982; normally aspirated Seminole restored to production in 1988, suspended in 1990 and restored again in 1995.

CUSTOMERS: Four delivered in 1995, eight in 1996, six in 1997, four in 1998, six in 1999, 11 in 2000, 62 in 2001, 60 in 2002, 16 in 2003, 11 in 2004, 29 in 2005, and six in the first nine months of 2006. Recent customers include the University of North Dakota, which ordered one in April 2003, and the Royal Jordanian Air Academy, which took delivery of three in 2003.

Manufacture of all PA-44 variants reached 600 in 2002. Many used in twin-conversion and IFR training.

COSTS: Standard, equipped USD484,900 (2006).

DESIGN FEATURES: Twin-engined derivation of PA-28 Arrow (which see). Constant-chord low wing and T tail; leading-edge gloves inboard of engines; sweptback fin with small fillet.

Wing section NACA 65_2-415; thickness/chord ratio 15 per cent; dihedral 7°; incidence 2°; twist 3°; washout–1°.

FLYING CONTROLS: Manual. Ailerons, rudder and all-moving tailplane with full-span anti-servo tab; rudder tab; four-position manually operated flaps. Control surface movements: ailerons +23/–17°; tailplane +15/–3°; rudder ±37°; maximum flap deflection 40°.

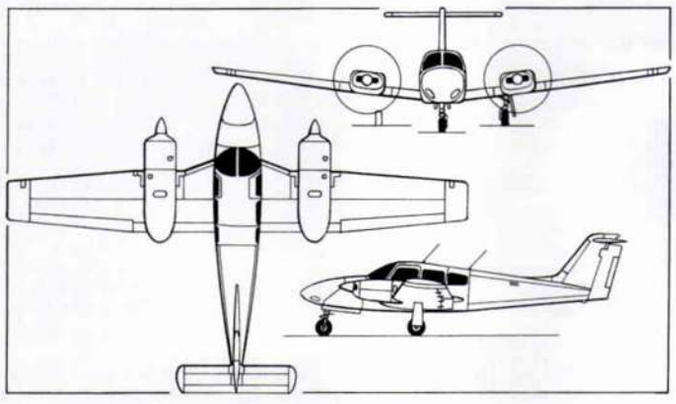
STRUCTURE: Conventional light alloy, with semi-monocoque fuselage; single-spar wings.

LANDING GEAR: Hydraulically retractable tricycle type. Free-fall emergency extension system. Piper oleo-pneumatic shock-absorbers. Mainwheels and tyres size 6.00–6 (8 ply), with tubes. Steerable nosewheel with tyre size 5.00–5 (6 ply), with tube. Dual toe-operated high-capacity disc brakes. Heavy-duty brakes and tyres optional.

POWER PLANT: Two 134 kW (180 hp) Textron Lycoming flat-four counter-rotating engines (one O-360-A1H6 to port and one LO-360-A1H6), each driving a Hartzell two-blade constant-speed fully feathering metal propeller: HC-C2Y(K,R)-2CEUF/FC7666A-2R and /FJC7666A-2R, respectively. One bladder-type fuel tank in each engine nacelle, with total capacity of 416 litres (110 US gallons; 91.6 Imp gallons), of which 409 litres (108 US gallons; 89.9 Imp gallons) are usable. Refuelling point on upper surface of each nacelle. Oil capacity 11.5 litres (3.0 US gallons; 2.5 Imp gallons).

ACCOMMODATION: Cabin seats four in two pairs of individual seats. Dual controls standard. Emergency exit on port side. Pilot's storm window. Baggage compartment at rear of cabin, capacity 91 kg (200 lb). Accommodation heated and ventilated. Windscreen defrosters.

Piper PA-44-180 Seminole *(Paul Jackson)* 1159792



Piper PA-44-180 Seminole four-seat light twin *(James Goulding)* 1159823

SYSTEMS: Electrohydraulic system for landing gear actuation and brakes. Electrical system includes two engine-driven 14 V 60 A alternators and 12 V 35 Ah battery. Janitrol combustion heater of 45,000 BTU capacity. Dual vacuum systems standard.

AVIONICS: Standard Avidyne FlightMax Entegra integrated flight deck, as described for Saratoga II HP.

EQUIPMENT: Metal instrument panel, engine hour recorders, alternate static source, heated pitot head, instrument panel lights and overhead blue lighting, avionics dimming, dome light, navigation lights, landing/taxying light, wingtip strobe lights, pilot's and co-pilot's vertically adjustable seats in fabric and vinyl, with optional lumbar support, two reclining rear passenger seats, vinyl cabin side panels, crew armrests, tinted windscreen and windows, pilot's storm window, 'Quietised' soundproofing, tiedown points, jack pads, nose gear safety mirror, external power receptacle, static discharge wicks, and Du Pont Imron polyurethane exterior paint in white base colour with two contrasting trim stripes. Metallic paint optional.

DIMENSIONS, EXTERNAL:

Wing span	11.75 m (38 ft 6½ in)
Wing aspect ratio	8.1
Length overall	8.41 m (27 ft 7¼ in)
Height overall	2.59 m (8 ft 6 in)
Tailplane span	3.05 m (10 ft 0 in)
Wheel track	3.21 m (10 ft 6½ in)
Wheelbase	2.56 m (8 ft 4¾ in)
Propeller diameter	1.88 m (6 ft 2 in)
Distance between propeller centres	3.86 m (12 ft 7¼ in)
Cabin door (stbd): Height	0.89 m (2 ft 11 in)
Width	0.91 m (3 ft 0 in)
Baggage door: Height	0.51 m (1 ft 8 in)
Width	0.56 m (1 ft 10 in)

DIMENSIONS, INTERNAL:

Cabin (instrument panel to rear bulkhead):	
Length	2.46 m (8 ft 1 in)
Max width	1.05 m (3 ft 5½ in)
Max height	1.25 m (4 ft 1 in)
Volume	3.0 m³ (106 cu ft)
Baggage compartment volume	0.74 m³ (26.0 cu ft)

AREAS:

Wings, gross	17.08 m² (183.8 sq ft)
Ailerons (total)	1.13 m² (12.12 sq ft)
Trailing-edge flaps (total)	1.36 m² (14.60 sq ft)
Fin	1.26 m² (13.56 sq ft)
Rudder, incl tab	0.76 m² (8.21 sq ft)
Horizontal tail surfaces (total)	2.27 m² (24.40 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,177 kg (2,596 lb)
Max T-O weight	1,723 kg (3,800 lb)
Max ramp weight	1,731 kg (3,816 lb)
Max wing loading	100.9 kg/m² (20.67 lb/sq ft)
Max power loading	6.42 kg/kW (10.55 lb/hp)

PERFORMANCE:

Max level speed	168 kt (311 km/h; 193 mph)
Cruising speed: at 75% power	162 kt (300 km/h; 186 mph)
at 65% power	157 kt (291 km/h; 181 mph)
Stalling speed: flaps up	57 kt (106 km/h; 66 mph) IAS
flaps down	55 kt (102 km/h; 63 mph) IAS
Max rate of climb at S/L	408 m (1,340 ft)/min
Rate of climb at S/L, OEI	65 m (212 ft)/min
Service ceiling	4,575 m (15,000 ft)
Service ceiling, OEI	1,155 m (3,800 ft)
T-O to 15 m (50 ft)	671 m (2,200 ft)
Landing from 15 m (50 ft)	454 m (1,490 ft)
Cruising range at 55% power, 45 min reserves	770 n miles (1,426 km; 886 miles)

PIPER PA-46-350P MALIBU MIRAGE

TYPE: Business prop.

PROGRAMME: Prototype Malibu first flew 30 November 1979; FAA certification of original PA-46-310P Malibu (TSIO-520 engine and two-blade propeller) received 27 September 1983; production deliveries began December 1983; 404 built before replaced by PA-46-350P Malibu Mirage October 1988. FAA certification having been received on 30 August 1988. Production temporarily suspended in 2000 to enable the company to concentrate on launching the turboprop Malibu Meridian; resumption then planned for late 2001.

CURRENT VERSIONS: **Malibu Mirage**: *As described.* Improvements introduced on 1995 model include pilot's heated glass windscreen, inflatable lumbar support on pilot/co-pilot's seats, colour co-ordinated control wheels and restyled interior trim, cabinetry and seats. Strengthened wing structure of Malibu Meridian (which see) introduced as standard from 1999, affording 18 kg (40 lb) increase in maximum take-off weight.

Malibu Meridian: Described separately.

JetPROP DLX: Supplemental Type Certificate awarded in 1998 to JetPROP LLC and Rocket Engineering, both of Spokane, Washington, for conversion of Malibu and Malibu Mirage with Pratt & Whitney PT6A-35 turboprop and Hartzell four-blade propeller.

CUSTOMERS: Total of 40 delivered in 1995, 57 in 1996, 54 in 1997, 55 in 1998, 61 in 1999, 63 in 2000, 10 in 2001, 19 in 2002, seven in 2003, 15 in 2004, 11 in 2005, and 18 in the first nine months of 2006.

COSTS: Standard, equipped USD1.1 million (2006).

DESIGN FEATURES: high-speed, long-range Piper single, with streamlined appearance and moderately high-aspect ratio wing, which is low mounted and tapered; mid-tailplane, also tapered; sweptback fin; wide track landing gear.

Wing section NASA 23016 at root, 23009 at tip; dihedral 4° 30'; thickness/chord ratio 16 per cent; twist 2° 57'; incidence 3° 38'.

FLYING CONTROLS: Conventional and manual. Horn-balanced elevators and rudder; stainless steel control cables. Electronic trim tab in elevator; electrically operated trailing-edge flaps. Precise Flight speed brakes standard. Control surface movements: ailerons ±18°; elevator ±23° 30'/–14° 30'; rudder 26° port/30° starboard; elevators +19/–14° 30'; maximum flap deflection 35°.

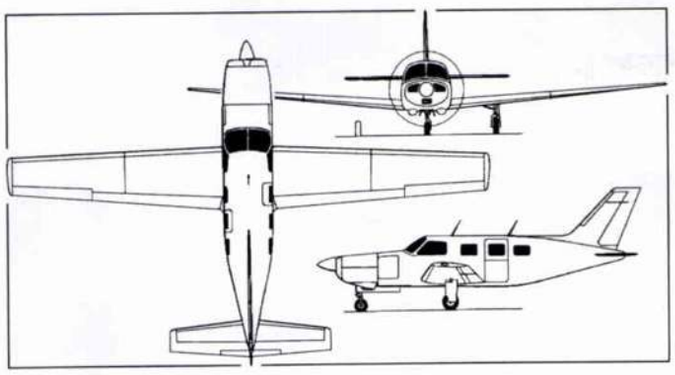
STRUCTURE: Cantilever high-aspect ratio all-metal wings; light alloy fuselage, fail-safe construction in pressurised area; light alloy tail surfaces.

LANDING GEAR: Hydraulically retractable tricycle type with single wheel on each unit; main units retract inward into wingroots, nosewheel rearward, rotating 90° to lie flat under baggage compartment. Mainwheel size 6.00–6 (8 ply), pressure 3.80 bar (55 lb/sq in); nosewheel 5.00–6 (6 ply) pressure 3.45 bar (50 lb/sq in). Toe-operated brakes.

POWER PLANT: One 261 kW (350 hp) Textron Lycoming TIO-540-AE2A turbocharged and intercooled flat-six engine, driving a Hartzell HC-13YR-1E/7890K three-blade constant-speed propeller with polished spinner. Composites (Kevlar) propeller replaced metal from 1998. Fuel system capacity 462 litres (122 US gallons; 102 Imp gallons), of which 454 litres (120 US gallons; 100 Imp gallons) are usable. Oil capacity 11.5 litres (3.0 US gallons; 2.5 Imp gallons).

ACCOMMODATION: Pilot and five passengers in pressurised, heated and air conditioned cabin; dual controls standard; front two occupants have vertical, fore-and-aft adjusting and reclining leather seats with inflatable lumbar supports, stowaway armrests, inertia reel shoulder harnesses and map-holders. Leather reclining passenger seats in club arrangement

Piper PA-46-350P Malibu Mirage *(Paul Jackson)* 1159793



Piper PA-46-350P Malibu Mirage (Textron Lycoming TIO-540-AE2A)
(Dennis Punnett) 1159822

with stowaway armrests and inertia reel shoulder harnesses; unpressurised baggage compartment in nose, and pressurised space at rear of cabin. Door with integral steps on port side aft of wing.

SYSTEMS: Pressurisation, maximum differential 0.38 bar (5.5 lb/sq in), to provide a cabin altitude of 2,400 m (7,900 ft) to a height of 7,620 m (25,000 ft). Hydraulic system pressure 107 bar (1,550 lb/sq in). Dual engine-driven vacuum pumps standard. Split bus electrical system has two 28 V/70 A alternators; 24 V 10 Ah battery; full icing protection standard. Optional electrically heated pilot's windscreen and fuel management system.

AVIONICS: Standard Avidyne FlightMax Entegra integrated avionics package, as described under Saratoga II HP, but with three displays, two for PFD functions and one MFD.

EQUIPMENT: Standard equipment includes heated lift detector; stall warning computer and horn; digital ammeter/voltmeter; six-channel CHT monitoring system with selectable cylinder readout; gyro air filter; alternate static source; heated pitot head; nosewheel light; wingtip taxying light; navigation lights, wingtip strobe lights; cockpit dome lights; solid-state dimming landing gear position and instrument panel lights; seven cabin overhead lights; PPG pilot's heated windscreen; windscreen defrosters; pilot's opening storm window; pilot's relief tube; supplemental electric heater; emergency oxygen system; leather sidewalls; stowaway executive writing table; forward refreshment/entertainment centres; super 'Quietised' soundproofing with inner passenger windows; halon fire extinguisher; Truax static discharge wicks; chemical corrosion protection; and Du Pont Imron polyurethane exterior paint in single- or two-tone base colour with graphics striping in choice of three trim colours. Optional equipment includes 'Infinity' paint scheme and stainless steel cowling fasteners.

DIMENSIONS, EXTERNAL:

Wing span	13.11 m (43 ft 0 in)
Wing aspect ratio	10.6
Length overall	8.81 m (28 ft 10¾ in)
Height overall	3.44 m (11 ft 3½ in)
Tailplane span	4.42 m (14 ft 6 in)
Wheel track	3.75 m (12 ft 3½ in)
Wheelbase	2.44 m (8 ft 0 in)
Propeller diameter	2.03 m (6 ft 8 in)
Passenger door (port, rear): Height	1.17 m (3 ft 10 in)
Width	0.61 m (2 ft 0 in)
Baggage door (port, nose): Height	0.58 m (1 ft 11 in)
Width	0.48 m (1 ft 7 in)

DIMENSIONS, INTERNAL:

Cabin (instrument panel to rear pressure bulkhead):	
Length	3.76 m (12 ft 4 in)
Max width	1.26 m (4 ft 1½ in)
Max height	1.19 m (3 ft 11 in)
Baggage compartment volume: nose	0.37 m³ (13.0 cu ft)
rear cabin	0.57 m³ (20.0 cu ft)

AREAS:

Wings, gross	16.26 m² (175.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty, equipped	1,412 kg (3,113 lb)
Baggage capacity: nose	45 kg (100 lb)
rear cabin	45 kg (100 lb)
Max T-O weight	1,968 kg (4,340 lb)
Max ramp weight	1,976 kg (4,358 lb)
Max landing and max zero-fuel weight	1,870 kg (4,123 lb)
Max wing loading	121.1 kg/m² (24.80 lb/sq ft)
Max power loading	7.55 kg/kW (12.40 lb/hp)

PERFORMANCE:

Max level speed at mid-cruise weight	220 kt (407 km/h; 253 mph)
Cruising speed at optimum altitude, mid-cruise weight, high-speed cruise power	213 kt (394 km/h; 245 mph)
Stalling speed, flaps and wheels down	59 kt (110 km/h; 68 mph)
Max rate of climb at S/L	372 m (1,220 ft)/min
Max certified altitude	7,620 m (25,000 ft)
T-O run	331 m (1,087 ft)
T-O to 15 m (50 ft)	637 m (2,090 ft)
Landing from 15 m (50 ft)	600 m (1,968 ft)
Landing run	311 m (1,020 ft)
Range with max fuel, allowances for start, T-O, climb and descent, plus 45 min reserves, at optimum altitude, long-range cruise power	1,345 n miles (2,490 km; 1,547 miles)

PIPER PA-46-500TP MALIBU MERIDIAN

TYPE: Business turboprop.

PROGRAMME: Launched at 1997 National Business Aviation Association Convention in Dallas, Texas, where a full-scale fuselage mockup was displayed; prototype (N400PT, converted from second Malibu Mirage) rolled out 13 August 1998; first flight 21 August 1998. Static test airframe and three further certification flight test aircraft (N403MM, first flown in July 1999, N402MM first flown 27 August 1999 and N401MM first flown in September 1999) built on production tooling. N401MM was dedicated to stability and autopilot testing and ice shape testing; N402MM, first with production standard interior and exterior paint finish, conducted performance and avionics testing and certification for flight into known icing, as well as serving as marketing demonstrator. N403MM was responsible for systems and power plant testing, high-speed flight testing and flutter testing. Public debut (N402MM) at the NBAA Convention in Atlanta, Georgia, in October 1999. First flight of production aircraft (c/n 003/N375RD) 30 June 2000. FAR Pt 23 certification achieved 27 September 2000, followed by UK CAA approval on 21 June 2001.

Increase in maximum take-off weight to 2,310 kg (5,092 lb), resulting in 15 per cent increase in useful load, certified at end of 2002; modifications include strengthening of airframe, modified stall strips and addition of vortex generators to the wings and undersurface of tailplane.

CURRENT VERSIONS: **Malibu Meridian:** *As described.*

20th Anniversary Special Edition: As described under Malibu Mirage entry.

CUSTOMERS: Total of 239 orders held by October 2000. First delivery (N375RD) to Richard Dumais of Richardson, Texas, in November 2000. Total of 98 delivered in 2001, 25 in 2002, 24 in 2003, 26 in 2004, 40 in 2005, and 32 in the first nine months of 2006. 200th Malibu Meridian delivered 2005 to Don and Jane Lockhard of Ontario, Canada.

COSTS: USD1.895 million typically equipped (2006).

Description generally as for Malibu Mirage, except that below.

DESIGN FEATURES: Strengthened wing, incorporating wingroot leading-edge gloves to increase area and reduce stalling speed; strengthened tail surfaces; and 37 per cent increase in area of horizontal stabiliser.

FLYING CONTROLS: Deflections as for Malibu Mirage except flaps 36°. Flight-adjustable trim tab in rudder. Ground-adjustable tab on starboard aileron.

POWER PLANT: One Pratt & Whitney Canada PT6A-42A turboprop, thermodynamic rating 767 kW (1,029 shp), flat rated at 373 kW (500 shp) maximum continuous, driving a Hartzell HC-E4N-3Q/E8501B-3.5 four-blade constant-speed reversible propeller. Fuel capacity 655 litres (173 US gallons; 144 Imp gallons), of which 644 litres (170 US gallons; 141.5 Imp gallons) are usable. Oil capacity 11 litres (3.0 US gallons; 2.5 Imp gallons).

ACCOMMODATION: Pilot and five passengers in standard club layout; passenger capacity reduced to four with optional entertainment centre comprising beverage cooler, storage cabinets, AM/FM/CD stereo and provision for VCR with flat-panel monitor. Fully automatic bleed-air conditioning and temperature control systems.

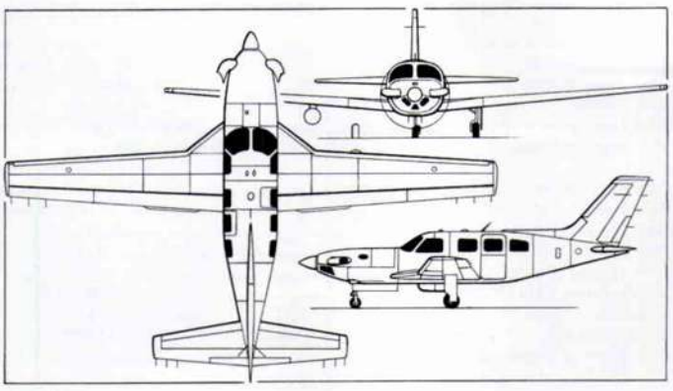
SYSTEMS: Upgraded electrical system, with 200 A starter/generator and 130 A standby alternator.

AVIONICS: Standard Garmin International and Meggitt package with dual Garmin GNS 530 nav/com/GPS as core system.

Comms: Garmin transceiver with 8.33 kHz spacing; GMA-340 audio panel; GTX-327 transponder.

Radar: Honeywell RDR 2000 vertical profile colour weather radar with KMD 850 MFD.

PA-46-500TP Malibu Meridian *(Paul Jackson)* 1159794



Piper Malibu Meridian (Pratt & Whitney Canada PT6A turboprop)
(James Goulding) 1159821

Flight: S-Tec Magic 1500 AFCS with integrated yaw damper; dual Meggitt air data, attitude, heading and reference systems (ADAHRS) provides digital readout of pitch and roll attitudes, roll and yaw rates, altitude, rate of altitude change, airspeed and heading.

Avidyne FlightMax Entegra integrated flight deck, introduced as standard from April 2005, comprises three 264 mm (10.4 in) high-resolution, sunlight-readable colour displays for PFD and MFD functions and EMax engine instrumentation system. Dual redundant EXP5000 PFDs with solid-state air data and attitude/heading reference system (ADAHRS) present standard flight information including EADI, EHSI, altitude, primary engine instruments, airspeed and vertical speed; EX5000 MFD provides situational awareness data on an integrated display that includes moving map with Jeppesen NavData Americas and International databases, lightning detection, terrain, traffic, engine information and optional Narrowcast datalink with Nexrad weather information. EMax displays torque, interstage turbine temperature, fuel flow and oil temperature and pressure on the PFD, propeller rpm, gas generator speed, fuel totaliser, percentage horespower, fuel remaining, six-cylinder CHT, EGT, oil temperature, OAT and electrical system performance on the MFD, plus data logging of critical engine parameters which are downloadable via a dataport in a standard spreadsheet format. Options include MultiLink graphical weather display, flight tracking and two-way air-to-ground text messaging, and CMax Jeppesen JeppView electronic chart display.

DIMENSIONS, EXTERNAL: As for Malibu Mirage except:
- Length overall ..... 9.02 m (29 ft 7¼ in)
- Height overall ..... 3.45 m (11 ft 4 in)
- Propeller diameter ..... 2.095 m (6 ft 10½ in)

DIMENSIONS, INTERNAL: As for Malibu Mirage

AREAS:
- Wings, gross ..... 17.00 m² (183.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty, equipped ..... 1,549 kg (3,414 lb)
- Baggage capacity ..... 45 kg (100 lb)
- Max T-O weight ..... 2,310 kg (5,092 lb)
- Max ramp weight ..... 2,329 kg (5,134 lb)
- Max wing loading ..... 135.8 kg/m² (27.82 lb/sq ft)
- Max power loading ..... 6.20 kg/kW (10.2 lb/shp)

PERFORMANCE:
- Max cruising speed at FL300 at mid-cruise weight ..... 260 kt (481 km/h; 299 mph)
- Stalling speed, flaps down ..... 69 kt (128 km/h; 80 mph)
- Max rate of climb at S/L ..... 474 m (1,556 ft)/min
- Max certified altitude ..... 9,150 m (30,000 ft)
- T-O run ..... 503 m (1,650 ft)
- T-O to 15 m (50 ft) ..... 743 m (2,438 ft)
- Landing from 15 m (50 ft) ..... 643 m (2,110 ft)
- Landing run ..... 311 m (1,020 ft)
- Max range at FL300, max cruise power, mid-cruise weight, 45 min reserves ..... more than 1,000 n miles (1,852 km; 1,151 miles)
- Endurance ..... 4 h 12 min

PIPER PIPERJET

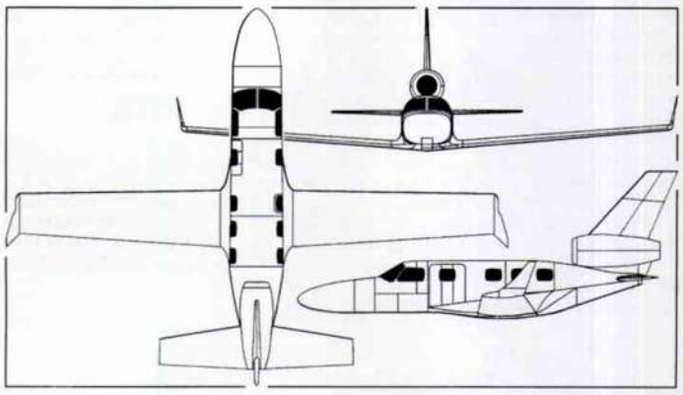
TYPE: Business mono-jet.

PROGRAMME: Announced 17 October 2006 at the NBAA Convention in Orlando, Florida, where a full-scale mockup was displayed; first flight planned 18 months thereafter. Certification, including approval for operation in known icing conditions and RVSM, and first customer deliveries, scheduled for the first half of 2010.

Artist's impression of the Piper PiperJet single-engined light jet 1159558

Standard six-seat club interior of the Piper PiperJet 1159559

PiperJet flight deck with three-tube EFIS display 1159560



Provisional general arrangement of PiperJet ***(Paul Jackson)*** 1159574

COSTS: USD2.199 million (2006).

DESIGN FEATURES: Low unswept tapered wing of natural laminar flow aerofoil section, with main spar mounted below cabin floor; outward canted sweptback winglets; low-mounted unswept tailplane; engine mounted centrally in pod above rear fuselage; sweptback fin mounted above engine.

FLYING CONTROLS: Conventional and manual. Dual sidestick controllers and single central thrust lever.

LANDING GEAR: Tricycle type; retractable.

POWER PLANT: One turbofan of unspecified type, with FADEC, performance computer and engine trend monitoring; autothrottle optional.

ACCOMMODATION: Standard accommodation for six, including single pilot, with main cabin in club-four configuration. Position forward, starboard, opposite door for optional seventh seat, or lavatory, or storage space or entertainment/beverage centre. Four cabin windows per side. Door on port side immediately forward of wing; emergency exit on starboard side above wing; seats can be removed for utility operations. Cabin features leather seats, zebra wood trim, cup holders and computer/iPod docking stations at each seat.

AVIONICS: Three-tube EFIS cockpit standard.

All data is provisional.

DIMENSIONS, EXTERNAL:
- Wing span over winglets ..... 13.59 m (44 ft 7 in)
- Length overall ..... 10.29 m (33 ft 9 in)
- Height overall ..... 5.03 m (16 ft 6 in)
- Fuselage: Max width ..... 1.40 m (4 ft 7 in)
  - Max height ..... 1.35 m (4 ft 5 in)
- Passenger door width ..... 0.91 m (3 ft 0 in)

DIMENSIONS, INTERNAL:
- Cabin volume ..... 8.3 m³ (293 cu ft)

WEIGHTS AND LOADINGS:
- Payload with max fuel ..... 363 kg (800 lb)
- Max T-O weight ..... 3,175 kg (7,000 lb)

PERFORMANCE:
- Max cruising speed ..... 360 kt (667 km/h; 414 mph)
- Max operating altitude ..... 10,670 m (35,000 ft)
- T-O run ..... 762 m (2,500 ft)
- Max range ..... 1,300 n miles (2,407 km; 1,496 miles)

PULSAR

PULSAR AIRCRAFT CORPORATION

4233 North Santa Anita Avenue, Suite 5, El Monte Airport, El Monte, California 91731
Tel: (+1 626) 443 10 19
Fax: (+1 626) 443 13 11
e-mail: info@pulsaraircraft.com
Web: www.pulsaraircraft.com
PRESIDENT AND CEO: Ron Degani
MANUFACTURING DIRECTOR: Rich Trickel

Pulsar Aircraft Corporation acquired rights to Pulsar series of light aircraft from SkyStar in July 1999 and announced the Super Pulsar 100, based on the Pulsar III (which remains available), at that time. It has also obtained rights to the former Tri-R KIS and KIS Cruiser, marketing of which began in 2001.

In 2004, the Pulsar XP-LSA and Super Pulsar-LSA were announced in anticipation of Light Sport Aircraft regulations introduced 1 September 2004; however, development is continuing and aircraft were not available by October 2006.

PULSAR SUPER PULSAR 100

TYPE: Side-by-side kitbuilt.

PROGRAMME: Designed by Mark Brown. Prototype Pulsar II first flew 3 April 1988 as two-seat version of Aero Designs Star-Lite (itself first flown in 1983). Originally with 47.8 kW (64.1 hp) Rotax 582 engine. Until suspended in 1999, in favour of Super Pulsar, parallel main production versions were Pulsar XP, with 59.6 kW (79.9 hp) Rotax 912 UL and Pulsar III with 84.6 kW (113.4 hp) turbocharged Rotax 914, giving improved performance. Larger canopy and redesigned cowling with chin intake; 100 per cent mass-balanced controls. Nose- and tailwheel versions of both were available. Programme acquired by SkyStar in late 1996 and by Pulsar in 1999.

CURRENT VERSIONS: **Super Pulsar 100:** Refined version of Pulsar III with repositioned tail unit for improved stability and higher, wider cabin having cutaway rear, but single-piece canopy. Prototype (N601SP) first flew August 2000 but damaged 20 August 2000; flight testing resumed 2 April 2001 and aircraft made public debut at Sun 'n' Fun 13 April 2001; by April 2002, 228 hours had been flown by prototype. Initial customer-built aircraft first flown 3 September 2002 in Poland. Tailwheel version under consideration, but no evidence of recent promotion.

Description applies to Super Pulsar 100.

Super Pulsar-LSA: Announced 2004, powered by 59.7 kW (80 hp) Jabiru 2200. Offered as kit or, from January 2005, as ready-to-fly; however, in abeyance by October 2005.

Wega: Version of Pulsar II-914 Turbo, certified to JAR-VLA with 600 kg (1,323 lb) maximum T-O weight, to have been marketed by HK Aircraft Technology in Germany; project abandoned.

Pulsar XP: Returned to production in 2001 as kit; cost USD22,950 (2005); available with Jabiru 2200 or Rotax 912 engine; Pulsar III has higher-powered Rotax 914 (Pulsar Turbo). Jabiru 3300 or Rotax 912S. Some versions have fixed rear windows in addition to canopy/windscreen.

Pulsar XP-LSA: As Super Pulsar-LSA; in abeyance by October 2005.

CUSTOMERS: More than 250 of all Pulsar variants flying by mid-2003, with a further 300 then under construction; over 150 current on US register in October 2005.

COSTS: Basic Super Pulsar kit (no engine) USD26,950 (2005); fast-build options add USD7,500.

DESIGN FEATURES: Highly streamlined low-wing configuration, with sweptback fin. Designed for ease of home construction with premoulded components where possible. Wings removable in about 15 minutes for mounting on trailer. Quoted build time 1,000 hours, or 600 hours for 'Super' kit.

Wing aerofoil NASA MS(1)-0313; tailplane aerofoil NACA 63_2-215.

FLYING CONTROLS: Conventional and manual; 60 per cent mass-balanced surfaces operated by rods and cables. Control surface deflections: elevator +30/–15°; aileron +25/–22°; rudder 30°. Flaps maximum deflection 40°.

STRUCTURE: GFRP with carbon fibre and foam cores. Wing skins of composites.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring cantilever mainwheel legs with wheel fairings. Mainwheels 500×5; tailwheel 400×5.

POWER PLANT: One 88.0 kW (118 hp) Pulsar Aeromaxx flat-four piston engine; alternatively 93 kW (125 hp) Teledyne Continental IO-240, 89 kW (120 hp) Jabiru 3300, 73.5 kW (98.6 hp) Rotax 912S or 84.6 kW (113.4 hp) Rotax 914. Fuel capacity 144 litres (38.0 US gallons; 31.6 Imp gallons).

DIMENSIONS, EXTERNAL:

Wing span	7.62 m (25 ft 0 in)
Wing aspect ratio	7.8
Length overall	6.10 m (20 ft 0 in)
Height overall	1.80 m (5 ft 11 in)

DIMENSIONS, INTERNAL:

Cabin: Max width	1.09 m (3 ft 7 in)
Max height	1.14 m (3 ft 9 in)

AREAS:

Wings, gross	7.43 m² (80.0 sq ft)

WEIGHTS AND LOADINGS (Rotax 912S):

Weight empty, equipped	318 kg (700 lb)
Max baggage weight	60 kg (132 lb)
Max T-O weight	635 kg (1,400 lb)
Max wing loading	85.4 kg/m² (17.50 lb/sq ft)
Max power loading	8.64 kg/kW (14.20 lb/hp)

PERFORMANCE (Rotax 912S):

Never-exceed speed (VNE)	191 kt (354 km/h; 220 mph)
Max level speed at S/L	156 kt (290 km/h; 180 mph)
Stalling speed, power off	46 kt (84 km/h; 52 mph)
Max rate of climb at S/L, solo	335 m (1,100 ft)/min
Service ceiling	4,875 m (16,000 ft)
T-O run	213 m (700 ft)
Landing run	244 m (800 ft)
Range	869 n miles (1,609 km; 1,000 miles)
g limits	+9/–6

PULSAR SPORT 150

TYPE: Side-by-side kitbuilt.

PROGRAMME: Designed by Rich Trickel and Vance Jaqua. First flown 1991 and initially known as Tri-R KIS; name derived from 'keep it simple'. Programme sold to Pulsar in 1999; new owner modified design with revised canopy (rear-hinged or sliding) and empennage.

CURRENT VERSIONS: **TR-1:** Tricycle landing gear version, *as described.*

TD: Tailwheel version, introduced 1992; powered by 88.0 kW (118 hp) Textron Lycoming O-235-C1B; seven flying by end of 1996; no longer marketed.

CUSTOMERS: At least 57 (50 tricycle and seven tailwheel) flying by 2005.

COSTS: Basic kit USD24,950, without engine, avionics, propeller, spinner, upholstery, battery, instruments and paint (2005).

DESIGN FEATURES: Conventional low-wing monoplane of composites construction. Upturned wingtips and sharply tapered fin. Quoted build time 1,000 hours.

FLYING CONTROLS: Conventional and manual. Plain ailerons and horn-balanced elevators, latter with tab on port side. Horn-balanced rudder, hinged on starboard side. Plain three-position flaps; deflect 0/12/28°. Control surface deflections: elevator +25/–16°; ailerons ±12°; rudder 24° port, 30° starboard.

STRUCTURE: Constructed of high-temperature epoxy pre-impregnated GFRP/CFRP premoulded components, with either Divinycell or honeycomb core. All metal components prewelded or premachined. Aerofoil NACA 63(2)-215 slightly modified; dihedral 2° 30'.

LANDING GEAR: Fixed. Fuselage-mounted spring cantilever mainwheel legs with optional speed fairings in tricycle or tailwheel layout. Matco 6.00×6 wheels and brakes; McCreary 5.00-5 tyres. Tricycle version has steerable nosewheel; size 5.00×5.

POWER PLANT: One piston engine driving a two- or three-blade propeller: typically 88 kW (118 hp) Textron Lycoming O-235-C1B; 93 kW (125 hp) Teledyne Continental IO-240; or 74.6 kW (100 hp) Teledyne Continental O-200. Alternatives include 59.7 kW (80 hp) Limbach L 2000 and 74.6 kW (100 hp) Fire Wall Forward CAM 100 four-cylinder converted Honda motorcar engine. Fuel capacity 95 litres (25.0 US gallons; 20.8 Imp gallons); optionally 129 litres (34.0 US gallons; 28.3 Imp gallons) for Lycoming- and Continental-powered versions, or 76 litres (20.0 US gallons; 16.7 Imp gallons) in Limbach.

ACCOMMODATION: Two, side by side. Upward-hinged door each side.

DIMENSIONS, EXTERNAL:

Wing span	7.01 m (23 ft 0 in)
Wing chord	1.17 m (3 ft 10 in)
Wing aspect ratio	6.0
Length overall	6.71 m (22 ft 0 in)
Height overall: TR-1	2.21 m (7 ft 3 in)
TD	1.89 m (6 ft 2½ in)
Tailplane span	2.24 m (7 ft 4 in)

PULSAR CRUISER and SUPER CRUISER

TYPE: Four-seat kitbuilt.

PROGRAMME: Designed by Rich Trickel and Vance Jaqua. First flown 1994, when known as Tri-R Cruiser TR-4. Design purchased by Pulsar in 1999.

CURRENT VERSIONS: **Cruiser:** Baseline model; being replaced by Super Cruiser.

Super Cruiser: Higher-powered version with minor redesign to dorsal fin to give larger area. First aircraft to this standard (N98WG) flew 8 March 1999.

CUSTOMERS: More than 60 kits sold and 18 flying by mid-2002 (latest data supplied); eleven on US register in October 2005.

COSTS: Kit USD34,950 (2005); fast-build options add USD7,000.

DESIGN FEATURES: Larger version of the Pulsar Sport 150, but without upturned wingtips. Quoted build time 1,500 hours.

Description generally as for Sport 150 except that below.

FLYING CONTROLS: As Sport 150, except elevator tab on starboard side and four-position flaps, deflections 0/10/23/31°.

LANDING GEAR: Tricycle type only.

POWER PLANT: *Cruiser:* One 134 kW (180 hp) Textron Lycoming O-360 flat-six, driving a two-blade, fixed-pitch propeller; alternatively a 119 kW (160 hp) Textron Lycoming O-320 can be fitted.

Super Cruiser: One 157 kW (210 hp) six-cylinder Teledyne Continental IO-360, driving a two-blade, constant-speed propeller.

Fuel capacity in both versions 197 litres (52.0 US gallons; 43.3 Imp gallons), of which 189 litres (50.0 US gallons; 41.6 Imp gallons) usable.

DIMENSIONS, EXTERNAL:
- Wing span ..... 8.83 m (29 ft 0 in)
- Wing aspect ratio 6.2
- Length overall ..... 7.16 m (23 ft 6 in)
- Height overall ..... 2.29 m (7 ft 6 in)

DIMENSIONS, INTERNAL:
- Cabin: Length ..... 1.98 m (6 ft 6 in)
- Max width ..... 1.14 m (3 ft 9 in)
- Max height ..... 1.17 m (3 ft 10 in)

AREAS:
- Wings, gross ..... 12.54 m² (135.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty: Cruiser ..... 544 kg (1,200 lb)
- Super Cruiser ..... 572 kg (1,260 lb)
- Max baggage weight ..... 29 kg (65 lb)
- Max T-O weight ..... 1,088 kg (2,400 lb)
- Max wing loading ..... 86.8 kg/m² (17.78 lb/sq ft)
- Max power loading:
  - Cruiser ..... 8.12 kg/kW (13.33 lb/hp)
  - Super Cruiser ..... 6.96 kg/kW (11.43 lb/hp)

PERFORMANCE:
- Never-exceed speed (VNE) ..... 186 kt (346 km/h; 215 mph)
- Cruising speed: at 75% power:
  - Cruiser ..... 165 kt (306 km/h; 190 mph)
  - Super Cruiser ..... 174 kt (322 km/h; 200 mph)
- at 60% power: Cruiser ..... 156 kt (290 km/h; 180 mph)
  - Super Cruiser ..... 165 kt (306 km/h; 190 mph)
- Stalling speed: Cruiser ..... 48 kt (89 km/h; 55 mph)
  - Super Cruiser ..... 50 kt (92 km/h; 57 mph)
- Max rate of climb at S/L: Cruiser ..... 396 m (1,300 ft)/min
  - Super Cruiser ..... 610 m (2,000 ft)/min
- Service ceiling ..... 6,400 m (21,000 ft)
- T-O run: Cruiser ..... 305 m (1,000 ft)
  - Super Cruiser ..... 274 m (900 ft)
- T-O to 15 m (50 ft): Cruiser ..... 366 m (1,200 ft)
  - Super Cruiser ..... 298 m (975 ft)
- Landing run: Cruiser ..... 395 m (1,300 ft)
  - Super Cruiser ..... 411 m (1,350 ft)
- Range: Cruiser ..... more than 782 n miles (1,448 km; 900 miles)
  - Super Cruiser ..... more than 695 n miles (1,287 km; 799 miles)

Web: www.maero.com

Original Luscombe company formed in 1934, specialising in all-metal private light aircraft; ownership passed to Temco in 1949, Silvaire Aircraft in 1955, and to Luscombe Aircraft Corporation on termination of aircraft production in 1960. Type certificate of Model 11 transferred to Luscombe Aircraft Corporation on 10 August 1995 and then to QMA on 13 March 2006. Relaunch of modified version undertaken from 1998 in newly built 11,150 m² (120,000 sq ft) factory at Altus. Company subsequently renamed Quartz Mountain Aerospace, remaining based at Altus, Oklahoma. First production aircraft scheduled for delivery in late 2006.

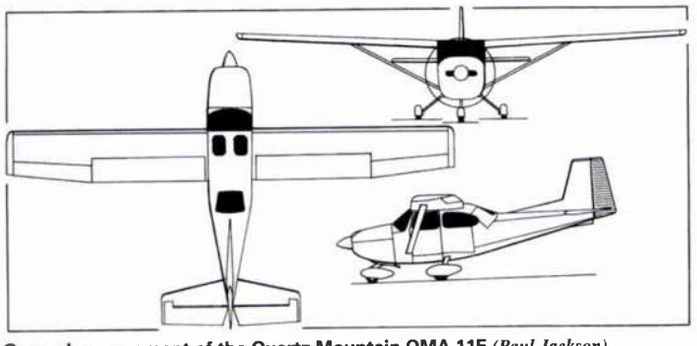
QMA 11E

TYPE: Four-seat lightplane.

PROGRAMME: Model 11A Sedan first flew (NX74202) 11 September 1946; certified 4 October 1948; total of 198 built with tailwheel and 123 kW (165 hp) Continental E-165 engine; production ended in 1949; 40 remained registered in US during 2006. Planned 1970 relaunch as Alpha Aviation Alpha IID failed to materialise.

Considerably redesigned Luscombe 185-11E being produced at Altus, Oklahoma, following conversion of Sedan N1674B as Proof-of-concept followed by construction of

QMA 11E (alias Luscombe 11E demonstrator) *(Paul Jackson)* 1158586



General arrangement of the Quartz Mountain QMA 11E *(Paul Jackson)* 1158554

preproduction prototype (N747BM, c/n 00995; later N11XE) for certification. Initially marketed under name of Spartan, which had been dropped by 2002. First production aircraft/demonstrator N11XA.

Structural test fuselage completed December 1997; production of new aircraft due to have started April 2000, but this slipped to early 2004 and subsequently to late 2006 as QMA 11E. Certification (Certificate No. A804) for sales and marketing purposes awarded November 1998, with full type certification (Certificate No. A804) received 17 December 2002.

Changes from original include engine, 24 V electrical system, nosewheel, composites engine cowling, modified windscreen, electric (formerly hydraulic) flaps, electric (formerly manual) elevator trim and three-point seatbelts.

CUSTOMERS: Two (including prototype) registered by October 2001. Announced customers include the US Civil Air Patrol, which has a requirement for eight.

COSTS: USD189,500 (2006).

DESIGN FEATURES: High-wing braced monoplane; original 1946 design modified for nosewheel and 0.30 m (1 ft 0 in) increase in constant-chord inner wing, with sweptforward outer trailing-edge and Hoemer-style wingtips; tapered tailplane; slightly sweptback fin with ventral fillet. Wing section NACA 43012A.

FLYING CONTROLS: Conventional and manual. Stainless steel control cables. All control surfaces aluminium skinned with external stiffeners. Horn-balanced elevators with flight-adjustable, electric trim tab on port side; ground-adjustable tab on starboard aileron. Control movements: ailerons +15/–9°, elevators +29/–13° and rudder ±15°. Three-position electric flaps; maximum deflection 25°.

STRUCTURE: Steel tube semi-monocoque corrosion-proofed fuselage and strut-braced two-spar wings, all covered with aluminium skins, except composites engine cowling. Dorsal tail fillet.

LANDING GEAR: Alloy spring leaf main legs with 6.00-6 tyres, pressure 2.4 bar (35 lb/sq in). Air/oil shock-absorbing strut nose gear with 5.00-5 tyre, pressure 1.7 bar (25 lb/sq in), steerable ±10°. Hydraulic disc brakes and parking brake on mainwheels; turning radius approximately 8.23 m (27 ft 0 in).

POWER PLANT: One 157 kW (210 hp) Teledyne Continental IO-360-ES six-cylinder fuel-injected piston engine derated to 138 kW (185 hp) and driving a McCaulley 1B235/EFC7667 two-blade fixed-pitch metal propeller with D4245 spinner. Fuel capacity 159 litres (42.0 US gallons; 35.0 Imp gallons) in two bladder wing tanks, of which 152 litres (40.0 US gallons; 33.3 Imp gallons) are usable. Filler port in each wing. Oil capacity 7.5 litres (2.0 US gallons; 1.6 Imp gallons). Proof-of-concept aircraft has three-blade propeller, which is optional on production airframes.

ACCOMMODATION: Pilot and three passengers in side-by-side pairs; door each side; front seats fully adjustable; dual controls. Inertia reel harnesses for all seats. Cabin windows are tinted, as are two vision ports in cabin roof.

SYSTEMS: 28 V 70 A alternator; 24 V 12.75 Ah battery; dual vacuum pumps.

AVIONICS: *Comms:* Garmin GNC 250XL GPS/com, GTX 327 transponder and GMA 340 audio panel standard. GTX 330 transponder and Senheiser HMEC 300/BP-03 or HME 100 headsets optional.

Flight: Dual Garmin GNS 430 or GNS 530 GPS/com/nav, GI 106A CDI with glideslope and flight data recorder optional.

Instrumentation: Altimeter, compass, ASI, VSI, turn co-ordinator, ammeter, OAT gauge, vacuum gauge, fuel gauge, tachometer, EGT gauge and oil pressure gauge standard.

EQUIPMENT: Position lights, strobe lights and white paint with accent colour all standard. Options include leather seats, deluxe interior, Rosen sun visors, noise cancelling headsets, wheel fairings, metallic paint and polished propeller spinner.

DIMENSIONS, EXTERNAL:

Wing span	11.73 m (38 ft 6 in)
Wing aspect ratio	8.9

Quest was established in 2001, specifically to develop and market the Kodiak utility transport. New, 2,500 m² (27,000 sq ft) plant at Sandpoint Municipal Airport opened 16 October 2002; 5,295 m² (57,000 sq ft) extension commissioned in October 2005. Personnel totalled 50 in 2005.

QUEST KODIAK

TYPE: Light utility turboprop.

PROGRAMME: Prototype (N490KQ) first flight 16 October 2004; achieved 27 hours in first month and 50 sorties by 14 January 2005. Total 200 hours by July 2005; 330 by January 2006. Public debut at Alaska State Aviation Trade Show, May 2005. Second airframe for ground tests. Certification due 2006.

CURRENT VERSIONS: **Kodiak 100:** Prototype.

CUSTOMERS: Total 28 deposits by July 2005, including 15 for missionary work.

COSTS: USD1,111,000 (2005).

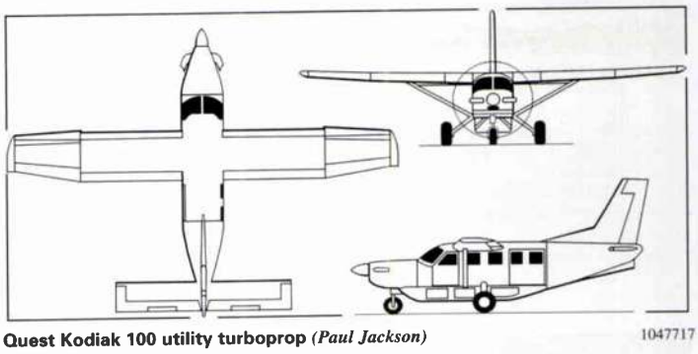
DESIGN FEATURES: Optimised for missionary work. High, braced wing with constant-chord central section and tapered from approximately 60 per cent span after leading-edge 'dogtooth' extension. Tall, sweptback fin with underfin, ventral fillet and large rudder horn. Constant-chord tailplane. Wide-track landing gear for rough field operation. Airframe life 30,000 h.

Certifiable to FAR Pt 23 for IFR operation. Custom-designed aerofoil section; dihedral 3°.

FLYING CONTROLS: Conventional and manual. Horn-balanced elevators and rudder. Balanced ailerons with electric trim tab, port. Trim tab in each elevator; electrical actuation. Fowler flaps; max deflection 35°.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring steel cantilever mainwheel legs; steerable nosewheel with Cleveland oleo-pneumatic shock-absorber. Tyre sizes 29×11.0-10 main; 22×8.0-8 nose. Optional floats, with addition of fuselage underfin.

POWER PLANT: One 559 kW (750 shp) Pratt & Whitney Canada PT6A-34 turboprop, driving a Hartzell D9511FBX four-blade, constant-speed, fully-reversible propeller. Fuel capacity 1,212 litres (320 US gallons; 267 Imp gallons) usable.



Quest Kodiak 100 utility turboprop *(Paul Jackson)* 1047717

Quest Kodiak 100 prototype over Port Alsworth, Alaska 1129181

ACCOMMODATION: Total of 10 persons, including pilot(s) at 79 cm (31 in) pitch. Forward-hinged crew door each side; upward-hinged freight door, port, rear. Optional baggage pannier below fuselage.
AVIONICS: Garmin G1000 suite installed December 2005 for trials.
DIMENSIONS, EXTERNAL:
- Wing span ... 13.72 m (45 ft 0 in)
- Wing aspect ratio ... 8.4
- Length overall ... 16.93 m (55 ft 6½ in)
- Height overall ... 4.70 m (15 ft 5 in)
- Tailplane span ... 6.10 m (20 ft 0 in)
- Tailplane chord (constant) ... 1.02 m (3 ft 4 in)
- Propeller diameter ... 2.44 m (8 ft 0 in)
- Propeller ground clearance ... 0.48 m (1 ft 7 in)
- Crew doors: Height ... 1.22 m (4 ft 0 in)

- Econ cruising speed ... 185 kt (343 km/h; 213 mph)
- Stalling speed: flaps up ... 78 kt (145 km/h; 90 mph)
- flaps down ... 60 kt (111 km/h; 69 mph)
- Max rate of climb at S/L ... 518 m (1,700 ft)/min
- Max certified altitude ... 7,620 m (25,000 ft)
- T-O run ... 214 m (700 ft)
- Landing run without propeller reversal ... 229 m (750 ft)
- Range at econ cruising speed at FL125, 1 h reserves ... 1,075 n miles (1,990 km; 1,237 miles)
- Endurance (absolute) ... 6 h 50 min

QUIKKIT

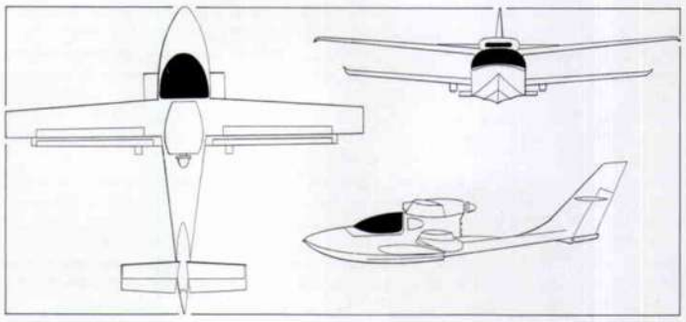
RAINBOW FLYERS INC, QUIKKIT DIVISION

9002 Summer Glen, Dallas, Texas 75243-7445
Tel/Fax: (+1 214) 349 04 62
e-mail: quikkit@glassgoose.com
Web: www.glassgoose.com
PRESIDENT: Thomas W Scott
PRODUCTION MANAGER: Robert Giddens

WORKS: Lakeview Airport, Lake Dallas, Texas 75065

Quikkit was initially involved in the production of parts and modification kits for the Aero Composites Sea Hawk; the Glass Goose, while visually similar, is a new design.

Promotion was continuing in 2006.



Quikkit Glass Goose two-seat amphibian ***(Paul Jackson)*** 0084616

QUIKKIT GLASS GOOSE

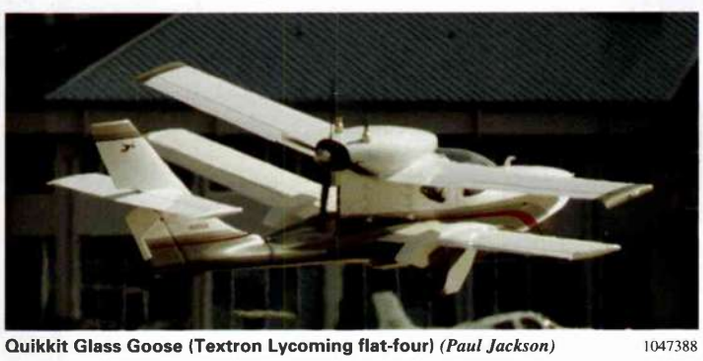
TYPE: Two-seat amphibian kitbuilt.
PROGRAMME: Extensively redesigned Aero Gare Sea Hawk/Aero Composites Sea Hawker, obviating deficiencies of that discontinued aircraft. Modifications initially applied to Tom Scott's Sea Hawker and later marketed for incorporation by other Sea Hawker operators, although no longer available.

Prototype new-build Glass Goose flew 1996, but lost to flaperon flutter. Second prototype, in definitive configuration, first flew (N96GG) 20 March 1999. Production undertaken on Sea Hawker tools and jigs, acquired by Quikkit in 1993.

CUSTOMERS: Total 42 under construction, of which seven flying, by October 2003. At least six others extant by 2000, reflecting Sea Hawk conversions; eight on US Register, October 2005; at least 200 reported under construction in 2006.
COSTS: USD32,500, excluding engine, avionics and equipment; quick-build options add USD13,000 (2006).
DESIGN FEATURES: Pusher, cantilever biplane, with single-step hull, sponsons and underwing pods for retractable main landing gear. Dished upper rear fuselage; mid-mounted tailplane. Wing positive stagger of 20 cm (8 in); upswept lower wingtips; downswept upper wingtips.

Modifications to Sea Hawker design include extended (91 cm; 3 ft 0 in) upper wing span; sponsons of aerofoil section (replacing wingtip floats); and extended pylon chord, with associated fillets, vortex generators and augmentation slots in reshaped cowling to eliminate propeller vibration.

FLYING CONTROLS: Conventional and manual, with drooping ailerons on all wings, max deflection +10/–40°. Actuation by pushrods and cables.
STRUCTURE: Glass fibre, with Kevlar reinforcement. Forward wing spars of glass fibre beam type, with carbon caps, at 27 per cent chord; glass fibre C-type rear spar at 85 per cent chord; glass fibre/foam core sandwich ribs. Pre-moulded flaperons aid construction. Intersecting fuselage bulkheads for additional strength. Quoted build time 1,000 hours.



Quikkit Glass Goose (Textron Lycoming flat-four) ***(Paul Jackson)*** 1047388

LANDING GEAR: Retractable tricycle type for land operation. Two, side-by-side Cheng Shin 11×4.00–5 tyres on each main unit, underside of landing gear stowage pod also being forward-hinged leg/door. Mainwheel brakes.

Rearward retracting, stainless steel, fully castoring nose leg, with 4.00–5 tyre, extends against spring-loaded single door. Electrohydraulic actuation. Ventral rudder, cable operated, for water manoeuvring.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming O-320-B2B flat-four driving a Warp Drive, four-blade, ground-adjustable pitch propeller. Four equal-size, integral fuel tanks in wings (upper pair main; lower pair for long range), total capacity 265 litres (70.0 US gallons; 58.3 Imp gallons). No crossfeed. Optional provision for total of 455 litres (120 US gallons; 100 Imp gallons) involves fuselage tank.
ACCOMMODATION: Two, side by side, with baggage stowage areas behind seats and between lower wings.
DIMENSIONS, EXTERNAL:
- Wing span: upper ... 8.23 m (27 ft 0 in)
- lower ... 7.62 m (25 ft 0 in)
- Wing chord: at root ... 0.84 m (2 ft 9 in)
- at tip ... 0.65 m (2 ft 1½ in)
- Length overall ... 5.94 m (19 ft 6 in)
- Height overall ... 2.29 m (7 ft 6 in)
- Tailplane span ... 2.44 m (8 ft 0 in)

DIMENSIONS, INTERNAL:
- Cockpit max width ... 1.07 m (3 ft 6 in)
- Baggage volume: cockpit ... 0.24 m^3 (8.5 cu ft)
- between wings ... 0.45 m^3 (16.0 cu ft)

AREAS:
- Wings, gross ... 12.17 m^2 (131.0 sq ft)
- Sponsons (lifting) ... 1.44 m^2 (15.50 sq ft)
- Flaperons (total) ... 1.86 m^2 (20.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ... 454 kg (1,000 lb)
- Max T-O weight ... 816 kg (1,800 lb)
- Max wing loading ... 67.1 kg/m^2 (13.74 lb/sq ft)
- Max power loading ... 6.85 kg/kW (11.25 lb/hp)

PERFORMANCE:
- Max level speed ... 139 kt (257 km/h; 160 mph)
- Max cruising speed at 75% power ... 122 kt (225 km/h; 140 mph)
- Stalling speed: flaps up ... 44 kt (81 km/h; 50 mph)
- flaps down ... 37 kt (68 km/h; 42 mph)
- Max rate of climb at S/L ... 366 m (1,200 ft)/min
- Service ceiling ... 3,660 m (12,000 ft)
- T-O run ... 244 m (800 ft)
- Landing run ... 274 m (900 ft)
- Max range, 30 min reserves ... 955 n miles (1,770 km; 1,100 miles)
- *g* limits ... ±9

RANS

RANS INC

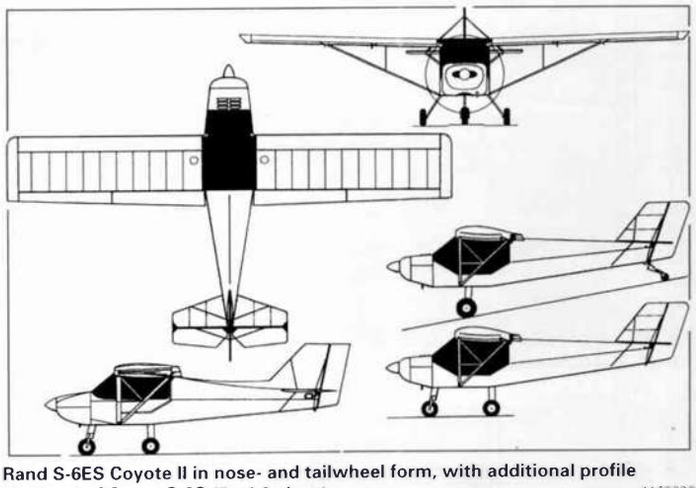
4600 Highway 183 Alternate, Hays, Kansas 67601
Tel: (+1 785) 625 63 46
Fax: (+1 785) 625 27 95
e-mail: rans@media-net.net
Web: www.rans.com
PRESIDENT AND CEO: Randy J Schlitter
VICE-PRESIDENT: Paula Schlitter

Formed in 1974, initially to build sand yachts, Rans was marketing 11 types of aircraft in early 2006, namely S-4/5 Coyote, S-6 Coyote II, S-7 Courier, S-9 Chaos, S-10 Sakota, S-12 Airaile, S-14 Airaile, S-16 Shekari, S-17 Stinger and S-18 Stinger II. At Sun 'n' Fun, Lakeland, Florida, April 2006, S-19 was launched, coincident with announcement of withdrawal of most earlier types with effect from 1 July 2006. S-12XL Airaile was initially included in discontinuations, but rapidly reinstated due to popular demand. Marketing now concentrated on S-6, S-7, S-12 and S-19, while two-stroke engine option also withdrawn and S-7 only available with Sport Wing.

In October 2003, Rans employed 45 at its 4,645 m² (50,000 sq ft) factory. By June 2005, 4,000 kits had been delivered.

In addition, Rans also produces recumbent bicycles.

S-6S version of Rans Coyote displaying doped skin, longer chord fin and partly unglazed door *(Paul Jackson)* 1158024



Rand S-6ES Coyote II in nose- and tailwheel form, with additional profile (bottom) of Super S-6S *(Paul Jackson)* 1158030

RANS S-6 COYOTE II

TYPE: Side-by-side ultralight kitbuilt.

PROGRAMME: First flown November 1988; S-6ES production prototype flew April 1990 and S-6ES TD tailwheel version in October 1990, S-6S flown October 1993 and with improved fuselage in February 1999, Sport Wing flown April 2005 and became standard on all versions in July 2006.

CURRENT VERSIONS: **S-6ES Coyote II**: 'Extended span' versions previously available with Standard (14.42 m²; 155.25 sq ft, constant chord) and '116' (10.78 m²; 116.0 sq ft, cruise speed optimised, forward-swept trailing edge) wings and choice of Rotax 503, 582, 912 and 912 S engines. Current wing based on Standard, but with tapered ailerons and flaps. Pre-sewn, laced Dacron covering. *As described.*

S-6S Super Coyote II: Doped fabric covering; otherwise as S-6ES, although longer fin chord; squared fintips; partly opaque doors.

CUSTOMERS: More than 1,700 sold in some 50 countries by December 2005.

COSTS: Kit S-6ES USD30,850 with Rotax 912 UL or USD32,450 with Rotax 912 ULS; S-6S USD33,075 and USD34,675, respectively; plus tax (2006).

DESIGN FEATURES: High, almost constant-chord wing braced to lower longerons by streamlined V struts and intermediate struts. Sweptback fin and low-mounted tailplane. Optional wing folding. Quoted built time 300 to 500 hours.

FLYING CONTROLS: Conventional and manual. Four-position flaps.

STRUCTURE: Generally of material-covered, blind-riveted and wire-braced aluminium tube with sheet bulkheads and welded 4130 steel cockpit cage. Root rib tension system on wings, ailerons and flaps. Wing main and trailing spars of tubular aluminium, 76 mm (3 in) and 51 mm (2 in), respectively; stamped aluminium ribs and sheet aluminium leading edge. Composites wingtips.

LANDING GEAR: Fixed; nosewheel or tailwheel options. Fuselage-mounted, tapered spring steel cantilever mainwheel legs. Telescoping spring nosewheel, where fitted as alternative to steerable tailwheel.

POWER PLANT: One Rotax flat-four, liquid-cooled piston engine: 59.6 kW (79.9 hp) Rotax 912 UL with 2.27:1 reduction or 73.5 kW (98.6 hp) Rotax 912 ULS with 2.43:1 reduction. Two-or three blade propeller to customer's requirements. Fuel tank in each wing; combined capacity 68 litres (18.0 US gallons; 15.0 Imp gallons).

DIMENSIONS, EXTERNAL:

Wing span	9.27 m (30 ft 5 in)
Wing mean chord	1.37 m (4 ft 6 in)
Wing aspect ratio	6.7
Width, wings folded (wheel outer track)	1.85 m (6 ft 1 in)
Length overall: rigged	6.10 m (20 ft 0 in)
folded	7.34 m (24 ft 1 in)
Height overall: tricycle	2.74 m (9 ft 0 in)
tailwheel	1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:

Cockpit max width	1.14 m (3 ft 9 in)

AREAS:

Wings, gross	12.78 m² (137.6 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	295 kg (650 lb)
Max baggage weight	23 kg (50 lb)
Max T-O weight	544 kg (1,200 lb)

PERFORMANCE (Rotax 912 ULS engine and Sport Wing):

Never-exceed speed (VNE)	113 kt (209 km/h; 130 mph)
Normal cruising speed	96 kt (177 km/h; 110 mph)
Stalling speed: flaps up	36 kt (66 km/h; 41 mph)
flaps down	32 kt (58 km/h; 36 mph)
Max rate of climb at S/L	381 m (1,250 ft)/min
Service ceiling	5,335 m (17,500 ft)
T-O run	**64 m (210 ft)**
Landing run	80 m (260 ft)
Range	382 n miles (708 km/h; 440 miles)
Endurance	**4 h 0 min**
g limits	+4/–2

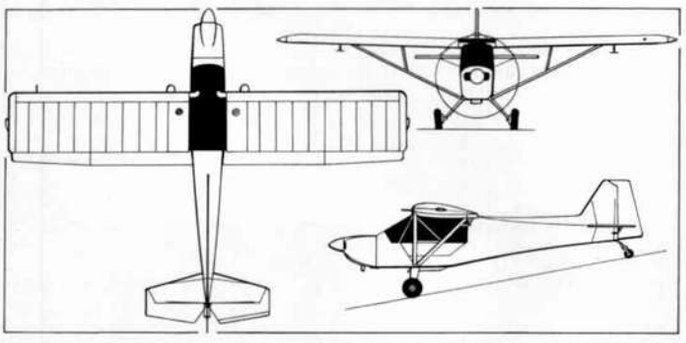
RANS S-7 COURIER

TYPE: Two-seat lightplane; tandem-seat kitbuilt.

PROGRAMME: Prototype first flew November 1985; with Rotax 503 of 34.0 kW (45.6 hp) and 177 kg (390 lb) empty weight; in production from January 1986. Considerably revised S-7S and LS are current versions.

Rans S-6ES Coyote II with Dacron covering 1158023

Rans S-7LS Courier, approved in US LSA category 1158012



Rans S-7LS Courier two-seat factory-built light aircraft *(James Goulding)* 0089516

CURRENT VERSIONS: **S-7:** Original kitbuilt version, superseded by S-7S.

S-7LS: Factory-built version; changes include additional fuselage side stringers, smaller ailerons, larger flaps, taller (15 cm; 6 in) fin and rudder, extended dorsal strake, control surface gap seals, improved low-friction control cable runs, tab for pitch trim, tapered spring steel main landing gear legs with improved fairings, dual calliper brakes, larger baggage compartment and corrosion-proofing as standard. Known until 2005 as S-7C; first flight (N11632; second airframe) 20 December 1996; re-flown March 1999 with Rotax 912 ULS and fuselage stretch. Conforming prototype N2506A flew July 2000. Type certificate awarded 14 September 2001, permitting start to deliveries; however, production was on hold until January 2003, pending definitive Sport Pilot regulations; first S-7LS flew 24 October 2005 and approved as LSA; deliveries began December 2005. *As described.*

S-7S: Kitbuilt version of S-7C, conforming to FAA 51 per cent rule. Kit production began January 2003. LSA compliant as kit.

CUSTOMERS: Total of 396 S-7 kits sold, of which 315 completed by October 2005.

COSTS: S-7LS USD75,000 flyaway; kit USD18,900 or USD37,100 including Rotax 912 ULS engine (2006).

DESIGN FEATURES: High-wing, mid-tailplane configuration with sweptback fin, constant-chord wings and tapered tailplane. Wings braced by A-struts; empennage mutually wire-braced. Wings fold rearwards and tailplanes upwards for stowage; usual rigging/de-rigging time 30 to 45 minutes. Quoted build time for kit version is 500 to 700 hours; quick-build kit version 250 to 300 hours.

NACA 2412 wing section, thickness/chord ratio 14 per cent; dihedral 1°; twist 25°.

FLYING CONTROLS: Conventional and manual. Cable-operated rudder and ailerons, the last-named spade-assisted, and torque tube-operated elevators; trim tab on starboard elevator; cable-operated four-position flaps (0, 8, 16 and 26°).

STRUCTURE: Wings have two tubular 6061-T6 alloy spars, preformed aluminium tube ribs riveted and clipped to spars and sheet alloy leading-edges; fuselage and tail surfaces of welded 4130 steel; glass fibre forward decking and engine cowling. Airframe is fabric-covered.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring tubular steel mainwheel legs with streamlined trouser; steerable, full-swivelling tailwheel; mainwheel size 16×5 (6.00–6 on S-7C), maximum pressure 2.41 bar (35 lb/sq in); tailwheel with solid tyre, size 8×2; Matco/Cleveland wheels with hydraulic brakes. Optional speed fairings on main legs increase cruising speed by 2 to 4 kt (5 to 8 km/h; 3 to 5 mph). Tundra tyres, skis, floats and Aerocet amphibious floats optional.

POWER PLANT: One 59.6 kW (79.9 hp) Rotax 912 UL or one 73.5 kW (98.6 hp) Rotax 912 ULS four-cylinder piston engine in early versions, each with 2.27:1 reduction gear, driving a two-blade, ground-adjustable propeller (Tennessee on 912 UL and Sensenich on 912 ULS). S-7LS and S-7S have Rotax 912 ULS with 2.43:1 reduction gear; driving Sensenich two-blade propeller (wood standard; ground-adjustable, composites, optional). Fuel contained in two wing tanks, combined capacity 68 litres (18.0 US gallons; 15.0 Imp gallons), of which 63 litres (16.75 US gallons; 14.0 Imp gallons) are usable. Oil capacity 2.9 litres (0.75 US gallon; 0.6 Imp gallon); coolant capacity 4.2 litres (1.1 US gallons; 0.9 Imp gallons).

ACCOMMODATION: Pilot and passenger in tandem on fore- and aft-adjustable seats; lap and shoulder harness standard; optional deluxe seats. Dual controls standard. Cabin is heated and ventilated. Upward-hinged door on each side is flight-openable with uplocks; quick-release hinge pins optional. Baggage compartment at rear of cabin.

AVIONICS: To customer's choice; optional Bendix/King or Garmin GPS, VHF com and intercom.

Data follow for S-7LS with Rotax 912 ULS engine.

DIMENSIONS, EXTERNAL:

Wing span	8.92 m (29 ft 3 in)
Wing mean chord	1.52 m (5 ft 0 in)
Wing aspect ratio	5.8
Length overall	7.09 m (23 ft 3 in)
Height overall	1.90 m (6 ft 3 in)
Tailplane span	2.44 m (8 ft 0 in)
Wheel track	1.93 m (6 ft 4 in)
Wheelbase	5.18 m (17 ft 0 in)
Propeller diameter	1.83 m (6 ft 0 in)
Cabin door: Max height	0.97 m (3 ft 2 in)
Max width	1.52 m (5 ft 0 in)
Height to sill	0.81 m (2 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.93 m (6 ft 4 in)
Max width	0.76 m (2 ft 6 in)
Max height	1.07 m (3 ft 6 in)

RANS S-12XL AIRAILE

TYPE: Side-by-side ultralight kitbuilt.

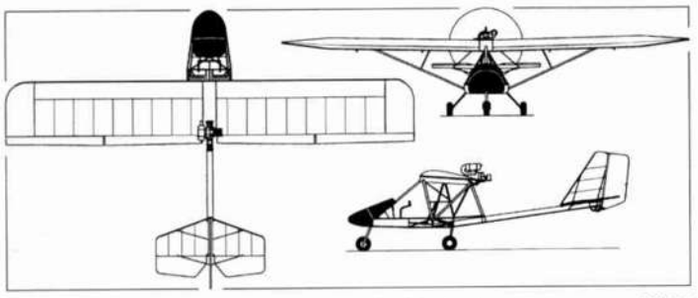
PROGRAMME: Basic S-12 first flown March 1990. Improved S-12XL (N8045X) first flown March 1995; made its debut at Sun 'n' Fun in Lakeland, Florida, April 1995. S-12S first flown January 1999. Rans announced discontinuation of S-12 family in 2006, but almost immediately reinstated S-12XL.

CUSTOMERS: 991 S-12s (all models) ordered by October 2005, of which 910 flying.

COSTS: Airframe kit, less engine, but with equipment appropriate to proposed installation, USD15,000 to USD17,200, according to Rotax type (2006). Quick-build options also available.

DESIGN FEATURES: Pod and boom fuselage; V-strut-braced wings; wire-braced tail surfaces; wings fold rearwards and tailplanes upwards for storage. Quoted build time 175 to 225 hours; or 325 to 500 hours with full enclosure cockpit. (Extra 200 hours for S-12S.)

Rans S-12XL Airaile in traditional, open configuration 1158437



Rans S-12XL Airaile general arrangement *(Paul Jackson)* 1158445

FLYING CONTROLS: Conventional and manual. Cable-operated; ground-adjustable flaps primarily used for setting best trim, but can also be lowered for landing; tailplane incidence is ground-adjustable. Dual controls standard.

STRUCTURE: Welded steel tube cockpit cage; aluminium alloy tubular tailboom; wings have two tubular alloy spars and preformed ribs; ailerons, flaps and tail surfaces of alloy tube with stamped alloy or moulded ABS ribs; option of Dacron or doped fabric covering.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted tubular spring steel cantilever mainwheel legs (with streamlined trouser on S-12S); with small tailwheel/bumper; spring-loaded telescoping nose leg; pedal-operated hydraulic brakes on mainwheels; steerable nosewheel. All wheels 15 cm (6 in) aluminium on S-12XL and 13 cm (5 in) on S-12S. Optional spats, tundra tyres and Puddle Jumper floats.

POWER PLANT: One air-cooled 34.0 kW (45.6 hp) Rotax 503 or liquid-cooled 47.8 kW (64.1 hp) Rotax 582 two-cylinder engine with 2.58:1 reduction gear, or 59.6 kW (79.9 hp) Rotax 912 or 73.5 kW (98.6 hp) Rotax 912 ULS flat-fours with 2.27:1 reduction gear, driving a two-blade Tennessee wooden propeller; three-blade Warp Drive propeller optional; electric start optional on 503 and 582, standard on 912. Version with 48.5 kW (65 hp) Hirth 2706 two-cylinder two-stroke is available in Germany. Fuel in single wing tank, maximum capacity 34 litres (9.0 US gallons; 7.5 Imp gallons); dual tanks optional, (standard in S-12S) combined capacity 68 litres (18.0 US gallons; 15.0 Imp gallons).

ACCOMMODATION: Pilot and passenger side by side in open cockpit; transparent mini pod fairing standard; optional partial- and full-enclosure cockpits provide increased leg, shoulder and head room and lower noise levels and, combined with flow fences attached to fuselage pod and boom, raise cruising speed.

DIMENSIONS, EXTERNAL:

Wing span	9.45 m (31 ft 0 in)
Length overall	6.25 m (20 ft 6 in)
Height overall	2.36 m (7 ft 9 in)
Propeller diameter:	
S-12XL	1.73 to 1.83 m (5 ft 8 in to 6 ft 0 in)
S-12S	1.73 m (5 ft 8 in)

AREAS:

Wings, gross	14.12 m² (152.0 sq ft)

WEIGHTS AND LOADINGS (A: S-12XL with Rotax 912 UL, B: S-12S with Rotax 912 ULS):

Weight empty: A	261 kg (575 lb)
B	295 kg (650 lb)
Max T-O weight: A	499 kg (1,100 lb)
B	521 kg (1,150 lb)

PERFORMANCE (A and B as above):

Never-exceed speed (VNE): A	87 kt (161 km/h; 100 mph)
B	104 kt (193 km/h; 120 mph)
Cruising speed: A	74 kt (137 km/h; 85 mph)
B	87 kt (161 km/h; 100 mph)[1]
Stalling speed, flaps down: A, B	31 kt (57 km/h; 35 mph)
Max rate of climb at S/L: A	274 m (900 ft)/min
B	366 m (1,200 ft)/min
T-O run: A	87 m (285 ft)
B	81 m (265 ft)
Landing run: A, B	61 m (200 ft)
Range: A	325 n miles (601 km; 374 miles)
B	312 n miles (579 km; 360 miles)
Endurance: A	4 h 24 min
B	3 h 54 min

[1] *With cockpit and wheel fairings*

RANS S-19

TYPE: Two-seat kitbuilt.

PROGRAMME: Announced at Sun 'n' Fun, April 2006 when two years into development.

COSTS: Kit USD37,800, including engine and engine instruments (2006).

DESIGN FEATURES: Similar to earlier S-16 Shekari. Low wing and tailplane, both of constant chord with rounded tips. Sweptback fin. Conforms to US LSA-E criteria. Wings and stabilator detachable for storage.

FLYING CONTROLS: Manual. All-moving stabilator with anti-balance tab. Mass-balanced rudder. Flaps. Ailerons and stabilator actuated by pushrods; rudder by cables.

STRUCTURE: Generally of riveted aluminium, with composites wing- and empennage tips, engine cowling and wingroot fairings.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted, aluminium cantilever spring mainwheel legs. Steerable nosewheel. Matco wheels (W-51) and hydraulic brakes; all tyres 5.00-5. Optional wheel fairings.

POWER PLANT: One 73.5 kW (98.6 hp) Rotax 912 ULS liquid-cooled flat-four driving a Sensenich two-blade, ground-adjustable pitch propeller via 1:2.43 reduction gear. Composites fuel tank in each wing; combined capacity 91 litres (24.0 US gallons; 20.0 Imp gallons).

ACCOMMODATION: Two, side by side. Fixed windscreen and rearward-sliding canopy. Dual controls. Baggage area behind seats.

DIMENSIONS, EXTERNAL:

Wing span	8.53 m (28 ft 0 in)
Wing chord constant	1.40 m (4 ft 7 in)
Wing aspect ratio	6.2
Height overall	2.43 m (7 ft 11½ in)
Propeller diameter	1.73 m (5 ft 8 in)

DIMENSIONS, INTERNAL:

Cockpit max width	1.10 m (3 ft 7½ in)

AREAS:

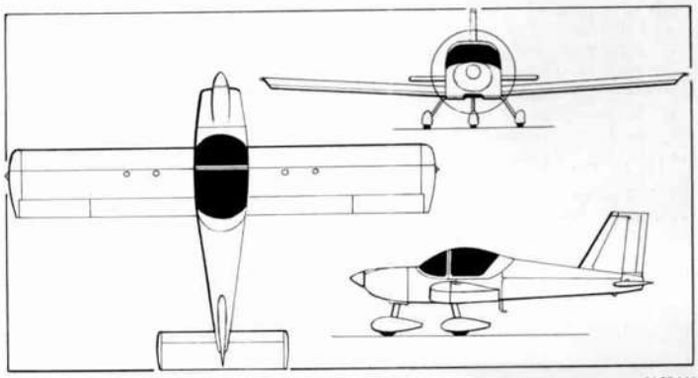
Wings, gross	11.79 m² (126.9 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	340 kg (750 lb)
Max baggage weight	32 kg (70 lb)
Max T-O weight	598 kg (1,320 lb)
Max wing loading	50.8 kg/m² (10.40 lb/sq ft)
Max power loading	8.15 kg/kW (13.38 lb/hp)

PERFORMANCE (estimated):

Never-exceed speed (VNE)	130 kt (241 km/h; 150 mph)
Cruising speed at 75% power at FL75	111 kt (206 km/h; 128 mph)
Stalling speed: flaps up	45 kt (83 km/h; 51 mph)
flaps down	40 kt (73 km/h; 45 mph)
Max rate of climb at S/L	274 m (900 ft)/min
Service ceiling	4,420 m (14,500 ft)
T-O and landing run	100 m (325 ft)
Range at 65% power at FL75	530 n miles (981 km; 610 miles)
Endurance at 65% power	5 h 6 min
g limits	+4.4/–2.0



Rans S-19 two-seat lightplane *(James Goulding)* 1158441

RAYTHEON

RAYTHEON AIRCRAFT COMPANY

Among the divisions and subsidiaries of this major aerospace/defence contractor are Raytheon Aircraft Company and Raytheon Systems Limited.

9709 East Central, Wichita, Kansas 67201-0085

Tel: (+1 316) 676 71 11

Fax: (+1 316) 676 82 86

Web: www.raytheonaircraft.com

BRANCH DIVISIONS: Salina, Kansas and Little Rock, Arkansas.

CHAIRMAN AND CEO: James E Schuster

PRESIDENT, COMMERCIAL AIRCRAFT: Brad Hatt

PRESIDENT, GLOBAL CUSTOMER SERVICE AND SUPPORT: Randy Groom

VICE-PRESIDENTS:

Jackie Berger (Communications and Corporate Affairs)
John Brauneis (Special Missions and Contracts)
Don Dwyer (Global Commercial Sales)
Ted Farid (International Sales)
Randy Groom (Global Customer Service and Support)
Brad Hatt (Commercial Aircraft)
James B Smith (Government Business)

Refer to **Beechcraft** and **Hawker** entries for aircraft descriptions.

Raytheon Aircraft Company (RAC) formed 15 September 1994, combining Raytheon Company subsidiaries Beech Aircraft Corporation and Raytheon Corporate Jets Inc. Raytheon acquired British Aerospace's Corporate Jets division 6 August 1993. RAC builds civil and military aircraft, and components; Salina division supplies wings for most models, non-metallic interior components, ventral fins, nosecones and tailcones.

Final assembly of Hawkers transferred from UK to new 41,800 m² (450,000 sq ft) plant at Wichita beginning last quarter of 1995 and finalised by April 1997, when last UK-built Hawker was completed; 17,745 m² (191,000 sq ft) Training Systems Division plant added for Texan II assembly line. Little Rock continues to provide custom interiors, avionics, sales and customer support services for Hawker models and aircraft painting services for Hawkers. Beech and Hawker product names are retained and separate Beechcraft and Hawker divisions

were established in mid-2002 for marketing purposes, Raytheon title having been dropped from aircraft designations.

Wholly owned subsidiaries include Raytheon Aircraft Credit Corporation Inc (business aircraft retail financing and leasing); Travel Air Insurance Company Ltd (aircraft liability insurance); Raytheon Aircraft Services network of fixed-base operations; Raytheon Travel Air, formed in 1997, which offers fractional ownership; and Raytheon Aircraft Charter and Management, which offers aircraft charter and full-service management.

In 2005 RAC had 8,000 employees worldwide and occupied 650,321 m^2 (7,000,000 sq ft) of plant area.

On 21 December 2006 Raytheon Company announced that it had signed an agreement to sell Raytheon Aircraft Company to Hawker Beechcraft Corporation, a new company formed by GS Capital Partners, an affiliate of Goldman Sachs and Onex Partners, for USD3.3 billion. The sale, which was expected to be concluded during the first half of 2007, includes RAC facilities and other assets in Kansas, Arkansas and Texas as well as its fixed-base operations in the UK, US and Mexico.

RAYTHEON SENTINEL

RAF designation: Sentinel R. Mk 1

TYPE: Airborne ground surveillance system.

PROGRAMME: On 15 June 1999 Raytheon Systems Limited was chosen as the preferred bidder for the UK Ministry of Defence's Airborne Stand-Off Radar (ASTOR) programme, for which five Global Express airframes are being modified by Bombardier's Belfast division to provide the airborne platform for radar and communications systems. Contract value GBP800 million (1999). Preliminary Design Review (PDR) scheduled for completion in March 2001; 200-hour flight test programme of an aerodynamically representative airframe, modified from Global Express prototype C-FBGX, began on 3 August 2001, leading to Critical Design Review (CDR) and design freeze in fourth quarter 2002. Height is 7.95 m (26 ft 1 in) due to extension of fintip, other dimensions being as for Global Express. Known as ASTOR until 'Sentinel' name assigned June 2003.

First production airframe (C-GJRG/ZJ690) delivered 7 February 2002 to Raytheon Systems Limited at Greenville, Texas, for airframe modification and systems integration. First flight in Sentinel configuration 26 May 2004; intended radar equipment seriously damaged during bench testing in August 2004; new radar eventually installed at Greenville by June 2005, at which time all other airframe trials had been completed. Second production airframe (C-FZVM/ZJ691) delivered to Hawarden, UK, on 29 January 2003. First flight in Sentinel configuration 25 July 2005; repainted grey in August 2005; to US for trials. Third and fourth airframes (C-FZWW/ZJ692 and C-FZXC/ZJ693) delivered Hawarden 16 January 2004. Of these, ZJ692 completed March 2006, painted grey April 2006 and used for RAF pilot training at Hawarden; type's public debut at RAF Waddington air show 1 to 2 July 2006; radar installed; exhibited at Farnborough 17 to 23 July 2006.

Fifth airframe (C-FZYL/ZJ694) used for No. 5 Squadron familiarisation, flying from Hawarden still as unpainted Global Express; initial sortie, on 11 May 2005, visiting Waddington. Transferred to conversion line.

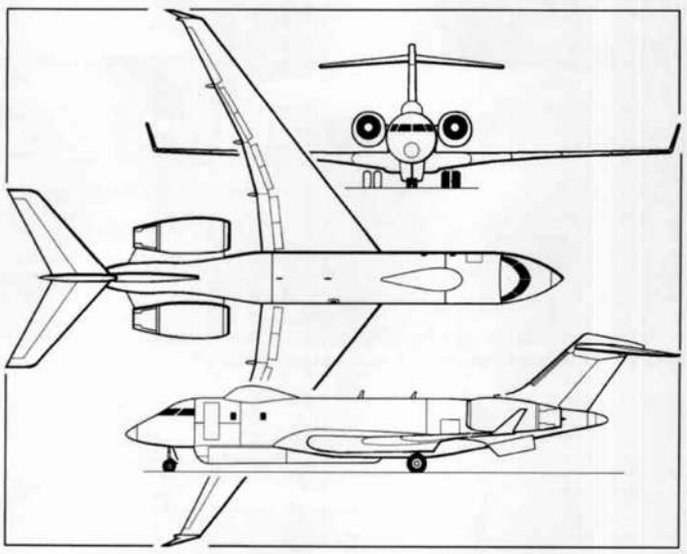
In-service date originally fixed for September 2005, with aircraft based at RAF Waddington, Lincolnshire, and operated by No. 5 Squadron, which re-formed on 1 April 2004. This not achieved; first delivery re-scheduled for October 2006, although full operational capability target remains 2007. Final delivery to RAF due in 2007.

Detailed description in *Jane's Electronic Mission Aircraft*; brief details follow:

UK Air Staff Requirement (ASR) 925 for Airborne Stand-Off Radar (ASTOR) platform is designed to provide near real-time radar intelligence in support of air/land and/or tri-service operations; includes the following requirements:

- carriage of a combined Ground Moving Target Indicator (GMTI)/Synthetic Aperture Radar (SAR) as the platform's primary surveillance sensor. ASARS-2 Plus radar installed
- a communications suite that incorporates a satellite communications subsystem, an air-to-air datalink (Link 16 standard - see following), 8 to 12.5 GHz and 12.5 to 18 GHz band primary imagery datalinks and secure, two-way radios for air-to-ground and air-to-air voice traffic
- an operating altitude of between 12,800 m (42,000 ft) and 15,545 m (51,000 ft)
- a maximum surveillance range of between 134 and at least 160 n miles (250 to 296 km; 154 to 184 miles)
- SAR swath and spotlight (0.5 m resolution) operating modes
- a GMTI facility that is capable of tracking ground targets moving at speeds of less than 7 kt (10 km/h; 6 mph)
- the ability to detect and track in-flight helicopters
- interleaved (but not concurrent) radar operating modes
- the ability to operate 'off-tether' from the air vehicle's associated ground stations
- the ability to process acquired data in real- or near real-time
- interoperability with non-national surveillance systems.

Sentinel R Mk 1 is externally characterised by a dorsal satellite communications antenna radome; a ventral 'canoe' fairing (housing the platform's radar and datalink antennas); a pair of stabilising fins beneath its rear fuselage; an extended fairing (housing the aircraft's aft-facing RWR antenna heads at the junction of its vertical and horizontal tail surfaces; missile warning system sensor units on each side of its tailcone; provision for a countermeasures dispensing system (CMDS) on the sides of its rear fuselage; and a ventral towed decoy launcher aft of its wing trailing-edges. Provision is made for a flight crew of two, three system operators (two image analysts and a mission controller) and (possibly) two relief operators. The platform is intended to have an unrefuelled flight duration of up to 11 hours.



Raytheon Sentinel R. Mk 1 airborne surveillance platform *(Paul Jackson)*

1159123

Aside from the radar, other onboard equipment includes:

- a BAE Systems managed Defensive Aids Group (DAG) that incorporates a BAE Systems AN/ALR-56M RWR, the BAE Systems' AN/AAR-57(V) missile warning system, the Thales Aerospace Division's Shrike techniques generator, a variant of Raytheon's AN/ALE-50(V) advanced airborne expendable decoy and a CMDS (thought to be the Thales Optronics' Vicon 78 Series 455 equipment). DAG management is by means of a Radstone embedded defensive aids suite manager
- a re-ducted baseline cooling system together with liquid cooling provision for the radar sensor
- Mercury Computer Systems RACE++ embedded, real-time, digital signal/image processing computers (for use in the ASTOR DMR)
- a mission communications suite that includes:
- a Logica Joint Tactical Information Distribution System (JTIDS/Link 16 host processor
- a Cubic/Ultra Electronics Narrowband DataLink Subsystem (NDLS - based on the Cubic Surveillance and Control DataLink that is used aboard the E-8 Joint STARS aircraft)
- L-3 Communications-sourced wide-band datalinks and Super High-Frequency—likely to be the company's X-band airborne system—satellite communications terminals
- Very/Ultra High-Frequency band voice radios
- an avionics fit that is based on the Honeywell Primus 2000XP integrated cockpit equipment package, as installed aboard the baseline Global Express aircraft. Here, the system incorporates 'minor changes' to the baseline architecture together with V/UHF band radios for air traffic control purposes
- Sun Microsystems operator workstations.

Interior layout includes (from nose to tail): a two-man flight deck; a crew rest area (incorporating a galley, lavatory and two rest seats); three operator consoles (located to port) and a rear cabin electronics bay with a total of six equipment racks.

Sentinels are supported by a General Dynamics Decision Systems-managed ground station architecture and a Raytheon-managed support package. In the first instance, a total of eight ground stations are divided into transportable Operational Level (OLGS) and Tactical (TGS) formats. Of the eight, two are configured to OLGS standard, with the complete OLGS package comprising:

- two, 7 m long, shelter-mounted communications modules
- five, 7 m long, shelter-mounted workstation modules
- two deployable Broadcast Mode DataLink (BMDL) antenna units
- two trailer-mounted linking/datalink modules
- seven trailer-mounted generator modules
- four remote terminals.

Raytheon ASARS-2 Plus is a dual-mode radar developed from equipment used in the Lockheed U-2S surveillance aircraft. Aboard the Sentinel R. Mk 1, the architecture is understood to incorporate the USAF's latest standard ASARS-2 receiver/exciter, an upgraded processor and a combined mechanical/electronic scanning antenna array. Alongside Raytheon, the Sentinel dual-mode radar effort is believed to involve UK contractors BAE Systems (radar antenna gimbal controls and radomes) and QinetiQ (processing algorithms).

Second UK-converted Raytheon Sentinel R. Mk 1

ROBINSON

ROBINSON HELICOPTER COMPANY

2901 Airport Drive, Torrance, California 90505
Tel: (+1 310) 539 05 08
Fax: (+1 310) 539 51 98
Web: www.robinsonheli.com
PRESIDENT: Franklin D Robinson
VICE-PRESIDENTS:
Kurt Robinson (Product Support)
Wayne Walden (Production)
MARKETING DIRECTOR: Tim Goetz

By March 2004, Robinson had produced 5,283 helicopters, including 390 in 2000, 328 in 2001, 255 in 2002, 422 in 2003, 690 in 2004, and 806 in 2005. 6,000th production helicopter, an R44 Raven II delivered in April 2005. 4,000th production R22 delivered in December 2005. Production rate 15 helicopters per week in 2004. Factory floor area 44,130 m^2 (475,000 sq ft). Workforce 1,150 in November 2006. Company is ISO 9001 certified.

ROBINSON R22 BETA II

TYPE: Two-seat helicopter.

PROGRAMME: Design began 1973; first flight 28 August 1975; first flight of second R22 early 1977; FAA certification 16 March 1979; UK certification June 1981; Japanese certification 18 November 2002; deliveries began October 1979; early versions were R22 (O-320-A2B engine; 199 built) and R22HP (O-320-B2C; 151 built), both with 621 kg (1,300 lb) max T-O weight. R22 Alpha (O-320-B2C and 621 kg; 1,370 lb MTOW) certified October 1983 (further 151 built); R22 Beta certified 5 August 1985. Current Beta II introduced in 1995. More powerful Textron Lycoming O-360 engine provides better high-level hover performance and allows take-off power to be sustained up to 2,285 m (7,500 ft). Previously optional, tinted windscreen and door windows fitted as standard. Production began at c/n 2571 in 1995.

CUSTOMERS: Total production 4,100 by September 2006. 3,000th handed over 15 October 1999; 4,000th in late December 2005 to Heliflite Australia; deliveries in 1999 totalled 128, followed by 126 in 2000, 134 in 2001, 107 in 2002, 128 in 2003, 234 in 2004, and 243 in 2005.

COSTS: USD209,800 for basic R22 Beta II (2006). Direct operating cost USD44.10 per hour; total cost (500 hours annually) USD101.83 per hour (2006).

DESIGN FEATURES: Simple, pod-and-boom light helicopter; horizontal stabiliser, starboard side only; vertical stabiliser above and below boom; offset to starboard; tall rotor mast. Horizontally mounted piston engine drives transmission through multiple V belts and sprag-type overrunning clutch; main and tail gearboxes use spiral bevel gears; maintenance-free flexible couplings of proprietary manufacture used in both main and tail rotor drives. two-blade semi-articulated main rotor, with tri-hinged underslung rotor head to reduce blade flexing, rotor vibration and control force feedback, and an elastic teeter hinge stop to prevent blade-boom contact when starting or stopping rotor in high winds; blade section NACA 63-015 (modified); two-blade tail rotor on port side; rotor brake standard.

FLYING CONTROLS: Manual. Removable dual controls standard; piston-grip type cyclic controls.

STRUCTURE: All-metal bonded blades with stainless steel spar and leading-edge, light alloy skin and light alloy honeycomb filling; frame section of steel tube with light alloy skinning; full monocoque light alloy tailboom.

LANDING GEAR: Welded steel tube and light alloy skid landing gear, with energy-absorbing crosstubes.

POWER PLANT: One Textron Lycoming O-360 flat-four engine, derated to 97.5 kW (131 hp), mounted in the lower rear section of the main fuselage, with cooling fan. Light alloy main fuel tank in upper rear section of the fuselage on port side, usable capacity 72.5 litres (19.2 US gallons; 16.0 Imp gallons). Optional auxiliary fuel tank, capacity 39.75 litres (10.5 US gallons; 8.7 Imp gallons). Oil capacity 5.7 litres (1.5 US gallons; 1.25 Imp gallons). Transmission overhaul interval 2,200 hours or 12 years.

ACCOMMODATION: Two seats side by side in enclosed cabin, with inertia reel shoulder harness. Curved two-panel, tinted windscreen. Removable door, with tinted window, on each side. Baggage space beneath each seat. Cabin heated and ventilated.

SYSTEMS: Electrical system, powered by 12 V DC alternator, includes navigation, panel and map lights, dual landing lights, anti-collision light and battery.

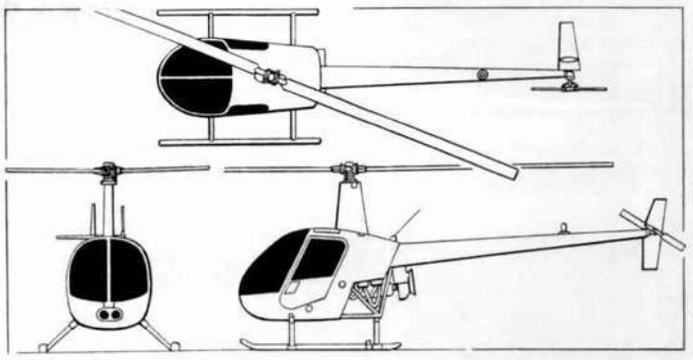
AVIONICS: *Comms:* Bendix/King KY 197A VHF com radio; KT 76C transponder with Mode C altitude encoder; and NAT AA 80 intercom system with floor and hand switches. Options include Garmin 430 GPS/COM/VOR/LOC/GS with 106A CDI, replacing KY 197A; Pointer 3000–10 or 4000–10 (Canadian spec) ELT; NAT AA 12 intercom controller; and David Clark H10-13H or Bose Series X headsets.

Flight: Garmin 150XL, 250XL and 400 GPS optional.

Instrumentation: Standard equipment includes ASI; VSI; rotor/engine dual tachometer; sensitive altimeter; magnetic compass; digital OAT gauge; CHT gauge; oil temperature and pressure gauges; ammeter; hours meter; manifold pressure gauge; quartz clock; and warning lights for low voltage, low oil pressure, low fuel, low rotor rpm and horn, main gearbox temperature, main and tail rotor gearbox chips, starter engaged, and rotor brake engaged.

Optional instruments include BFG (AIM) 1100 artificial horizon with/without slip indicator; BFG (AIM) 205-1A DG; turn co-ordinator; PAI-700 vertical compass (replaces standard compass); United Instruments IVSI (replaces standard VSI); LC-2 digital clock (replaces standard clock); and Millibar altimeter.

Robinson R22 Beta used for pilot training *(Paul Jackson)* 1158594



Robinson R22 Beta II two-seat helicopter *(James Goulding)* 1158556

EQUIPMENT: Standard equipment includes rotor brake; tinted windscreen and windows; belly hardpoint; dual landing lights; navigation, panel and map lights; anti-collision light; ground handling wheels; rotor blade tiedowns; and windscreen cover.

Optional equipment includes three-cylinder engine priming system; RHC oil filter; cabin heater/defogger; metallic base or trim exterior colours; and leather seats.

DIMENSIONS, EXTERNAL:

Main rotor diameter	7.67 m (25 ft 2 in)
Tail rotor diameter	1.07 m (3 ft 6 in)
Main rotor blade chord	0.18 m (7¼ in)
Distance between rotor centres	4.39 m (14 ft 5 in)
Length overall, rotors turning	8.76 m (28 ft 9 in)
Fuselage: Length	6.30 m (20 ft 8 in)
Max width	1.12 m (3 ft 8 in)
Height: overall	2.72 m (8 ft 11 in)
to top of cabin	1.75 m (5 ft 9 in)
Skid track	1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin max width	1.12 m (3 ft 8 in)

AREAS:

Main rotor blades (each)	0.70 m^2 (7.55 sq ft)
Tail rotor blades (each)	0.04 m^2 (0.40 sq ft)
Main rotor disc	46.21 m^2 (497.4 sq ft)
Tail rotor disc	0.89 m^2 (9.63 sq ft)
Fin	0.21 m^2 (2.28 sq ft)
Stabiliser	0.14 m^2 (1.53 sq ft)

WEIGHTS AND LOADINGS:

Weight empty (without auxiliary fuel tank)	388 kg (855 lb)
Fuel weight: standard	52 kg (115 lb)
auxiliary	28.6 kg (63 lb)
Max T-O and landing weight	621 kg (1,370 lb)
Max disc loading	13.4 kg/m^2 (2.75 lb/sq ft)
Max power loading at T-O	6.37 kg/kW (10.46 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE):	
without sling load	102 kt (190 km/h; 118 mph)
with sling load	75 kt (139 km/h; 86 mph)
Max level speed	97 kt (180 km/h; 112 mph)
Cruising speed at 70% power at FL80	96 kt (177 km/h; 110 mph)
Econ cruising speed	82 kt (153 km/h; 95 mph)
Max rate of climb at S/L	more than 305 m (1,000 ft)/min
Rate of climb at FL100	more than 183 m (600 ft)/min
Service ceiling	4,265 m (14,000 ft)
Hovering ceiling IGE	2,865 m (9,400 ft)
Range with max payload, no reserves:	
normal fuel	more than 173 n miles (321 km; 200 miles)
max fuel	more than 260 n miles (482 km; 300 miles)
Endurance at 65% power, auxiliary fuel, no reserves	3 h 20 min

ROBINSON R44

TYPE: Four-seat helicopter.

PROGRAMME: Development began 1986; first flight (N44RH) 31 March 1990; first flight of third R44 March 1992; marketing began 22 March 1992; certification completed 10 December 1992. In August 1997 an R44 became first piston helicopter flown around the world. In June 2002 an R44 Raven (G-NUDE) became the first piston-engined helicopter to land at the North Pole. Japanese certification achieved 18 November 2002.

CURRENT VERSIONS: **R44 Astro:** Initial version; no longer produced.

R44 Raven I: Basic version, introduced in April 2000 to replace Astro; features 194 kW (260 hp) Textron Lycoming O-540 engine derated to 168 kW (225 hp) at T-O, 153 kW (205 hp) continuous; hydraulic control system standard; plus elastomeric tail rotor bearings and adjustable pedals for pilot.

R44 Raven II: Upgraded version introduced in June 2002. FAA certification 10 October 2002; first deliveries November 2002. Features a Textron Lycoming IO-540 engine, 28 V 70 A electrical system, increased lifting area on main rotor blades, and aerodynamic tip caps on main and tail rotor blades. Total of 580 ordered and 390 delivered by May 2004, including two ENG variants. *As described.*

R44 Clipper II: Float-equipped version, initially certified (as R44 Clipper) 17 July 1996. Available with twin utility floats or pop-out floats.Total of 141 Clippers sold by 1 June 2001.

R44 Police Helicopter: Specially modified Raven II for law enforcement, with Inframetrics 445G Mk II IR sensor, TV camera and ×7 zoom lens mounted in gyrostabilised nose turret; LCD video monitor; Spectrolab SX-5E 15 to 20 million candlepower searchlight; FM radio package; bubble door windows; Bendix/King KFM 985 dual-band transceiver, KY 196A VHF, II Morrow Apollo SL-60 standby comms, KT 76C transponder, 28 V electrical system and extended landing gear struts. Empty weight, equipped, approx 715 kg (1,570 lb). Optional equipment, available from October 2005, includes GPS moving map system which features a Stealth personal computer, custom keyboard, moving map software and Transvideo fold-down monitor for GPS and FLIR displays. By typing in an address the operator can call up a road map of the selected location with direction, distance and estimated time of arrival displayed on-screen. First delivery of an R44 Police Helicopter

Robinson R44 four-seat, piston-engined helicopter *(Paul Jackson)* 1158598

Robinson R44 Raven II light helicopter *(Mike Keep)* 0507289

equipped with the system took place in February 2006 to Silver State Helicopters of Texas for use in their Sheriff Airborne Law Enforcement (SABLE) programme. Certified July 1997; first customer El Monte Police Agency of Los Angeles. Recent customers include the Estonian Air Force, which ordered two in February 2002 for delivery commencing May 2002. China's Zheng Zhou Public Security Bureau, which took delivery of one in June 2002 following its appearance at the China Expo 2002 exhibition, Fontana Police Department, California, which took delivery of one in October 2003, and Merced County Sheriff's Department, California, which took delivery of one in November 2003, and the National Police of El Salvador, which took delivery of one on 25 June 2004.

R44 Newscopter: Digital electronic news gathering (ENG) version of Raven II intended for media companies and fitted with Ikegami HL-59WNA digital camera with ×21 lens and 360° continuous rotation with five-axis gyro stabilisation; and microwave transmitter; four video monitors, two micro cameras, KY 196A VHF, KT 76C transponder (Mode C), GPS, two FM radios and bubble window in port door. Deliveries began January 1998; 29 sold by 1 June 2002. First digital ENG Raven II delivered on 9 February 2003 to Sky Helicopters of Garland, Texas, and was the 30th ENG Newscopter delivered. Other customers include flying TV Ltd of the UK, which took delivery of one (G-PIXX) in May 2004.

R44 IFR: Equipped for IFR helicopter training IFR package adds US$27,200 to standard cost. 18 Sold by 1 June 2001.

CUSTOMERS: Total of 3,000 delivered by 18 September 2006. Deliveries totalled 150 in 1999, 264 in 2000, 194 in 2001, 294 in 2003, 456 in 2004, and 563 in 2005. 3,000th R44 delivered 18 September 2006 to Segrave Aviation of North Carolina for customer Chris Bond. 6,000th Robinson helicopter delivered was an R44 Raven II (C-FDQG) for Airborne Energy Solutions of Alberta, Canada, in April 2005. Recent customers include the Lebanese Army, which took delivery of four Raven IIs in 2005. City of San Bernardino Police, California, which took delivery of an R44 Police Helicopter in September 2006, and the Republic of Kazakhstan, which took delivery of an R44 Raven II on 14 December 2006 for police support work in the nation's capital, Astana.

COSTS: Raven I USD307,000, Raven II USD364,000. Clipper II with utility floats USD381,000, Clipper II with pop-out floats USD387,000, R44 Police Helicopter USD535,000, R44 Newscopter USD579,000 (all 2006). Direct operating cost USD72.60 per hour; total (500 hours annually) USD161.33 per hour (both 2006). IFR avionics USD35,480 extra.

DESIGN FEATURES: New design, incorporating general configuration (but larger cabin) and some proven concepts of R22; designed to requirements of FAR Pt 27; features for comfort and safety include electronic throttle governor to reduce pilot workload by controlling rotor and engine rpm during normal operations, rotor brake, advanced warning devices, automatic clutch engagement to simplify and reduce start-up procedure and reduce chance of overspeed, T-bar pistol grip cyclic control, and crashworthy features including energy-absorbing landing gear and lap/shoulder strap restraints designed for high forward *g* loads. High reliability and low maintenance; patented rotor design with tri-hinge (see R22); low noise levels.

FLYING CONTROLS: Conventional, with Robinson central cyclic stick; rpm governor; rotor brake standard; left-hand collective lever and pedals removable.

LANDING GEAR: Fixed skids; or, on R44 Clipper II, twin utility floats, or pop-out helium floats, which inflate in 2 seconds.

POWER PLANT: One 224 kW (300 hp) Textron Lycoming IO-540 AE1A5 flat-six engine, derated to 183 kW (245 hp) for 5 minutes, 153 kW (205 hp) maximum continuous. Standard fuel capacity 116 litres (30.6 US gallons; 25.5 Imp gallons) in tank on port side; optional 69 litres (18.3 US gallons; 15.2 Imp gallons) in starboard tank. No transmission limit; transmission TBO 2,200 hours or 12 years.

ACCOMMODATION: Four persons seated 2 + 2. Baggage stowage beneath each seat. Dual controls. Cabin heated and ventilated. Tinted windscreen and door windows.

AVIONICS: *Comms:* Bendix/King KY 196A VHF radio; KT 76C transponder with Mode C altitude encoder; and NAT AA 80 intercom system with floor and hand switches. Options include Garmin 420 GPS/COM; Garmin 430 GPS/COM/VOR/LOC/GS with 106A CDI; Pointer 3000–10 or 4000–10 (Canadian spec) ELT; NAT AA 12 intercom controller; and David Clark H10-13H or Bose Series X headsets.

Flight: Garmin 150XL, and 400 GPS optional.

Instrumentation: Standard equipment includes ASI; VSI; rotor/engine dual tachometer; sensitive altimeter; magnetic compass; digital OAT gauge; CHT gauge; oil temperature and pressure gauges; ammeter; hours meter; manifold pressure gauge; quartz clock; and warning lights for low voltage, low oil pressure, low fuel, low rotor rpm and horn, main gearbox temperature, main and tail rotor gearbox chips, starter engaged, and rotor brake engaged.

Optional instruments include 'heads-up' side console for GPS display; BFG (AIM) 1100 artificial horizon with/without slip indicator; BFG (AIM) 205-1A DG; turn co-ordinator; PAI-700 vertical compass (replaces standard compass); United Instruments IVSI (replaces standard VSI); LC-2 digital clock (replaces standard clock); and millibar altimeter.

EQUIPMENT: Standard equipment includes rotor brake; tinted windscreen and windows; belly hardpoint; dual landing lights; navigation, panel and map lights; anti-collision light; ground handling wheels; tow cart adapter, rotor blade tie-downs; and windscreen cover. Optional equipment includes three-cylinder engine priming system; RHC oil filter; observation bubble windows; cabin heater/defogger; metallic base or trim exterior colours; and leather seats.

DIMENSIONS, EXTERNAL:

Main rotor diameter	10.06 m (33 ft 0 in)
Tail rotor diameter	1.47 m (4 ft 10 in)
Length overall, rotors turning	11.76 m (38 ft 7 in)
Fuselage: Length	9.07 m (29 ft 9 in)
Max width	1.28 m (4 ft 2½ in)
Height: overall	3.28 m (10 ft 9 in)
to top of cabin	1.83 m (6 ft 0 in)
Skid track	2.18 m (7 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin max width	1.19 m (3 ft 11 in)

AREAS:

Main rotor disc	79.46 m² (855.3 sq ft)
Tail rotor disc	1.70 m² (18.35 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: standard	683 kg (1,506 lb)
Fuel weight: standard	83 kg (184 lb)
auxiliary	50 kg (110 lb)
Max T-O and landing weight	1,134 kg (2,500 lb)
Max disc loading	14.27 kg/m² (2.92 lb/sq ft)
Max power loading at T-O	6.21 kg/kW (10.20 lb/hp)

PERFORMANCE:

Cruising speed at 75% power	117 kt (217 km/h; 135 mph)
Max rate of climb at 1,830 m (6,000 ft)	over 305 m (1,000 ft)/min
Service ceiling	4,270 m (14,000 ft)
Hovering ceiling:	
IGE at 1,134 kg (2,500 lb)	2,728 m (8,950 ft)
OGE: at 1,043 kg (2,300 lb)	2,286 m (7,500 ft)
at 1,134 kg (2,500 lb)	1,372 m (4,500 ft)
Max range, at 105 kt (194 km/m; 121 mph) no reserves	approx 347 n miles (643 km; 400 miles)

ROCKY MOUNTAIN

ROCKY MOUNTAIN WINGS INC

PO Box 1188, Nampa, Idaho 83653-1188
Tel/Fax: (+1 208) 466 66 99
e-mail: rmwwings@aol.com
Web: www.realflying.com
PRESIDENT: Stace E Schrader

Rocky Mountain was formed in 1999 to market the Ridge Runner. In August 2004, the Bushwhacker was introduced and marketed separately by Bushwhacker Aircraft. Plans are under way to produce an LSA-compliant version of the latest, enlarged cockpit Ridge Runner 3.

ROCKY MOUNTAIN RIDGE RUNNER

TYPE: Tandem-seat ultralight kitbuilt.

PROGRAMME: Ridge Runner 1 awarded Grand Champion at AirVenture 2001 and Arlington 2001; Ridge Runner 2 awarded outstanding lightplane award at Sun 'n' Fun 2004.

CURRENT VERSIONS: **Ridge Runner 1:** Single-seat ultralight model.

Ridge Runner 2: As Ridge Runner 1 but 1+1-seat version; *as described.*

Ridge Runner 3: Slightly larger, fully two-seat version of Ridge Runner 2; wider fuselage. Prototype N39ZT, built 2004.

Bushwhacker: See separate entry.

CUSTOMERS: Total of 54 of all versions sold by November 2006, including at least 10 Ridge Runner 3s.

Rocky Mountain Ridge Runner 3 1040440

COSTS: Ridge Runner 1 USD9,900; Ridge Runner 2 USD10,900; Ridge Runner 3 USD12,900 (2006).

DESIGN FEATURES: Wings fold for transportation and storage with no need to disconnect controls. Quoted build time 600 hours.

FLYING CONTROLS: Conventional and manual. Full-span ailerons and slotted flaps. Trim tab on port elevator. Horn-balanced fin and elevators.

STRUCTURE: Fabric-covered 4130 chromoly steel tube fuselage and wooden wings with tubular steel V-struts. Composites engine cowling. Tailplane has V-strut supports below.

LANDING GEAR: Tailwheel type; fixed. Two side Vs hinged to lower longerons, plus half-axles, each with bungee cord shock-absorber, attached to compression frame with fabric-covered side panels and half axle. Mainwheels 8.00–6. Maule solid tailwheel. Cable operated brakes.

POWER PLANT: Choice of 19.0 kW (25.5 hp) Rotax 277; 29.5 kW (39.6 hp) Rotax 477, 37.0 kW (49.6 hp) Rotax 503, 47.8 kW (64.1 hp) Rotax 582, or 20.9 kW (28.0 hp) Hirth F33 engines. Fuel tank(s) in inboard section of wings, capacity 18.9 litres (5.0 US gallons; 4.2 Imp gallons) in Ridge Runner 1; 38 litres (10.0 US gallons; 8.3 Imp gallons) in Ridge Runner 2 and 3.

ACCOMMODATION: Pilot and passenger in tandem. Fully enclosed cockpit.

DIMENSIONS, EXTERNAL:

Wing span	7.98 m (26 ft 2¼ in)
Length overall	5.18 m (17 ft 0 in)
Height overall	1.57 m (5 ft 2 in)

DIMENSIONS, INTERNAL (A: Ridge Runner 1, B: Ridge Runner 2, C: Ridge Runner 3):

Cabin max width: A, B	0.61 m (2 ft 0 in)
C	0.74 m (2 ft 5 in)

AREAS:

Wings, gross	9.23 m² (99.4 sq ft)

WEIGHTS AND LOADINGS (A, B and C as above):

Weight empty: A	113 kg (250 lb)
B	159 kg (350 lb)
C	163 kg (360 lb)
Max T-O weight: A	249 kg (550 lb)
B, C	408 kg (900 lb)

PERFORMANCE (A, B and C as above, Rotax 582):

Never-exceed speed (VNE)	95 kt (177 km/h; 110 mph)
Normal cruising speed	70 kt (129 km/h; 80 mph)
Stalling speed: flaps up	28 kt (52 km/h; 32 mph)
flaps down	25 kt (45 km/h; 28 mph)
Max rate of climb at S/L: A	244 m (800 ft)/min
B	366 m (1,200 ft)/min
C	488 m (1,600 ft)/min
T-O run	23 m (75 ft)
Landing run	31 m (100 ft)
Range with max fuel: A	152 n miles (281 km; 175 miles)
B, C	282 n miles (523 km; 325 miles)

ROTORWAY

ROTORWAY INTERNATIONAL

4140 West Mercury Way, Stellar Air Park, Chandler, Arizona 85226
Tel: (+1 480) 961 10 01
Fax: (+1 480) 961 15 14
e-mail: rotorway@rotorway.com
Web: www.rotorway.com
VICE-PRESIDENT, PRODUCTION: Rusty Mueller
VICE-PRESIDENT, SALES: Brent Marshall
MARKETING DIRECTOR: Susie Bell

Initial RotorWay Company set up by the late B J Schramm in early 1960s; successively produced the Javelin, Scorpion I and Scorpion II before launching Exec in 1980. Company purchased and re-established on 1 June 1990 by the late John Netherwood; assets acquired in 1996 by company's employees, who are current owners.

RotorWay currently manufactures Exec 162F helicopter kits for final assembly by amateur builders and operators. The Exec is powered by the company's own engine, which has been in production for more than 20 years and has recently been upgraded to improve performance at altitude. Other companies offer modifications which are not approved by the manufacturer.

Some foreign distributors also sell helicopters; approximately 40 per cent of sales are outside the US. RotorWay, which had 40 employees in mid-2004, offers flight orientation and maintenance training, and customer service programme; 3,440 m² (37,000 sq ft) facility near Phoenix, Arizona, incorporates all departments, including manufacturing, sales and flight school.

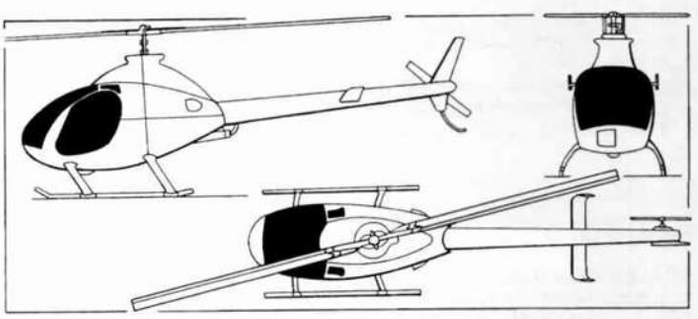
ROTORWAY EXEC 162F

TYPE: Two-seat helicopter kitbuilt.

PROGRAMME: Development of first RotorWay helicopter (Scorpion) began in 1967; followed by Scorpion Too in 1971 and Exec in 1980. With some 23 modifications, became Exec 90, certified in UK in 1990 and in Poland in 1993. Exec 162 introduced in 1994, although latter's improvements can be retrofitted.

Kits, which lack only avionics and paint, are currently marketed in USA and 50 other countries; 40 per cent of production is shipped abroad. French certification received in October 2001 following approval of modifications to meet DGAC requirements, including improved fire protection, repositioned instrumentation and foot controls.

RotorWay Exec 162F with unapproved Pro-Drive modifications as 162SF
(Paul Jackson) 1040419



RotorWay 162F homebuilt (RotorWay International RI 162 engine)
(Paul Jackson) 1158950

CURRENT VERSIONS: **Exec 162F:** *As described.* Marketed in Australia as **Exec 162FA.**

Exec 162 Pro: Not approved by RotorWay. Optional improvement package from Pro-Drive Inc, comprising modified main rotor drive system, 'E Z Start' clutch and carbon fibre tail rotor.

JetExec: Not approved by RotorWay. Turbine conversion offered by Kiss Aviation of Perris, California; powered by 112 kW (150 hp) Solar T-62T-32 Titan. Fuel capacity 151 litres (40.0 US gallons; 33.3 Imp gallons); max rate of climb 548 m (1,800 ft)/min; range 260 n miles (482 km; 300 miles).

CUSTOMERS: Over 250 Exec 90 and 750 Exec 162F kits sold and over 600 flying; 500th 162F delivered to Mexican Navy June 2000, 600th to Heli Diffusion of France in June 2002, 700th to Australia in August 2003 and 800th to South Africa on 11 August 2004. International uses include police surveillance, forestry observation, powerline inspection, ranch work, crop-spraying, recreation and flight training.

COSTS: Kit: USD67,750 including engine (2006). ACIS (see Power Plant) USD4,675 extra. Also available in four batches of parts to spread cost.

DESIGN FEATURES: Asymmetrical RotorWay-designed aerofoil section two-blade main rotor. All-metal aluminium alloy blades attached to aluminium alloy teetering rotor hub by retention straps. Teetering tail rotor, with two blades each comprising steel spar and aluminium alloy skin. Elastomeric bearing rotor hub system with dual push/pull cable-controlled swashplate for cyclic pitch control. Horizontal stabilisers, with winglets, mounted on tailboom. Quoted build time 450 hours. Company offers on-line diagnostic testing by modem.

STRUCTURE: Blades as detailed under Design Features. Basic 4130 steel tube airframe structure, with wraparound glass fibre fuselage/cabin enclosure. Aluminium alloy monocoque tailboom.

LANDING GEAR: Twin-skid type. Floats optional (from outside source).

POWER PLANT: One 113 kW (152 hp) RotorWay International RI 162F 2.66 litre (162 cu in) liquid-cooled engine with FADEC. Optional Altitude Compensation Induction System (ACIS) supercharger supplies pressurised air to engine at altitude, obviating need for turbocharging and prolonging engine life. Standard fuel capacity 64.4 litres (17.0 US gallons; 14.2 Imp gallons).

ACCOMMODATION: Two persons side by side; optional external HeliPak baggage pod fits between skids, capacity 0.21 m^3 (7.4 cu ft).
AVIONICS: Extra navigational equipment optional on US market helicopters.
EQUIPMENT: Optional crop-spraying kit, including two 42 litre (11.0 US gallon; 9.2 Imp gallon) tanks.
DIMENSIONS, EXTERNAL:
Main rotor diameter ..... 7.62 m (25 ft 0 in)
Tail rotor diameter ..... 1.28 m (4 ft 2½ in)
Length: fuselage ..... 6.71 m (22 ft 0 in)
overall, rotors turning ..... 8.99 m (29 ft 6 in)
Height to top of main rotor ..... 2.44 m (8 ft 0 in)
Skid track ..... 1.65 m (5 ft 5 in)
DIMENSIONS, INTERNAL:
Cabin max width ..... 1.12 m (3 ft 8 in)
AREAS:
Main rotor disc ..... 45.60 m^2 (490.9 sq ft)
Tail rotor disc ..... 1.17 m^2 (12.57 sq ft)
WEIGHTS AND LOADINGS:
Weight empty ..... 442 kg (975 lb)
Crew weight ..... 193 kg (425 lb)
Max T-O weight ..... 680 kg (1,500 lb)
Max disc loading ..... 14.9 kg/m^2 (3.06 lb/sq ft)
Max power loading at T-O ..... 6.01 kg/kW (9.87 lb/hp)
PERFORMANCE:
Never-exceed (VNE) and max level speed ..... 100 kt (185 km/h; 115 mph)
Normal cruising speed ..... 82 kt (153 km/h; 95 mph)
Max rate of climb at S/L ..... 305 m (1,000 ft)/min
Service ceiling ..... 3,050 m (10,000 ft)
Hovering ceiling, with two persons: IGE ..... 2,135 m (7,000 ft)
OGE ..... 1,525 m (5,000 ft)
Range with max fuel at optimum cruising power ..... 156 n miles (289 km; 180 miles)
Endurance with max fuel at optimum cruising power ..... 2 h

SAI

SUPERSONIC AEROSPACE INTERNATIONAL LLC

2250 E Tropicana Avenue, 19-121, Las Vegas, Nevada 89119
e-mail: info@saiqsst.com
Web: www.saiproject.com
PRINCIPAL: J Michael Paulson

Programme for supersonic business jet announced October 2004, but no further information released in following two years.

SAI QUIET SUPERSONIC BUSINESS JET

TYPE: Supersonic business jet.
PROGRAMME: Design studies began 2001 when company founded with funding from Allen E Paulson Living Trust; QSST announced 12 October 2004 at the NBAA Convention in Las Vegas; initial Phase I design study then completed by Lockheed Martin Skunk Works; Phase II, lasting two years, will focus on forming an international consortium of risk-sharing manufacturing partners; Phase III will include detailed design and engineering; Phase IV production launch; Phase V certification and initial deliveries. Lockheed Martin will be design authority but will not be involved in manufacturing. First flight could occur in 2010 or 2011, with certification in 2012. Market for 300-400 aircraft envisaged over 15-year period.
COSTS: Target price USD80 million (2004).
DESIGN FEATURES: Sharply swept delta wing with high dihedral canard aft of flight deck; inverted V-tail provides bracing between fin and engine pods. Design goals include sonic boom signature less than 1 per cent of that of Concorde, facilitating overland supersonic flight and meeting noise and global environmental requirements. Potential stretch to 30-passenger version.
STRUCTURE: Conventional, aluminium alloy fuselage and composites wings.
LANDING GEAR: Retractable tricycle type; twin wheels on nose unit, four wheels on each main bogie.

Artist's impression of SAI Quiet Supersonic Business Jet 1159705

POWER PLANT: Two turbofans pod-mounted under wings, each rated at 146.8 kN (33,000 lb st) to 155.7 kN (35,000 lb st). General Electric, Pratt & Whitney and Rolls-Royce have offered non-afterburning power plants based on existing cores, but with tailored inlets, fans and nozzles.
ACCOMMODATION: Eight to 12 passengers.
DIMENSIONS, EXTERNAL:
Wing span ..... 19.2 m (63 ft 0 in)
Length overall ..... 40.2 m (132 ft 0 in)
WEIGHTS AND LOADINGS:
Max T-O weight ..... 69,400 kg (153,000 lb)
PERFORMANCE (estimated):
Cruising speed ..... M1.6 to M1.8
Cruising altitude ..... 14,325 m (47,000 ft)
Range: ..... 4,000 n miles (7,408 km; 4,603 miles)

SCALED

SCALED COMPOSITES LLC

1624 Flight Line, Mojave, California 93501-1663
Tel: (+1 661) 824 45 41
Fax: (+1 661) 824 41 74
e-mail: info@scaled.com
Web: www.scaled.com
PRESIDENT: Burt (Elbert L) Rutan
VICE-PRESIDENT AND GENERAL MANAGER: Michael W Melvill

Scaled Composites founded 1982; bought by Beech Aircraft Corporation (now part of Raytheon) June 1985; sold back to Burt Rutan November 1988 and integrated in joint venture with Wyman-Gordon Company of North Grafton, Massachusetts; is now owned by private investors following buy-out by Burt Rutan and 10 other investors; continues to provide R&D facilities to individuals and companies; several projects developed for Beech retained by Scaled.

Scaled Composites is responsible for research and development and prototype construction; company also active in UAV field. Current programmes include proprietary products; the most recent have included White Knight, SpaceShipOne and Capricorn, details of which follow.

Scaled produced the prototype and undertook early test flights of the Visionaire Vantage business jet. Similarly, Scaled was involved in the Adam A500, which it designed, built and flight tested.

Company has 130 employees and annual revenue of around USD22 million.

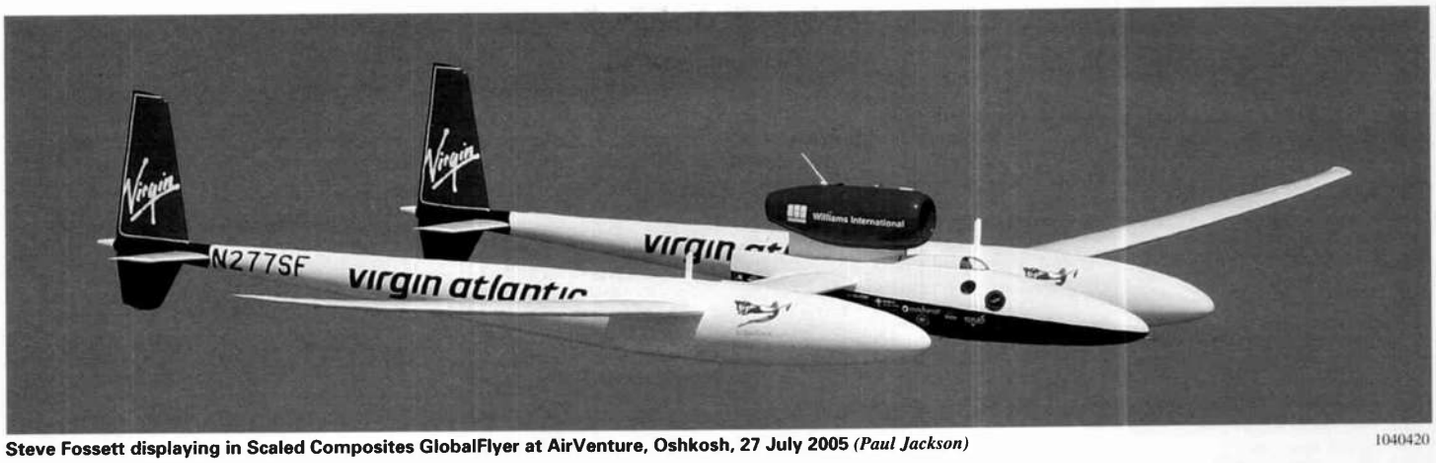
SCALED COMPOSITES 311 CAPRICORN

TYPE: Technology demonstrator.
PROGRAMME: Announced 23 October 2003 and unveiled at roll-out on 8 January 2004; named *Virgin Atlantic GlobalFlyer*. Construction began in late 2002. Vehicle for attempt at first solo, non-stop, eastbound aeroplane global circumnavigation (minimum 19,863.692 n miles; 36,787.559 km; 22,858.739 miles between 66° 33' South and 66° 33' North, as stipulated by FAI) by celebrated balloon pilot Steve Fossett, with Sir Richard Branson of sponsor Virgin Atlantic Airways as 'reserve pilot'. First flight (N277SF), lasting 1½ hours, took place at Mojave 5 March 2004; four more flights by early June 2004; record attempt planned for 2004/05 winter, to capture optimum jetstream assistance), launching from central US and flying round the world in less than 80 hours.

Take-off was made from the municipal airport at Salina, Kansas, at 1847 Central Standard Time on 28 February 2005, completing the global circuit before landing back at Salina at 1348 CST on 3 March, a total flying time of 67 hours 1 minute 46 seconds. The flight was successful despite the leakage of some 1,406 kg (3,100 lb) of fuel shortly after take-off; approximately 680 kg (1,500 lb) of fuel remained at the end of the flight. Three new world records were established by the flight, as follows:

Speed around the world, non-stop and non-refuelled (297.4 kt; 550.78 km/h; 342.2 mph);
Distance without landing (17,703.2 n miles; 32,786.43 km; 20,372.5 miles); and
Distance over a closed circuit (19,923.3 n miles, 36,898.04 km; 22,927.3 miles).

In July 2005, Fossett and Branson announced a further ambition for the aircraft: to exceed the present all-class absolute distance record by 4,000 n miles (7,408 km; 4,603 miles), in an attempt targeted for February 2006. Repairs to a damaged wingtip in January delayed the aircraft's positioning flight to Kennedy Space Center by six days, but it eventually took off from Cape Canaveral, Florida, at 0722 EST on 18 February 2006 with some 8,255 kg (18,200 lb) of fuel contributing to its 10,024 kg (22,100 lb) take-off weight. During the flight, the aircraft suffered two bird strikes and an early fuel leak, but continued to complete a full circuit of the Earth and beyond, including two Atlantic crossings. The flight was curtailed in the final stages by a generator failure, and a diversionary landing was made at Bournemouth, Hampshire, UK, instead of the intended site at Manston in Kent. Landing was made just after 1700 GMT on 11 February after a flying time of 76 hours 45 minutes. An absolute world distance record was claimed of 22,390.4 n miles (41,467 km; 25,766.3 miles), this qualifying also in subclasses C-1 and C-1g.
DESIGN FEATURES: Typical, innovative Scaled Composites configuration. Single-piece, high aspect ratio wing carrying central accommodation module and dorsal power plant pod, plus two separate pontoons, each with fin, underfin and two-piece tailplane. Lift/drag ratio approximately 37:1.
FLYING CONTROLS: Conventional and manual (cables and pushrods). Six-segment, narrow-chord aileron on each outer wing; rudder and elevators on tail unit of each boom. No flaps, slats or spoilers.
STRUCTURE: Composites throughout, with graphite/epoxy skins and aramid honeycomb core. Single graphite/epoxy I-beam wing spar.
LANDING GEAR: Tricycle type; retractable. Single mainwheels, on aluminium oleos with steel sliders and hydraulic disc brakes; fully castoring twin nosewheels. Due to large wing span, main gear can be rotated 90° to allow aircraft to exit hangar sideways. Paratech braking parachute (diameter 1.83 m; 6 ft) in canister on each wing inboard trailing-edge.
POWER PLANT: One 10.23 kN (2,300 lb st) Williams FJ44-3 ATW (Around The World) turbofan. Fuel (JP-4) in 2,161.5 litre (571 US gallon; 475.5 Imp gallon) forward tank and 2,055.5 litre (543 US gallon; 452 Imp gallon) aft tank in each boom; further 1,241.5 litres (328 US gallons; 273 Imp gallons) in four outboard tanks in each wing; and 117.3 litres (31.0 US gallons; 25.8 Imp gallons) in fuselage tank, giving total capacity (13 tanks) of 11,034 litres (2,915 US gallons; 2,427 Imp gallons). Fuel load represents more than 82 per cent of total T-O weight.
ACCOMMODATION: Pressurised and soundproofed cockpit for one occupant, including horizontal sleeping space and stowage for food and personal equipment. Cockpit pressure differential 0.55 bar (8.0 lb/sq in) gives 3,050 m (10,000 ft) environment at FL450.



Steve Fossett displaying in Scaled Composites GlobalFlyer at AirVenture, Oshkosh, 27 July 2005 *(Paul Jackson)* 1040420

AVIONICS: Chelton FlightLogic EFIS; Wulfsberg Series III VHF radios; NAT audio control panel. Dual TruTrak Flight Systems digital autopilots. Inmarsat C satellite datalink.

DIMENSIONS, EXTERNAL:
- Wing span ..... 34.75 m (114 ft 0 in)
- Wing aspect ratio 32.5
- Length overall ..... 13.44 m (44 ft 1¼ in)
- Height overall ..... 4.05 m (13 ft 3½ in)

DIMENSIONS, INTERNAL:
- Cabin length ..... 2.13 m (7 ft 0 in)

AREAS:
- Wings, gross ..... 37.16 m² (400.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ..... 1,520 kg (3,350 lb)
- Max fuel weight ..... 8,165 kg (18,000 lb)
- Max T-O weight ..... 9,981 kg (22,006 lb)
- Landing weight (all fuel expended) ..... less than 1,814 kg (4,000 lb)
- Max wing loading ..... 268.6 kg/m² (55.01 lb/sq ft)
- Max power loading ..... 976 kg/kN (9.57 lb/lb st)

PERFORMANCE (estimated):
- Normal cruising speed ..... 250 kt (463 km/h; 288 mph)
- Normal cruising altitude ..... 13,720 m (45,000 ft)
- Service ceiling ..... 15,850 m (52,000 ft)
- T-O field length ..... 3,660 m (12,000 ft)
- Range:
  - in still air ..... 18,250 n miles (33,799 km; 21,001 miles)
  - with optimum jetstream assistance ..... 20,000 n miles (37,040 km; 23,015 miles)
- Endurance ..... 80 h

SCALED COMPOSITES 318 WHITE KNIGHT

TYPE: High-altitude platform.

PROGRAMME: Design conception started 1996, but existence unknown until shortly before first flight (N318SL) on 1 August 2002; officially unveiled 18 April 2003 as launch platform for suborbital SpaceShipOne and, possibly, other payloads. First captive-carry flight with SpaceShipOne attached, 20 May 2003; this programme completed in October 2004.

Following reallocation of the Boeing X-37 programme from NASA to DARPA, the White Knight was adapted as carrier for that aircraft, making its first captive-carry flight with the X-37 on 21 June 2005.

Two White Knight 2s, a larger version of the aircraft, will be built for carrying the next generation Scaled Composites space vehicle, the eight-seat SpaceShipTwo. Further details of WK2 not expected before late 2007.

SCALED COMPOSITES 316 SPACESHIPONE

TYPE: Technology demonstrator.

PROGRAMME: Design concepts for 'Tier One' suborbital manned spacecraft inaugurated 1996; SpaceShipOne development programme began with award of customer contract in April 2001; aircraft registered N328KF (signifying non-metric equivalent of 100,000 m) on 20 March 2003 and existence revealed 18 April 2003. Initial two sorties (first unmanned, second manned) on 20 May and 29 July 2003 were captive-carry flights under company's White Knight aircraft; followed by first manned glide 7 August 2003; first 'feather' conversion made on fourth flight, 27 August 2003. Pitch-up problem encountered during third gliding flight on 23 September; rectified, and flying resumed, 17 October 2003. First supersonic flight was made on the 17 December 2003 Wright brothers centennial anniversary, after release from White Knight at 14,630 m (48,000 ft), aircraft suffering minor damage when port mainwheel leg collapsed on landing. On same date, telecommunications and entertainments businessman Paul G Allen identified as project's sponsor.

On 1 April 2004, FAA Office of Commercial Space Transportation issued SpaceShipOne with licence as suborbital manned rocket (first of its kind), paving way for attempt on Ansari X-Prize. During the course of flight 15P (see table) on 21 June 2004, N328KF achieved an altitude under rocket power of 86,106 m (282,500 ft), which was submitted to the FAI for ratification in Classes C-1 and C-1d as a record for a landplane launched from a mother-ship.

Flights on 29 September and 4 October 2004 successfully qualified for the USD10,000 X-Prize, considerably exceeding in the process both the official and unofficial absolute records for altitude achieved in 1962 and 1963 by the North American X-15A. Shortly before this, on 27 September, Sir Richard Branson's Virgin Group announced its entry into agreement to license the SpaceShipOne technology (owned by sponsor Paul Allen's Mojave Aerospace Ventures) to develop the world's first privately funded spaceships to carry commercial passengers. Separately, it formed new company Virgin Galactic to become the world's first commercial space tourism operator. Initial discussions with Scaled concerned suborbital spacecraft with accommodation for up to nine passengers, with configuration to be finalised in 2005. Anticipated design changes may include an attempt to eliminate bouts of uncommanded roll encountered on both of the X-Prize flights.

On 8 February and 9 March 2005 respectively, the SpaceShipOne team received the prestigious Robert J Collier Trophy and the NASM Trophy for Current Achievement. Shortly afterwards, it was announced that the aircraft had been donated to the National Air and Space Museum. Presentation to the NASM was made on 2 August 2005; inauguration, in a prominent position between the Ryan NYP *Spirit of St Louis* and the Bell X-1, was conducted on 5 October 2005.

A larger, second-generation **SpaceShipTwo**, for two pilots and six passengers, is to be produced by The Spaceship Company, a joint venture between Scaled Composites and Virgin Galactic. Five have been ordered. Further details not expected before late 2007.

SCHWEIZER

SCHWEIZER AIRCRAFT CORPORATION

Elmira/Corning Regional Airport, 1250 Schweizer Road, Horseheads, New York 14845
Tel: (+1 607) 739 38 21
Fax: (+1 607) 796 24 88
e-mail: schweizer@sacusa.com
Web: www.sacusa.com
PRESIDENT: W Stuart Schweizer
EXECUTIVE VICE-PRESIDENTS: Leslie E Schweizer
VICE-PRESIDENT: Michael D Oakley
GENERAL MANAGER: Randy Simpson
MARKETING CO-ORDINATOR: Peter S Schweizer
MARKETING DIRECTORS:
David K Savage
Barbara J Tweedt

Established 1939 by Ernest Schweizer (1912–2000) to produce sailplanes; from mid-1957 to 1995 made Grumman (later Gulfstream American) Ag-Cat, initially under subcontract, but as Schweizer-owned product from January 1981; manufacturing rights sold to Ag-Cat Corporation of Malden, Missouri, but production terminated soon thereafter.

Schweizer acquired rights for sole US manufacture of Hughes 300 light helicopter 13 July 1983; continues to support earlier Hughes 300s; first Elmira-built 300C completed June 1984; Schweizer purchased US rights for whole 300C programme from McDonnell Douglas Helicopter Company (formerly Hughes Helicopters) 21 November 1986. Deliveries totalled 56 helicopters in 1996, 44 in 1997, 41 in 1998, 43 in 1999, 36 in 2000, 33 in 2001, 32 in 2002 and 38 in 2003, by which time Schweizer had delivered nearly 930 helicopters.

The 1,000th production Schweizer helicopter, a Model 300CBi, was delivered on 21 October 2005 to BC Helicopters of Abbotsford, British Columbia, Canada.

Schweizer also manufactures the Model 300C, 300CB, 300CB*i* and 333 helicopters and the 2–37 and 2-38 surveillance aircraft. An unmanned version of the 300CB, known as the RoboCopter 300, was developed in collaboration with Kawada Industries Inc of Japan and was described in *Jane's Unmanned Aerial Vehicles and Targets*.

At the Heli-Expo show at Orlando, Florida, in February 2002 Schweizer, Sikorsky Aircraft and Shanghai Little Eagle Science and Technology (SLEC) of the People's Republic of China announced an agreement whereby a new joint-venture company, Shanghai Sikorsky Aircraft Co (SSAC), in which SLEC and Sikorsky hold 51 per cent and 49 per cent shares respectively, will produce Schweizer Model 300 series helicopters under licence. Initially, Schweizer 300C/CBCBis and 333s are being assembled from Schweizer-supplied kits (as Shen3A, Shen2B and Shen4T respectively), leading to manufacture of detail parts and eventually to full manufacture in China. First three kits arrived in Shanghai on 26 August 2002, followed by two more in September. Target production in China is 24 helicopters per year.

On 26 August 2004 Sikorsky Aircraft announced that it had reached agreement to acquire Schweizer as a wholly owned subsidiary. Completion of the acquisition was announced in the following month.

Subcontracts include aircraft structural components and assemblies for Northrop Grumman, Sikorsky and Boeing. The company employed 421 in 2004 in its 18,580 m² (200,000 sq ft) facility.

SCHWEIZER SA 2-37

US military designation: RG-8A

TYPE: Multisensor surveillance lightplane.

PROGRAMME: First flight 1985; prototype fitted with Hughes AN/AAQ-16 and other manufacturers' thermal imaging systems.

CURRENT VERSIONS: **SA 2-37A:** Baseline version.

SA 2-37B: Powered by 186 kW (250 hp) Textron Lycoming TIO-540-AB1AD engines. First aircraft (N6150U, c/n 015) registered February 2001; most subsequent production is to this standard. *As described.*

CUSTOMERS: Details in table. Three for US Army, of which one lost in accident; remaining two transferred in 1987 to US Coast Guard at Opa Locka for anti-narcotics operations; one converted to SA 2-38A.

Fifth, sixth and seventh 2-37As built for Central Intelligence Agency late 1989/early 1990; others to Colombian (CACOM 2), Jordanian (14 Squadron) and Mexican (EA 502) air forces, possibly to assist US drugs interdiction efforts as transfers not announced. Colombian purchase of one aircraft was followed by US government provision of five more.

CIA aircraft employed as airborne communications relay platforms for long-range reconnaissance UAVs; believed used over former Yugoslavia in 1994, supporting General Atomics Gnat 750 vehicles; also fitted with surface surveillance equipment to identify sites for NATO air strikes in same operational theatre. Participated in hostage rescue at Japanese embassy in Peru, 1997.

Notes: CIA aircraft registered to Vantage Leasing Inc of Dover, Delaware.
No. 1 remains currently registered (2006) as N3623C apparently due to administrative oversight. Similarly, Nos 016, 017, 019 and 020 remain on the US civil aircraft register.
No. 010 LAIRD International at Marietta, Georgia.
No. 013: This serial number not allocated by Schweizer company.
Nos. 015 to 017 and 019 upwards are SA 2-37Bs.
Nos. 015 to 017 and 019 to 020 believed to be Colombian FAC5752 onwards.

[1] Issue of Airworthiness Certificate
[2] Registration date; no airworthiness certificate by late 2006.

DESIGN FEATURES: Modification of Schweizer SGM 2-37 motor glider, but with slightly greater wing span, drooped leading-edge and leading-edge fences on outer wing panels to improve stall, much more powerful engine with large exhaust silencers on fuselage sides, three-blade quiet propeller, fuselage modified to accept bulged canopy and larger engine, streamlined fairings and hydraulic parking brake on mainwheels; more than treble standard fuel capacity, but optional extra tank also available; later aircraft have outward-canted finlets on lower tips of tailplane. Removable underfuselage skin and hatches give access to 1.84 m^3 (65 cu ft) payload bay behind cockpit, in which pallets holding LLLTV, FLIR or camera payloads can be quickly removed and installed; other engines and larger payloads available for surveillance, basic and advanced training, operator training, glider and banner towing, and priority cargo delivery. Certified to FAR Pt 23 for day and night IFR; inaudible when overflying at 'quiet mode' speed at about 610 m (2,000 ft) over land and 183 m (600 ft) over water with propeller turning at 1,100 rpm to 1,300 rpm and engine producing 48.5 kW (65 hp) of its maximum 186 kW (250 hp).

Wing section Wortmann FX-61-163 at root and FX-60-126 (modified) at tip; outer wing panels and horizontal tail can be removed for transport.

FLYING CONTROLS: Manual. All-moving tailplane with anti-balance tab; externally mass-balanced ailerons; rudder.

LANDING GEAR: Tailwheel type; fixed. Wing-mounted, cantilever main legs. Cantilever tailwheel. Cleveland disc brakes.

POWER PLANT: Current production SA 2-37B has one 186 kW (250 hp) 175 kW (235 hp) Textron Lycoming TIO-540-AB1AD turbocharged flat-six engine, driving a McCauley three-blade constant-speed propeller. Usable fuel capacity 375 litres (99 US gallons; 82.4 Imp gallons). Shadin fuel flow system.

ACCOMMODATION: Seats for two persons side by side under two-piece upward-opening canopy, hinged on centreline. Dual controls, seat belts and inertia reel harnesses standard. Compartment aft of seats enlarged to accommodate pallet containing up to 340 kg (750 lb) of sensors or other equipment.

DIMENSIONS, EXTERNAL:
- Wing span ..... 21.70 m (71 ft 2½ in)
- Wing aspect ratio 25
- Fuselage length ..... 8.79 m (28 ft 10 in)
- Height overall ..... 2.36 m (7 ft 9 in)

AREAS:
- Wings, gross ..... 18.68 m^2 (201.1 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ..... 1,157 kg (2,550 lb)
- Payload ..... 322 kg (710 lb)
- Max mission payload ..... 227 kg (500 lb)
- Max fuel ..... 272 kg (600 lb)
- Max T-O weight ..... 1,950 kg (4,300 lb)
- Max wing loading ..... 104.4 kg/m^2 (21.38 lb/sq ft)
- Max power loading ..... 10.47 kg/kW (17.2 lb/hp)

PERFORMANCE:
- Never-exceed speed (VNE) ..... 165 kt (305 km/h; 189 mph)
- Mission speed ..... 85 kt (157 km/h; 98 mph)
- Optimum climbing speed ..... 85 kt (157 km/h; 98 mph) CAS
- Stalling speed ..... 67 kt (125 km/h; 78 mph)
- Service ceiling ..... 7,315 m (24,000 ft)
- T-O run ..... 449 m (1,473 ft)
- T-O to 15 m (50 ft) ..... 742 m (2,433 ft)
- Landing from 15 m (50 ft) ..... 726 m (2,383 ft)
- Landing run ..... 375 m (1,230 ft)
- Endurance: standard, 200 n mile (370 km; 230 mile) mission radius ..... 7 h
  - quiet mode ..... up to 12 h

SCHWEIZER SA 2-38

US military designations: RU-38A/B Twin Condor

TYPE: Multisensor surveillance lightplane.

PROGRAMME: Development started 1993; substantial redesign of single-engined SA 2-37A/RG-8A; first US Coast Guard 2-37A returned to Schweizer 24 January 1994 for conversion beginning in April; first flight (N61428) 31 May 1995; second aircraft was due to fly in mid-1996, but was destroyed in a crash earlier the same year while still an RG-8; third was to be first 'new' build, but with wing taken from stock; all three for USCG. Type publicly revealed 20 July 1995. First delivery due to US Coast Guard in late 1996; however, programme suspended following RG-8 crash and not resumed until December 1996 when contract amended to two aircraft with engines uprated with turbochargers. Modifications introduced in 1997 comprised a redesigned tailplane and improved inlet ducts for the rear engine. Latest known airworthiness certificate issued 24 September 2002.

Second (new-build) aircraft registered N61449 in July 1997 and gained airworthiness certificate on 23 October 1997. Flight testing (aircraft reserialled 8103) for USCG acceptance began at Edwards AFB on 10 July 1998 by 445th Flight Test Squadron, USAF programme was 100 sorties in three/four months; however test programme was terminated in the following year. Both aircraft remain registered to Schweizer.

Development of SA 2-38B first revealed in June 2003, when three aircraft were registered (N2101J, c/n 001; N2082C, c/n 002; and N2083N, c/n 003), all destined for undisclosed 'US government customer', although registered to Schweizer. First flight was expected in early 2004; initial aircraft declared airworthy on 4 March 2004 and certified 1 April 2004; second declared airworthy 14 April 2005 and certified 24 August 2005. Airworthiness certificates renewed 13 March and 25 April 2006, respectively, but third aircraft had not received a registration certificate by early 2007 and may not have been built.

CURRENT VERSIONS: **SA 2-38A:** Two-seat version, *as described except where otherwise indicated.*

SA 2-38B: Two/four-seat version powered by two 336 kW (450 shp) Rolls-Royce 250-B17F turboprops. Compared with SA 2-38A has increased wing span, overall length and MTOW.

CUSTOMERS: US Coast Guard (two); second US customer, and one overseas, also reported. However, by late 1999, only two SA 2-38As known to have been built.

COSTS: US$450,000 (1993) for initial redesign, US$35 million (1994) USAF contract to convert existing two aircraft; approximately US$1 million each (excluding sensors) for any additional procurement. Renegotiated contract (December 1996) covered two aircraft for US$53 million.

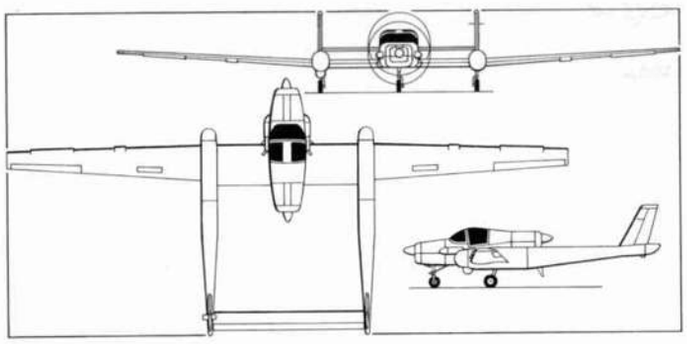
DESIGN FEATURES: Main objectives of SA 2-38A were to increase night patrol capability and reduce engine coking problems compared with SA 2-37A; additional engine also increases safety factor for overwater operation, though normal mode is single-engine cruise with second engine shut down.

Utilises wings and cockpit forward section of SA 2-37A; wing section Wortmann FX-61-163 at root and FX-60-126 (modified) at tip; principal design changes are adoption of pod and twin tailboom configuration with two engines in push-pull layout; cabin slightly widened.

LANDING GEAR: Tricycle type; fixed. Boom-mounted cantilever main legs; strut-braced nosewheel leg; single wheel on each unit. Main units Cleveland 6.50–10 wheel assemblies with Cleveland 30-95A brakes; nosewheel is Cleveland 6.00–8.

POWER PLANT: Prototype SA 2-38A originally with two heavily muffled Teledyne Continental GIO-550A flat-six engines, each rated at 261 kW (350 hp) at 3,400 rpm, with 3:2 reduction

Schweizer RU-38A Twin Condor surveillance aircraft 1129477



Schweizer SA 2-38A twin-engined surveillance aircraft *(Mike Keep)* 0064927

gear to limit propeller speed to 2,267 rpm. One engine in nose and one in rear of fuselage pod, respectively driving a tractor and pusher constant-speed, fully feathering three-blade propeller. Turbocharged engines in service version. Usable fuel capacity 375 litres (99.0 US gallons; 82.5 Imp gallons).

SA 2-38B has two 336 kW (450 shp) Rolls-Royce 250-B17F turboprops, geared to drive propellers at 800-1,000 rpm at mission speed. Rear engine is essentially redundant, to reduce risk of engine failure and to provide higher cruising speeds en route to and from missions. Front engine drives four-blade, constant-speed propeller; rear propeller is three-blade, constant-speed and full-feathering to enable rear engine to be shut down in flight in quiet surveillance mode, when aircraft noise is said to be undetectable from the ground during overflight at 610 m (2,000 ft); engine exhaust is directed over wings to reduce infra-red signature. Usable fuel capacity 1,060 litres (280 US gallons; 233 Imp gallons).

ACCOMMODATION: SA 2-38A accommodates pilot and sensor operator, side by side. SA 2-38B accommodates up to four, with seats for sensor operators behind the pilots' seats, but will operate with two crew with initial customer.

SYSTEMS: Three independent 28 V power sources.

AVIONICS: *Comms:* Rockwell Collins AN/ARC-182 VHF/UHF and Honeywell HF 990 radios, Bendix/King KY 196 VHF, KMA 24H-65 audio selector (two) and KFS 594 HF control; Wolfsburg RT9600 marine band radio.

Radar: Honeywell AN/APN-215(V) colour weather radar with search and mapping modes in nose of port tailboom.

Flight: Bendix/King KI 229 RMI, KI 256 flight director, KI 525A HSI, KI 250 radar altimeter, KDI 572 DME, KC 192 autopilot, KR 87 ADF and KNS 81 VOR/LOC/GS/RNAV. BAE Systems 7880 Omega/GPS.

Mission: Surveillance radar, as above. FLIR/LLLTV and dual recorder in nose of starboard boom; Bendix/King KY 58 and KY 75 communications encryption devices. Fully integrated sensor suite under development.

DIMENSIONS, EXTERNAL (A: SA 2-38A; B: SA 2-38B):

Wing span: A	19.51 m (64 ft 0 in)
B	25.64 m (84 ft 1½ in)
Wing aspect ratio: A	18.1
B	21.2
Length overall: A	9.19 m (30 ft 2 in)
B	10.70 m (35 ft 1¼ in)
Height overall: A	2.90 m (9 ft 6 in)
Wheelbase: A	5.79 m (19 ft 0 in)

AREAS:

Wings, gross: A	20.98 m² (225.9 sq ft)
B	31.05 m² (334.2 sq ft)
Fins (total): A	2.26 m² (24.30 sq ft)
Tailplane: A	3.26 m² (35.10 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: A	1,524 kg (3,360 lb)
B	1,935 kg (4,265 lb)
Max payload: A	408 kg (900 lb)
B	363 kg (800 lb)
Max fuel weight: A	272 kg (600 lb)
B	669 kg (1,475 lb)
Max T-O weight: A	2,404 kg (5,300 lb)
B	3,265 kg (7,200 lb)
Max wing loading: A	114.6 kg/m² (23.46 lb/sq ft)
B	105.2 kg/m² (21.54 lb/sq ft)
Max power loading: A	4.61 kg/kW (7.57 lb/hp)
B	4.87 kg/kW (8.00 lbs/hp)

PERFORMANCE:

Never-exceed speed (VNE): A	165 kt (305 km/h; 189 mph)
B	168 kt (311 km/h; 193 mph)
Cruising speed at 1,525 m (5,000 ft): A	
at 75% power	136 kt (252 km/h; 157 mph)
at 63% power	127 kt (235 km/h; 146 mph)
Mission speed: A	90 kt (167 km/h; 104 mph)
B	83 kt (154 km/h; 96 mph)
Best climbing speed: A	87 kt (161 km/h; 100 mph)
B	83.5 kt (155 km/h; 96 mph)
Stalling speed: A	75 kt (139 km/h; 87 mph)
B	62 kt (115 km/h; 72 mph)
Max rate of climb at S/L: A	670 m (2,200 ft)/min
Rate of climb at S/L, nose engine only: A	350 m (1,150 ft)/min
Service ceiling: A	7,315 m (24,000 ft)
B	9,144 m (30,000 ft)
T-O run: A	295 m (960 ft)
B	294 m (965 ft)
T-O to 15 m (50 ft): A	430 m (1,400 ft)
B	311 m (1,020 ft)
Landing from 15 m (50 ft): A	755 m (2,475 ft)
B	945 m (3,100 ft)
Landing run: A	410 m (1,350 ft)
B	600 m (1,970 ft)
Endurance with no reserves: typical mission: A	6 h
max: A	10 h

SCHWEIZER 300C

Engineering designation: Model 269

TYPE: Three-seat helicopter.

PROGRAMME: Hughes 269 first flew 2 October 1956; production deliveries began October 1961; marketed later as Model 300. Developed 300C first flew August 1969; first flight Hughes production model December 1969; FAA certification May 1970. Production of 300C transferred from Hughes Helicopters to Schweizer July 1983; first flight Schweizer 300C (1,166th 300C) June 1984; Schweizer bought entire programme November 1986. Deliveries of 300CB began in August 1995 with initial three of 10 ordered by launch customer Helicopter Adventures, of Concord, California. More than 3,600 Hughes/Schweizer 300/330s have been produced. Production rate stood at one per week in 2004. The 1,000th Schweizer-built helicopter, a Model 300CBi was delivered on 21 October 2005 to BC Helicopters of Abbotsford, Canada.

CURRENT VERSIONS: **300C:** Standard civil version.

Main description applies to 300C, unless otherwise indicated.

300C Sky Knight: Special police version; options include safety mesh seats with inertia reel shoulder harnesses, public address/siren system, searchlight, integrated communications, infra-red sensor, Heavy-duty 28 V 100 A electrical system, cabin heater, night lights with strobe beacons, cabin utility light, fire extinguisher, first aid kit and map case. Chinese designation **Shen3A**.

TH-300C: Military training version.

300CB: 'Basic' version (otherwise designated 269C-1) for training role; 134 kW (180 hp) Textron Lycoming HO-360-C1A engine, 132 litre (35 US gallon; 29.1 Imp gallon) fuel tank and 2,000 hour TBO; stated to be cheaper to operate than 300C. First flight (N6002X) 28 May 1993; type certificate awarded August 1995. Changes from standard model include one-piece upper pulley hub; improved air filtration system; lightweight exhaust; and improved oil filter. 200,000 hours flown by October 2002, at which time 11 had been involved in accidents without fatalities. Chinese designation **Shen2B**.

300CB*i*: Enhanced version of 300CB, which it was scheduled to replace from 2002; introduced at Heli-Expo 2002 at Orlando, Florida, in February 2002. Features fuel-injected engine, new splined (replacing bolted) main rotor driveshaft and hub with 4,000-hour life, and electronic automatic engagement system (AES). First delivery (G-OCBI, c/n 0139) to CSE Aviation at Oxford, UK, in August 2002. One delivered to Great Slave Helicopters at Yellowknife, NWT, October 2002.

RoboCopter: Unmanned version developed by Kawada Industries in Japan for cropspraying, pipeline patrol, aerial crane and reconnaissance; first flight October 1996; Schweizer teamed with Northrop Grumman to offer helicopter for US Navy VTOL UAV requirement (subsequently met by RQ-8A Fire Scout version of Schweizer 333, which see); RoboCopter promoted in late 2002 under US marketing name **Argus**; further details were in *Jane's Unmanned Aerial Vehicles and Targets*.

CUSTOMERS: Hughes produced 2,775 of all versions, including TH-55A Osage for US Army, before transfer to Schweizer. Royal Thai Army received 58 TH-300C helicopters between March 1986 and mid-1989; 500th Schweizer-manufactured 300C delivered at Heli Expo 1994. Sky Knight customers include police departments of Baltimore, Maryland; Lakewood, California; and Kansas City, Missouri. Recent customers include Helicopter Adventures Inc of California, which ordered 23 300CB*i*s, plus 10 options, for its rotary-wing training schools in California and Florida; High Desert Helicopters of West Jordan, Utah, which ordered two 300Cs in March 2004; and the Civil Aviation University of China, which took delivery of two 300Cs in early 2004, bringing to nine the total of Schweizer 300Cs delivered to China in 2003-04. By late 2006, Schweizer had built some 734 300Cs and 268 300CBs; during 2000, 13 300Cs and 17 300CBs were delivered, followed by 17 and 12 in 2001; 13 and 17 in 2002; 20 and 15 in 2003; 13 and 27 in 2004; and 12 and 40 in 2005.

COSTS: 300C: USD235,650 (2001); 300CB USD204,750 (2001). Direct operating cost: 300C USD87.01 per hour; 300CB*i* USD70.52 per hour (both 2005).

DESIGN FEATURES: Simple, pod-and-boom configuration, with exposed power plant and fuel tanks. Aerofoil-section stabiliser, starboard side, rear, at approx 45° dihedral; triangular underfin. Fully articulated three-blade main rotor, turning at 471 rpm; fully interchangeable blades; blade section NACA 0015; elastomeric dampers; two-blade teetering tail rotor; limited blade folding; no rotor brake; multiple V-belt and pulley reduction gear/drive system between horizontally mounted engine and transmission, with electrically controlled belt-tensioning system instead of clutch; braced tubular tailboom; separate dihedral tailplane and fin.

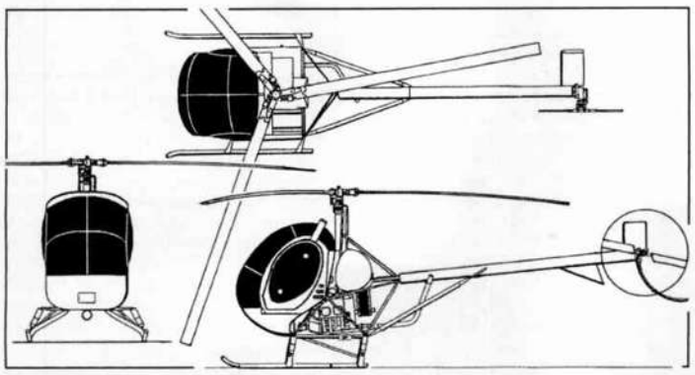
FLYING CONTROLS: Manual. Electric two-axis cyclic trim, cyclic and collective friction control.

STRUCTURE: Main rotor blades bonded with constant-section extruded aluminium spar, wraparound skin and trailing-edge; tail rotor blades have steel tube spar and glass fibre skin; steel tube cabin section with light alloy and stainless steel skin and Plexiglas transparencies.

LANDING GEAR: Tubular skids carried on booted oleo-pneumatic shock-absorbers. Replaceable Heavy-duty skid shoes. Two ground handling wheels with 0.25 m (10 in) balloon tyres, pressure 4.14 to 5.17 bar (60 to 75 lb/sq in). Available optionally on floats made of polyurethane-coated nylon fabric, 4.70 m (15 ft 5 in) long and with a total installed weight of 27.2 kg (60 lb). Heavy-duty skid plates optional.

POWER PLANT: One 168 kW (225 hp) Textron Lycoming HIO-360-D1A flat-four engine, derated to 142 kW (190 hp), mounted horizontally aft of seats. Normal fuel capacity of 300C and 300CB is 123 litres (32.5 US gallons; 27.1 Imp gallons) of which 114 litres (30.0 US gallons; 25.0 Imp gallons) are usable; auxiliary tank of 133 litres (35.0 US gallons; 29.2 Imp gallons) can be fitted to 300C and tank of 114 litres (30.0 US gallons; 25.0 Imp

Schweizer 300CB*i* three-seat helicopter *(Paul Jackson)* 1159744



General arrangement of the Schweizer 300 *(Paul Jackson)* 1159692

gallons) to 300CB. Normal fuel capacity of 300 CB*i* is 132 litres (35.0 US gallons; 29.1 Imp gallons); auxiliary tank of 114 litres (30 US gallons; 25.0 Imp gallons) can be fitted. Oil capacity 9.5 litres (2.5 US gallons; 2.1 Imp gallons).

ACCOMMODATION: Three persons side by side on sculptured and cushioned bench seat, with shoulder harness, in Plexiglas enclosed cabin. Accommodation ventilated. Carpet and tinted canopy standard. Forward-hinged, removable door on each side. Dual controls optional in 300C, standard in 300CB and 300 CB*i*; captain sits on left in 300C and on right in 300CB. Offset anti-torque pedals. Exhaust muff heating kit available.

SYSTEMS: Standard electrical system includes 24 V 70 A alternator, 24 V 17 Ah battery, lightweight high-torque starter and external power socket. Night lights with strobe beacons standard on 300CB. Automatic engagement system (AES) introduced as an option from February 2002 incorporates a start-up overspeed governor, computer-controlled rotor engagement device and low rotor rpm warning.

AVIONICS: *Comms:* Avionics include Honeywell KY 96A com transceiver and headsets, KR 86 ADF and GTX 320 transponders and ACK A-30 blind encoder.

EQUIPMENT: Standard for all models are fire extinguisher, first aid kit and engine hour meter. Model 300C has external power plug and fuel pressure indicator; Model 300CB has night lights with strobes. Optional equipment includes stretcher kits, cargo racks with combined capacity of 91 kg (200 lb), external load sling of 408 kg (900 lb) capacity, Simplex Model 5200 agricultural spray or dry powder dispersal kits, instrument training package, throttle governor, start-up overspeed control unit, night flying kit, single or dual exhaust mufflers, door lock and dual oil coolers.

DIMENSIONS, EXTERNAL:

Main rotor diameter	8.18 m (26 ft 10 in)
Main rotor blade chord	0.17 m (6¾ in)
Tail rotor diameter	1.30 m (4 ft 3 in)
Distance between rotor centres	4.66 m (15 ft 3½ in)
Length: fuselage	6.77 m (22 ft 2½ in)
overall, rotors turning	9.40 m (30 ft 10 in)
Height: to top of rotor head	2.66 m (8 ft 8¾ in)
to top of cabin	2.19 m (7 ft 2 in)
Width: rotor partially folded	2.44 m (8 ft 0 in)
cabin	1.30 m (4 ft 3 in)
Skid track	1.99 m (6 ft 6½ in)
Length of skids	2.51 m (8 ft 3 in)
Passenger doors (each): Height	1.09 m (3 ft 7 in)
Width	0.97 m (3 ft 2 in)
Height to sill	0.91 m (3 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.50 m (4 ft 11 in)
Max width	1.45 m (4 ft 9 in)

AREAS:

Main rotor blades (each)	0.70 m^2 (7.55 sq ft)
Tail rotor blades (each)	0.08 m^2 (0.86 sq ft)
Main rotor disc	52.54 m^2 (565.5 sq ft)
Tail rotor disc	1.32 m^2 (14.20 sq ft)
Fin	0.23 m^2 (2.50 sq ft)
Horizontal stabiliser	0.246 m^2 (2.65 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: 300C	499 kg (1,100 lb)
300CB, 300CB*i*	494 kg (1,088 lb)
Baggage capacity	45 kg (100 lb)
Max T-O weight:	
Normal category: 300C	930 kg (2,050 lb)
300CB, 300CB*i*	794 kg (1,750 lb)
external load	975 kg (2,150 lb)
Max disc loading:	
Normal category: 300C	17.7 kg/m^2 (3.63 lb/sq ft)
300CB, 300CB*i*	15.1 kg/m^2 (3.09 lb/sq ft)
external load	18.6 kg/m^2 (3.80 lb/sq ft)
Max power loading at T-O:	
Normal category: 300C	6.57 kg/kW (10.79 lb/hp)
300CB, 300CB*i*	5.61 kg/kW (9.21 lb/hp)
external load	6.89 kg/kW (11.32 lb/hp)

PERFORMANCE (at max Normal T-O weight, ISA):

Never-exceed speed (VNE) at S/L:	
300C	95 kt (176 km/h; 109 mph) IAS
300CB, 300CB*i*	94 kt (174 km/h; 108 mph) IAS
Max cruising speed: 300C	86 kt (159 km/h; 99 mph)
300CB, 300CB*i*	80 kt (148 km/h; 92 mph)
Speed for max range, at FL40	67 kt (124 km/h; 77 mph)
Max rate of climb at S/L: 300C	229 m (750 ft)/min
300CB, 300CB*i*	381 m (1,250 ft)/min
Hovering ceiling: IGE: 300C	3,290 m (10,800 ft)
300CB, 300CB*i*	2,135 m (7,000 ft)
OGE: 300C	2,620 m (8,600 ft)
300CB, 300CB*i*	1,465 m (4,800 ft)
Range at FL40, 2 min warm-up, max normal fuel, no reserves	208 n miles (386 km; 240 miles)
Max endurance at S/L: 300C	3 h 48 min
300CB, 300CB*i*	3 h 18 min

SCHWEIZER 330 and 333

TYPE: Four-seat helicopter.

PROGRAMME: Announced 1987; first flight in public (N330ST; converted from a 300C) 14 June 1988; FAA certification September 1992. Italian certification April 2002. Deliveries started mid-1993. Three sets of controls available for student training. Model 330SP is marketing designation; type is 269D. Production rate one per month in 2004.

CURRENT VERSIONS: **330:** Original version delivered from 1993.

330SP: Announced May 1997, incorporates larger main rotor hub, increased blade chord and raised landing gear. Modifications can be retrofitted to existing 330s.

333: Announced early 2000 as an upgraded version of the 330SP; lead customer was San Antonio Police Department (two aircraft). FAA certification awarded 28 September 2000, at which time first three already delivered. 330SP can be upgraded to 333 standard. Differences include new cambered wider chord aerofoil main rotor blades, larger diameter rotor system, increased height landing gear and increased transmission rating. Chinese designation **Shen 4T**.

Five-seat version under study in 2003 for Indonesian Police Force requirement for up to 35 helicopters, with initial procurement expected to total 16 to 18.

Details apply to 333 unless otherwise stated.

RQ-8A MQ-8B Fire Scout: Schweizer 333 selected as airframe basis for Northrop Grumman Model 379 VTOL tactical UAV for US Army and Navy (see *Jane's Unmanned Aerial Vehicles and Targets*) for which a USD93.7 million contract was awarded on 10 February 2000. In late March 2003, Schweizer began flight tests of a 333 (original prototype N330ST) equipped with a four-blade main rotor destined for the Q-8.

CUSTOMERS: Operated in Belgium, India, Japan, Netherlands, Panama, Poland, Sweden, Switzerland and US. Recent customers include Chesapeake Bay Helicopters of Virginia and Aero Optics Inc of Wisconsin, which have each taken delivery of a 333 for powerline/pipeline inspection and other aerial work duties; the Dominican Air Force, which took delivery of four 333s in 2004 for pilot training and airborne patrol; the Mexican Procuraduria General de la Republica's Agencia General de Investigacion, which ordered eight (and may receive up to 28) delivered from 2004 for law enforcement, border patrol and drug interdiction; and Total Air Management Services (TAM) of the UK, which has ordered four to be used on gas pipeline patrols.

Three aircraft delivered in 1993; five in 1994, plus one prototype and one demonstrator; five in 1996, five in 1997, three in 1998, one in 1999, six in 2000, four in 2001; two in 2002; three in 2003; eight in 2004 and six in 2005, for a total of 53, excluding two Fire Scout prototypes.

COSTS: USD607,500 for 333 (2001). Direct operating cost USD100.64 per hour; operating cost including reserves USD178.54 per hour (both 2006).

DESIGN FEATURES: Developed from Model 300C, with turbine power, enclosed engine and tapered tailboom. Civil roles include law enforcement, scout/observation, aerial photography, light utility, agricultural spraying and personal transport; uses turbine fuel rather than scarcer Avgas; extremely low flat rating of engine for good hot-and-high performance; streamlined external envelope and large tailplane with endplate fins added during development; rotor rpm 471.

FLYING CONTROLS: Similar to 300C; see Design Features.

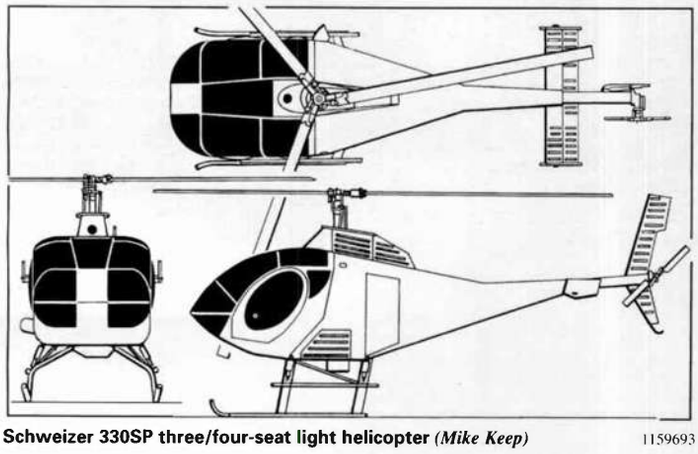
STRUCTURE: Generally similar to 300C.

POWER PLANT: *330/330SP:* One 313.2 kW (420 shp) Rolls-Royce 250-C20W turboshaft derated to 175 kW (235 shp). Transmission rating 175 kW (235 shp) for T-O; 164 kW (220 hp) maximum continuous. Fuel contained in cash-resistant tank, maximum usable capacity 276 litres (73.0 US gallons; 60.8 Imp gallons).

333: One 313.2 kW (420 shp) Rolls-Royce 250-C20W turboshaft derated to 173 kW (232 shp). Transmission rating 209 kW (280 shp) for T-O; 173 kW (232 shp) maximum continuous. Fuel capacity as 330SP.

ACCOMMODATION: Three persons side by side (central occupant slightly forward), with up to three sets of controls; four point inertia reel seat belts. Fourth occupant in 'high density' configuration (central seat replaced by double seat). Cabin ventilated.

Schweizer 333 operated by Aero Optics of Wisconsin *(Paul Jackson)* 1159745



Schweizer 330SP three/four-seat light helicopter *(Mike Keep)* 1159693

SYSTEMS: Engine inlet anti-ice system; 24 V 30 Ah lead-acid battery; 150 A starter/generator; external APU plug; circuit breaker protection.

AVIONICS: *Instrumentation:* Tachometer, engine torquemeter, engine oil temperature and pressure indicators; electric digital OAT, turbine outlet temperature indicator; annunciator warning panel.

Mission: Law enforcement options include FLIR, video recorder, Spectrolab SX-5 Starburst searchlight, Pronet and Litton computer system.

DIMENSIONS, EXTERNAL:

Main rotor diameter	8.38 m (27 ft 6 in)
Tail rotor diameter	1.30 m (4 ft 3 in)
Length overall, rotors turning	9.50 m (31 ft 2 in)
Fuselage: Length	6.82 m (22 ft 4½ in)
Max width	1.72 m (5 ft 7¾ in)
Height overall	3.35 m (11 ft 0 in)
Width overall	2.04 m (6 ft 8½ in)
Tailplane span	2.04 m (6 ft 8½ in)
Skid track	1.92 m (6 ft 3½ in)

DIMENSIONS, INTERNAL:

Cabin: Max width	1.84 m (6 ft 0½ in)
Length	1.98 m (6 ft 6 in)
Height at seat	1.35 m (4 ft 5¼ in)

AREAS:

Main rotor disc area	55.20 m² (594.2 sq ft)
Tail rotor disc area	1.32 m² (14.20 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	567 kg (1,250 lb)
Max T-O weight	1,156 kg (2,550 lb)
Max disc loading	20.95 kg/m² (4.29 lb/sq ft)
Transmission loading at max T-O weight and power	5.54 kg/kW (9.11 lb/shp)

PERFORMANCE:

Never-exceed speed (VNE)	120 kt (222 km/h; 138 mph)
Normal cruising speed	105 kt (194 km/h; 121 mph)
Econ cruising speed	94 kt (174 km/h; 108 mph)
Max rate of climb at S/L	420 m (1,380 ft)/min
Hovering ceiling at MTOW: IGE	2,713 m (8,900 ft)
OGE	1,798 m (5,900 ft)
Max range at FL40, no reserves	310 n miles (574 km; 356 miles)
Max endurance, no reserves	4 h 6 min

Seastar has undertaken a fundamental redesign of the Seawind amphibian which it now offers complete or as a kit. The next product will be the Adventurer turbo-powered version; other versions planned include an armed version for patrol work and a search and rescue equipped model.

The company is establishing a 5,000 m² (53,820 sq ft) facility in Hungary where certified aircraft will be built before being transferred to the USA for completion.

SEASTAR SEASTAR and LAKESTAR

TYPE: Six-seat amphibian kitbuilt.

PROGRAMME: Production prototype Seawind first flew 23 August 1982. Progressed through several versions, last of which built by Seawind International Inc of Canada.

Compared to Seawind, the completely new design SeaStar offers a changed aerofoil, single-piece Fowler flaps, gull-wing cabin doors and stainless steel landing gear. Adapted for optional pressurisation and alternative diesel and turboprop engines. Prototype (N601SS) exhibited, partly complete, at Sun 'n' Fun, April 2000; first flown 12 November 2000; by April 2002, 111 hours had been flown and certification programme begun with certification expected 2005–06; however, by April 2004 certification was no longer planned. By this date, prototype reported to have flown 601 hours.

CURRENT VERSIONS: **SeaStar TSP-350:** Piston-engined version, *as described.* Initially marketed as SeaStar 7T and SeaStar 200.

SeaStar TSP-350P: As TSP-350 but pressurised. Initially marketed as SeaStar 7P and SeaStar 300.

SeaStar T-724: Non-pressurised turbine model. Option of longer-span wing.

SeaStar T-724P: Pressurised turbine model. Option of longer-span wing.

SeaStar 400: Certified version, under development.

SeaStar 500: Military rescue, patrol and law enforcement version. Initially marketed as SeaStar 400.

LakeStar: Lower-powered four seat version.

CUSTOMERS: Several kits under construction by end 2001; company assisting with completion of first ten; over 30 deposits taken by April 2002; however, by October 2005 none appeared to be complete.

COSTS: Kits: LakeStar USD89,950; TSP-350 USD109,000; TSP-350P USD129,000; T-724 USD119,000; T-724P USD129,000 (all 2006). Estimated total cost to first flight USD300,000, depending on engine choice.

SeaStar SeaStar multipurpose amphibian *(Paul Jackson)* 1047387

DESIGN FEATURES: Unconventional configuration; shoulder wing with stabilising floats at tips; long-chord fin mounts engine and tailplane at mid-position, shielding propeller from water spray. Optional longer-span wing for high-altitude operations. Quoted build time 3,000 hours.

FLYING CONTROLS: Conventional and manual. Full-span elevator with two flight-adjustable tabs; ground-adjustable tab on rudder; flight-adjustable tab in port aileron. Electrically operated two-section slotted flaps, max deflection 40°.

STRUCTURE: Carbon fibre throughout; stainless steel landing gear. Wing aerofoil GA37A315.

POWER PLANT: *TSP-350:* One 261 kW (350 hp) Textron Lycoming IO-540-J2BD driving four-blade reversible pitch MT propeller. Normal fuel capacity of 379 litres (100 US gallons; 83.3 Imp gallons); option of adding extra 151 litre (40.0 US gallons; 33.3 Imp gallons) auxiliary tank.

T-724P: One 562 kW (754 shp) Walter 601E driving a three- or five-blade reversible pitch Avia propeller. Other options include Walter 601F and, for military versions, Pratt and Whitney Canada PT-6. Normal fuel capacity 606 litres (160 US gallons; 133 Imp gallons); option of adding extra 227 litre (60.0 US gallon; 50.0 Imp gallon) auxiliary tank.

LakeStar: One 172 kW (230 hp) Wankel Diesel engine.

LANDING GEAR: Tricycle type; electrically retractable; spring steel legs. Mainwheels are 7.00–6, have hydraulic brakes and retract upwards into wing; steerable 6.00–6 nosewheel retracts forwards.

ACCOMMODATION: Two front seats and bench for three passengers in rear. Four centreline-hinged, upward-opening doors in piston-engined version.

ARMAMENT: Military version has provision for total of four underwing pylons.

DIMENSIONS, EXTERNAL:

Wing span: standard	11.58 m (38 ft 0 in)
optional	12.80 m (42 ft 0 in)
Length overall	10.06 m (33 ft 0 in)
Height overall: TSP-350P	3.20 m (10 ft 6 in)
T-724P	3.35 m (11 ft 0 in)
Baggage door: Width	0.76 m (2 ft 6 in)
Height	0.69 m (2 ft 3 in)

DIMENSIONS, INTERNAL:

Cabin: Length	3.25 m (10 ft 8 in)
Width: at front	1.35 m (4 ft 5 in)
at rear	1.52 m (5 ft 0 in)
Height	1.08 m (3 ft 6½ in)
Baggage compartment: Length	1.83 m (6 ft 0 in)
Volume	0.48 m³ (16.88 cu ft)

AREAS:

Wings, gross	15.89 m² (171.0 sq ft)

WEIGHT AND LOADINGS:

Weight empty: TSP-350P	1,293 kg (2,850 lb)
T-724P	1,338 kg (2,950 lb)
LakeStar	975 kg (2,150 lb)
Max T-O weight: TSP-350P	1,814 kg (4,000 lb)
T-724P	2,268 kg (5,000 lb)
LakeStar	1,383 kg (3,050 lb)
Max wing loading: TSP-350P	114.2 kg/m² (23.39 lb/sq ft)
T-724P	142.8 kg/m² (29.24 lb/sq ft)
LakeStar	87.1 kg/m² (17.84 lb/sq ft)
Max power loading: TSP-350P	6.96 kg/kW (11.43 lb/hp)
T-724P	4.04 kg/kW (6.63 lb/shp)
LakeStar	8.07 kg/kW (13.26 lb/hp)

PERFORMANCE:

Normal cruising speed: at FL20: TSP-350P	185 kt (343 km/h; 213 mph)
T-724P	231 kt (428 km/h; 266 mph)
at FL15: LakeStar	149 kt (277 km/h; 172 mph)
Stalling speed, flaps down: TSP-350P, T-724P	54 kt (100 km/h; 62 mph)
LakeStar	47 kt (87 km/h; 54 mph)
Max rate of climb at S/L: TSP-350P, LakeStar	267 m (875 ft)/min
T-724P	610 m (2,000 ft)/min
Service ceiling: TSP-350P, T-724P	7,010 m (23,000 ft)
T-O run from water: TSP-350P	290 m (950 ft)
T-724P	235 m (770 ft)
LakeStar	412 m (1,350 ft)
Range: TSP-350P	1,215 n miles (2,251 km; 1,399 miles)
T-724P	1,203 n miles (2,228 km; 1,385 miles)
LakeStar	999 n miles (1,850 km; 1,150 miles)

PRESIDENT AND CEO: Richard Silva
SALES DIRECTOR: Dave Arnold

Seawind announced in 2003 that it was pursuing certification for its Seawind 300C amphibian, a derivative of the earlier Seawind 2000 and 3000. Production will be in a new 7,620 m² (82,000 sq ft) plant at St Jean-sur-Richelieu Canada, for which a government loan of CAD2.8 million was awarded in mid-2006; marketing sales and service are handled by a facility at Chester County Airport, Pennsylvania.

In third quarter of 2004, Seawind announced a delay in operations because of a 20 per cent shortfall in funding; by August 2005, operations had recommenced and the first conforming test aircraft made its first flight on 31 August 2006; VFR certification then expected by year end with further options following soon after.

SEAWIND SEAWIND 300C

TYPE: Four-/five-seat amphibian.

PROGRAMME: Developed from Seawind 2000 through Seawind 3000, which first flew 23 August 1982; both versions sold as kits; now discontinued.

Factory-constructed Seawind 300C was being prepared for certification in late 2004 by FAA and Transport Canada, with deliveries to start in mid-2006, but these targets were not met. Trials aircraft N46SW had flown 2,000 hours and made 1,308 water landings by July 2005. Certification flying by two preproduction aircraft, first (C-GDBS) having been due to fly in March 2004 but failed to do so and subsequently schduled to start third quarter 2005; first flight took place on 31 August 2006. Authorisation to produce seven aircraft prior to completion of flight testing awarded; these aircraft to be used for tooling and training purposes.

CUSTOMERS: Total of 130 kits sold and 75 flying by August 2005, at which time six certified aircraft had been sold and deposits on a further 33 taken. Further sales achieved AirVenture '05 to bring total to 46 and had reached 80 by the end of September 2006. Deliveries set at 24 for first year, rising to 60 the following year and 100 thereafter.

COSTS: USD324,900. VFR-equipped; IFR USD38,000 extra; glass cockpit adds further USD28,000 (2006).

DESIGN FEATURES: Intended to be first-ever composites amphibian to receive certification. Rotation of engine pod enables aircraft to back away from beach or dock; four flotation compartments and composite foam core design intended to make aircraft almost unsinkable.

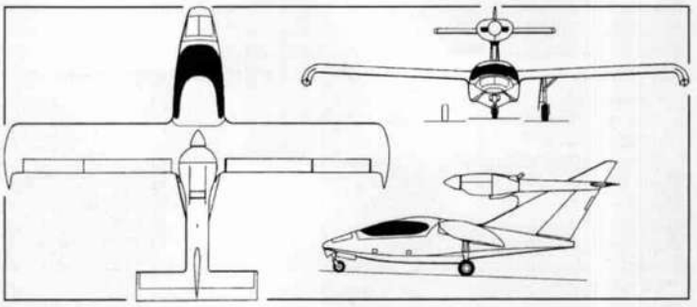
FLYING CONTROLS: Conventional and manual. Slotted flaps on laminer flow wing.

STRUCTURE: Entire aircraft constructed from glass fibre, vinylester resin and foam composites. Glass fibre main and aft spars. Vertical tail is stressed skin and bulkhead structure to support cantilevered engine.

LANDING GEAR: Tricycle type; retractable. Trailing-link main gear, nosewheel retracts rearwards. Single-step hull with stabilising floats in downturned wingtips. Honda outboard motor mounted internally for manoeuvring on water.

POWER PLANT: One 231 kW (310 hp) Textron Lycoming IO-550N flat-six, driving Hartzell Scimitar three-blade, constant-speed propeller in prototype: optional FADEC. Fuel capacity 303 litres (80.0 US gallons; 66.6 Imp gallons) in main fuel tanks with option to increase to 416 litres (110 US gallons; 91.6 Imp gallons).

First preproduction Seawind 300C on maiden flight 1040478



Seawind 300C ***(Paul Jackson)*** 1164903

ACCOMMODATION: Pilot and three or four passengers in enclosed cabin. Front bucket seats move forward and aft; rear seats hinge forward for access to cabin baggage area and are easily removable. Retractable cargo net.

SYSTEMS: 28 V electrical system with 70A alternator.

AVIONICS: Two packages available. Optional IFR layouts include full 'glass cockpit' from SAGEM with GMX200 moving map, GNS430 GPS/com, SL 30 nav/com and GL 106A CDI. and EFIS displays.

Comms: Garmin GMA 340 audio panel, GNC 250XL GPS/com, GTX 327 transponder. Optional traffic information service.

Radar: Optional XM GDL 69 weather radar.

Flight: Optional S-Tec autopilot; optional lightning detection, optional GDL 90 ADS-B.

EQUIPMENT: Automatic bilge pump; optional 1.8 kW (2.5 hp) retractable water-cooled engine for manoeuvring.

DIMENSIONS, EXTERNAL:

Wing span	10.67 m (35 ft 0 in)
Wing aspect ratio	7.4
Length overall	8.28 m (27 ft 2 in)
Height overall	3.10 m (10 ft 2 in)
Propeller diameter	1.93 m (6 ft 4 in)
Baggage door: Height	0.48 m (1 ft 7 in)
Width	1.02 m (3 ft 4 in)
Propeller diameter	1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin: Length	2.67 m (8 ft 9 in)
Max width	1.37 m (4 ft 6 in)
Max height	1.09 m (3 ft 7 in)
Baggage volume: cabin	0.28 m³ (10.0 cu ft)
nose	0.14 m³ (5.0 cu ft)
Freight hold: Length	1.80 m (5 ft 11 in)
Volume	0.85 m³ (30.0 cu ft)

AREAS:

Wings, gross	15.41 m² (165.9 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,021 kg (2,250 lb)
Max T-O weight	1,542 kg (3,400 lb)
Max wing loading	100.1 kg/m² (20.49 lb/sq ft)
Max power loading	6.68 kg/kW (10.97 lb/hp)

PERFORMANCE:

Max operating speed	173 kt (321 km/h; 200 mph)
Max cruising speed at 75% power	166 kt (307 km/h; 191 mph)
Normal cruising speed at 65% power	156 kt (290 km/h; 180 mph)
Econ cruising speed at 55% power	147 kt (272 km/h; 169 mph)
Stalling speed, power off:	
flaps up	63 kt (116 km/h; 72 mph)
flaps and wheels down	52 kt (95 km/h; 59 mph)
Max rate of climb at S/L	381 m (1,250 ft)/min
Service ceiling	5,486 m (18,000 ft)
T-O run: land	358 m (1,175 ft)
water	442 m (1,450 ft)
Landing run: land	396 m (1,300 ft)
water	351 m (1,150 ft)
Range, no reserves:	
with normal fuel	903 n miles (1,673 km; 1,040 miles)
with max fuel	1,260 n miles (2,333 km; 1,450 miles)

PRESIDENT: Alfred P Scott

Sequoia has marketed the F.8L Falco since 1979, both as plans and kit.

SEQUOIA FALCO F.8L

TYPE: Side-by-side lightplane/kitbuilt.

PROGRAMME: Designed by Stelio Frati, Falco first flew (I-RAID) in Italy on 15 June 1955. Initial batch of 10 Series I (101 kW; 135 hp Lycoming 0-290-D2B) built by Aviamilano at Milan, followed by 10 Series II (112 kW; 150 hp 0-320-A2A). Production rights acquired by Caproni and manufacture transferred to Aeromere at Trento, where 36 Series III Falco Americas built for US market, gaining FAA certification on 26 June 1961. Programme taken over by successor company Laverda in 1964; Super Falco Series IV (119 kW; 160 hp 0-320-B3) production totalled 20 up to 1968.

Design rights acquired by 1978 by Alfred Scott; drawings converted to 'US' Imperial standards by Scott and David Thurston and initially marketed as plans by Sequoia; first plans aircraft (N33LW) built by Larry Wohlers and flown 14 June 1982. Shortly after, Sequoia added kit option and first thus constructed (N545SF) was flown by builder Dave Aronson on 20 July 1984, also being second Sequoia aircraft airborne.

CUSTOMERS: Total of 86 Sequoia aircraft flown by 23 September 2006, in Australia, Brazil, Canada, Chile, France, Germany, Italy, Netherlands, New Zealand, Norway, South Africa, UK and USA.

COSTS: Kit: 160 hp USD106,440, 180 hp USD106,455, including propeller but excluding engine, main landing gear wheels and brakes.

DESIGN FEATURES: Streamlined low-wing, retractable-gear monoplane. Quoted build time 2,000 hours.

NACA $64_2212.5$ wing section at root, NACA 64_2210 at tip. Wing dihedral 5° 30', washout 3°. Tailplane section NACA 65009.

FLYING CONTROLS: Conventional and manual. No aerodynamic balances. Control surface movements: ailerons +24/–16°; elevators +22/–16°; rudder ±20°; flap deflection 45° max. Elevator trim tab flight-adjustable.

STRUCTURE: Entire airframe has plywood-covered wood structure, with overall fabric covering and glass fibre wing fillets. Optional metal control surfaces.

LANDING GEAR: Tricycle type; retractable. Mainwheels retract inwards; nosewheel rearwards. Steerable nosewheel. Cleveland single calliper disc brakes. 5.00–5 mainwheels and 4.00–5 nosewheel. Oleo shock-absorbers on all legs.

POWER PLANT: One 119 kW (160 hp) Textron Lycoming IO-320-B1A is standard for kitbuilt aircraft, driving Hartzell HCC-ZYL-1BF/F7663-4 two-blade constant-speed metal propeller. Optional engines for which Sequoia offers installation kits are the 112 kW (150 hp) IO-320-A1A and 134 kW (180 hp) IO-360-B1E. Fuel in two tanks, fore and aft, combined capacity 151 litres (40.0 US gallons; 33.3 Imp gallons). Optional 11.4 litre (3.0 US gallon; 2.5 Imp gallon) header tank to permit inverted flight.

Sequoia F.8L Falco with fintop camera *(Paul Jackson)* 1158595

ACCOMMODATION: Two seats, side by side; child's seat or baggage area to rear. Dual controls. Low profile Nustrini canopy optional.

DIMENSIONS, EXTERNAL:

Wing span	8.00 m (26 ft 3 in)
Wing chord: at root	1.65 m (5 ft 5 in)
at tip	0.83 m (2 ft 8½ in)
Wing aspect ratio	6.4
Length overall	6.63 m (21 ft 9 in)
Height overall	2.29 m (7 ft 6 in)
Tailplane span	2.71 m (8 ft 10½ in)
Wheel track	2.08 m (6 ft 10 in)
Wheelbase	1.50 m (4 ft 11 in)
Propeller diameter	1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:

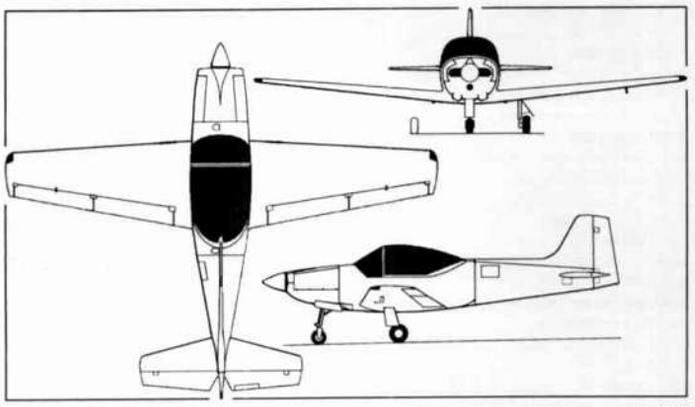
Cabin max width	1.07 m (3 ft 6 in)

AREAS:

Wings, gross	10.00 m² (107.6 sq ft)
Fin	1.01 m² (10.88 sq ft)
Rudder	0.48 m² (5.20 sq ft)
Tailplane	1.34 m² (14.44 sq ft)
Elevator	0.83 m² (9.00 sq ft)

WEIGHTS AND LOADINGS (119 kW; 160 hp engine):

Weight empty	550 kg (1,212 lb)
Payload with max fuel	194 kg (428 lb)
Baggage capacity	41 kg (90 lb)



Sequoia F.8L Falco *(Paul Jackson)* 1158558

Max aerobatic weight	748 kg (1,650 lb)
Max T-O weight	852 kg (1,880 lb)
Max wing loading	85.3 kg/m² (17.47 lb/sq ft)
Max power loading	7.15 kg/kW (11.75 lb/hp)

PERFORMANCE (119 kW; 160 hp engine):

Never-exceed speed (VNE)	208 kt (386 km/h; 240 mph)
Max level speed at S/L	184 kt (341 km/h; 212 mph)
Cruising speed at 75% power	165 kt (306 km/h; 190 mph)
Stalling speed: clean	66 kt (121 km/h; 75 mph)
flaps and wheels down	54 kt (100 km/h; 62 mph)
Max rate of climb at S/L	347 m (1,140 ft)/min
Service ceiling	5,790 m (19,000 ft)
T-O run	174 m (570 ft)
T-O to 15 m (50 ft)	351 m (1,150 ft)
Landing from 15 m (50 ft)	351 m (1,150 ft)
Landing run	229 m (750 ft)
Range at econ cruising speed	869 n miles (1,609 km; 1,000 miles)
Endurance	4 h 24 min
g limits	+6/−3

SHERPA

Byron Root
Glen Gordon

Sherpa Aircraft is in the process of certifying the Sherpa 300 derivative of its earlier six-seat aircraft version. In 2001, the company announced that it had entered into a joint venture agreement with Khrunichev (Russia) which would result in parts being manufactured in Moscow and Sherpa marketing the T-411 Aist and Aviotechnica SL-90. Sherpa is expanding its manufacturing facility at Scappoose, Oregon, at present 1,400 m² (15,000 sq ft), to accommodate increased production; in August 2006 it announced that builders would attend a mandatory builder assist programme at Scappoose.

SHERPA SHERPA

TYPE: Light utility transport.

PROGRAMME: Development of the Sherpa series began in 1991, with first prototype (N1415B) making debut at Oshkosh in July 1994; by August 2006 it had accumulated 1,600 flying hours. Second prototype (N711SA) first flown 1995; both prototypes five-seat versions. Third prototype (N712SA), shown at AirVenture 2001, is the eight-seat Sherpa C-400 version. All versions use same airframe, except for modified wings on K-200, K-300 and C-400. By August 2003, construction of the first K-200 was underway.

In August 2004, the first two aircraft from Russia were delivered to Sherpa for assembly.

CURRENT VERSIONS: **Sherpa:** Original six-place version; kit production under consideration.

Sherpa K-200: Five/six-seat version; under development. Reduced wing span and area. Prototype was due to fly third quarter 2005; this later slipped to April 2006, following redesign to accept new engines.

Sherpa K-300: Six-seat version; main differences from K-200 are in cabin and CG envelope; third airframe due to be complete by June 2005, later slipped to March 2006.

Sherpa C-400: Eight-seat version; *as described unless otherwise stated.*

Floatplane Sherpa second prototype N711SA *(Paul Jackson)* 1040497

Sherpa C-500T: Proposed certified eight/10-seat version.

Sherpa K-500T: Turbine-powered eight-seater; same airframe as C-400; wing displayed at AirVenture '04, at which time it was hoped that the first K-500T would be flying by April 2005; at AirVenture '06 a new, improved set of wings had been fitted to N712SA, which had previously served as the C-400 prototype.

Sherpa C-700T: Proposed 10-seat version.

CUSTOMERS: Three flying by end 2001.

COSTS: Sherpa K-200: USD119,000; Sherpa K-300: USD139,000; Sherpa K-500T: USD225,000, Sherpa C-400: USD425,000; Sherpa C-500T: USD750,000; C-700T: USD895,000 (2005).

DESIGN FEATURES: Optimised for use in inhospitable terrain, with STOL performance, strengthened landing gear, option for large tyres and easy maintenance access.

Constant-chord, high-mounted wing with V bracing struts and auxiliary struts; wire-braced empennage. Tail surfaces have rounded tips and horn balances. Fully glazed flight deck door.

FLYING CONTROLS: Conventional and manual. Two-track Fowler flaps increase wing area by 15 per cent when fully deployed at 40°. Inboard trim tab each side above flap. Tabs on rudder and starboard elevator adjustable in flight, as is tailplane incidence.

STRUCTURE: Steel 4130 fuselage frame has fabric covering aft and metal sheet covering forward of cabin. Fabric-covered 4130 steel tube wing has metal leading-edges and control surfaces. Fabric-covered steel tube empennage. Graphite composites nose cowlings. Single-piece 6 mm (¼ in) thick wrap-round windscreen.

LANDING GEAR: Tailwheel type; fixed. Standard tyre size 29×11.0–10; optional 1.07 m (42 in) Tundra tyres can be fitted. Cleveland hydraulic brakes. Optional floats, wheeled floats and skis; conversion time quoted as 90 minutes.

POWER PLANT: *Sherpa K-200:* One 265 kW (355 hp) VOKBM M-14X nine-cylinder radial. Fuel capacity 530 litres (140 US gallons; 117 Imp gallons).

Sherpa K-300T, C-500T and *C-700T*: One 560 kW (751 shp) Walter M 601 turboprop driving a three-blade propeller. Fuel capacity 852 litres (225 US gallons; 187 Imp gallons).

Sherpa K-300 and *C-400*: One 347 kW (465 hp) Textron Lycoming TIO-720-X152 flat-eight driving a three-blade Hartzell F8483 propeller. Normal fuel capacity 568 litres (150 US gallons; 125 Imp gallons) in six individually removable tanks.

ACCOMMODATION: Pilot and up to seven passengers on individual seats with central aisle; seats can be removed individually to allow carriage of freight (up to 10 empty 208 litre (55.0 US gallon; 45.8 Imp gallon) drums or two casualties plus two attendants. Double door on starboard side of fuselage for cabin; individual doors for crew positions. Additional baggage door on starboard side aft of cabin area.

SYSTEMS: 12 V electrical system.

AVIONICS: Honeywell avionics suite plus S-Tek autopilot.

DIMENSIONS, EXTERNAL (all, except where indicated):

Wing span: C-500T, K-500T	13.72 m (45 ft 0 in)
K-200, K-300, C-400	13.41 m (44 ft 0 in)
Wing chord, constant	1.85 m (6 ft 1 in)
Wing aspect ratio	7.3
Length overall	9.96 m (32 ft 8 in)
Height overall	2.87 m (9 ft 5 in)
Tailplane span	5.03 m (16 ft 6 in)
Wheel track	2.69 m (8 ft 10 in)
Propeller diameter	2.54 m (8 ft 4 in)
Propeller ground clearance	0.69 m (2 ft 3 in)
Cabin door: Height	1.12 m (3 ft 8 in)
Width	1.55 m (5 ft 1 in)
Baggage door: Height	0.51 m (1 ft 8 in)
Width	0.76 m (2 ft 6 in)

DIMENSIONS, INTERNAL (all):
- Cabin volume ... 4.42 m³ (156 cu ft)
- Baggage hold ... 0.36 m³ (12.7 cu ft)

AREAS (all, except where indicated):
- Wings, gross: C-500T, K-500T ... 25.55 m² (275.0 sq ft)
- K-200, K-300, C-400 ... 24.71 m² (266.0 sq ft)
- Ailerons (total) ... 1.83 m² (19.7 sq ft)
- Trailing-edge flaps (total) ... 4.51 m² (48.5 sq ft)
- Spoilerons (total) ... 0.39 m² (4.2 sq ft)
- Fin ... 1.24 m² (13.4 sq ft)
- Rudder, incl tab ... 1.37 m² (14.7 sq ft)
- Tailplane ... 2.81 m² (30.3 sq ft)
- Elevators, incl tab ... 2.39 m² (25.7 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty: K-200 ... 1,252 kg (2,760 lb)
- K-300 landplane ... 1,390 kg (3,065 lb)
- K-300T ... 1,393 kg (3,070 lb)
- C-400 ... 1,445 kg (3,185 lb)
- C-500T ... 1,427 kg (3,146 lb)
- Max T-O weight: K-200 ... 1,846 kg (4,070 lb)
- K-300: landplane ... 2,268 kg (5,000 lb)
- floatplane ... 2,404 kg (5,300 lb)
- K-300T ... 2,494 kg (5,500 lb)
- C-500T ... 2,844 kg (6,270 lb)
- Max wing loading: K-200 ... 74.7 kg/m² (15.30 lb/sq ft)
- K-300: landplane ... 87.8 kg/m² (17.99 lb/sq ft)
- floatplane ... 93.1 kg/m² (19.06 lb/sq ft)
- K-300T ... 96.6 kg/m² (19.78 lb/sq ft)
- C-500T ... 110.1 kg/m² (22.55 lb/sq ft)
- Max power loading: K-200 ... 6.98 kg/kW (11.46 lb/hp)
- K-300: landplane ... 6.54 kg/kW (10.75 lb/hp)
- floatplane ... 6.94 kg/kW (11.40 lb/hp)
- K-300T ... 4.46 kg/kW (7.33 lb/hp)
- C-500T ... 5.09 kg/kW (8.36 lb/hp)

PERFORMANCE:
- Max operating speed:
- K-200 ... 123 kt (229 km/h; 142 mph)
- K-300T ... 182 kt (338 km/h; 210 mph)
- Max cruising speed: K-300 ... 132 kt (245 km/h; 152 mph)
- K-300T ... 162 kt (301 km/h; 187 mph)
- C-400 ... 140 kt (259 km/h; 161 mph)
- Normal cruising speed at 75% power: K-200 ... 105 kt (195 km/h; 121 mph)
- C-400 ... 144 kt (267 km/h; 166 mph)
- C-500T ... 162 kt (301 km/h; 187 mph)
- Econ cruising speed: K-300 ... 120 kt (222 km/h; 138 mph)
- K-300T ... 146 kt (270 km/h; 168 mph)
- C-400 ... 129 kt (238 km/h; 148 mph)
- Stalling speed:
- flaps up: K-200 ... 51 kt (94 km/h; 58 mph)
- K-300, K-300T, C-400 ... 54 kt (100 km/h; 62 mph)
- flaps down: K-200 ... 35 kt (65 km/h; 40 mph)
- K-300 ... 40 kt (73 km/h; 45 mph)
- K-300T, C-400 ... 42 kt (78 km/h; 48 mph)
- C-500T ... 46 kt (84 km/h; 52 mph)
- Max rate of climb at S/L:
- K-200, C-400 ... 300 m (985 ft)/min
- K-300 ... 274 m (900 ft)/min
- K-300T ... 509 m (1,670 ft)/min
- Service ceiling: K-200 ... 5,030 m (16,500 ft)
- K-300 ... 5,640 m (18,500 ft)
- K-300T, C-400 ... 7,620 m (25,000 ft)
- T-O run: K-200 ... 119 m (390 ft)
- K-300 ... 159 m (522 ft)
- K-300T ... 108 m (355 ft)
- C-400 ... 151 m (494 ft)
- Landing run: K-200 ... 104 m (340 ft)
- K-300 ... 122 m (400 ft)
- K-300T ... 81 m (265 ft)
- C-400 ... 86 m (283 ft)
- Range at max cruising speed:
- K-300 ... 938 n miles (1,738 km; 1,080 miles)
- K-300T ... 1,147 n miles (2,124 km; 1,320 miles)
- C-400 ... 833 n miles (1,543 km; 959 miles)
- Range at econ cruising speed:
- K-300T ... 1,364 n miles (2,526 km; 1,570 miles)
- C-400 ... 943 n miles (1,747 km; 1,086 miles)

VICE-PRESIDENT, GOVERNMENT BUSINESS DEVELOPMENT: Joseph Haddock
COMMUNICATIONS MANAGER: Ed Steadham

Founded as Sikorsky Aero Engineering Corporation in 1923 by late Igor I Sikorsky; has been division of United Technologies Corporation since 1929, but established as a subsidiary with effect 1 January 1995; began helicopter production in 1940s.

Headquarters and main plant at Stratford, Connecticut; also has manufacturing facilities elsewhere in Connecticut; other smaller facilities in Alabama, Florida and New York. Main current programmes include UH-60 Black Hawk and derivatives, S-76 series and, in co-operation with international partners, S-92 Helibus. Revenues in 2005 totalled USD2.8 billion, representing a 12% increase on 2004.

Sikorsky licensees include Agusta of Italy, Eurocopter of France and Germany, Korean Air Lines of South Korea, Mitsubishi of Japan, Pratt & Whitney Canada Ltd and UK element of AgustaWestland. Sikorsky and Embraer of Brazil signed agreement in mid-1983 to transfer technology covering design and manufacture of composites components. Sikorsky and CASA of Spain signed MoU in June 1984 covering long-term helicopter industrial co-operation programme; CASA builds tail rotor pylon, tailcone and stabiliser components for H-60 and S-70, with first CASA S-70 components delivered to Sikorsky January 1986. Another overseas venture, in collaboration with the Alpata Group of Turkey, concerns creation of Alp Aviation, which manufactures high-technology, precision-machined aerospace and defence components in 6,500 m² (70,000 sq ft) facility in Eskisehir. Most recent international venture launched 20 September 2006, when Sikorsky signed strategic MoU with PZL Mielec of Poland; this expected to lead to agreements whereby PZL would establish an assembly centre for production of the International Black Hawk helicopter. At that time, it was anticipated that a firm contract would follow in November, with the first Polish-assembled fuselage to be completed within 18 to 24 months of contract signature and the first complete helicopter in 2010.

In October 1998, Sikorsky purchased Helicopter Support Inc, so as to offer enhanced support to helicopter operators on worldwide basis. In latter half of 1998, Sikorsky also secured US$150 million deal with US Navy covering contractor maintenance of jet trainer aircraft as well as HH-1N Iroquois and UH-3H Sea King helicopters. Overall responsibility for latter allocated to Sikorsky Support Services Inc, with the work undertaken at Meridian, Mississippi; Pensacola, Florida; and Corpus Christi, Texas. Sikorsky portfolio and product line significantly expanded with acquisition of Schweizer Aircraft Corporation in latter half of 2004. Schweizer name to be retained, along with production facilities at Elmira, New York; construction of new facilities at Elmira due for completion in early 2007 and will function as primary completion centre for all UH-60 and MH-60 derivatives for US Army, US Navy and overseas customers. Previously, in 2003, joint venture Shanghai Sikorsky Aircraft Company established to manufacture and market Schweizer light helicopters in China.

SIKORSKY CH-53K SUPER STALLION

TYPE: Heavy lift helicopter.

PROGRAMME: Variant of proven CH-53E Super Stallion (refer to *Jane's Aircraft Upgrades*) to meet US Marine Corps' need for more than 150 new-build heavy lift helicopters for delivery between 2014 and 2022, when last examples of CH-53E due to be withdrawn from use. Operational requirements document prepared by Marine Corps by first quarter of 2004 and submitted to US Department of Defense for clearance to proceed with proposal then known as **CH-53X**. Authorisation to go ahead was expected in September 2004, but was initially deferred for six months until second quarter of 2005 and then again delayed until final quarter of 2005. In meantime, Sikorsky awarded risk-reduction contract for renamed **Heavy Lift Replacement (HLR)** in December 2004, using USD34 million of USD103 million allocated by Congress in FY05 budget.

On 22 December 2005, decision taken to proceed immediately with development of HLR, which given **CH-53K** designation; USD8.8 million initial system development and demonstration (ISDD) contract awarded to Sikorsky on 3 January 2006 to cover risk-reduction efforts and selection of partners to produce key subsystems such as cockpit, engines and fuselage. Full funding of SDD came on 5 April 2006, when Sikorsky awarded USD3.0 billion contract for manufacture of five YCH-53Ks (including one dedicated ground test article).

Under original schedule, Sikorsky intended to complete preliminary design review (PDR) by 30 June 2006 and critical design review (CDR) by 30 September 2008, with first flight targeted for mid-2011 and IOC of first operational unit in September 2015. These dates have slipped by several months as a consequence of delay in starting SDD, with PDR now expected to take place late in FY07, followed by CDR in mid-FY09. First flight is still anticipated in 2011, with approval for low rate initial production (LRIP) due early in FY13. IOC is still planned for 2015, with full operational capability to follow in 2021.

CURRENT VERSIONS: **CH-53K:** Version proposed for US Marine Corps.

CUSTOMERS: US Marine Corps anticipates receiving 156 examples of basic CH-53K version. A suitably adapted derivative may eventually be produced to replace MH-53E Sea Dragon mine countermeasures helicopters with US Navy. Export potential also exists, with Sikorsky reported to have had discussions with Eurocopter about co-operation that could extend to establishment of assembly line in Europe to satisfy French and German combined requirement for over 100 heavy lift helicopters.

PLANNED CH-53K PROCUREMENT
(as at mid-2006)

Lot	Ordered	Quantity	Deliveries
1	FY12	6	Late FY14
2	FY13	9	FY15
3	FY14	14	FY16
4	FY15	21	FY17
5	FY16	24	FY18
6	FY17	24	FY19
7	FY18	24	FY20
8	FY19	24	FY21
9	FY20	10	FY22
Total		**156**	

COSTS: Research, development and evaluation expected to cost USD4.4 billion (including USD3.0 billion for SDD phase), with further USD18.8 billion outlay anticipated for procurement; at end of 2005, average flyaway unit cost projected to be USD56.6 million.

DESIGN FEATURES: CH-53K to have 10,000 hour airframe life and will incorporate low maintenance elastomeric rotor hub and high efficiency composites rotor blades with revised aerofoil section and anhedral tips, coupled with new gearbox and new tail rotor head and blades. Improved internal and external cargo handling systems and enhanced survivability features also to be adopted. Air-to-air refuelling capability to be provided, but CH-53K also air transportable by C-5 and C-17. CH-53K has same footprint as CH-53E, but possesses twice the payload/range characteristics.

Model of Sikorsky CH-53K as envisaged in 2006 *(Paul Jackson)* 1158589

POWER PLANT: Three turboshaft engines; proposed HLR was initially expected to have new power plant in the 4,474 kW (6,000 shp) class, although concerns emerging over weight growth in early 2005 may necessitate adoption of a significantly more powerful engine, with a rating of around 5,593 kW (7,500 shp). Marine Corps originally understood to favour Rolls-Royce AE1107C turboshaft on grounds of commonality with Bell Boeing MV-22 Osprey tiltrotor; other contenders include Honeywell's T55-715, Pratt & Whitney Canada's PW 150 and a growth version of the General Electric T64-GE-416 that powers the CH-53E. Power plant selection announcement expected in August or September 2006, with total programme requirement involving about 650 engines at cost of USD1.5 billion. Transmission rating 11,186 kW (15,000 shp). Fuel capacity 8,653 litres (2,286 US gallons; 1,903 Imp gallons).

ACCOMMODATION: Crew of four, plus up to 30 troops on crashworthy seats. Alternatively, can accommodate up to 24 litters in casualty evacuation role. Internal cargo handling system installed, with hold able to take two 463L pallets. Three cargo hooks provided for carriage of external loads, up to maximum of 16,329 kg (36,000 lb); centre hook rated to carry maximum load of 16,329 kg (36,000 lb), with forward and aft hooks each rated at 11,340 kg (25,000 lb) capacity.

AVIONICS: Selection of Rockwell Collins as prime sub-contractor, with responsibility for provision of Avionics Management System (AMS) announced in June 2006. CH-53K to possess joint interoperable 'glass cockpit' including five fully integrated AMLCD multi-function displays, dual integrated processing cabinets (IPCs), dual control display units (CDUs) and dual data transfer units (DTUs). System will provide fully integrated primary flight instrumentation plus crew alerting system and management of displays, vehicle, civil/military flight, navigation and communications equipment. Embedded tactical mission aids include digital moving map, AN/AAQ-29 FLIR video, defensive ECM and tactical display functions.

ARMAMENT: Self-defence gun positioned in each forward door, with FN 0.5 in machine gun on rear ramp.

WEIGHTS AND LOADINGS:

Max underslung load	16,329 kg (36,000 lb)
Max T-O weight	38,419 kg (84,700 lb)

PERFORMANCE:

Unrefuelled radius of action with 12,340 kg (27,204 lb) payload	110 n miles (204 km; 127 miles)

SIKORSKY S-70A

US Army designations: UH-60A, UH-60C, UH-60L, UH-60M and UH-60Q Black Hawk, AH-60L, EH-60A, HH-60L, HH-60M, MH-60K, MH-60L and MH-60M
US Air Force designation: HH-60G Pave Hawk
US Navy designation: MH-60S KnightHawk
US Marine Corps designation: VH-60N
Israel Defence Force name: Yanshuf (Owl)
Japan Self-Defence Forces designations: UH-60J and UH-60JA
South Korean Army designations: HH-60P, UH-60P
Turkish Armed Forces name: Yarasa (Bat)

TYPE: Multirole medium helicopter.

PROGRAMME:

DEVELOPMENT MILESTONES

Request for proposals	Jan 72
Requirement issued	Aug 72
Selected by US Army	23 Dec 76
First flight	17 Oct 74
First flight, production	17 Oct 78
First delivery (US Army)	31 Oct 78
Entered service (101st AD)	Jun 79

UH-60A declared winner of US Army Utility Tactical Transport Aircraft System (UTTAS) competition against Boeing Vertol YUH-61A 23 December 1976; first flight of first of three YUH-60A competitive prototypes 17 October 1974; 2,000th H-60 delivered May 1994; 2,500th followed at end of 2001.

AgustaWestland in UK, Korean Air Lines of South Korea and Mitsubishi of Japan have licences to build the S-70 series, although UK programme not activated. Negotiations with Turkish Aerospace Industries concerning possible establishment of production line in Turkey began December 2003, but no recent news has been received. However, Sikorsky did conclude agreements with Vought Aircraft Industries and Kaman Aerospace in early 2005, whereby former would manufacture cabin structures for up to 1,100 Black Hawks, while latter is to supply up to 349 cockpit shipsets over next few years.

Sikorsky investigating possibility of establishing Black Hawk production lines at overseas locations when manufacture of UH-60L version is terminated at Stratford in about 2008; anticipated demand for as many as 500 UH-60Ls and derivatives could make this worthwhile. Korean Air Lines Aerospace is one candidate and was seeking opportunity for fuselage production in mid-2005 as subcontractor, but could also reactivate assembly line; PZL Mielec of Poland emerged in September 2006 as second potential partner.

CURRENT VERSIONS: **UH-60A Black Hawk**: Initial production version, designed to carry crew of three and 11 troops; also can be used without modification for medevac, reconnaissance, command and control, and troop supply; cargo hook capacity 4,082 kg (9,000 lb); one UH-60A can be carried in C-130, two in C-141 and six in C-5.

Medevac kits delivered from 1981; missile qualification completed June 1987, with day and night firing of Hellfire in various flight conditions; airborne target handover system (ATHS) qualified; cockpit lighting suitable for night vision goggles fitted to production UH-60s since November 1985 and retrofitted to those built earlier; US Army began testing Alliant Techsystems Volcano mine dispensing system July 1987; modular Volcano container is disposable and dispenses 960 Gator anti-tank and anti-personnel mines; deployment of 2,940 kg (6,482 lb) system began in FY95; usage monitor to measure certain rotor loads installed in 30 UH-60As; wire strike protection added to UH-60s and EH-60s during 1987; accident data recorders also fitted. Total 1,048 built for US Army (including 66 conversions to EH-60A but excluding six development aircraft funded in FY73) before production of UH-60L began in 1989. UH-60A 85-24441, delivered in 1985, became first Black Hawk to complete 10,000 flight hours, with milestone passed in December 2002.

Detailed description applies to UH-60A/L except where indicated.

Enhanced Black Hawk: Incorporates active and passive self-defence systems, retrofitted by Corpus Christi Army Depot, Texas, to new-build UH-60A/Ls; first 15 delivered to US Army in South Korea November 1989. Equipment includes BAE Systems AN/ARN-148 Omega navigation receiver, Motorola AN/LST-5B satellite UHF communications transceiver, Honeywell AN/ARC-199 HF-SSB, and AEL AN/APR-44(V)3 specific threat RWR complementing existing AN/APR-39 general threat RWR; M134 Minigun can be fitted on each of two pintle mounts, replacing M60 machine gun.

JUH-60A: At least seven used temporarily for trials.

GUH-60A: At least 20 grounded airframes in use as technical training aids.

HH-60D Night Hawk: One prototype (82-23718) completed for abandoned USAF combat search-and-rescue variant; subsequently became an HH-60G.

EH-60A: (Designation **EH-60C** reserved, but not adopted by US Army.) Prototype YEH-60A (79-23301) ordered in October 1980 to carry 816 kg (1,800 lb) Quick Fix IIB battlefield ECM detection and jamming system. TRW Electronic Systems Laboratories was prime contractor for AN/ALQ-151(V)2 ECM kit, with installation by Tracor Aerospace; four dipole antennas on fuselage and deployable whip antenna; hover IR suppressor system (HIRSS) standard. YEH-60A first flight 24 September 1981; order for Tracor Aerospace to modify 40 UH-60As to EH-60A standard under USD51 million contract placed October 1984; first delivery July 1987 as part of US Army Special Electronics Mission Aircraft (SEMA) programme; 66 funded by FY87 excluding prototype; programme completed 1989. EH-60A phased out in 2005, but helicopters remain in use in utility role.

Intercepts/locates AM, FM, CW and SSB radio emissions from upper HF to mid-VHF ranges over bandwidths of 8, 30 or 50 kHz; jams VHF communications. Protective systems of UH-60A/L (M-130 chaff/flare and AN/ALQ-144 IR jammer) augmented by Sanders AN/ALQ-156(V) missile approach warning system, ITT AN/ALQ-136(V) pulsed transmitter, Northrop Grumman AN/ALQ-162(V) CW transmitter and Litton AN/APR-39(V) RWR.

AN/ALQ-151(V)3 Advanced Quick Fix mission system tasked with providing ESM capability to forward ground units at division level; at least six EH-60As (84-24027, 85-24468, 85-24473, 87-24657, 87-24662 and 87-24670) adapted to **EH-60L** configuration. As fielded for Task Force XXI trials (1997), the EH-60L utilised the following equipment: sensor subsystem comprised Sanders TACJAM-A ESM for detection, direction-finding, identification and tracking of communications signals in HF, UHF, VHF and SHF frequency bands; Lockheed Martin Federal Systems communications high-accuracy locating system — exploitable (CHALS-X) for direction-finding in HF, UHF and SHF frequency bands; and signal location subsystem (SILO) for direction-finding in VHF frequency band. Navigation and timing subsystem featured INS, GPS and control display unit in cockpit. Mission control and interface subsystem comprised control, navigation, workstation and graphics processors, mass storage unit, keyboards with trackball and 483 × 483 mm (19 × 19 in) colour monitors. Communications subsystem comprised modified PRC-118 wideband control datalink, two AN/ARC-201A SINCGARS radios, AN/ARC-164 tasking and reporting datalink, intercom and AN/UYH-15 digital temporary storage recorder/reproducer set. Antenna subsystem. Airborne survivability subsystem comprised AN/ALQ-144(V)1 IR jammer, AN/ALQ-156(V)2 missile approach warning system (MAWS), AN/ALQ-162(V)2 CW transmitter and AN/APR-39(V)2 RWR.

Improvements to airframe include installation of UH-60L engines and gearbox for increase in maximum weight from 7,845 kg (17,295 lb) to 10,206 kg (22,500 lb).

Sikorsky UH-60 Black Hawk seconded to US Bureau of Immigration & Customs 1158813

Australian Army Sikorsky S-70A-9 *(Paul Jackson)* 1158801

HSC-25 (squadron) Sikorsky MH-60S KnightHawk *(MCSS Joshua Wayne LeGrand, US Navy)* 1158811

MH-60A: About 30 modified for Army 160th Special Operations Aviation Regiment (SOAR); fitted with Raytheon Systems AN/AAQ-16 FLIR, BAE Systems AN/ARN-148 Omega/VLF navigation, M-130 chaff/flare dispensers, AN/ALQ-144 IR jammer, night vision equipment, multifunction displays, auxiliary fuel tanks and door-mounted Minigun; fitted with-701C engines; interim equipment, pending MH-60K. Replaced by MH-60L in late 1990 and reverted to UH-60A configuration.

HH-60G Pave Hawk: Replaced US Air Force HH-60D Night Hawk rescue helicopters, which were not funded; converted from UH-60A/L, including 10 originally delivered to 55th Aerospace Rescue and Recovery Squadron (later Special Operations Squadron) at Eglin AFB, Florida, in 1982–83, initially remaining as UH-60As; all progressively fitted by Sikorsky Support Services at Troy, Alabama, with aerial refuelling probe, 443 litre (117 US gallon; 97.5 Imp gallon) internal auxiliary fuel tank and fuel management panel; then to Pensacola NAD for mission avionics and modified instrument panel; some retrofitted with replacement internal tank of 700 litres (185 US gallons; 154 Imp gallons) capacity; -701C engines fitted to 10 special operations examples and later production aircraft (FY89 onwards); recent retrofit programme, begun in November 1999, entailed installation of -701C engine on older HH-60Gs. Final retrofits subject of USD8.5 million contract awarded to Sikorsky in late 2005.

Further procurement began with batch of nine in FY87, followed by purchases of 16, 18, 22, 15 and 13 in FY88-92; eight more funded in FY97 and delivered in 1998. All designated MH-60G until 1 January 1992, when 82 in combat rescue role redesignated HH-60G, with balance of 16 remaining as MH-60G for special operations units; by fourth quarter of 1998, only nine still in MH-60G configuration and at start of 2000, all were using HH-60G designation. All have rescue hoist, Doppler/INS, electronic map display, Tacan, Honeywell AN/APN-239 lightweight weather/ground-mapping radar, secure HF, and satcom; MH-60G had ESSS (see Armament paragraph) for weapons and additional fuel carrying capability, plus door-mounted 0.50 in machine guns and Raytheon AN/AAQ-16 Pave Low III FLIR.

Upgraded version of HH-60G, known as **Block 152**, made debut at Stratford, Connecticut, on 29 April 1999, when first of 49 planned aircraft rolled out in Upgraded Communication, Navigation/Integrated Electronic Warfare (UCN/IEW) configuration; new features include enhanced com/nav system and EW suite integrated into MIL-STD-1553 databus to reduce crew workload. Contractor trials in May and June 1999, after which modified HH-60G (possibly 92-26460) delivered to Nellis AFB, Nevada, for operational test and evaluation with 422nd TES. Retrofit included installation of revised, externally mounted, armament system with 0.50 in machine guns, expendable chaff/flare defensive countermeasures and repositioned nose radar.

Further extensive upgrade under consideration by USAF for HH-60G fleet from about 2003, with various options being examined; these include remanufacture to new **Block 162** standard with 'glass cockpit', new defensive aids and other changes; and less ambitious structural life extension programme.

MH-60K: US Army special operations aircraft (SOA); prototype (89-26194) ordered in January 1988; first flight 10 August 1990. US Army funded two batches of 11 with options for another 38, which not taken up; first production aircraft (91-26368) completed, February 1992; trials at Patuxent River and Edwards AFB before intended first deliveries in June 1992 to 160th Special Operations Aviation Group (part of 160 SOA Regiment). Deliveries delayed by software problems with special operations equipment; first 10 accepted in 1992 in non-operational state; remaining 12 initially stored, then delivered with new software installed, October to December 1993, to permit start of training by 160 SOA Group, February 1994.

Features include provision for additional 3,141 litres (829 US gallons; 691 Imp gallons) of internal and external fuel (see Power Plant), plus flight refuelling capability, integrated avionics system with electronic displays, Raytheon AN/AAQ-16 FLIR and AN/APQ-174B terrain-following, ground-mapping and air-to-ground ranging radar, T700-GE-701C engines and uprated transmission, external hoist, wire-strike protection, rotor brake, tiedown points, folding tailplane, AFCS similar to that of SH-60B, strengthened pintle mounts for 0.50 in machine guns, provision for Stinger missiles, missile warning receiver, pulse radio frequency jammer, CW radio jammer, laser detector, chaff/flare dispensers, and IR jammer.

May undergo service life extension programme and emerge as MH-60Ms.

SH-60B Seahawk: US Navy ASW/ASST helicopter, *described separately*.

SH-60F Seahawk: US Navy carrierborne inner-zone ASW helicopter to replace SH-3D Sea King. See Seahawk entry.

HH-60 and MH-60 Jayhawk: Search and rescue/special warfare helicopters; see Seahawk entry.

UH-60J: Designation of Japanese-built S-70A-12 for Air and Maritime Self-Defence Forces; procurement details under Mitsubishi in Japanese section.

UH-60JA: Japanese Ground Self-Defence Force version; procurement began in 1995. Manufactured by Mitsubishi.

UH-60L: Replaced UH-60A in production for US Army from October 1989 (aircraft 89-26179 onwards); prototype (84-23953) first flight 22 March 1988; two pre-series aircraft (89-26149 and 26154); first delivery 7 November 1989 to Texas ArNG. Powered by T700-GE-701C engines with uprated 2,535 kW (3,400 shp) transmission. More than 600 delivered to US Army, with production expected to continue until replaced by new-build UH-60M version. Current production aircraft fitted with hover IR suppression system (HIRSS) to cool exhaust in hover as well as forward flight; older UH-60s retrofitted. Composites wide-chord main rotor blades of improved design flight tested at West Palm Beach, beginning 8 December 1993; new blade 16 per cent wider than current titanium rotor and has anhedral tip angled down at 20°; testing revealed much lower vibration plus anticipated benefits in payload, speed and manoeuvrability; projected retrofit from 1997 did not occur, but new rotor fitted to UH-60M. Underslung load capability increased to 4,082 kg (9,000 lb).

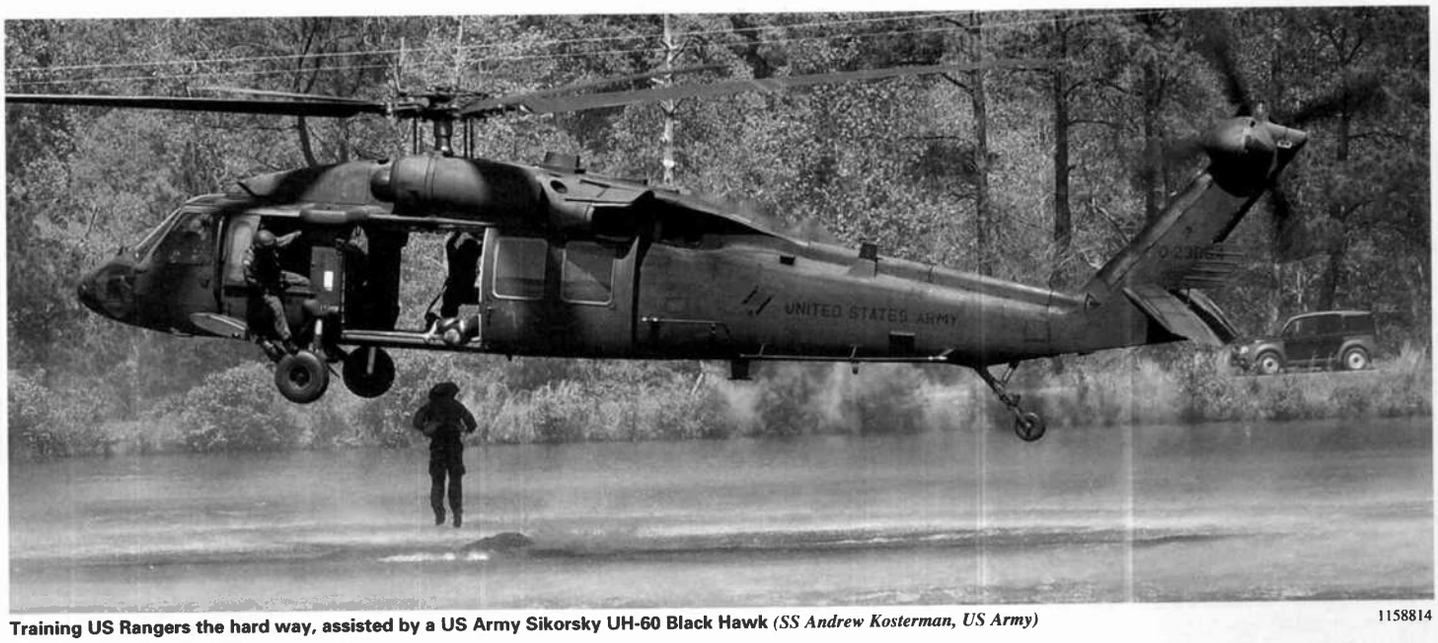
EUH-60L: Designation for command and control (C2) version; was under development at the US Naval Research Laboratory on behalf of the US Army. This version subsequently abandoned but project continues, with Raytheon as prime contractor for C2 system. First three systems delivered in first half of 2003. First five modified helicopters served as prototypes to validate performance in advance of initial operational test and evaluation, which began in 2004; prototype systems deployed with 4th Infantry Division in Iraq during 2004-05, accumulating more than 2,000 hours under combat conditions. Initial version to be known as **Block I**, with more sophisticated **Block II** expected to enter development in 2005; latter will be configured for UH-60M, which should facilitate system integration, while Block II also expected to use Joint Tactical Radio system. Contract worth USD110 million for development and production awarded in late 2001. Original plan was to obtain 207 helicopters, although this reduced to 121 by start of 2001. Rockwell Collins AN/ASC-15B/C consoles have been fitted to more than 50 US Army aircraft as interim **UH-60A(C)**. Communications suite to be finalised, but expected to include Have Quick II, SINCGARS/SIP and JTIDS; other capabilities also to be incorporated, including FLIR, NVG compatibility, digital map display, mission planner facility, improved ECCM and storage space for ground power generators and antennas. Five workstations will be provided for system operators.

HH-60L: Alternative designation for new-build medical evacuation version based on UH-60L airframe but incorporating UH-60Q specialised mission equipment. Sikorsky awarded USD11 million contract on 22 February 2000 for design definition and conversion of four UH-60Ls to this standard. Initial delivery expected in 2000, but delayed until March 2001, when three helicopters assigned to 507th Medical Company (Air Ambulance) at Fort Hood, Texas. Additional 18 aircraft ordered between FY00 and FY04. In October 2005, Colombia requested two UH-60Ls to be delivered in medevac configuration for use in SAR and battlefield evacuation roles; these expected to be outfitted similarly to US Army HH-60L.

MH-60L: Similar to MH-60A; approximately 40 helicopters modified for 160th SOAR, US Army; some helicopters upgraded to MH-60L 'Defensive Armed Penetrator' configuration in 1990 with FLIR, radar and standard UH-60 external stores support system; two Black Hawk companies of 160th SOAR each have MH-60K platoon and MH-60L platoon. Armament includes multiple 30 mm Chain Gun, racks of four Hellfires and 2.75 in rocket pods, 40 mm grenade launcher or trainable 7.62 mm Gatling guns. Expected to undergo service life extension programme and emerge as MH-60Ms.

HH-60M: Medical evacuation version based on UH-60M; as many as 357 could be acquired for service with first- and second-line medical evacuation units. First four included in FY07 request for 38 helicopters.

MH-60M: Special forces derivative, intended to replace existing MH-60 fleet with 160th SOAR. Few details available, but majority of existing MH-60Ks and MH-60Ls expected to be subjected to service life extension programme and emerge as MH-60Ms to common configuration. Development contract was due to be awarded in second quarter of FY04;



Training US Rangers the hard way, assisted by a US Army Sikorsky UH-60 Black Hawk *(SS Andrew Kosterman, US Army)* 1158814

Milestone C go-ahead for refurbishment then scheduled for final quarter of FY06. However, in April 2005, Integrated Systems subsidiary of L-3 Communications awarded USD42 million contract by US Special Operations Command for conversion of one UH-60M to prototype MH-60M configuration and modification of second UH-60M to flight test alternative engine integration; this suggests that definitive UH-60M could emerge as new-build rather than remanufactured helicopter. At least 62 will be acquired, although US Army is hopeful of increasing fleet to total of 96 by 2010. Remanufacture was expected to provide new 20-year airframe life; improved avionics, electrical and dynamic systems also anticipated, with replacement engine to be developed, tested and procured. RFP for latter issued in mid-2004, with Rolls-Royce and General Electric both expected to respond to requirement to re-engine about 100 helicopters from 2006 onwards.

In July 2006, it was reported that Taiwan was considering replacing its existing fleet of AH-1W SuperCobra attack helicopters with 30 MH-60Ms; officials from Taiwan's Ministry of National Defence declined to comment.

UH-60M: First use of designation was for proposed enhanced version for US Army. Cancelled early 1989 in favour of UH-60L. Designation subsequently re-used in 2000; see immediately below for details.

UH-60M: Improved Black Hawk version (originally known as the **UH-60L+**) for service with US Army; involves avionics and power plant modernisation offering benefits in terms of payload (up to 907 kg; 2,000 lb advantage over UH-60A) and performance (up to 15 kt; 28 km/h; 17 mph faster). Sikorsky awarded USD7.45 million contract in August 2000 for preliminary risk reduction effort. US Army initially envisaged procurement via major upgrade programme, whereby approximately 906 UH-60As would be brought to UH-60M standard, while another 311 UH-60Ls were expected to be similarly upgraded. Some new-build examples were also to be acquired, but in early 2005 US Army revealed intent to abandon remanufacture programme and instead obtain at least 1,227 new-build helicopters by 2020.

Improvements for the UH-60M include more powerful General Electric T700-GE-701D engines, improved durability main gearbox, wide-chord, composite-spar main rotor, a digitised 'glass cockpit' featuring four Rockwell Collins multifunction displays (MFDs) based on the MIL-STD-1553 databus and new avionics, Stormscope weather mapping system, an advanced flight control computer, new diagnostic monitoring systems (including Goodrich integrated vehicle health management system), a strengthened centre fuselage, larger fuel tanks and advanced infra-red suppression.

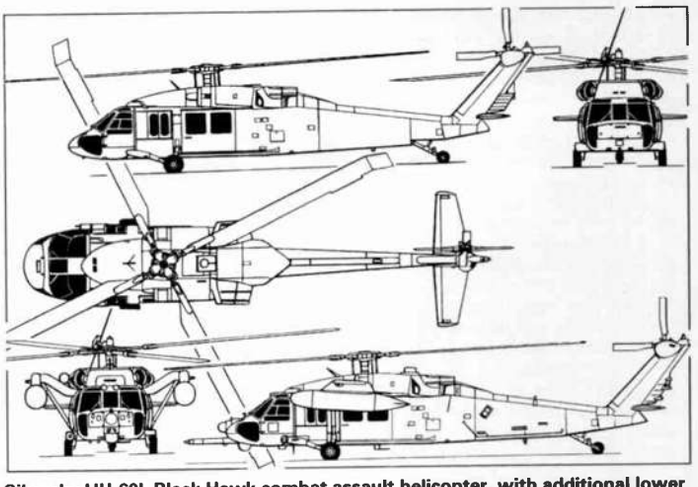
On 30 March 2001, Defense Acquisition Board approved Milestone B system development and demonstration phase; this followed in May by USD219.7 million contract for research, development, test and evaluation. Total of four UH-60M prototypes planned, comprising three conversions of existing Black Hawks (first, second and fourth aircraft) and one new-build helicopter (third aircraft; serial number 02-26969). Upgrade programme began in November 2001, with arrival of three UH-60s at Troy, Alabama, for dismantling and evaluation. Some structural reconditioning undertaken at Troy, before components and assemblies shipped to Stratford for reconditioning of dynamic components and reassembly. First aircraft to be upgraded was UH-60A 85-24432; second was conversion of UH-60L 89-26217; third (actually the fourth UH-60M) was conversion of UH-60A 77-22716 to **HH-60M** medical evacuation configuration. Maiden flight of first UH-60M prototype (now serialled 02-26976) took place at Sikorsky's West Palm Beach, Florida, facility on 17 September 2003; 75-minute sortie included flight at 120 kt (222 km/h; 138 mph) and 45 degree turns, as well as verifying performance of systems and instrumentation. Second aircraft (now serialled 02-26977) flew in October 2003, with remaining two (02-26969 and 02-26978, the former 77-22716) following in 2005.

First pair of aircraft primarily concerned with flight testing, while third used for electromagnetic interference chamber testing and fourth to evaluate specialised medical equipment. Four pre-production UH-60Ms (04-26998 to 04-27001, all previously UH-60As) also produced for US Army operational evaluation, which began at end of FY06, coincident with availability of LRIP helicopters, the first of which was formally rolled out and delivered to the US Army at Stratford on 31 July 2006. By that time, the eight development aircraft had accumulated over 850 hours flight time.

Development phase to take four years, with full-rate production decision due in 2007. Initial contract for 22 new-build UH-60Ms valued at USD245.4 million signed June 2005; includes five LRIP 1 aircraft funded in FY05, five LRIP 2 aircraft funded in FY06 and production line conversion of 12 UH-60L to UH-60M, also funded in FY06. Delivery from July 2006, with IOT&E (initial operational test and evaluation) beginning in October 2006. See table for details of planned procurement for FY07 to FY11. Fielding of first combat unit due in early 2008.

First export customer expected to be United Arab Emirates, which has requested total of 26 UH-60Ms under FMS programme; total value of deal expected to be around USD800 million if authorisation forthcoming.

VH-60N: Nine for US Marine Corps Executive Flight Detachment of squadron HMX-1 at Quantico, Virginia, to replace UH-1Ns; deliveries started November 1988; known as



Sikorsky UH-60L Black Hawk combat assault helicopter, with additional lower side view and lower front view of MH-60K special operations variant *(Dennis Punnett)* 1158766

VH-60A until redesignated 3 November 1989. Name **White Hawk** adopted by Marine Corps.

Additional equipment includes more durable gearbox, weather radar, SH-60B-type flight control system and ASI, -401 engines as in SH-60B, cabin soundproofing, VIP interior, cabin radio operator station, EMP hardening, 473 litre (125 US gallon; 104 Imp gallon) internal fuel tank and extensive avionics upgrading. SPAR (Special Progressive Aircraft Rework) undertaken on VH-60N fleet from 1998.

HH-60P: Local designation allocated to four UH-60P helicopters modified to perform combat search-and-rescue (CSAR) mission with Korean armed forces; upgrade to be accomplished in-country by Korean Aerospace Industries using kits supplied by Elbit Systems of Israel. Initial contract worth USD30 million awarded in late 2005, with further conversions expected to follow.

UH-60P: South Korean Army version of UH-60L (S-70A-18) with minor avionics modifications to meet local requirements; first (KA-1602) of three UH-60Ls delivered by Sikorsky 10 December 1990; balance of 81 UH-60Ps on initial contract assembled locally by Korean Air Lines with increasing indigenous content, in USD500 million, five year programme. Deliveries from follow-on batch of 57 since completed, but acquisition of third batch, to replace remaining UH-1 Iroquois, has not taken place. South Korea has requirement for about 12 medical evacuation helicopters and could obtain UH-60Q or equivalent.

UH-60Q: 'Dustoff' (Dedicated Unhesitating Service To Our Fighting Forces) medical evacuation/search and rescue version for US Army. Development began in early 1990s, after Gulf War, when it was realised that a requirement existed for a longer-range medevac helicopter to replace the UH-1V Iroquois. A proof-of-principle conversion of a UH-60A (86-24560) was undertaken by Serv-Air Inc of Richmond, Kentucky, and flown for the first time as the **YUH-60A(Q)** on 31 January 1993. This aircraft was subsequently delivered to the Tennessee Army National Guard at Lovell Field, Chattanooga, on 12 March 1993, where it underwent a 12-month evaluation programme beginning in September 1993, with an organisation known as CECAT (Combat Enhancing Capable Aviation Team).

Sikorsky eventually selected as prime integrator for production and was awarded an initial contract on 9 February 1996 for two Phase 2 conversions in FY96, with second contract for further two in FY97; YUH-60A(Q) designation also applied to these aircraft, which participated in two-year qualification programme, with initial flight tests successfully completed in second quarter of 1997; formal operational test followed at Fort Campbell, Kentucky, between July and September 1998, using three YUH-60A(Q)s, with fourth delivered to CECAT in early 1999. Major subcontractors are Air Methods (medical interiors); Breeze-Eastern (HS-29900 external electric rescue hoist); BAE Systems Canada (mission management system); FLIR Systems Inc (SAFIRE thermal imaging system); Litton (LITOX onboard oxygen generating system); Simula (medical attendant seats) and Telephonics (intercom).

Definitive UH-60Q configuration included a medical interior able to accommodate six stretcher patients, with integrated suction and oxygen systems plus defibrillation, ventilation and intubation equipment, as well as apparatus for monitoring of vital signs. It also featured

a 'glass cockpit' incorporating Litton smart multifunction displays (SMFDs); Doppler 128C with embedded GPS; NVG-compatible lighting; AN/ARS-6(V)2 personnel locator system; HIRSS; chaff/flare dispensers; ESSS; -701C engines; plus an improved data modem and SINCGARS radios, which allow it to transmit and receive digital data. Subsequently, limited production of HH-60L version undertaken by Sikorsky, with HH-60M expected to enter service in substantial numbers from late in the present decade.

MH-60R Seahawk: US Navy ASW/ASST helicopter, *described separately*.

MH-60S KnightHawk: Shipboard transport helicopter. Key element in 1996 US Navy Helicopter Master Plan, entailing retirement of CH/HH-46Ds, HH-60Hs and SH-3s by FY12 and their replacement by navalised MH-60S (previously designated CH-60S until 6 February 2001). Design is fundamentally baseline UH-60L Black Hawk with T700-GE-401C engines and dynamics of SH-60 Seahawk, plus automatic rotor blade folding system, folding tail pylon, improved durability gearbox, rotor brake, automatic flight control system (AFCS), HIFR capability and rescue hoist for SAR/CSAR missions. Also has 'glass cockpit', with active matrix liquid crystal displays (AMLCDs); common cockpit on MH-60S and MH-60R, with Lockheed Martin securing USD61 million contract in August 1998 to develop and produce two prototypes for flight testing from late 1999. Equipment includes two integrated inertial navigation/GPS units, mass memory unit, mission computer, flight management computer, operational software and four Litton flat-panel displays replacing all but standby instruments; MH-60S cockpit is 'scaled-down' version, with potential for upgrading if combat SAR mission is added at later date. MH-60S also has provision for external stores support system (ESSS), allowing carriage of additional fuel and forward-firing weapons.

Design includes a convertible cargo handling system; when configured for pure cargo operations, MH-60S can carry two 1.02× 1.22 × 1.02 m (40 × 48 × 40 in) tri-wall pallets with total weight of 1,588 to 1,814 kg (3,500 to 4,000 lb); as a personnel transport, is able to accommodate a crew of four, plus 13 passengers. Underslung loads up to 4,082 kg (9,000 lb) may also be carried, with total payload capacity about 4,536 kg (10,000 lb).

MH-60S potential demonstrated by modified UH-60L in June 1995, when internal and external cargo-carrying capability studied by Sikorsky and the US Navy. Detail design began October 1996, with award in April 1997 of USD5.75 million contract to Sikorsky for demonstrator. This was hybrid vehicle, based around UH-60L (96-26673) borrowed from the US Army, married to components from SH-60F furnished by US Navy. Resulting YCH-60S (Navy identity 966673) made first flight on 6 October 1997 and was used for joint Navy/Sikorsky 35 hour flight test programme that ended on 10 January 1998. First shipboard demonstration on 19 November 1997, with YCH-60S completing 17 landings aboard combat store ship USS *Saturn*; initial trial included 12 vertical replenishment lifts with 680 kg (1,500 lb) slung load and three hot refuellings.

YCH-60S evaluated in 1999–2000 as potential airborne mine countermeasures (AMCM) platform to replace MH-53E. Initial trials at Stratford in third quarter of 1999, followed by transfer to Patuxent River in fourth quarter for tow tests, plus carriage, winch deployment and recovery of AN/AQS-20/X mine detection sonar. Thicker frames for helicopter's rear-cabin structure will permit cable loads up to 2,722 kgf (6,000 lbf). Raytheon Airborne Mine Neutralisation System (AMNS) selected in first quarter of 2003, with first AMCM-configured MH-60S making initial flight on 20 July 2003. Trials with Northrop Grumman Airborne Laser Mine Detection System (ALMDS) began in April 2004, this being one of five sensors that will be utilised by the MH-60S. AMCM version is basic MH-60S with operator station in cabin, plus additional internal fuel and ability to tow detection equipment; neutralisation accomplished by BAE Systems Archerfish expendable underwater vehicle, which guided into position and then detonated to destroy mine. System Development and Demonstration (SDD) phase subject of USD18 million contract awarded in first quarter of 2003. MH-60S AMCM platform to achieve IOC in 2005, with ultimate total of 66 MH-60Ss planned for AMCM mission.

Features not embodied in demonstrator include fuel dump vents, flotation gear, HIFR and navalised T700 engines. Avionics also unrepresentative, although featuring a databus and four 127 × 127 mm (5 × 5 in) Rockwell Collins AMLCDs for pilot and co-pilot vertical and horizontal situation data, plus two control display/navigation units and an LN-100G embedded GPS/INS.

Decision to proceed with MH-60S low-rate initial production (LRIP) taken in early 1998, although firm fixed-price contract for first lot not awarded to Sikorsky until September 1999; valued at USD67.4 million, this was for initial five aircraft, plus option for one more (taken up in November 1999) and associated engineering and logistic services. Maiden flight of initial production MH-60S (165742) at Stratford, Connecticut on 27 January 2000; delivered to Patuxent River, Maryland, on 15 May to begin US Navy development testing and operational evaluation. At least four helicopters involved in trials, with initial technical evaluation completed by November 2000; three-month Opeval began November 2001 and yielded disappointing result, with MH-60S considered neither operationally "effective" nor "suitable"; further evaluations conducted in mid-2003 by VX-1 at Patuxent River resulted in MH-60S being described as "operationally effective and operationally suitable" in October 2003. Changes to software and operational requirements ensued, allowing approval to be given for start of full-rate production at end of August 2002.

Navy has requirement for 267 MH-60Ss. First example funded in FY98, with five more (Lot 1) in FY99, 16 (Lot 2) in FY00, 15 (Lot 3) for FY01, 13 (Lot 4) for FY02, 15 (Lot 5) for FY03, 13 (Lot 6) for FY04 and 15 and 26 respectively requested for FY05 and FY06; see table for details of planned procurement for FY07 to FY11. First squadron was HC-3 (since redesignated HSC-3) at North Island, California, which received initial example (165745) for use as ground maintenance trainer in early 2001 and which assumed responsibility for flight training in February 2002; second squadron was HC-5 (now HSC-25) at Andersen AFB, Guam, which began converting from H-46 in mid-2002. HC-6 (now HSC-26) at Norfolk, Virginia, also accepted its first MH-60S in second quarter of 2002. USN undertaking major reorganisation of fleet helicopter squadrons in next few years, resulting in creation of Helicopter Sea Combat (HSC) squadrons; see table for details of implementation plan and future assignments. Approximately 40 MH-60s delivered by end of 2002, with first operational deployment, by HC-5 in USS *Essex*, completed at end of January 2003; 50th MH-60S delivered June 2003. By end April 2004, US Navy had received 64 helicopters and completed 50,000 flight hours, with number on hand having risen to about 75 at end of 2004 and 90 at end of September 2006.

Thailand became first overseas customer for MH-60S in second quarter of 2006, when it announced intention to purchase initial two helicopters of eventual total of six, for use in utility role; delivery of these is expected in 2008, with additional examples to be acquired as and when funding becomes available.

UH-60X: Designation allocated to potential follow-on to UH-60M, but now known as Future Utility Rotorcraft (FUR), for which UH-60M may provide basis. Total of 256 required for service with 'first-to-fight' units, but currently unfunded and unlikely to enter inventory until at least 2025.

LUH-60: Unsuccessful Sikorsky proposal of late 2004 to satisfy US Army requirement for light utility helicopter; proposal envisaged refurbishing UH-60A version with UH-60L engine and transmission, plus digital cockpit of UH-60M and vehicle health management system. Bell 210 selected by US Army during 2005.

BattleHawk: Offered unsuccessfully to Australian Army for Project Air 87 armed reconnaissance requirement; based on MH-60K. Name re-used in 2006, with new iteration revealed at Farnborough International in July; proposal envisages armed helicopter featuring integrated EW suite and comprehensive array of weaponry. To be offered in new-build form or as kit for retrofit to existing UH-60 and S-70A variants.

Firehawk: Trials of specialist firefighting version began in July 1998, using modified UH-60L (96-26728) with extended landing gear and removable 3,785 litre (1,000 US gallon; 833 Imp gallon) ventral watertank manufactured by Aero Union of Chico, California. Replenishment of tank accomplished in two ways: by landing next to water source for water to be pumped into tank via side connector, or by hovering over source and using snorkel hose and pump assembly to suck up water. Subsequent three month demonstration of firefighting capability by Los Angeles County Fire Department proved validity of system. Demonstrator then returned to US Army for further testing, before delivery to Oregon Army National Guard in 1999. Two examples delivered to Los Angeles County Fire Department in 2001, with Army National Guard units in California and Florida also receiving single examples during 2002–03; Los Angeles County Fire Department subsequently received third Firehawk, with others delivered to Nevada and New York Army National Guard. In early 2005, Sikorsky concluded teaming agreement with Heritage Aviation Ltd of Grand Prairie, Texas, covering future S-70A conversions to Firehawk configuration for commercial operators, municipalities, local government agencies and foreign governments.

International Black Hawk: Proposed new variant announced at Farmborough International in July 2006; to be produced in collaboration with overseas partners and assembled outside the US. PZL Mielec of Poland is potential assembly centre, following signature of MoU in September 2006. Design will be based on modular concept, with basic platform adapted to satisfy unique customer requirements, but featuring common cockpit configuration with four-axis advanced flight control system, coupled flight director, active vibration control and dual pilot IFR.

Maple Hawk: Unsuccessful contender in contest to supply Canadian Forces with new SAR helicopter; offer reportedly priced at CAD300 million for 15 helicopters, but EHI EH 101 Cormorant selected in December 1997.

Exports comprise:

S-70A-1: FMS deal for Royal Saudi Land Forces Army Aviation Command; 12 delivered January to April 1990 to squadron based at King Khaled Military City; modified to **Desert Hawk** and one (delivered December 1990) fitted with VIP interior; Desert Hawk has 15 troop seats, blade erosion protection using polyurethane tape and spray-on coating, Racal Jaguar 5 frequency-hopping radio, provision for searchlights, internal auxiliary fuel tanks, and external hoist.

S-70A-1L: Medical evacuation version for Saudi Arabia; IR filtered searchlight, rescue hoist, improved AN/ARC-217 HF com, AN/ARN-147 VOR/ILS, AN/ARN-149 ADF, air conditioning and provision for six stretchers; eight delivered from December 1991; further eight required.

S-70A-5: Two for Philippine Air Force, delivered March 1984.

S-70A-9: Royal Australian Army; 39 replaced Bell UH-1s; deliveries from October 1987 to 1 February 1991; first completed by Sikorsky, remainder assembled by Hawker de Havilland in Australia; aircraft transferred to Australian Army in February 1989, but RAAF continues to maintain them.

S-70A-11: Three to Jordan in 1986-87.

MH-60S PLANNED ASSIGNMENT

New Identity	Current Identity	Planned Date	Fleet Assignment	Type of Deployment
HSC-2	HC-2	Jan 06	Atlantic	Training
HSC-3	HC-3	Mar 05	Pacific	Training
HSC-4	HS-4	Feb 07	Pacific	Carrier Force
HSC-5	HS-5	Feb 09	Atlantic	Carrier Force
HSC-6	HS-6	Apr 10	Pacific	Carrier Force
HSC-7	HS-7	Jan 08	Atlantic	Carrier Force
HSC-8	HS-8	Mar 08	Pacific	Carrier Force
HSC-9	HS-3	Feb 10	Atlantic	Carrier Force
HSC-11	HS-11	Feb 11	Atlantic	Carrier Force
HSC-12	HS-2	Apr 09	Pacific	Carrier Force
HSC-14	HS-14	Apr 11	Pacific	Carrier Force
HSC-15	HS-15	Feb 12	Atlantic	Carrier Force
HSC-21	HC-11	Mar 05	Pacific	Expeditionary
HSC-22	(new)	Sep 06	Atlantic	Expeditionary
HSC-23	(new)	Jan 07	Pacific	Expeditionary
HSC-25	HC-5	Mar 05	Pacific	Expeditionary
HSC-26	HC-6	Mar 05	Atlantic	Expeditionary
HSC-28	HC-8	Mar 05	Atlantic	Expeditionary
HSC-84	HCS-4	TBA	Reserve (Atlantic)	
HSC-85	HC-85	Mid-2006	Reserve (Pacific)	

Notes:
HSC-3, HSC-21, HSC-25, HSC-26 and HSC-28 already equipped with MH-60S; date given refers to change of unit identity; all other dates refer to planned conversion to MH-60S

US BLACK HAWK PROCUREMENT UP TO AND INCLUDING FY06

Total		**273**	**98**	**371**	**143**	**514**

Notes: Current plan calls for UH-60M and MH-60S to be acquired during FY07 to FY11 under terms of Multi-Year Procurement (MYP) programme. FY07 procurement for US Army expected to comprise four HH-60M and 34 UH-60M, with latter including two to be configured for use by Commanders-in-Chief (CinCHawk). Consideration is being given to also including MH-60R in same MYP programme. Figures shown above are provisional and may change. Data sourced from documentation supporting FY07 defence budget. Follow-on procurement of another 932 UH-60M, 50 MH-60S and 82 MH-60R is anticipated if current plans are pursued in full.

S-70A-12: Japan Self-Defence Forces acquiring **UH-60J/JA** versions of Mitsubishi SH-60J for search and rescue. Sikorsky-built prototype (N7267D), plus two CKD kits, delivered late 1990. Further production by Mitsubishi (which see).

S-70A-16: Reserved for Westland Helicopters.

S-70A-17: Turkish Jandarma ordered six in September 1988; deliveries completed December 1988; further six (including two VIP) delivered from late 1990 to Turkish National Police. See also S-70A-28.

S-70A-18: Korea (see UH-60P).

S-70A-19: Reserved for GKN Westland of UK.

S-70A-21: Two VIP versions to Egypt, 1990. Two VIP-configured UH-60L ordered by Egypt in third quarter of 1999; further two VIP-configured UH-60Ls requested in September 2002. Latter pair were delivered in November and December 2003.

S-70A-22: Korean VIP version. Three aircraft built by Sikorsky.

S-70A-24: Two UH-60Ls for Mexico. Delivered 1991. Further four received in about 1996.

S-70A-25/26: Moroccan Gendarmerie ordered two Black Hawks with different seating arrangements in 1991; delivered October 1992; began operations 11 November 1992; fitted with colour weather radar.

S-70A-27: Hong Kong. Two delivered 16 December 1992 to Royal Hong Kong Auxiliary Air Force; unit became Government Flying Service 1 April 1993. Fitted with FLIR and searchlight. Requirement for further four reportedly existed in 1995, but only one additional aircraft delivered. Subsequently, all three sold in 2005 to Brown Helicopters of Leesburg, Florida, for modification to S-70A Firehawk standard by Firehawk Helicopters Inc.

S-70A-28: Turkish follow-on batch; 90 ordered 8 December 1992, of which first five to Jandarma on 4 January 1993, followed by 40 to armed forces during 1993–94; balance of 45 to have been co-produced in Turkey by TAI (which see) but programme suspended. However, fresh negotiations for 50 additional Black Hawks concluded in latter half of 1998, with first five airlifted to Turkey by An-124 in mid-June 1999 and deliveries completed in 2001. Final 30 produced with 'glass cockpit', which to be retrofitted to earlier machines; first flight of **S-70A-28D** in this guise on 29 March 2000. Installation includes four Rockwell Collins MFDs, dual flight management system and LN-100G INS/GPS; four to incorporate Tadiran Spectralink ASR-700 airborne search and rescue system (ASARS) for use by Turkish Army Special Forces in combat search and rescue and covert operations.

S-70A-30: One VIP transport ordered for Argentine Air Force, January 1994; delivered 4 September 1994.

S-70A-33: Four ordered by Brunei in 1995; delivered 1997–98. Equipment includes radar, AN/AAQ-21 FLIR and external stores support system.

S-70A-34: Malaysia ordered two S-70A Black Hawks in 1996 as replacements for AS 332 Super Puma in VIP transport role; first of pair delivered by end of 1997, with second following in February 1998.

S-70A-36: Brazil received four S-70As in August 1997 for use in Peru/Ecuador peacekeeping support mission; equipment includes GPS, HF radio, internal rescue hoist and weather radar.

S-70A-37: Version of Firehawk; two to Sultan of Brunei, 2000, replacing S-70Cs.

S-70A-39: Chilean order for one, announced in March 1998; delivered in July 1998.

S-70A-41: Colombia. Believed to refer to 22 aircraft delivered during 1994 (two), 1995 (two), 1997 (seven) and 1998 (11); these are UH-60L derivative, unlike initial delivery of 1988–89 which was baseline UH-60A. Further helicopters requested in November 1999; two contracts received by Sikorsky in mid-December 2000 cover purchase of 21 helicopters for Colombian Army, plus four for Air Force and six for National Police. Ultimately, as many as 60 in prospect as part of US drive to combat increased narcotics trafficking in this region. Request for eight UH-60Ls via FMS notified to US Congress in mid-2005; firm order expected to follow.

S-70A-42: Austria signed contract in December 2000 for nine aircraft to begin replacement of Agusta-Bell 204/212; total cost of deal put at USD184 million. First example handed over in USA on 10 June 2002.

S-70A-43: Thailand. Initial three helicopters delivered to Thai Army in December 2001 (two) and January 2002 (one); two more handed over in November 2004. Further two requested via FMS in mid-2005 for Thai Army, with Thai Air Force reportedly negotiating in late 2004 for up to 16 to satisfy requirement for SAR helicopter.

S-70A-50: Israel. Request for 15 UH-60Ls revealed by US DoD in April 1997; first so-called 'Peace Hawk' handed over at Stratford, Connecticut, on 23 March 1998, being airlifted (with four others) to Israel by C-5 on 27 May 1998. Deliveries completed by end of 1998. Additional 35 requested in September 2000 at estimated cost of USD525 million, but subsequent contract received on 31 January 2001 covered supply of 24 **S-70A-55** aircraft at total cost of USD211.8 million. Delivery of these was accomplished in second

half of 2002. Israeli Black Hawks subject of major upgrade that began in 2002; accomplished indigenously, much of the work undertaken on IDF/AF UH-60As and UH-60Ls is classified, but does include addition of in-flight refuelling probes and external fuel tanks as well as more powerful environmental conditioning systems.

Other recent customers include Los Angeles County Fire Department, which accepted two S-70A Firehawks in the first half of 2001 and ordered a third in 2003, for delivery in December 2004.

Direct transfers include one UH-60L to Bahrain, early 1991; five UH-60As delivered to Colombian Air Force in July 1988 for anti-narcotics operations; five more sold February 1989. Israel received 10 former US Army UH-60As in August 1994, for 124 Squadron at Palmachim, under local name of Yanshuf (Owl).

Taiwan requires new utility helicopter as replacement for existing UH-1H Iroquois; S-70A in contention and reportedly preferred option over competing Bell 412; up to 80 of chosen type to be obtained, with local manufacture expected to be a key factor in selection. Decision originally anticipated in 1998 but has been deferred, with initial contract for 20 to 25 helicopters likely. Jordan also to acquire UH-60L version, with initial batch of eight helicopters delivered in second half of 2006 under FMS programme, following award of contract to Sikorsky on 9 July 2004. Most recent FMS customer is Brazil, which took delivery of the first of 10 UH-60L for CSAR and other duties on 26 July 2006; this helicopter left for Brazil on 2 August and arrived at Manaus on 7 August to join 7 Esquadrao.

S-70C: Commercial version; no recent news to report.

CUSTOMERS: By 1999, over 2,400 H-60s of all variants had flown more than 3.6 million hours; by mid-2006, US Army fleet alone had surpassed 4.6 million flight hours. US Army total includes EH-60As and diversions to USAF, Bahrain, Colombia, Egypt and Saudi Arabia; 1,000th of S-70 series accepted 17 October 1988 and 2,000th May 1994; US Army Black Hawks in service in US, Germany, Hawaii and South Korea and with Army National Guard and Army Reserve.

US Army UH-60As loaned to the US Drug Enforcement Agency, augmenting five bought direct from Sikorsky. Fleet in 1999 totalled 13 (all with military serial numbers), plus three in storage and further two lost in accidents.

See Current Versions for export models and details.

COSTS: UH-60L USD8.6 million (1997) US Army unit cost; MH-60G USD10.2 million. Two VIP aircraft for Egypt cost about USD47 million (2002), with spare engines, spare parts, tools and support equipment and other logistical support. Cost of single S-70A Firehawk for Los Angeles County Fire Department quoted as USD14.5 million (2003). Projected flyaway unit cost in FY07 of UH-60M and MH-60S quoted as USD14.2 million and USD18.6 million respectively.

DESIGN FEATURES: Represented new generation in technology for performance, survivability and ease of operation when introduced to replace UH-1 as US Army's main squad-carrying helicopter; adapted to wide variety of other roles, including several maritime applications. Four-blade main rotor; one-piece forged titanium rotor head with elastomeric blade retention bearings providing all movement and requiring no lubrication; hydraulic drag dampers; bifilar self-tuning vibration absorber above head; blades have 18° twist, and tips swept at 20°; thickness and camber vary over the length of blades, based on Sikorsky SC-1095 aerofoil; blades tolerant up to 23 mm hits and spar tubes pressurised with gauges to indicate loss of pressure following structural degradation.

Two pairs of tail rotor blades fastened in cross-beam arrangement, mounted to starboard; tail rotor pylon tilted to port to produce lift as well as anti-torque thrust and to extend permissible CG range; fixed fin large enough to allow controlled run-on landing following loss of tail rotor.

FLYING CONTROLS: Rotor pitch control powered by two independent hydraulic systems; Hamilton Sundstrand AFCS with digital three-axis autopilot provides speed and height control and coupled modes. Full-time autostabilisation includes feet-off heading hold cancelling torque-induced yaw at all airspeeds and during hover; positive fuselage attitude control provided by electrically driven variable incidence tailplane moving from +34° in hover to −6° during autorotation; angle is controlled by combined sensing of airspeed, collective-lever position, pitch attitude rate and lateral acceleration.

STRUCTURE: Main blade spar is formed and welded into oval titanium tube, with Nomex core, graphite trailing-edge, and covered by glass fibre/epoxy skin; titanium leading-edge abrasion strip and Kevlar tip. New composites main rotor blades, with modified tips and 16 per cent increase in chord, installed on UH-60M; retrofit to UH-60L model was under consideration but has not occurred Cross-beam composites tail rotor, eliminating all rotor head bearings. Light alloy airframe designed to retain 85 per cent of its flight deck and passenger space intact after vertical impact at 11.5 m (38 ft)/s, lateral impact at 9.1 m (30 ft)/s, and longitudinal impact at 12.2 m (40 ft)/s; also withstands simultaneous 20 *g* forward and 10 *g* downward impact; glass fibre and Kevlar used for cockpit doors, canopy, fairings and engine cowlings; glass fibre/Nomex floors; tailboom folds to starboard and main rotor mast can be lowered for transport/storage.

LANDING GEAR: Non-retractable tailwheel type with single wheel on each unit. Energy-absorbing main gear with a tailwheel which gives protection for the tail rotor in taxying over rough terrain or during a high-flare landing. Axle assembly and main gear oleo shock-absorbers by General Mechatronics. Mainwheel tyres size 26×10.00–11, pressure 8.96 to 9.65 bar (130 to 140 lb/sq in); tailwheel tyre size 15×6.00–6, pressure 6.21 to 6.55 bar (90 to 95 lb/sq in). Alaskan-based H-60s have Airglass Engineering ski landing gear.

POWER PLANT: Two 1,163 kW (1,560 shp) General Electric T700-GE-700 turboshafts on UH-60A. From late 1989 (UH-60L), two T700-GE-701C engines, each developing 1,402 kW (1,880 shp). UH-60M has two T700-GE-701D engines, each rated at 1,652 kW (2,215 shp). (T700-GE-701A engines with maximum T-O rating of 1,285 kW; 1,723 shp optional in export models.) Transmission rating 2,109 kW (2,828 shp) in UH-60A, uprated to 2,535 kW (3,400 shp) in models with T700-GE-701C engines.

Two crashworthy, bulletproof fuel cells, with combined usable capacity of 1,361 litres (360 US gallons; 300 Imp gallons), aft of cabin. Single-point pressure refuelling, or gravity refuelling via point on each tank. Auxiliary fuel can be carried internally in one of several optional arrangements, or externally by the ESSS system. Two external tanks each of 871 litres (230 US gallons; 192 Imp gallons); up to two internal tanks, each of 700 litres (185 US gallons; 154 Imp gallons).

ACCOMMODATION: Two-man flight deck, with pilot and co-pilot on armour-protected seats. A third crew member is stationed in the cabin at the gunner's position adjacent forward cabin windows. Forward-hinged jettisonable door on each side for access to flight deck area. Main cabin open to cockpit to provide good communication with flight crew and forward view for squad commander. Accommodation for 11 fully equipped troops, or 14 in high-density configuration; 20 minimally armed personnel in optional configuration. Eight troop seats can be removed and replaced by four litters for medevac missions, or to make room for internal cargo. An optional layout is available to accommodate a maximum of six litter patients. Executive interiors for seven to 12 passengers available for the S-70A. Cabin heated and ventilated. Simula Safety Systems Inc received USD7.1 million contract in April 1999 covering supply of 290 cockpit airbag systems for installation in US Army UH-60A/L; this was low-rate initial production phase and total comprised 275 aircraft units and 15 spares.

External cargo hook, having a 3,630 kg (8,000 lb) lift capability, enables UH-60A to transport a 105 mm howitzer, its crew of five and 50 rounds of ammunition. Rescue hoist of 272 kg (600 lb) capacity optional. Large rearward-sliding door on each side of fuselage for rapid entry and exit.

SYSTEMS: Solar 67 kW (90 hp) T-62T-40-1, Honeywell or Hamilton Sundstrand APU. An optional winterisation kit provides a second hydraulic accumulator installed in parallel with the APU hydraulic start accumulator, maintaining engine start capability at low ambient temperatures; Honeywell 30 to 40 kVA and 20 to 30 kVA electrical power generators; 17 Ah Ni/Cd battery. Engine fire extinguishing system. Rotor blade de-icing system standard on US Army aircraft, optional for export. Electric windscreen de-icing.

AVIONICS: Configurations vary between aircraft. Additional avionics and self-protection equipment installed in Enhanced Black Hawk, as described under Current Versions. Improvement options offered from 1996 for new-build and retrofit on S-70 series include 'glass cockpit' and digital avionics; equipment available includes EFIS and digital automated flight computer system (AFCS).

Comms: Raytheon AN/ARC-186 VHF-FM, Raytheon AN/ARC-115 VHF-AM, Raytheon AN/ARC-164 UHF-AM, Rockwell Collins AN/ARC-186(V) VHF-AM/FM, Honeywell AN/APX-100 IFF transponder, Raytheon TSEC/KT-28 voice security set, and intercom. HH-60G has AN/URC-108 satcom and is being upgraded with Rockwell Collins AN/ARC-210 integrated communications system; Rockwell Collins AN/ARC-220 nap of the earth digital radio and AN/ARC-222 installed on Block 152 Upgrade HH-60G. UH-60M has Telephonics secure digital intercom system.

Radar: MH-60K has Raytheon AN/APQ-147A terrain-following/terrain-avoidance radar, HH-60G has Honeywell AN/APN-239 (RDR-1400C) radar. MH-60L and some export S-70s also equipped with radar.

Flight: Hamilton Sundstrand AFCS with digital three-axis autopilot, Honeywell AN/ARN-123(V)1 VOR/marker beacon/glideslope receiver, Emerson AN/ARN-89 ADF, BAE Systems AN/ASN-128 Doppler, AN/ASN-43 gyrocompass, Honeywell AN/APN-209(V)2 radar altimeter. HH-60G has BAE Systems AN/ASN-137 Doppler, Rockwell Collins AN/ASN-149 GPS and Litton ring laser gyro INS (replacing Carousel IV). Northrop Grumman LISA-200 AHRS to be retrofitted to US Army helicopters. UH-60M has two Canadian Marconi (CMC) CMA-2082M electronic flight management systems and CMA-2088 emergency control panel, plus dual Honeywell embedded global positioning/inertial navigation systems.

Instrumentation: HH-60G has Teldix KG-10 map display. US Army MH-60 special operations versions gained Elbit ANVIS 7 NVG/HUD system as retrofit; system already fitted in UH-60A and L. Elbit ANVIS/HUD system ordered by Australia in August 1999; 12 units acquired for installation by Raytheon Australia on S-70A-9. NVG-compatible version of Lockheed Martin GH-3000 electronic standby instrument system installed on MH-60K. UH-60M has four Rockwell Collins 152 × 203 mm (6 × 8 in) landscape colour AMLCDs, providing primary flight, navigation and tactical information and also including fully integrated digital map display.

Mission: HH-60G has Raytheon AN/AAQ-16 FLIR. UH-60Q and HH-60L have (and HH-60M will have), FLIR Systems Inc AN/AAQ-22 SAFIRE thermal imaging system. Raytheon ZSQ-1(V) electro-optic sensor system installed on US Army MH-60s; two versions exist, with suite of equipment including laser rangefinders or laser spot trackers/designators, laser pointers, FLIR sensors, image-intensifying TV and associated processing and control electronics. Israeli S-70As have Elbit armament control system as well as an observation and targeting system, plus display and sight helmet with line-of-sight cueing. UH-60M incorporates US Army Blue Force tracking system.

Self-defence: Baseline UH-60 Black Hawk has Raytheon AN/APR-39(V)1 RWR, Sanders AN/ALQ-144 IR countermeasures set and BAE Systems M-130 chaff/flare dispenser. MH-60K has BAE Systems AN/AAR-47 missile warning system, Northrop Grumman AN/ALQ-136 pulse radio frequency jammer, Northrop Grumman AN/ALQ-162 CW radio jammer, Raytheon AN/APR-39A and AN/APR-44 pulse/CW warning receivers, Raytheon AN/AVR-2 laser detector, BAE Systems M-130 chaff/flare dispenser and BAE Systems AN/ALQ-144 IR countermeasures set. HH-60G has chaff/flare dispenser (BAE Systems M-130 being replaced by AN/ALE-47 since 1998) and BAE Systems AN/ALQ-144 IR countermeasures set. Development testing of BAE Systems AN/ALQ-212 Advanced Threat IR Countermeasures (ATIRCM) system on EH/MH-60s of US Army began in 1999. Future US Army UH-60s to incorporate BAE Systems Combined Common Missile Warning System/Advanced Threat Infrared Countermeasures (CMWS/ATIRCM), which subject of October 2004 contract. AN/AAR-47 missile warning system, AN/ALR-69(V) RWR, AN/ALE-47 chaff/flare dispensers and AN/ALQ-213 EW management system installed on Block 152 Upgrade HH-60G. Israeli S-70As have locally designed self-protection suite, including Elta EL/M-2160 missile approach warning system plus laser warning system, radar warning receivers, IR jammers and Roker chaff/flare dispensers. Australian S-70As to be upgraded with Project Echidna package, including EADS AN/AAR-60 missile launch detection system and BAE Systems Australia ALR-2002D radar warning receivers.

EQUIPMENT: HH-60G has Lucas Aerospace internal rescue hoist with 76 m (250 ft) of cable. UH-60Q has external Breeze-Eastern HS-29900 electric rescue hoist, with same company's BL-27100-85 hydraulic rescue hoist ordered by US Navy in November 2002 for installation on H-60 helicopters. MH-60S using Raytheon Airborne Mine Neutralisation System (AMNS) from 2005. Rafael external airbag system to be installed on Israeli Black Hawks for additional protection in event of crash or hard landing.

ARMAMENT: New production UH-60As and Ls from c/n 431 onward incorporate hardpoints for an external stores support system (ESSS). This consists of a combination of fixed provisions built into the airframe and four removable external pylons from which fuel tanks and a variety of weapons can be suspended. Able to carry more than 2,268 kg (5,000 lb) on each side of the helicopter, the ESSS can accommodate two 871 litre (230 US gallon; 192 Imp gallon) fuel tanks outboard, and two 1,703 litre (450 US gallon; 375 Imp gallon) tanks inboard. This allows the UH-60A to self-deploy 1,200 n miles (2,222 km; 1,381 miles) without refuelling. The ESSS also enables the Black Hawk to carry Hellfire laser-guided anti-armour missiles, gun or M56 mine dispensing pods, FIM-92 Stinger AAMs, ECM packs, rockets and motorcycles. Up to 16 Hellfires can be carried externally on the ESSS, with another 16 in the cabin to provide capability to land and reload. Two pintle mounts in cabin can each accommodate a 0.50 in calibre General Electric GECAL 50 or 7.62 mm six-barrel Minigun.

DIMENSIONS, EXTERNAL:

Main rotor diameter	16.36 m (53 ft 8 in)
Main rotor blade chord	0.53 m (1 ft 8¾ in)
Tail rotor diameter	3.35 m (11 ft 0 in)
Length overall: rotors turning	19.76 m (64 ft 10 in)
rotors and tail pylon folded	12.60 m (41 ft 4 in)
Length of fuselage:	
UH-60A/HH-60G, excl flight refuelling probe	15.26 m (50 ft 0¾ in)
HH-60G, incl retracted refuelling probe	17.38 m (57 ft 0¼ in)
Fuselage max width: UH-60A	2.36 m (7 ft 9 in)
Max depth of fuselage	1.75 m (5 ft 9 in)

Height: overall, tail rotor turning ..... 5.13 m (16 ft 10 in)
to top of rotor head ..... 3.76 m (12 ft 4 in)
in air-transportable configuration ..... 2.67 m (8 ft 9 in)
Tailplane span ..... 4.38 m (14 ft 4½ in)
Tailplane chord ..... 0.88 m (2 ft 10½ in)
Wheel track ..... 2.705 m (8 ft 10½ in)
Wheelbase ..... 8.83 m (28 ft 11¾ in)
Tail rotor ground clearance ..... 1.98 m (6 ft 6 in)
Cabin doors (each): Height ..... 1.37 m (4 ft 6 in)
Width ..... 1.75 m (5 ft 9 in)

DIMENSIONS, INTERNAL:
Cabin: Volume ..... 11.6 m^3 (410 cu ft)

AREAS:
Main rotor blades (each) ..... 4.34 m^2 (46.70 sq ft)
Tail rotor blades (each) ..... 0.41 m^2 (4.45 sq ft)
Main rotor disc ..... 210.15 m^2 (2,262.0 sq ft)
Tail rotor disc ..... 8.83 m^2 (95.03 sq ft)
Fin ..... 3.00 m^2 (32.30 sq ft)
Tailplane ..... 4.18 m^2 (45.00 sq ft)

WEIGHTS AND LOADINGS:
Weight empty: UH-60A ..... 5,118 kg (11,284 lb)
UH-60L ..... 5,344 kg (11,782 lb)
UH-60M ..... 5,670 kg (12,500 lb)
Payload: internal, UH-60A/L ..... 1,197 kg (2,640 lb)
underslung, UH-60A ..... 3,629 kg (8,000 lb)
underslung, UH-60L/Q and MH-60S ..... 4,082 kg (9,000 lb)
Mission T-O weight: UH-60A ..... 7,708 kg (16,994 lb)
UH-60L ..... 8,031 kg (17,706 lb)
HH-60G ..... 8,119 kg (17,900 lb)
MH-60K ..... 11,113 kg (24,500 lb)
UH-60M ..... 8,792 kg (19,382 lb)
Max alternative T-O weight (ferry mission), UH-60A/L: ..... 11,113 kg (24,500 lb)
Max disc loading:
UH-60L at mission T-O weight ..... 36.7 kg/m^2 (7.52 lb/sq ft)
UH-60L at max alternative T-O weight ..... 52.9 kg/m^2 (10.83 lb/sq ft)
Transmission loading:
UH-60L at mission T-O weight and max power ..... 3.04 kg/kW (5.00 lb/shp)
UH-60L at max alternative T-O weight and power ..... 4.20 kg/kW (6.91 lb/shp)

PERFORMANCE (UH-60A at mission T-O weight, except where indicated):
Never-exceed speed (VNE):
UH-60A/L/Q ..... 195 kt (361 km/h; 224 mph)
MH-60S ..... 180 kt (333 km/h; 207 mph)
Max level speed at S/L ..... 160 kt (296 km/h; 184 mph)
Max level speed at max T-O weight ..... 158 kt (293 km/h; 182 mph)
Max cruising speed at 1,220 m (4,000 ft) and 35°C (95°F):
UH-60A ..... 139 kt (257 km/h; 160 mph)
UH-60L ..... 152 kt (282 km/h; 175 mph)
Single-engine cruising speed at 1,220 m (4,000 ft) and 35°C (95°F) ..... 105 kt (195 km/h; 121 mph)
Vertical rate of climb at 1,220 m (4,000 ft) and 35°C (95°F):
UH-60A ..... 119 m (390 ft)/min
UH-60L ..... 472 m (1,550 ft)/min
Service ceiling: UH-60A ..... 5,700 m (18,700 ft)
UH-60L ..... 5,835 m (19,150 ft)
Hovering ceiling:
OGE at 35°C: UH-60A ..... 1,645 m (5,400 ft)
UH-60L ..... 2,330 m (7,650 ft)
Range with max internal fuel at max T-O weight, 30 min reserves:
UH-60A ..... 319 n miles (592 km; 368 miles)
UH-60L ..... 315 n miles (584 km; 363 miles)
Range with external fuel tanks on ESSS pylons:
with two 870 litre (230 US gallon; 191.5 Imp gallon) tanks ..... 880 n miles (1,630 km; 1,012 miles)
with two 870 litre (230 US gallon; 191.5 Imp gallon) and two 1,703 litre (450 US gallon; 375 Imp gallon) tanks ..... 1,200 n miles (2,222 km; 1,381 miles)
Endurance: UH-60A ..... 2 h 18 min
UH-60L ..... 2 h 6 min

SIKORSKY S-70B

US Navy designations: SH-60B and MH-60R Seahawk, SH-60F and HH-60H
US Coast Guard designations: HH-60J, MH-60J and MH-60T Jayhawk
Japan Maritime Self-Defence Force designation: SH-60J and SH-60K
Spanish Navy designation: HS.23
Republic of China Navy designation: S-70C(M)-1 and S-70C(M)-2 Thunderhawk

TYPE: Naval combat helicopter.

PROGRAMME:

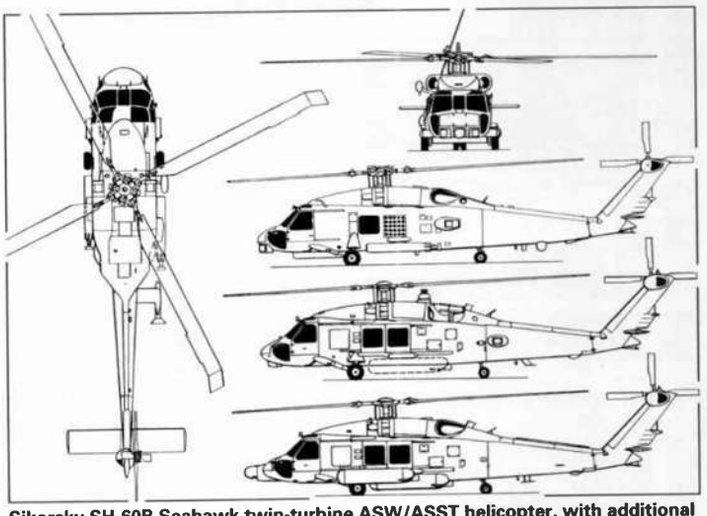
DEVELOPMENT MILESTONES

Programme launched	1977
First order (US Navy)	FY82
First flight	12 Dec 79
First flight, production	11 Feb 83
Entered service (US Navy)	1984
Subsequent versions:	
MH-60R	
First flight	11 Dec 99
First flight, production	28 Jul 05
First delivery	19 Aug 05

Naval development of Sikorsky UTTAS (UH-60A Black Hawk) utility helicopter; won US Navy LAMPS Mk III competition for shipboard helicopter in 1977; first flight of first of five YSH-60B prototypes (161169) 12 December 1979; first 18 SH-60Bs authorised FY82. Changed USN planning in 1993 resulted in premature end to SH-60B/F production; original intent was to remanufacture SH-60B/Fs and HH-60Hs as SH-60R (redesignated MH-60R in mid-2001), but acquisition strategy changed in 2001 and all but a handful of MH-60Rs will be new-build helicopters.

CURRENT VERSIONS: **SH-60B**: Initial production version for ASW/ASST; 181 built for US Navy, excluding prototypes.

First new-built Sikorsky MH-60R *(Lockheed Martin)* 1116430



Sikorsky SH-60B Seahawk twin-turbine ASW/ASST helicopter, with additional side views of HH-60H (centre) and HH-60J Jayhawk (bottom) *(Dennis Punnett)* 0507464

Detailed description applies to SH-60B, unless otherwise stated.

NSH-60B: Designation applied to two SH-60Bs (162337 and 162974) assigned to permanent test duties at Patuxent River, Maryland.

SH-60F: CV Inner Zone ASW helicopter, known as CV-Helo, for close-in ASW protection of aircraft carrier groups; US$50.9 million initial US Navy contract for full-scale development and production options placed 6 March 1985; replacing SH-3H Sea King; Seahawk prototype modified as SH-60F test aircraft; first flight 19 March 1987; initial fleet deployment by HS-2 aboard USS *Nimitz* in 1991. Currently assigned to 10 deployable squadrons (HS-2 to HS-8, HS-11, HS-14 and HS-15) plus one training unit (HS-10) and one Reserve Force squadron (HS-75). Production terminated with delivery of 82nd example 1 December 1994.

SH-60F has all LAMPS Mk III avionics, fairings and equipment removed, including cargo hook and RAST system main and tail probes, but installation provisions retained. Replaced by integrated ASW mission avionics including Honeywell AN/AQS-13F dipping sonar, MIL-STD-1553B databus, dual Litton AN/ASN-150 tactical navigation computers and AN/ASM-614 avionics support equipment, automatic flight control system with quicker automatic transition and both cable and Doppler autohover, tactical datalink with other aircraft, communications control system, multifunction keypads and displays for each of four crew members; internal/external fuel system and extra weapon station to port allowing carriage of three Mk 50 homing torpedoes; provision for surface search radar, FLIR, night vision equipment, passive ECM, MAD, air-to-surface missile capability, sonobuoy datalink, chaff/sonobuoy dispenser, attitude and heading reference system (AHRS), Navstar GPS, fatigue monitoring system and increase of maximum T-O weight to 10,659 kg (23,500 lb); secondary missions include SAR and plane guard.

UH-60F: Unconfirmed (and apparently unofficial) designation applicable to SH-60Fs modified for search and rescue duty with US Navy. At least one SH-60F (163282) has had specialised ASW equipment removed before flying for first time in this form on 25 October 2004; it was subsequently assigned to Naval Air Station Key West, Florida, but appears to have retained SH-60F designation throughout 2006.

YSH-60F: Designation applied to second production SH-60F (163283) which served as 'prototype' on test duties at Patuxent River, Maryland. To be fitted with lifting wing with flaperons and 2.44 m (8 ft) diameter vectored thrust ducted propeller ('ring tail') by Piasecki Aircraft Corporation (which see) as **X-49A** for trials project as part of advanced technology demonstration programme. Known as SpeedHawk, this programme originated with Naval Air Systems Command, but was transferred to US Army control in late 2003; a 14-month flight test effort was expected to begin in about July 2005. No recent news received concerning this project.

HH-60H: US Navy procurement of 42 completed in 1996; used for strike-rescue/special warfare support (HCS); designated HH-60H in September 1986; first flight (163783) 17 August 1988; accepted by USN 30 March 1989; in service with HCS-4 at Norfolk, Virginia, January 1990; initial procurement ended with 18th delivery July 1991, completing HCS-5 at Point Mugu, California; both squadrons are part of Navy Reserve. Regular SH-60F squadrons later added pairs of HH-60Hs for deployed duty when embarked aboard aircraft carriers; missions are to recover four-man crew at 250 n miles (463 km; 288 miles) from launch point or fly 200 n miles (371 km; 230 miles) and drop eight SEALs from 915 m (3,000 ft).

Close derivative of SH-60F, with T700-GE-401C engines and HIRSS as SH-60B/F; equipment includes Litton AN/APR-39A(XE)2 RWR, Raytheon AN/AVR-2A(V) laser

Sikorsky SH-60F Seahawk of HS-14 lifting from USS *Kitty Hawk*, with USS *Ronald Reagan* as backdrop *(PMA Joshua Wayne LeGrand, US Navy)* 1158812

Sikorsky HH-60H strike rescue and special warfare helicopter *(MCS2C Rebecca Moat, US Navy)* 1158815

warning receiver, Honeywell AN/AAR-47 missile plume detector, Lockheed Martin AN/ALE-47 chaff/flare dispenser, Sanders AN/ALQ-144 IR jammer, Elbit ANVIS 7 NVG/HUD system and two cabin-mounted M60D 7.62 mm machine guns; provision for weapon pylons; required to operate from decks of FFG-7, DD-963, CG-47 and larger vessels, as well as unprepared sites. Cubic AN/ARS-6 personnel locator system installed from FY91. Some equipped with Indal RAST (recovery assist, secure and traverse) equipment. Armament development authorised October 1991 for installation of Hellfire ASM, 70 mm (2.75 in) rockets and forward-firing guns. Some HH-60H now fitted with nose-mounted Raytheon AN/AAS-44(V) FLIR/laser designator system for use with Hellfire missile.

HH-60J Jayhawk: Ordered in parallel with HH-60H; adapted for US Coast Guard medium-range recovery (MRR) role; last of 42 delivered in 1996. First flight (USCG 6001) 8 August 1989; first delivery to USCG (6002 at Elizabeth City CGAS) 16 June 1990; subsequently to Mobile, Traverse City, San Diego, Astoria, San Francisco, Cape Cod, Sitka, Kodiak and Clearwater CGAS. When carrying three 455 litre (120 US gallon; 100 Imp gallon) external tanks, HH-60J can fly out 300 n miles (556 km; 345 miles) and return with six survivors in addition to four-man crew, or loiter for 1 hour 30 minutes when investigating possible smugglers; other duties include law enforcement, drug interdiction, logistics, aids to navigation, environmental protection and military readiness; compatible with decks of 'Hamilton' and 'Bear' class USCG cutters. Equipment includes Honeywell RDR-1300C search/weather radar, AN/ARN-147 VOR/ILS, KDF 806 direction-finder, GPS, Tacan, VHF/UHF-DF, TacNav, dual U/VHF-FM radios, HF radio, IFF, V/U/HF IFF crypto computers, NVG-compatible cockpit, rescue hoist and external cargo hook. **MH-60J** designation applies to HH-60J helicopters that have been modified to carry weaponry allied to the AUF (Airborne Use of Force) equipment package. An initial batch of five aircraft were deployed during 2004, with four more due to be similarly modified by the end of 2005; weaponry comprises door-mounted M240 machine guns and an M-14 sniper rifle.

XSH-60J: Japan Maritime Self-Defence Force (JMSDF) placed US$27 million order for two **S-70B-3** s for installation of Japanese avionics and mission equipment; first flights 31 August and early October 1987; 1,007 hour test programme by Japan Defence Agency Technical Research and Development Institute between 1 June 1989 and 7 April 1991 to evaluate largely Japanese avionics for SH-60J, but AN/APS-124 radar.

SH-60J: Mitsubishi manufactured more than 100 SH-60J Seahawks for JMSDF.

SH-60K: Improved version of Seahawk for JMSDF. Production was expected to begin in FY01 but was delayed; JMSDF funded batches of seven helicopters in each of FY02, FY03 and FY04, while reportedly seeking initial batch of 50, with second batch of 50 to follow, as well as upgrade project involving SH-60J version.

Operational evaluation of Sikorsky MH-60R by HSM-41 *(MCS2C Rebecca J Moat, US Navy)* 1158816

Royal Australian Navy Sikorsky S-70B-2 Seahawk *(Paul Jackson)* 1158855

MH-60R: Originally designated SH-60R and also known as LAMPS Block II; combines SH-60B capabilities with dipping sonar of SH-60F; original plan was for rebuild of existing fleet; first two conversions were to be funded in FY98; 15 in FY99 and more thereafter; however, concerns over cost led to one year delay in launch of remanufacture programme, which began in FY00 with batch of seven helicopters for test duties (ordered 25 April 2000) . Training unit HSL-41 at North Island, California, planned to be first squadron under new identity as HSM-41.

Development delays and cost concerns in 2000–01 prompted Navy to restructure programme in favour of mostly new-build MH-60Rs, which will be purchased for USD1 million to USD3 million more than remanufactured examples and also allow the Navy to implement measures to improve power to weight performance. Total of 252 MH-60Rs required by 2015.

MH-60R systems orientated towards littoral warfare operations, with ability to process and prosecute large number of air and sea contacts in a comparatively confined space, the latter in relatively shallow water. New systems added to enhance countermeasures and passive and active detection capability. Initial upgrade package abandoned on grounds of high cost in 1998, when less expensive programme, making extensive use of COTS technology, was adopted.

Lockheed Martin secured USD61 million contract in third quarter of 1998 for development of common cockpit prototype applicable to MH-60R and MH-60S variants. Under terms of contract, Lockheed Martin provided flight instrument displays, two MFDs, two operator keysets and digital communications suite as well as Litton integrated INS/GPS, mass memory unit, mission and flight management computers and applicable operational software for both versions. New 'glass cockpit' centred around Lockheed Martin-developed computer systems, but using commercial PowerPC processors, with data presented to pilots via electronic flight instrument display and multifunction mission display.

Other changes on MH-60R include deletion of MAD, addition of AGM-114 Hellfire anti-armour missile and two more stores stations, databus, Telephonics AN/APS-147 multimode radar, Raytheon/Thales AN/AQS-22 (FLASH) advanced airborne low-frequency dipping sonar, AN/AYK-14 mission processor and AN/UYS-2A enhanced modular signal processor, Lockheed Martin AN/ALQ-210 ESM, Raytheon AN/AAS-44 FLIR/laser ranger and NVG compatibility. MTOW expected to rise to 10,659 kg (23,500 lb). May eventually be fitted with new, more powerful engine.

Two SH-60Bs (162976 and 162977) selected as prototypes; conversion undertaken by Lockheed Martin Systems Integration at Owego, New York, where first (then designated SH-60R, later becoming NMH-60R) was rolled out on 5 August 1999. First flight scheduled for October 1999, following electronic systems functional test and checkout on the ground, but delayed until 11 December; first prototype half analogue/half 'glass cockpit' for initial testing, with full 'glass cockpit' installed after about three months. After initial trials at Owego, first prototype delivered to Patuxent River, Maryland, in early May 2000 for start of two-year Navy/contractor developmental test programme.

Initial engineering development model (EDM) aircraft (166402), remanufactured by Sikorsky, first flew 19 July 2001 and formally accepted by Navy (still in manufacturer's hands) later in same month. Subsequently to Patuxent River, on 10 August 2001 for installation of flight test instrumentation and then to Lockheed Martin at Owego for fitting of new mission systems. First flight with 'total weapon system' made on 4 April 2002.

A second EDM aircraft (166403) was delivered to the US Navy by the start of February 2002; thereafter, a total of five Low Rate Initial Production (LRIP I) helicopters followed, with the first (166404) making its maiden flight on 9 July 2002. Two further LRIP I MH-60Rs had been accepted by the Navy before the end of 2002, with the final pair following in 2003; in all cases, remanufacture was accomplished by Sikorsky, with the helicopter then going to Lockheed Martin at Owego for installation of mission systems. It was originally intended to obtain another four remanufactured aircraft in FY01, but this was abandoned when the Navy opted to acquire new-build helicopters starting with the LRIP II batch, which was funded in FY04. The first new-build MH-60R (166515) made its maiden flight on 28 July 2005 and was formally accepted by US Navy at Stratford, Connecticut on 19 August, being flown to Owego for fitting out in early October 2005, after initial flight testing by Sikorsky; this machine retained by Lockheed Martin for trials, with second new-build MH-60R (166516) being first to join US Navy on assignment to HX-21 at Patuxent River after hand-over on 31 March 2006.

Before that, the US Navy had completed a six-month technical evaluation (TechEval) programme in February 2005; during this trials effort, the MH-60R test fleet accumulated about 630 flight hours with HX-21 and VX-1 Squadrons; much of this was accomplished at NAS Patuxent River, Maryland, other locations used during TechEval including NAS China Lake, California, and Eglin AFB, Florida, with some testing undertaken in the Caribbean.

Final hurdle before start of full-rate production is US Navy OpEval (operational evaluation), which began with VX-1 Squadron at Patuxent River on 9 May 2005 and concluded in September of same year. Successful conclusion of OpEval cleared way for Milestone III approval on 31 March 2006 of full-rate production starting with Lot 4 (12 aircraft) in FY06. Total of six helicopters purchased in FY05, with 12 in FY06 and 25 planned for FY07; rate will ultimately build to peak of 30 per year. USN to reorganise fleet and redesignate units as Helicopter Maritime Strike (HMS) squadrons; see table for details of implementation plan and future assignments. Some slippage has already occurred, with first (training) squadron actually receiving its first four aircraft (166402, 166404, 166407 and 166408) of eventual 17 in December 2005 and thereafter achieving IOC on 19 January 2006; this is HSM-41 at North Island, California. First students to undergo training with HSM-41 commenced transition course on 1 October 2006.

First operational deployment as part of Navy carrier battle group now expected to take place in FY09; unit involved will probably be HSM-71.

MH-60R PRODUCTION

Batch	FY	Quantity	First Aircraft
Test	00	2	166402
LRIP I	00	5	166404
LRIP II	04	4	166515
LRIP III	05	6	166519
FRP I	06	12	n/a
Total		**29**	

Notes: Excludes two SH-60Bs modified as SH-60R (later MH-60R) prototypes. Subsequent full-rate production (FRP) to be subject of a multiyear procurement (MYP) programme alongside UH-60M and MH-60S versions; refer to table in S-70A entry for details.

HH-60T Jayhawk: A modernisation programme to be accomplished between 2007 and 2011 is expected to result in all 41 surviving HH-60Js being brought to **MH-60T** standard, compatible with AUF (Airborne Use of Force) weaponry as detailed in MH-60J entry. In the intervening period, a number of other improvements, including provision of digital cockpits, FLIR and new radar sensors, Nightsun searchlights and airframe modifications, will bring a number of aircraft to HH-60T configuration, with the first example scheduled to begin operational test and evaluation by the end of 2006. Consideration is also being given to upgrading current T700-GE-401C engines to T700-GE-401D standard, offering increased power and enhanced durability. The definitive MH-60T will be required to deploy 200 n miles (370 km; 230 miles) from shore base with a six-man counter-terrorism team.

Exports comprise: S-70B-1: Spanish Navy received six from December 1988 (designated **HS.23**) for operation from four FFG-7 frigates by Escuadrilla 010 at Rota; similar to USN SH-60B, but with Honeywell AN/AQS-13F dipping sonar. Spanish government approval to order additional six granted in December 1998, with order placed in third quarter 2000; five of them delivered to Rota, in October 2002, with final aircraft retained at Owego, New York, for additional trials before being handed over in early 2003. Deal for new helicopters also included funds to upgrade original six to same standard, including armament kits and compatibility with AGM-114 Hellfire and AGM-119 Penguin ASMs. First two upgraded helicopters completed modernisation process in July and October 2003.

S-70B-2: Royal Australian Navy (RAN) selected Seahawk for role adaptable weapon system (RAWS) full-spectrum ASW helicopter with autonomous operating capability; order for eight confirmed 9 October 1984; eight more ordered May 1986. S-70B-2 has substantially different avionics from USN version: Racal Super Searcher radar (capable of tracking 32 surface targets) and Rockwell Collins advanced integrated avionics including cockpit controls and displays, navigation receivers, communications radios, airborne target handoff datalink and tactical data system (TDS). Upgrade of Australian Seahawks, known as Project Sea 1405, includes installation of Raytheon AN/AAQ-27 FLIR and an electronic warfare support measures package based on Elisra's AES-210 system; also installation of Smiths NVG-compatible aircraft standby attitude indicators and Northrop Grumman AN/AAR-54(V) passive MAWS. All 16 Seahawks upgraded by third quarter of 2003; first helicopter handed over to Tenix Defence Systems in first quarter 2000. Mid-life upgrade (MLU) expected in due course, with project definition study beginning in 2003–04; MLU likely to involve provision of dipping sonar and integration of ASM, with Penguin Mk2 anti-ship missile a strong possibility as this already purchased for use by RAN Seasprite helicopters.

S-70B-6: Hybrid SH-60B/F for Greece, unofficially known as **Aegean Hawk**; selected December 1991 and initial quantity of five ordered 17 August 1992 for MEKO 200 frigates. Option for three more subsequently converted to firm order and contract for further two (later increased to three) signed on 12 June 2000. Armament includes NFT Penguin Mk2 ASMs; avionics include AN/AQS-18(V)-3 dipping sonar, AN/APS-143(V3) radar and AN/ALR-66(V)-2 ESM; towed MAD and sonobuoy launcher omitted. First two delivered fourth quarter of 1994, with three more in 1995, one in 1997 and two in 1998; two helicopters from latest order were delivered to Greece in June 2004, with final machine following by end of 2005. Original eight aircraft being modified to operate with AN/AAQ-22Q Star SAFIRE FLIR sensor; three final aircraft have Raytheon AN/AAS-44 FLIR/laser rangefinder.

S-70B-7: Six Seahawks ordered by Royal Thai Navy in October 1993; equipped for coastal surveillance, maritime patrol and SAR from aircraft carrier HTMS *Chakri Naruebet;* first handed over at Stratford on 6 March 1997, with all six delivered by June.

S-70B-28: Initial batch of four ordered by Turkish Navy on 14 February 1997, with option on another four subsequently converted to firm order; the first example made its maiden flight on 18 January 2001 and all eight were delivered in 2002 for service aboard frigates in ASW and surveillance roles. They are first export Seahawks with a Rockwell Collins 'glass cockpit' and also have L-3 Communications Ocean Systems HELRAS long-range active dipping sonar and Telephonics AN/APS-143(V) radar installed. Original order includes supply of AGM-114 Hellfire II ASM. Turkey has ultimate requirement for up to 28 S-70Bs, of which further 12 formed subject of MoU announced by Sikorsky in June 2005; delivery set to begin in 2008, with a further five helicopters subject to option. Finalisation of order delayed because of protracted negotiations concerning previous offset arrangement relating to Black Hawk helicopters; for a time, it looked as if S-70B order would not go ahead, but settlement eventually achieved in March 2006; delivery of these helicopters may, however, take place later than originally anticipated.

S-70C(M)-1/2 Thunderhawk: S-70C designation used for H-60 purchases not qualifying for FMS. Principally assigned to aircraft delivered to Taiwan. Production complete.

CUSTOMERS: Total US Navy requirement originally 260 SH-60Bs; 186 on order, including five prototypes, when procurement terminated in FY94. First flight production Seahawk 11 February 1983; last SH-60B delivered to US Navy on 25 September 1996; first squadron was HSL-41 at NAS North Island, San Diego, California; operational deployment began 1984; 10 US Navy squadrons operating by March 1991 (HSLs 41, 43, 45, 47 and 49 at NAS North Island; 40, 42, 44, 46 and 48 at NAS Mayport, Florida); subsequently HSL-51 formed at Atsugi, Japan, 1 October 1991, and HSL-37 at NAS Barbers Point, Hawaii, began converting from SH-2Fs on 6 February 1992; most recent unit to equip is HSL-60 of the Reserve Force, also at Mayport. SH-60Bs deployed in 'Oliver Hazard Perry' (FFG-7) class frigates, 'Spruance' class and Aegis-equipped destroyers and 'Ticonderoga' class guided missile cruisers. US Navy originally required 150 SH-60Fs; total 82 completed, comprising seven pre-series plus 18 each in FY88, 89 and 91, 12 in FY92 and nine in FY93; procurement then halted; in West Coast service with HS-2, 4, 6, 8, 10 and 14 squadrons at NAS North Island, California; HS-3 at Jacksonville, Florida, equipped from 27 August 1991 as first East Coast squadron, followed by HS-1, 5, 7, 11 and 15, of which training squadron HS-1 since disestablished, leaving HS-10 of Pacific Fleet to conduct all US Navy SH-60F instruction. Reserve Force unit HS-75 at Jacksonville now also has SH-60F. US Navy planning acquisition of 252 MH-60Rs (excluding two test articles).

Exported to Australia, Greece, Japan, Spain, Taiwan, Thailand and Turkey (see Current Versions). S-70B-4 and -5 are derivatives of SH-60F and HH-60H, respectively; not taken up. Singapore announced purchase of six S-70Bs on 21 January 2005; delivery to be accomplished in 2008-10 for service on new La Fayette class frigates, but helicopters will be flown by air force personnel. Brazil expected to acquire at least six S-70Bs to replace SH-3 Sea King with naval air arm; US Congress advised of request for FMS deal on 27 September 2006.

COSTS: USD20.25 million (1992) USN programme unit cost. Flyaway cost of final USN SH-60B about USD16 million. MH-60R RDT&E costs expected to be around USD1.5 billion in FY06 base year dollars, with unit flyaway cost of MH-60Rs to be acquired in FY06 projected to be USD33.7 million, reducing to USD30.1 million in FY07. Total procurement cost in FY06 base year dollars estimated at USD9.2 billion.

DESIGN FEATURES: SH-60B Seahawk designed to provide all-weather detection, classification, localisation and interdiction of surface ships and submarines, either controlled through datalink from parent ship or operated independently; secondary missions include SAR, vertical replenishment, medevac, fleet support and communications relay.

Revised features, compared with UH-60A, include more powerful navalised GE T700-GE-401 engines, additional fuel, sensor operator's station, port-side internal launchers for 25 sonobuoys, pylon on starboard side of tailboom for MAD bird, lateral pylons for two torpedoes or external tanks, chin-mounted ESM pods, sliding cabin door, rescue hoist, electrically actuated blade folding, rotor brake, folding tail, short-wheelbase tailwheel landing gear with twin tailwheels stressed for lower crash impact, DAF Indal RAST recovery assist, secure and traversing for haul-down landings on small decks and moving into hangar, hovering in-flight refuelling system, and emergency flotation system; pilots' seats not armoured. SH-60B gives 57 minutes' more listening time on station and 45 minutes' more ship surveillance and targeting time than SH-2F Seasprite LAMPS Mk I.

For operation in Gulf during mid-1980s Iran-Iraq war, 25 SH-60Bs fitted with upper and lower Sanders AN/ALQ-144 IR jammers, BAE Systems AN/ALE-39 chaff/flare dispensers, Honeywell AN/AAR-47 electro-optical missile warning, and a single 7.62 mm machine gun in door, for a weight penalty of 169 kg (369.5 lb); seven Seahawks fitted with Raytheon AN/AAS-38 FLIR on root weapon pylon with instantaneous relay to parent ship.

First Block I SH-60B update, introduced in production Lot 9, delivered from October 1991, includes provision for NFT AGM-119 Penguin anti-ship missile, Mk 50 advanced lightweight torpedo, Flightline AN/ARR-84 99-channel sonobuoy receiver (replacing ARR-75), Rockwell Collins AN/ARC-182 V/UHF FM radio and Rockwell Collins Class 3A Navstar GPS.

FLYING CONTROLS: As for UH-60.

STRUCTURE: Basically as for UH-60 plus marine corrosion protection; single cabin door, starboard side, narrower than on UH-60.

LANDING GEAR: Generally as for UH-60, but with twin tailwheel positioned further forward to facilitate operation from landing platforms on warships.

POWER PLANT: Two 1,260 kW (1,690 shp) intermediate rating General Electric T700-GE-401 turboshafts in early aircraft; 1,342 kW (1,800 shp) T700-GE-401C turboshafts introduced in 1988 and on HH-60H/J. Transmission rating 2,535 kW (3,400 shp). Internal fuel capacity 2,233 litres (590 US gallons; 491 Imp gallons). Hovering in-flight refuelling capability.

MH-60R PLANNED ASSIGNMENT

New Identity	Current Identity	Planned Date	Fleet Assignment	Type of Deployment
HSM-37	HSL-37	Jan 14	Pacific	Expeditionary
HSM-40	HSL-40	Jan 10	Atlantic	Training
HSM-41	HSL-41	Mar 05	Pacific	Training
HSM-42	HSL-42	Mar 14	Atlantic	Expeditionary
HSM-48	HSL-48	Feb 15	Atlantic	Expeditionary
HSM-49	HSL-49	Apr 14	Pacific	Expeditionary
HSM-51	HSL-51	Mar 13	Pacific	Expeditionary
HSM-60	HSL-60	Mar 14	Reserve	Reserve
HSM-70	(new)	Jan 08	Atlantic	Carrier Force
HSM-71	(new)	Apr 09	Pacific	Carrier Force
HSM-72	(new)	Feb 09	Atlantic	Carrier Force
HSM-73	HSL-43	Feb 07	Pacific	Carrier Force
HSM-74	HSL-44	Feb 10	Atlantic	Carrier Force
HSM-75	HSL-45	Mar 08	Pacific	Carrier Force
HSM-76	HSL-46	Feb 11	Atlantic	Carrier Force
HSM-77	HSL-47	Apr 10	Pacific	Carrier Force
HSM-78	(new)	Feb 12	Atlantic	Carrier Force
HSM-79	(new)	Apr 11	Pacific	Carrier Force

Notes:
Dates refer to planned conversion to MH-60R according to programme announced in late 2003; some changes have already occurred, with HSM-71 now identified as first operational squadron, scheduled to take delivery of MH-60R in FY08 at North Island. It also appears that responsibility for Atlantic Fleet training will be assigned to HSM-70 rather than HSM-40 as stated in table.

Two 455 litre (120 US gallon; 100 Imp gallon) auxiliary fuel tanks on fuselage pylons optional (three on HH-60J). Hover IR suppressor subsystem (HIRSS) exhaust cowling fitted to HH-60H.

ACCOMMODATION: Pilot and airborne tactical officer/back-up pilot in cockpit, sensor operator in specially equipped station in cabin. Dual controls standard. Sliding door with jettisonable window on starboard side. Accommodation heated, ventilated and air conditioned.

SYSTEMS: Generally as for UH-60A.

AVIONICS: Refer also to Current Versions for variants other than SH-60B.

Comms: Rockwell Collins AN/ARC-159(V)2 UHF, Rockwell Collins AN/ARC-174(V)2 HF, Hazeltine AN/APX-76A(V) and Honeywell AN/APX-100(V)1 IFF transponders, TSEC/KG-45(E-1) communications security set, TSEC/KY-75 voice security set, Telephonics OK-374/ASC communications system control group. Satellite communications planned for MH-60R, which also has Mode S IFF transponder and Harris Hawklink Ku-band sensor datalink.

Radar: Raytheon AN/APS-124 search radar on SH-60B and Telephonics AN/APS-147 on MH-60R (Racal Super Searcher for Australia; Telephonics AN/APS-128PC for Taiwan; Telephonics AN/APS-143(V) for Turkey).

Flight: Rockwell Collins AN/ARN-118(V) Tacan, Northrop Grumman AN/APN-127 Doppler, Rockwell Collins AN/ARA-50 UHF DF, Honeywell AN/APN-194(V) radar altimeter. US Navy began testing version of Raytheon Joint Precision Approach and Landing System (JPALS) on an SH-60 in 2002; this system was expected to begin replacing existing radar-based shipboard precision approach system from 2005–06, but funding shortages have resulted in it being indefinitely delayed. MH-60R has Northrop Grumman LN-100G GPS/INS.

Mission: Sikorsky sonobuoy launcher, Flightline AN/ARR-75 and R-1651/ARA sonobuoy receiving sets (AN/ARR-84 receiver in Australian Seahawks and for USN Block 1 upgrade), Raytheon AN/ASQ-81(V)2 towed MAD (CAE AN/ASQ-504(V) internal MAD in Australian Seahawks), Raymond MU-670/ASQ magnetic tape memory unit, Astronautics IO-2177/ASQ altitude indicator, Fairchild AN/ASQ-164 control indicator set, Fairchild AN/ASQ-165 armament control indicator set, IBM AN/UYS-1(V)2 Proteus acoustic processor (Computing Devices UYS-503 for Australia) and CV-3252/A converter display, GD Information AN/AYK-14 (XN-1A) digital computer, Raytheon AN/ALQ-142 ESM, Sierra Research AN/ARQ-44 datalink and telemetry (Rockwell Collins DHS-901 in Australian Seahawks). SH-60F has Honeywell AN/AQS-13F dipping sonar (AN/AQS-18 in Taiwanese S-70s). During 1991 Gulf War, pod-mounted Hughes (now Raytheon) AN/AAQ-16 FLIR fitted to five SH-60Bs and Raytheon AN/AAQ-17 FLIR deployed on one SH-60B; BAE Systems Sea Owl IR turret evaluated later in 1991. Raytheon AN/AAS-44 FLIR/laser ranger and AN/AQS-22 airborne low frequency sonar on MH-60R. Australian examples also acquired AN/AAQ-16 FLIR for 1991 Gulf War. Raytheon AN/AAQ-27 FLIR system adopted as part of upgrade of Australian Seahawks to be undertaken by Tenix Defence Systems. US Navy to acquire airborne laser mine detection system for SH-60B and MH-60R; Northrop Grumman system selected in mid-2000, with 36 month engineering and manufacturing development (EMD) from 2001. Greek aircraft retrofitted with AN/AAQ-22Q Star SAFIRE FLIR sensor between November 2002 and June 2003; Raytheon AN/AAS-44 installed on final three Aegean Hawks.

Self-defence: ESM systems include Raytheon AN/APR-39 RWR on HH-60H; none on SH-60F. MH-60R has Lockheed Martin AN/ALQ-210 ESM. Australian Seahawks fitted with AN/ALE-47 chaff/flare dispensers and AN/AAR-47 missile detectors for 1991 Gulf War. Upgrade of Australian Seahawks to include ESM based on Elisra AES-210 system.

EQUIPMENT: External cargo hook (capacity 2,722 kg; 6,000 lb) and rescue hoist (272 kg; 600 lb) standard. SH-60B/F and MH-60R have provision for eight sonobuoys.

ARMAMENT: US Navy armament includes up to three Mk 46 torpedoes and NFT AGM-119B Penguin Mk 2 Mod 7 anti-shipping missiles. Block I upgrade integrated Penguin and Honeywell Mk 50 Advanced Lightweight Torpedo from 1993. HH-60H has two pintle-mounted M240G 7.62 mm machine guns and was cleared in 1996 to operate with AGM-114 Hellfire ASM. HH-60H can operate with 70 mm (2.75 in) rocket pods and GAU-17/A 7.62 mm forward-firing guns. Hellfire to be included in SH-60B and MH-60R armament for attacking small ships. MH-60J and future MH-60T include provisions for carriage of door-mounted M240 7.62 mm machine guns and M-14 sniper rifle. MH-60R to have Raytheon Mk 54 lightweight hybrid torpedo and provision for crew-served weapons including M60, M240, GAU-16 and GAU-21 machine guns.

DIMENSIONS, EXTERNAL: As UH-60A except:

Length overall, rotors and tail pylon folded:	
SH-60B	12.47 m (40 ft 11 in)
HH-60H	12.51 m (41 ft 0⅞ in)
HH-60J	13.13 m (43 ft 0⅞ in)
Length of fuselage: HH-60J	15.87 m (52 ft 1 in)
Width, rotors folded	3.26 m (10 ft 8½ in)
Height:	
overall, tail rotor turning	5.18 m (17 ft 0 in)
overall, pylon folded	4.04 m (13 ft 3¼ in)
to top of rotor head	3.79 m (12 ft 5⅝ in)
Wheelbase	4.83 m (15 ft 10 in)
Tail rotor ground clearance	1.83 m (6 ft 0 in)
Main/tail rotor clearance	6.6 cm (2⅝ in)

AREAS: As UH-60A

WEIGHTS AND LOADINGS:

Weight empty: SH-60B ASW	6,191 kg (13,648 lb)
HH-60H	6,114 kg (13,480 lb)
HH-60J	6,086 kg (13,417 lb)
Useful load: HH-60J	3,551 kg (7,829 lb)
Internal payload: HH-60H	1,860 kg (4,100 lb)
Mission gross weight:	
SH-60B	9,575 kg (21,110 lb)
Max T-O weight:	
SH-60B Utility, HH-60H	9,926 kg (21,884 lb)
SH-60F, MH-60R	10, 659 kg (23,500 lb)
HH-60J	9,637 kg (21,246 lb)
Max disc loading:	
SH-60B Utility, HH-60H	47.2 kg/m² (9.67 lb/sq ft)
SH-60F, MH-60R	50.7 kg/m² (10.39 lb/sq ft)
HH-60J	45.9 kg/m² (9.39 lb/sq ft)
Transmission loading at max T-O weight and power:	
SH-60B Utility, HH-60H	3.92 kg/kW (6.44 lb/shp)
SH-60F, MH-60R	4.21 kg/kW (6.91 lb/shp)
HH-60J	3.80 kg/kW (6.25 lb/shp)

PERFORMANCE:

Cruising speed at S/L:	
HH-60H	147 kt (272 km/h; 169 mph)
HH-60J	146 kt (271 km/h; 168 mph)
Dash speed at 1,525 m (5,000 ft), tropical day:	
SH-60B	126 kt (234 km/h; 145 mph)
Vertical rate of climb at S/L, 32.2°C (90°F):	
SH-60B	213 m (700 ft)/min
Vertical rate of climb at S/L, 32.2°C (90°F), OEI: SH-60B	137 m (450 ft)/min

SIKORSKY S-76

TYPE: Multirole medium helicopter.

PROGRAMME: S-76A announced 19 January 1975; first flight (N762SA) 13 March 1977; certification to FAR Pt 29, Category B, on 21 November 1978; Category A on 9 January 1979; deliveries started early 1979; delivery of Mk II began 1 March 1982; S-76B programme initiated October 1983; first flight (N3123U) 22 June 1984; certified in category B on 31 October 1985 and in Category A on 3 February 1987; final S-76B delivered December 1997; see 1997–98 and previous *Jane's All the World's Aircraft* for details of these early models.

S-76C announced June 1989; replaced S-76B's P&WC PT6B turboshafts with Arriel engines; first flight 18 May 1990; FAA certification in Category B on 15 March 1991 and in Category A on 12 April 1991, deliveries beginning immediately thereafter.

Following manufacture of c/n 760514 in mid-2000, production of S-76C+ fuselages progressively transferred to Aero Vodochody of the Czech Republic under a USD200 million contract, beginning with Sikorsky-built c/n 760515, which was shipped to the Czech Republic for final assembly and scheduled to return to the USA in January 2001. Three further shipsets to be sent from Sikorsky, with first wholly Czech-built fuselage completed in late 2001; 100th Czech-built airframe delivered to Sikorsky in July 2006. Fiescher Advanced Composites of Austria supplies composites components to Aero Vodochody. Keystone Helicopter Corporation of West Chester, Pennsylvania, selected in April 2000 as principal completion centre for S-76C+s, following flight testing and certification at Sikorsky's Stratford, Connecticut, facility, and completed its 50th S-76C+ on 8 September 2004.

By May 2006 some 600 S-76s of all models were in service with 220 operators in 59 countries, and had accumulated more than four million flight hours, with 99.9 per cent despatch reliability.

CURRENT VERSIONS: **S-76C:** Initial production version with Arriel 1S1 engines; now superseded by S-76C+.

S-76C+: FAA and CAA certification and first delivery, mid-1996; features Arriel 2S1 turboshafts with FADEC for improved single-engine performance and fuel efficiency. 'Quiet Zone' gearbox transmission introduced in 2005. *As described.*

S-76C++: Improved version, announced February 2005; FAA certification granted 3 January 2006. Combines airframe of S-76C+ with Turbomeca Arriel 2S2 engines, each rated at 688 kW (922 shp) for T-O, 621 kW (833 shp) maximum continuous, 770 kW (1,032 shp) OEI for 30 seconds; 'Quiet Zone' gearbox; Honeywell VXP HUMS; 159 to 204 kg (350 to 450 lb) increase in Category A max T-O weight at 90°F at sea level; improved inlet protection via full-coverage barrier filters; and enhanced safety features including EGPWS and TCAS, airframe-mounted liferafts, enlarged pop-out cabin windows and automatic float deployment. Long-range cruising speed 137 kt (254 km/h; 158 mph); service ceiling, OEI 1,495 m (4,900 ft); range at long-range cruising speed, 30 min reserves 345 n miles (639 km; 397 miles). Optional five-passenger VIP interior by Keystone Helicopter Corporation and Heritage Aviation, introduced in 2005, features two forward-facing captain's leather chairs and a three-person aft-facing bench and Keystone Silencer soundproofing system.

S-76D: Further improved version, announced February 2005. Features include Pratt & Whitney PW210S engines each rated at 746 kW (1,000 shp) that will afford an increase in max T-O weight of nearly 454 kg (1,000 lb) with no range penalty when compared with the S-76C+; new main rotor with advanced technology composites blades of advanced aerofoil section that will improve hovering performance and cruise efficiency while offering greater damage tolerance; a 136 kg (300 lb) increase in maximum T-O weight in hot-and-high conditions and a 50 n mile (93 km; 57 mile) increase in maximum range compared to the current versions' main rotor; new quiet tail rotor (NQTR) affording a 2 dBA reduction in external noise at take-off and a 1.5 dBA reduction on flyover; rotorcraft icing protection system (RIPS) for main and tail rotor blades permitting despatch into known icing conditions; and Thales TopDeck integrated avionics featuring large format active matrix LCD displays. Certification to FAA/EASA requirements and first deliveries expected in late 2008.

CUSTOMERS: See table. The 600th production S-76 received its airworthiness certificate on 30 September 2005. Recent customers include The Fisheries and Maritime Affairs Department of Xunta de Galicia in Spain, which took delivery of two S-76C+s on 31 May 2005 for SAR operations; CHC Helicopter Corporation of Vancouver, British Columbia, which ordered five in February 2005; Era Aviation, which has ordered two S76C+s and three S-76C++s for delivery beginning in the first quarter of 2006 and deployment on offshore oil support duties in the Gulf of Mexico; China Eastern General Aviation Corporation, which ordered two in August 2005 to support offshore oil operations in the Bohai Bay area of Northern China; J C Bamford Excavators Ltd of the UK, which has ordered an S-76C++ for delivery in September 2006; Malaysian Helicopter Service, which ordered three S-76C++s for delivery in July 2007; Aero Med Spectrum Health of Grand Rapids, Michigan, which has ordered one S-76C++; Wynn Resorts (Macau) SA, which ordered two S-76C++s for delivery in 2007; Xavier Aviation of Palm Springs, Florida, which ordered two S-76Ds; and Premier Aviation Services Ltd, which has ordered two S-76Ds.

COSTS: Unit cost approximately USD8.5 million in offshore configuration (2004).

DESIGN FEATURES: Meets FAR Pt 29 with Category A IFR; intended for offshore support, business transport, medical evacuation and general utility use; technology and aerodynamics based on those of UH-60 Black Hawk.

Four-blade main rotor with high twist and varying section and camber based on Sikorsky SC-1095; tapered blade tip has 30° leading-edge sweep; fully articulated rotor head with single elastomeric bearings; hydraulic drag dampers; dual bifilar vibration absorber assemblies above rotor head; four-blade cross-beam tail rotor on port side; rotor brake optional. Max rotor speed, power on, 316 rpm (108 per cent). Main rotor blade life of 28,000 hours; tail rotor life unlimited. Optional manual blade folding.

Emergency medical service installation includes multiple-position pivoting primary patient litter, a second litter, and track-mounted seats for four attendants, forward and rear oxygen systems, and dual access to external power on ground; cabin volume 4.0 m^3 (141 cu ft).

FLYING CONTROLS: Dual powered hydraulic controls with autostabilisation and autopilot; releasable spring-centring trim system for both cyclic and collective controls.

STRUCTURE: Main rotor blades have formed and welded titanium oval-section tubular main spar with Nomex honeycomb aerofoil core, glass fibre composites outer skin and titanium/nickel leading-edge abrasion strips. Fuselage has bonded aluminium/honeycomb skin panels to permit flush riveting; extensive use made of carbon fibre (replacing Kevlar and glass fibre in earlier S-76s). Aerospace Industrial Development Corporation (AIDC) of Taiwan signed five-year contract in December 1998 for supply of composites crew and passenger doors.

LANDING GEAR: Hydraulically retractable tricycle type, with single wheel on each unit. Nosewheel retracts rearward, main units inward into rear fuselage; all three wheels are enclosed by doors when retracted. Mainwheel tyres size 14.5×5.5–6 (14 ply) tubeless, pressure 11.38 bar (165 lb/sq in); nosewheel tyre size 5.00–4 (12 ply) tubeless, pressure 9.31 bar (135 lb/sq in). Hydraulic brakes; hydraulic mainwheel parking brake. Non-retractable tricycle gear, with low-pressure tyres and skid landing gear both optional.

POWER PLANT: Two Turbomeca Arriel 2S1 turboshafts with FADEC, each rated at 638 kW (856 shp) for take-off, 731 kW (980 shp) OEI for 30 seconds and 592 kW (794 shp) maximum continuous; transmission rating 1,193 kW (1,600 shp) for take-off and maximum continuous. Standard fuel capacity 1,083 litres (286 US gallons; 238 Imp gallons) of which 1,064 litres (281 US gallons; 234 Imp gallons) are usable; optional auxiliary tank capacity 405 litres (107 US gallons; 89.1 Imp gallons). Self-sealing tanks optional.

ACCOMMODATION: One or two pilots and 12 to 13 passengers. Three four-abreast rows of seats, floor-mounted at a pitch of 79 cm (31 in). A number of executive layouts are available, including a four-passenger 'office in the sky' configuration. Executive versions have luxurious interior trim, full carpeting, special soundproofing, radiotelephone and co-ordinated furniture. Dual controls optional. Two large doors on each side of fuselage, hinged at forward edges; sliding doors available optionally. Baggage hold aft of cabin, with external door each side of fuselage. Cabin heated and ventilated; air conditioning optional. Windscreen demisting and dual windscreen wipers. Windscreen heating and external cargo hook optional.

SYSTEMS: Hydraulic system at pressure of 207 bar (3,000 lb/sq in) supplied by two pumps driven from main gearbox. Hydraulic system maximum flow rate 15.9 litres (4.2 US gallons; 3.5 Imp gallons)/min. Bootstrap reservoir. Pump head pressure 3.45 bar (50 lb/sq in). In VFR configuration, electrical system comprises two 200 A DC starter/generators and a 24 V 17 Ah Ni/Cd battery. In IFR configuration, system comprises gearbox-driven 7.5 kVA generator, and a 115 V 600 VA 400 Hz static inverter for AC power. 34 Ah battery optional. Engine fire detection and extinguishing system.

AVIONICS: *Comms:* Honeywell Primus II integrated radios.

Radar: Honeywell Primus 440 colour weather radar.

Flight: Honeywell SPZ-7600 dual digital AFCS. Optional Universal UNS-1D navigation management system, L-3 Com/Sextant TCAS and Argus moving map display.

Instrumentation: Four-tube Honeywell colour EFIS; Parker Hannifin Gull Electronics active colour matrix LCD three-screen integrated instrument display system (IIDS).

EQUIPMENT: Standard equipment includes cabin fire extinguishers; cockpit, cabin, instrument, navigation and anti-collision lights; landing light; external power socket; and utility

Notes: Some S-76As retrofitted to A+. Excludes seven (six flying) prototypes and pre-series

soundproofing. Optional equipment includes 1,497 kg (3,000 lb) capacity cargo hook, 272 kg (600 lb) capacity rescue hoist, emergency flotation gear, engine air particle separators and litter installation.

DIMENSIONS, EXTERNAL:

Main rotor diameter	13.41 m (44 ft 0 in)
Main rotor blade chord	0.39 m (1 ft 3½ in)
Tail rotor diameter	2.44 m (8 ft 0 in)
Tail rotor blade chord	0.16 m (6½ in)
Length: overall, rotors turning	16.00 m (52 ft 6 in)
fuselage	13.21 m (43 ft 4 in)
Height overall, tail rotor turning	4.42 m (14 ft 6 in)
Tailplane span	3.05 m (10 ft 0 in)
Width of fuselage	2.13 m (7 ft 0 in)
Wheel track	2.44 m (8 ft 0 in)
Wheelbase	5.00 m (16 ft 5 in)
Tail rotor ground clearance	1.97 m (6 ft 5¾ in)

DIMENSIONS, INTERNAL:

Passenger cabin: Length	2.41 m (7 ft 11 in)
Max width	1.93 m (6 ft 4 in)
Max height	1.35 m (4 ft 5 in)
Floor area	4.18 m^2 (45.0 sq ft)
Volume	5.8 m^3 (204 cu ft)
Baggage compartment volume	1.1 m^3 (38 cu ft)

AREAS:

Main rotor disc	141.26 m^2 (1,520.5 sq ft)
Tail rotor disc	4.67 m^2 (50.27 sq ft)
Tailplane	2.00 m^2 (21.5 sq ft)

WEIGHTS AND LOADINGS:

Operating weight empty	2,545 kg (5,611 lb)
Weight empty, executive configuration	3,691 kg (8,138 lb)
Max baggage	272 kg (600 lb)
Useful load	1,616 kg (3,562 lb)
Max fuel	3,030 kg (6,680 lb)
Max T-O weight	5,307 kg (11,700 lb)
Max disc loading	37.6 kg/m^2 (7.69 lb/sq ft)
Transmission loading at max T-O weight and power	4.45 kg/kW (7.31 lb/shp)

PERFORMANCE:

Never-exceed speed (VNE) and max level speed	155 kt (287 km/h; 178 mph)
Long-range cruising speed	140 kt (259 km/h; 161 mph)
Max rate of climb at S/L	495 m (1,625 ft)/min
Service ceiling	3,871 m (12,700 ft)
Service ceiling, OEI	975 m (3,200 ft)
Hovering ceiling: IGE	1,722 m (5,650 ft)
OGE	549 m (1,800 ft)
Range at 140 kt (259 km/h; 161 mph) at FL40, standard fuel:	
no reserves	439 n miles (813 km; 505 miles)
30 min reserves	385 n miles (713 km; 443 miles)

SIKORSKY S-92 and H-92 SUPERHAWK

Canadian Forces name: CH-148 Cyclone

TYPE: Medium transport helicopter.

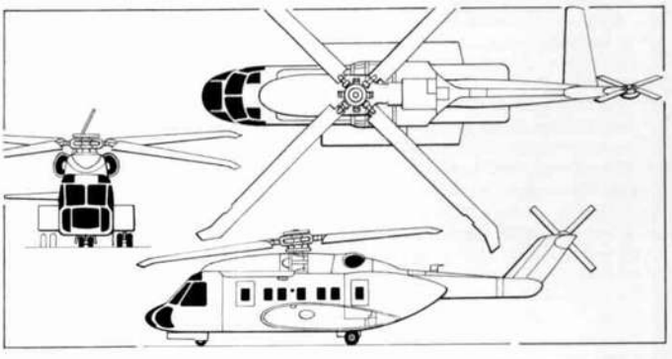
PROGRAMME:

DEVELOPMENT MILESTONES

Programme launched	Jun 95
Announced	Mar 92
First flight	23 Dec 98
First flight, production representative	5 Oct 01
First flight, production	14 Jun 04
Certification	17 Dec 02

Announced March 1992; originally envisaged as S-92C'Growth Hawk' development of S-70; market evaluation co-ordinated with Mitsubishi Corporation and Mitsubishi Heavy Industries. Launched at Paris Air Show, June 1995 as S-92A Helibus and military S-92IU (international utility). Risk-sharing partners Mitsubishi Heavy Industries (7.5 per cent), Jingdezhen Helicopter Group of China (2 per cent) and Gamesa of Spain (7 per cent), with

Turkish military Sikorsky S-92 in VIP role 1159806



Sikorsky S-92 in envisaged production configuration *(James Goulding)* 0103496

Taiwan Aerospace (6.5 per cent) and Embraer (4 per cent) as additional fixed-price supplier/partners; Russia's Mil is associated with programme, but not yet a full partner; other suppliers include Aerazur (fuel cells), Goodrich (health and usage monitoring system), Dunlop (engine inlet), Eaton (emergency flotation bag electro-optical sensors); Hamilton Sundstrand (automatic flight control system and active vibration computers), Honeywell (radar and APU), Lucas-Western (rescue hoist), Martin-Baker (crew seats), Messier-Bugatti (wheels and brakes), Moog (active vibration controls), Parker Bertea (servos), Rockwell Collins (multifunction displays and nav/com suite); Universal (FMS) and Vickers (hydraulic pumps). Programme rationalisation resulted in discontinuation of S-92IU and adoption of standard civil/military configuration with new designation S/H-92 applied in 2002; designations S-92 and H-92 Superhawk adopted in 2003 for civilian and military variants respectively.

Design changes announced in July 2000 in response to customer requests include a 0.41 m (1 ft 4 in) increase in cabin length to permit installation of a 1.27 m (4 ft 2 in) wide cabin door to improve hoisting capability and to accommodate a Stokes litter during SAR operations; reduction in height of tail rotor pylon by about 1.02 m (3 ft 4 in) to offset additional weight of cabin extension; and relocation of the horizontal stabiliser. These changes will provide additional benefits in creating an improved fold configuration for shipboard operations, increased birdstrike protection deriving from the relocation of tail rotor drive shaft and controls aft of the tail spar, and a flatter hover attitude arising from a forward shift of the helicopter's centre of gravity, improving visibility for confined space and shipboard landing, and increasing aft fuselage ground clearance. The revised configuration has been incorporated from the third prototype and on all production aircraft.

Test programme comprises one ground test vehicle (PA1/GTV; first airframe built, first ground run 4 September 1998 and completed 200-hour FAA certification endurance run in September 1999) and four flying prototypes, of which first (PA2/N292SA) completed maiden flight at Sikorsky's Development Flight Center in Florida on 23 December 1998 and was subsequently modified to the revised configuration described above. GTV and first

First Sikorsky S-92 delivered to Cougar Helicopters of Canada 1159805

For details of the latest updates to ***Jane's All the World's Aircraft*** online and to discover the additional information available exclusively to online subscribers please visit
jawa.janes.com

flying prototype have 1,305 kW (1,750 shp) CT7-6D engines; remaining three flying prototypes have production-standard CT7-8s and APUs. PA3/N392SA (second flying) joined the test programme in May 1999, flew in October, and is devoted principally to engine and AFCS development; subsequently upgraded to production configuration with extended main rotor shaft; new main rotor servos; redesigned electrical system to maintain rotor ice protection after a generator failure; new tail rotor pylon; and state-of-the-art cockpit displays. Flown again in this configuration on 22 March 2002. PA4/N492SA delayed during assembly to incorporate airframe changes described above and final avionics updates and first flew in definitive production configuration on 5 October 2001. PA5/N592SA, exhibited unflown at the Paris Air Show in June 1999, is in utility configuration with MIL-STD-1553 databus, rear loading ramp, folding seats for 22 troops, sliding windows, cargo hook and provision for 7.62 mm machine gun pintle mounts; was later modified to revised configuration as described above, and made its first flight on 8 February 2001.

By February 2002, PA2 had flown more than 380 hours, and PA3 221 hours, including flights at maximum take-off weight of 13,998 kg (30,860 lb), demonstrating a range of 800 n miles (1,482 km; 921 miles) with mid-mission hover; PA4 had flown 60 hours; and PA5 more than 260 hours. PA2 was withdrawn from use in May 2002.

FAA FAR Pt 29 Category A Amendment 47 certification achieved 17 December 2002 after 1,570-hour flight test programme; Category B full release awarded 7 May 2004. EASA certification achieved 8 June 2004 as the first helicopter certified by the Agency, followed by EASA approval in April 2006 for flight into known icing conditions. Transport Canada certification achieved 7 February 2005. Initial production aircraft (c/n 920006/N192PH) made its first flight on 14 June 2004.

Total fleet time exceeded 20,000 flight hours in July 2006, with two high-time airframes having logged more than 2,200 hours each.

CURRENT VERSIONS: **S-92A:** Civilian variant, *as described.*

H-92 Superhawk: Military variant. Name announced at the Paris Air Show 16 June 2003. Features uprated 2,289 kW (3,070 shp) CT7-8C engines providing some 25 per cent more power than the S-92's CT7-8As; folding main and tail rotors; BAE Systems fly-by-wire controls; self-sealing fuel tanks; armour protection for critical components; self-defence systems including chaff/flare dispensers and IR suppression; and Rockwell Collins mission avionics. Programme timetable dependent on engine development, with first flight tests of CT7-8C targeted for 2006 and certification on H-92 in 2007.

The H-92 Superhawk is also competing for the USAF combat search and rescue helicopter programme to replace HH-60G Pave Hawks, with a requirement for 100 to 150 helicopters, and in a proposed **VH-92** variant which was the unsuccessful contender for the US Marine Corps VX requirement to replace VH-3Ds for Presidential transport missions.

H-92 Cyclone: Canadian military version. Selection announced 22 July 2004 and confirmed 23 November 2004; 28 required for service in maritime role aboard Halifax-class vessels at cost of CAD1.8 billion (including ship adaptation). Sikorsky is teamed with Bombardier Aerospace Defence Services for the Cyclone, which will replace Canadian Forces Sea King helicopters. General Dynamics Canada is responsible for mission system integration, and Bombardier will perform interior completion, installation and checking of mission equipment, exterior painting and final acceptance and delivery, in addition to in-service support and fleet management. Deliveries from November 2008 at one per month.

CUSTOMERS: First four delivered in 2004, followed by 19 in 2005.

Launch customer Cougar Helicopter of Eastern Canada announced intent to order up to five for delivery in 2002; following programme delays, reaffirmed requirement for three at February 2003 Heli-Expo, Dallas, Texas of which the first entered service in June 2005 in support of PetroCanada exploration in the Terra Nova offshore fields in Newfoundland and Labrador. Other announced civil customers include Norsk Helikopter which ordered two for its Stratoil contract in February 2003, with service entry of the first on 21 February 2005, followed by the second in April 2005 and third on 2 January 2006, at which time the Norsk S-92 fleet had accumulated 3,206 flight hours; Petroleum Helicopters Inc (PHI) ordered six for offshore support operations in the Gulf of Mexico, of which the first was "handed over" in unflown condition at Heli-Expo 2004 at Dallas in March 2004, and the fourth was delivered in June 2005; CHC Helikopter Service, ordered an initial two, the first of which entered service on 23 May under contract to Norsk Hydro; Gulf Helicopters of Qatar, ordered one in VVIP configuration for delivery in 2006; Brunei Shell Petroleum, which ordered three in September 2005 for offshore oil support in the South China Sea; Eastern General Aviation Corporation of China, ordered one in September 2005 for delivery in late 2006 and subsequent operation in the Bohai Bay area on offshore oil support missions; the Government of Turkey, ordered one in December 2004 for head of state missions; the Republic of Korea, ordered three in VIP configuration for its Presidential mission, with delivery beginning in 2007 and the Turkmenistan Government, which ordered two for delivery in 2005-06 for Presidential transport. First VIP configured S-92 (c/n 920007/N908W) delivered to Harrods Aviation at London-Stansted Airport, UK, on 22 September 2004, for operation on behalf of Laws Helicopter LLC. CHC Helicopter Corporation ordered four on 13 December 2005 for operation in SAR role on behalf of the UK Maritime and Coastguard Agency, commencing 1 July 2007 from bases at Sumburgh and Stornoway, Scotland. In June 2006, the Bristow Group signed a multiyear agreement for the supply of S-92s, with first deliveries scheduled for early 2007.

COSTS: Programme USD600 million. Direct operating cost USD2,381 per hour, comprising USD1,194 fixed and USD1,175 variable costs (2003). Turkmenistani order for two valued at USD54 million (2004).

DESIGN FEATURES: Design, manufacture and assembly use CATIA database system; modular design simplifies customised configurations. Standard medium helicopter configuration, with engines above cabin; raised tailboom to permit rear loading via ramp; high-set, strut-braced tailplane to port. Prominent sponsons accommodate main landing gear and fuel.

Dynamic components based on proven Sikorsky technology to reduce development risks, including: titanium yoke-type infinite-life main rotor head with elastomeric bearings; four-blade, quick-release, all-composites main rotor with swept, tapered anhedral tips based on scaled-up version of blades tested on Black Hawk in 1995–96; blade chord increased 12 per cent, compared with Black Hawk; damping masses at mid-span of each blade; normal rotor speed 246 rpm; new transmission based on upgraded four-stage version of Black Hawk's three-stage main gearbox; rotor brake; new intermediate tail rotor gearbox; and new four-blade, fully articulated, birdstrike-tolerant tail rotor with individually removable blades to starboard, meeting FAR/JAR 29 birdstrike requirements. Manual rotor blade folding (two forward; two aft). New-style bifiliar vibration absorber, with Hamilton Sundstrand computer and Moog actuators, on top of rotor hub comprises metal drum enclosing five composites springs allowing absorber to move in opposition to in-plane forces. Service life initially set (2004) at 30,000 hours. Target TBO for rotor head is 50,000 hours. Gearbox TBO 6,000 hours.

FLYING CONTROLS: Similar, but not identical, to Black Hawk; dual digital AFCS with autopilot and dual independent, triple-axis stability augmentation features Hamilton Sundstrand primary processor based on that of RAH-66 Comanche, and is expected to have 8,000 hour MTBF. BAE Systems contracted in 2003 to design FBW control system.

STRUCTURE: Modular structure of aluminium and composites (about 40 per cent of structure is of composites, though mostly non-structural to reduce costs) designed to be highly crack-resistant, with extensive lightning/HIRF protection; composites main rotor blades (including spars); structure optimised for minimum parts count.

Sikorsky responsible for rotor and transmission systems, final assembly and flight test. Airframe largely designed and manufactured by 'Team S-92' partners, as follows: Mitsubishi (main cabin), AIDC of Taiwan (flight deck), Embraer (sponson front halves, landing gear and incorporation of Aerazur/Intertechnique fuel system), Gamesa (cabin interior, aft fuselage, tail boom and upper fuselage transmission housing), and Jingdezhen (vertical tail including horizontal stabiliser).

LANDING GEAR: Retractable tricycle; main units retract rearwards into sponsons; nosewheel retracts forwards under flight deck. Wheels and brakes supplied by Messier-Bugatti. Optional inflatable emergency flotation bags, usable up to Sea State 5, activated by Eaton electro-optical sensors.

POWER PLANT: Two GE CT7-8A turboshafts, each rated at 1,879 kW (2,520 shp) for T-O, 1,742 kW (2,336 shp) for 30 minutes, and 1,523 kW (2,043 shp) maximum continuous; 1,939 kW (2,600 shp) OEI 30 seconds; 1,879 kW (2,520 shp) OEI 2 minutes; 1,863 kW (2,498 shp) OEI 30 minutes; and 1,523 kW (2,043 shp) OEI continuous. Hamilton Sundstrand dual-channel FADEC with autostart, power assurance and OEI training modes. Rolls-Royce Turbomeca RTM322 will be offered as alternative engine if demand is forthcoming. Transmission via modular compound planetary gearbox with 30 minute run-dry capability and 140 per cent overtorque certification, rating 3,110 kW (4,170 shp).

Single-point pressure refuelling/defuelling. Standard fuel in sponsons, each with optional gravity fuelling port, combined capacity 2,896 litres (765 US gallons; 637 Imp gallons) of which 2,877 litres (760 US gallons; 633 Imp gallons) are usable. Standard auxiliary fuel option of 1,401 litres (370 US gallons; 308 Imp gallons, comprising two 700 litre (185 US gallon; 154 Imp gallon) tanks in cabin. Other fuel options include two external tanks, each 871 litres (230 US gallons; 192 Imp gallons); or single or dual 322 litre (85.0 US gallon; 70.8 Imp gallon) bench-type tanks in cabin. Crash-resistant fuel system standard. In-flight refuelling probe optional.

ACCOMMODATION: Two-pilot crew on separate flight deck on FAA/JAA 16 *g* crashworthy seats; provision for one flight deck observer; 19 (FAA certification limit) to 24 passengers, with baggage on rear ramp; 10 executive passengers; or up to three LD-3 cargo containers in civil version. Martin-Baker ergonomically advanced crew seats available from mid-2006. In medevac configuration cabin can accommodate 16 patients on lifters. Main door, starboard side, front in three options: (a) split horizontally in upward- and downward-hinged sections, latter including steps; (b) lower airstair section with inward/backward-sliding upper portion (allowing installation of external SAR winch) and (c) full-height sliding door incorporating Type IV emergency exit. Further three FAA/JAA Type IV cabin emergency exits, plus pop-out windows at each seat row, for rapid emergency evacuation. Total of 22 combat-ready troops on sideways seats in military version; both versions have rear-loading ramp and 366 kg/m^2 (75 lb/sq ft) minimum floor rating (optionally 976 kg/m^2; 200 lb/sq ft). Military version has sliding cabin windows and weapons mounts. Martin-Baker crew and passenger seats. Accommodation is heated and ventilated with independent cockpit and cabin zones; air conditioning optional. Active noise suppression system under consideration.

SYSTEMS: Goodrich IMD-HUMS health and usage monitoring system standard, with cockpit displays and downloading facility to enable ground crew to access system via hand-held diagnostic equipment; active noise control system reduces cabin noise by 3 to 4 dB; active vibration control may be employed in key airframe areas.

Honeywell 36-150 (S92) APU with in-flight start and continuous run capability. Electrical system comprising two 75 kVA, 115 V, 400 Hz, three-phase main gearbox-driven AC generators, two 400 A, AC/28 V DC converters and one 35 kVA APU-driven back-up generator with 100 A AC/DC backup converter. Battery 28 V, 15 Ah. Three hydraulic systems, supplied by main gearbox-driven pumps, two serving main and tail rotor and stability augmentation system, while third serves utilities and acts as back-up; all 276 bar (4,000 lb/sq in). Anti-icing system for engine inlets, windscreen and pitot head; main and tail rotor de-icing optional. Automatically deployed emergency flotation system meets or exceeds FAR/JAR stability requirements and has demonstrated Sea State 5 capability; externally mounted 14-person liferaft in forward end of each sponson, with 50 per cent overload capability.

AVIONICS: Open architecture avionics system accommodating ARINC 429 and MIL-STD-1553 interfaces with Collins Pro Line 4 as core system.

Comms: Dual VHF, radio management and audio controls. Mode S transponder. BAE Systems CVR/FDR. Optional deployable emergency beacon.

Radar: Provision for radar in nose compartment.

Flight: UNS-1C FMS; Hamilton Sundstrand automatic flight control system featuring three-axis stability augmentation system and fully coupled dual digital autopilots with automatic approach-to-hover option. Independent standby instruments. Optional UNS-1ESP with GPS; TCAS I; and EGPWS.

Instrumentation: Rockwell Collins EFIS cockpit with four 203 × 152 mm (8 × 6 in) MFD-268EP active matrix liquid crystal displays (AMLCD) for PFD, EICAS, health monitoring, navigational and weather radar functions; fifth AMLCD, 152 × 203 mm (6 × 8 in) centre-mounted, optional for displaying sensor information such as moving map or FLIR data.

All avionics housed in removable mission equipment rack behind co-pilot station with wiring routed through conduits in fuselage frames for added protection.

Mission: Optional satcom, FLIR and loudhailer.

EQUIPMENT: Optional, single or dual, hydraulically powered, electrically controlled SAR rescue hoist, maximum capacity 272 kg (600 lb), with 88 m (290 ft) of usable cable, cable viewing window and spotlight. Windscreen wiper/washer system. Optional cargo handling system, which is compatible with 1.07 × 1.22 m (3 ft 6 in × 4 ft 0 in) pallets, includes 1,814 kg (4,000 lb) capacity centreline winch with 28 V DC winch motor, easy on/off cabin rollers, and 16 *g* cargo tiedowns at all major frames.

DIMENSIONS, EXTERNAL:

Main rotor diameter	17.71 m (56 ft 4 in)
Tail rotor diameter	3.35 m (11 ft 0 in)
Length overall, rotors turning	20.88 m (68 ft 6 in)
Fuselage: Length: airframe	17.12 m (56 ft 2 in)
incl tail rotor	18.47 m (60 ft 7 in)
Max width: over sponsons	3.89 m (12 ft 9 in)
incl horizontal stabiliser	5.26 m (17 ft 3 in)
Max width, main rotor in X position	12.19 m (40 ft 0 in)
Height: overall, tail rotor turning	5.46 m (17 ft 11 in)
tail rotor in X position	5.13 m (16 ft 10 in)
to top of main rotor head	4.70 m (15 ft 5 in)
to top of fin	4.32 m (14 ft 2 in)
Wheel track (c/l shock-absorbers)	3.17 m (10 ft 5 in)
Wheelbase	6.20 m (20 ft 4 in)
Forward door (stbd): Height	1.85 m (5 ft 11 in)
Width	1.02 m (3 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin: Length (incl bulkhead)	6.10 m (20 ft 0 in)
Max width	2.01 m (6 ft 7 in)
Max height	1.83 m (6 ft 0 in)
Volume	16.9 m^3 (596 cu ft)
Baggage volume (civil)	3.97 m^3 (140 cu ft)

AREAS:

Main rotor disc	231.55 m^2 (2,492.4 sq ft)
Tail rotor disc	8.83 m^2 (95.03 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: offshore oil	7,654 kg (16,875 lb)
airline	7,666 kg (16,901 lb)
SAR	7,650 kg (16,866 lb)
Operating weight empty:	
offshore oil	7,857 kg (17,322 lb)
airline	7,869 kg (17,348 lb)
SAR	8,034 kg (17,713 lb)
Max baggage weight	454 kg (1,000 lb)
Max fuel: internal	2,327 kg (5,130 lb)
with auxiliary tank	3,460 kg (7,628 lb)
Max external load	4,536 kg (10,000 lb)
Max T-O weight (civil):	
internal load	12,020 kg (26,500 lb)
external load	12,836 kg (28,300 lb)
Max disc loading:	
internal load	51.91 kg/m^2 (10.63 lb/sq ft)
external load	55.4 kg/m^2 (11.35 lb/sq ft)
Transmission loading at max T-O weight and power:	
internal load	3.87 kg/kW (6.35 lb/shp)
external load	4.13 kg/kW (6.79 lb/shp)

PERFORMANCE (at max internal load T-O weight):

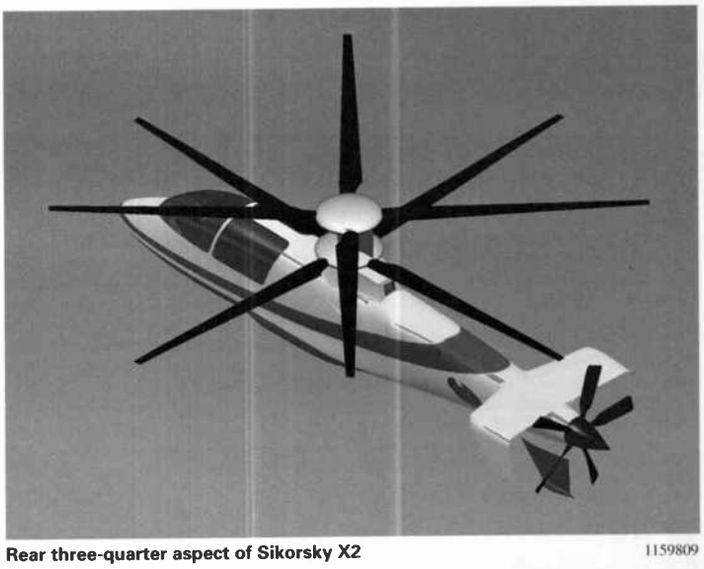
Never-exceed speed (VNE): power on	165 kt (305 km/h; 189 mph) IAS
power off	120 kt (222 km/h; 138 mph) IAS
Max cruising speed	151 kt (280 km/h; 174 mph)
Long range cruising speed	136 kt (252 km/h; 157 mph)
Service ceiling	4,425 m (14,520 ft)
Hovering ceiling: IGE	3,330 m (10,920 ft)
OGE	2,040 m (6,700 ft)
Range, offshore configuration: standard internal fuel, 19 passengers and baggage, 30 min reserves + 10%	400 n miles (740 km; 460 miles)
as above, no reserves	495 n miles (916 km; 569 miles)
with max internal fuel, 30 min reserves + 10%	712 n miles (1,318 km; 819 miles)
Range, airline configuration:	
with 19 passengers and baggage, 30 min reserves	476 n miles (881 km; 547 miles)
with 19 passengers and baggage, no reserves	543 n miles (1,005 km; 624 miles)
Max range with main fuel, 30 min reserves	532 n miles (985 km; 612 miles)
SAR mission radius of action:	
standard internal fuel + 10% reserves:	
pick up 25 survivors	147 n miles (272 km; 169 miles)
pick up 6 survivors	226 n miles (418 km; 260 miles)
max internal fuel + 10% reserves:	
pick up 25 survivors	247 n miles (457 km; 284 miles)
pick up 6 survivors	334 n miles (618 km; 384 miles)

SIKORSKY X2

TYPE: New concept rotorcraft.

PROGRAMME: At the American Helicopter Society International Annual Technical Forum in Texas on 1 June 2005, Sikorsky announced plans to build and test fly a demonstrator for its new class of X2 Technology coaxial rotor helicopters, which are aimed at maintaining or improving all vertical flight capabilities of current helicopters while providing a high cruising speed of 250 kt (463 km/h; 288 mph). Goal is doubled performance parameters — hence 'Times Two' designation.

X2 Technology refers to a suite of technologies that Sikorsky will apply to achieve new levels of performance and speed on coaxial rotor helicopters, and is intended to describe the multiplying effects (times two) of technologies that will include new rotor blade designs,



Rear three-quarter aspect of Sikorsky X2 1159809

Impression of possible Joint Heavy Lift helicopter, based on X2 work

1159811

rotor hub drag reduction, fly-by-wire, advanced flight control laws, transmissions with greater power-to-weight performance and the ability to transfer power seamlessly from main rotors to an aft propulsor, and active vibration control. In developing the X2, Sikorsky will draw on previous in-house research including the XH-59A Advancing Blade Concept (ABC) demonstrator prototypes flown 1973-77, Cypher UAV and RAH-66 Comanche.

The X2 Technology demonstrator, which will be built by Sikorsky subsidiary Schweizer Aircraft Corporation, is a two-seat design powered by a single LHTEC T800-801 turboshaft driving coaxial four-blade main rotors and a five-blade tail-mounted propulsor. Programme partners include Chelton Flight Systems (cockpit display), Eagle Aviation (rotor blades), Hamilton Sundstrand (modifying and providing data concentrator units), Honeywell (central processing units), LHTEC (engine). First flight is expected in late 2006. On 3 November 2005, a modified Schweizer 333 equipped with the X2 Technology fly-by-wire system made its first flight and is being used as a surrogate test vehicle.

Potential future developments of X2 technology include attack helicopters, commercial transports, 'flying crane', and UAVs.

In September 2005, the US Army Applied Aviation Technology Directorate awarded Sikorsky two Concept Design and Analysis contracts in support of preliminary design of two X2 Technology heavy lift coaxial rotorcraft with cruising speeds of 165 kt (306 km/h; 190 mph) and 245 kt (454 km/h; 282 mph) respectively.

SINO SWEARINGEN

SINO SWEARINGEN AIRCRAFT COMPANY

1770 Skyplace Boulevard, San Antonio, Texas 78216

CHAIRMAN AND CEO: Ching-Chiang Kuo
CHIEF FINANCIAL OFFICER AND SENIOR VICE-PRESIDENT: Kelly E Simmons
SENIOR VICE-PRESIDENT, OPERATIONS AND PRODUCT SUPPORT: Steve Crawford
VICE-PRESIDENTS:
Tom Bisges (Engineering)
Gene Comfort (Sales and Marketing)
Robert Homan (Quality Assurance)
Glenn Jensen (Human Resources)
Robert Kormer (International Sales and Marketing)
SENIOR ADVISOR: Edward J Swearingen

Ed Swearingen is well known for designing Fairchild Merlin and Metro commuter and business aircraft, and for engineering such aircraft as Piper Twin Comanche and Lockheed JetStar II. Current project is SJ30-2 business jet.

Swearingen Aircraft Inc re-formed on 1 April 1995 as joint venture company with Sino Aerospace of Taiwan, which provides financial support; will certify and produce SJ30-2 at new 8,130 m² (87,500 sq ft) facility at Martinsburg, West Virginia, where the workforce totalled 73 in May 2004, and was expected to rise to about 350 by 2006.

On 20 December 2006, company received FAA approved production inspection system (APIS) authorisation to allow acceleration of manufacturing rate.

SINO SWEARINGEN SJ30-2

TYPE: Light business jet.

PROGRAMME: Announced 30 October 1986 as SA-30 Fanjet; Gulfstream Aerospace, Williams International and Rolls-Royce announced they were joining programme in October 1988 and aircraft renamed Gulfstream SA-30 Gulfjet; Gulfstream withdrew from programme 1 September 1989; place taken by Jaffe Group of San Antonio, Texas, and aircraft renamed Swearingen/Jaffe SJ30; now a Sino Swearingen project. First flight of prototype (N30SJ) 13 February 1991 (with FJ44-1 engines).

Certification originally intended in 1995 but delayed pending development of increased performance SJ30-2, *as described*, which features fuselage stretched by 1.32 m (4 ft 4 in), wing span increased by 1.83 m (6 ft 0 in), increased wing dihedral, revised wing/fuselage fairing, increased fuel capacity and more powerful FJ44-2A engines. Prototype (N30SJ, modified from SJ30 prototype) first flown (original engines) 8 November 1996.

FJ44-2A engines installed and flown for first time on 4 September 1997; total of 270 flight hours accumulated with these engines (or 370 hours overall in SJ30-2 configuration) by late April 1999, including operation at speeds up to M0.83 and maximum altitude of 13,105 m (43,000 ft), 1.8 *g* turns at 12,495 m (41,000 ft), verification of stall and engine-out minimum control speeds, stability and control tests, engine operating tests throughout the flight envelope, simulated icing tests, yaw/damper/rudder bias system testing and handling trials with simulated flight control failures including trim runaways and asymmetric speed brake deployment. N30SJ withdrawn from use in mid-1999.

Static and fatigue tests on a representative section of primary wing joint completed February 1999, to 150 per cent of limit load in 230,000 loading cycles. Risk-sharing partner Gamesa Aeronautica of Vitoria, Spain, manufactured fuselages and wings of five certification test airframes; first of envisaged three (later four) production conforming flying prototypes (c/n 002/N138BF) rolled out at San Antonio 17 July 2000 and first flown 30 November 2000; public debut at the NBAA Convention in Orlando, Florida, 9 September 2002, but destroyed in crash near Del Rio, Texas on 26 April 2003; 003/N30SJ (second use of registration), first flown 6 March 2003 and 004/N404SJ, first flown 17 October 2003, for each scheduled 400 flight hours during the test and certification programme. No. 004 successfully completed high-speed dive tests to Mach 0.90 in August 2004, accompanied by F-100 Super Sabre chase aircraft. No. 005/N50SJ added to test programme to replace 003, having previously been earmarked as initial customer delivery aircraft; first flight early January 2005; autopilot, interior and function/reliability certification airframe; c/n TF-2 and TF-3 are static test and fatigue airframes respectively; TF-2 transferred to Sino Swearingen static test facility at San Antonio 8 March 2001 and completed tests in February 2005.

The flight test programme was scheduled to culminate in FAA certification in FAR Pt 23 Commuter category and first customer deliveries in early 2004 prior to the loss of the first conforming prototype, but certification finally achieved on 27 October 2005. Initial customer aircraft, c/n 0006 scheduled for delivery in third quarter 2006, but delayed until 2007 by manufacturing fault necessitating replacement of port wing.

On 16 July 2006 N50SJ made a record-breaking city-to-city flight in class C-1, flying from San Antonio, Texas to Farnborough, UK, via a fuel stop at Goose Bay, at an average speed of 389.3 knots (721 km/h; 448.0 mph).

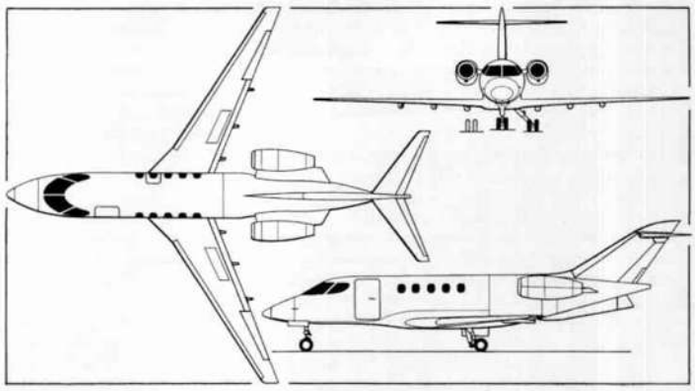
CUSTOMERS: Over 300 orders held by December 2006. Planned delivery of 13 aircraft by end of 2007, including six in first production batch.

COSTS: USD6,195 million typically equipped (2006). Estimated direct operating cost, USD740.47 per hour (2006).

DESIGN FEATURES: High-speed and high-altitude cruise with long-range capabilities, plus good slow speed handling; highly efficient swept wing planform.

Proprietary, computer-designed aerofoil sections. Wing sweep at quarter chord 32° 36', dihedral 2° 30'.

FLYING CONTROLS: Conventional and manual. Electrically actuated variable incidence tailplane, trim tab on rudder, aileron force bias spring for trimming in roll axis; single ventral fin under tail for yaw damping; slotted Fowler trailing-edge flaps actuated electrically; hydraulically actuated full-span leading-edge slats; single electrohydraulically actuated spoiler/lift dumper panel on each wing ahead of flap. Control surface movements: ailerons +15° 30'/–11° 20'; elevators +22°/–17° 10'; rudder ±27° 30'; ventral rudder ±30°; flaps have multiple settings including 10° and 20° options for T-O and positive angle for high-speed cruising.



Swearingen SJ30-2 business jet *(Paul Jackson)*

1159694

Sino Swearingen SJ30-2 N50SJ arriving at Farnborough on 16 July 2006 after its record-breaking flight *(Paul Jackson)*

1159760

STRUCTURE: All-metal with chemically milled skins on fuselage.

LANDING GEAR: Retractable tricycle type, manufactured by Integrated Aerospace of Santa Ana, California, with twin wheels on each unit. Trailing-link oleo-pneumatic suspension on main units. Hydraulic actuation, main units retracting inward and rearward into fuselage, nose unit forward. Two nosewheel doors each side; forward pair closed except when gear is cycling. Hydraulically steerable (±60°) nose unit. All wheels 41 cm (16 in) diameter. Main unit tyre pressure 10.76 bar (155 lb/sq in), nosewheel tyre pressure 2.14 bar (31 lb/sq in). Standard air-cooled power braking; dual ABS anti-skid.

POWER PLANT: Two 10.23 kN (2,300 lb st) Williams FJ44-2A turbofans flat rated to 72°C, pod-mounted on pylons on sides of rear fuselage. Six fuel tanks: one in each outer wing (total 1,055 litres; 278.8 US gallons; 232.1 Imp gallons); two wing hopper tanks (total 103 litres; 27.2 US gallons; 22.6 Imp gallons); centre wing tank (199 litres; 52.7 US gallons; 43.9 Imp gallons); and fuselage (torsion box) tank (1,440 litres; 380.3 US gallons; 316.7 Imp gallons) for total of 2,797 litres (739 US gallons; 615.3 Imp gallons) of which 389 litres (713 US gallons; 856 Imp gallons) usable. Fuel is burned sequentially to maintain aircraft centre of gravity. Single refuelling point in fuselage tank. Oil capacity 3.4 litres (0.9 US gallon; 0.75 Imp gallon) per engine.

ACCOMMODATION: Pilot and one passenger (or co-pilot) on flight deck. Main cabin separated by a bulkhead; six passengers seats comprising club four and two forward-facing seats; aft-facing seats recline and have lateral tracking capability; forward-facing seats have full berthing capability; lavatory, separated from main cabin by a half-cabin height partition with fan close-out, has belted, side-facing seat that is approved for occupation during take-off and landing. Full-height refreshment centre and foldaway tables, dual cupholders and cabin environment controls standard; recessed storage area aft of lavatory, with foldaway coat hooks, optional. Airstair passenger door with light at front on port side. Emergency exit over starboard wing. Baggage compartment aft of main cabin, with external access via port side door under engine nacelle. Two-piece birdproof electrically heated wraparound windscreen.

SYSTEMS: Cabin pressurised to 0.83 bar (12.0 lb/sq in), maintaining sea level pressure to 12,500 m (41,000 ft); cabin heated by engine bleed air; cooled by a vapour-cycle system. Hydraulic system (207 bar; 3,000 lb/sq in) for actuation of leading-edge slats, airbrake/lift dumpers and landing gear extension/retraction. Two 325 A 28 V DC engine-driven starter/generators and static inverters; 24 V lead-acid battery for engine starting and emergency power. Redundant frequency-wild alternators provide power for windscreen heating. Wing and engine inlets anti-iced by engine bleed air; tailplane has pneumatic de-icer boots, de-icing system. Oxygen system has 646 litre (22.8 cu ft) capacity.

AVIONICS: Honeywell Primus Epic CDS as core system.

Comms: Honeywell Primus II radio system; optional 8.33 kHz spacing. HF radio and Selcal optional.

Radar: Honeywell Primus 331 colour weather radar.

Flight: Dual IC-615 integrated avionics computers with combined flight director, autopilot and FMS/GPS functions; dual RVSM-compatible Honeywell AZ-850 micro air data computers; ADF, DME. Options include TCAS 2000, second FMS/GPS integrated with IC-615, second ADF, FMS data loader, second DME, CVR, FDR and lightning sensor system.

Instrumentation: EFIS cockpit comprising two Honeywell DU-180 flat panel portrait format 203 × 254 mm (8 × 10 in) active matrix colour LCDs, for PFD and MFD functions, with third optional.

DIMENSIONS, EXTERNAL:

Wing span	12.90 m (42 ft 4 in)
Wing chord: at root	2.41 m (7 ft 11 in)
at tip	0.50 m (1 ft 7½ in)
Wing aspect ratio	9.4
Length overall	14.26 m (46 ft 9½ in)
Fuselage: Length	12.79 m (41 ft 11½ in)
Max diameter	1.52 m (5 ft 0 in)
Height overall	4.34 m (14 ft 3 in)
Tailplane span	4.44 m (14 ft 7 in)
Wheel track (mean)	2.09 m (6 ft 10¼ in)
Wheelbase	5.70 m (18 ft 8½ in)
Passenger door: Height	1.42 m (4 ft 8 in)
Width	0.81 m (2 ft 8 in)
Baggage door: Height	0.65 m (2 ft 1½ in)
Width	0.47 m (1 ft 6½ in)
Emergency door: Height	0.56 m (1 ft 10 in)
Width	0.48 m (1 ft 7 in)

DIMENSIONS, INTERNAL:

Cabin: Length: between pressure bulkheads	5.36 m (17 ft 7 in)
passenger section	3.81 m (12 ft 6 in)
Max width	1.47 m (4 ft 10 in)
Max height	1.32 m (4 ft 4 in)
Floor area	5.46 m² (58.8 sq ft)
Volume	8.7 m³ (307.0 cu ft)
Baggage compartment volume	1.50 m³ (53 cu ft)

AREAS:

Wings, gross	**17.72 m² (190.7 sq ft)**
Ailerons (total)	**0.76 m² (8.20 sq ft)**
Trailing-edge flaps (total)	**3.31 m² (35.63 sq ft)**
Leading-edge flaps (total)	**2.83 m² (30.48 sq ft)**
Fin	**1.06 m² (11.40 sq ft)**
Rudder, incl tab	**0.69 m² (7.40 sq ft)**
Tailplane	**3.41 m² (36.70 sq ft)**
Elevator, incl tabs	**0.79 m² (8.53 sq ft)**

WEIGHTS AND LOADINGS:

Basic operating weight	**3,924 kg (8,650 lb)**
Max baggage weight	**227 kg (500 lb)**
Max fuel weight	**2,200 kg (4,850 lb)**
Max T-O weight	**6,327 kg (13,950 lb)**
Max ramp weight	**6,373 kg (14,050 lb)**
Max landing weight	**5,772 kg (12,725 lb)**
Max zero-fuel weight	**4,763 kg (10,500 lb)**
Max wing loading	**357.2 kg/m² (73.15 lb/sq ft)**
Max power loading	**309 kg/kN (3.03 lb/lb st)**

PERFORMANCE:

Max operating speed to FL295	320 kt (592 km/h; 368 mph)
Max operating Mach No. (MMO) above FL295	0.83
High-speed cruising speed	M0.83 (486 kt; 900 km/h; 559 mph)
Long-range cruising speed	M0.76 (436 kt; 807 km/h; 502 mph)
Stalling speed, flaps down, flight idle power	91 kt (168 km/h; 105 mph)
Max certified altitude	14,935 m (49,000 ft)
FAA T-O balanced field length	1,201 m (3,940 ft)
FAA landing distance	897 m (2,945 ft)
Range, pilot and three passengers, NBAA IFR reserves, 100 n mile (185 km; 115 mile) alternate, at M0.80:	2,363 n miles (4,376 km; 2,719 miles)
Range, pilot and three passengers, NBAA IFR reserves, 100 n mile (185 km; 115 mile) alternate at M0.78	2,500 n miles (4,630 km; 2,877 miles)

OPERATIONAL NOISE LEVELS:

T-O	**76.5 EPNdB**
Approach	**93.8 EPNdB**
Sideline	**86.5 EPNdB**

Global Skyship Industries, then the US subsidiary of Aviation Support Group Ltd of the UK, acquired the assets of the former Westinghouse Airships Inc (WAI) in December 1996. As a result, GSI became holder of the type certificates for the UK-designed Skyship 500 HL and Skyship 600 and the WAI Sentinel 1000. In late 1997, GSI announced that it had re-opened the production line and had these airships available for immediate delivery.

Formation of Skycruiser Corporation was announced on 18 November 2002, as a joint venture between Airship Management Services Inc (AMS) of Greenwich, Connecticut, and Skyship Cruise Ltd of Lindau, Switzerland. New holder of the Type Certificates for the Skyship and Sentinel series of airships, it is part of the Skycruiser group of companies that include AMS, GSI (now co-located with AMS), Skyship Cruise Ltd and Skycruise Switzerland. The companies also operate a maintenance facility and FAA repair station at Skycruiser Corporation's base in Elizabeth City, North Carolina, where work was under way in 2006 on a Skyship 1000, based on the Sentinel 1000.

SKYCRUISER SKYSHIP 500HL

TYPE: Helium non-rigid airship.
PROGRAMME: First flight (G-SKSB) (converted Skyship 500) 30 July 1987.
CUSTOMERS: Three conversions completed in UK; one (N601LP) in service in USA with Airship Operations Inc in 1998, but destroyed by severe storm on 7 September 1998. Type

SKYSHIP 500 PRODUCTION

c/n	Registrations	Remarks
1214/01	G-BECE	AD500; first flight 3 Feb 79; destroyed Mar 79
1214/02	G-BIHN, N502LP	Now 500HL, Trans-Continental Leasing; inoperative
1214/03	G-SKSA	C of A expired 3 May 89. Deregistered 1996
1214/04	G-SKSB, N602LP, N501LP	Trans-Continental Leasing; believed inoperative
1214/05	G-SKSE, JA1003	To Japan Jul 84
1214/06	G-SKSH, N601LP	500HL; destroyed 7 Sep 98
1214/07	N503LP	Now 500HL, Trans-Continental Leasing; inoperative
1214/09	N504LP	Trans-Continental Leasing; inoperative

remains available from GSI which, in mid-2001, still had three (including 07/N503LP and 09/N504LP) ready for assembly on receipt of orders; however, no new sales reported by mid-2006.

DESIGN FEATURES: Combines modified Skyship 500 gondola with larger envelope of Skyship 600, providing ability to operate with greater payload in hotter climates and at higher altitudes than Skyship 500.

POWER PLANT: Two 153 kW (205 hp) Porsche 930/01 non-turbocharged engines; fuel capacity 545 litres (144 US gallons; 120 Imp gallons), of which 530 litres (140 US gallons; 117 Imp gallons are usable).

ACCOMMODATION: Pilot, co-pilot and up to nine passengers. Ground crew of 18.

DIMENSIONS, EXTERNAL: As for Skyship 600 except:

Length overall	59.13 m (194 ft 0 in)
Gondola: Length	9.75 m (32 ft 0 in)
Max width	2.13 m (7 ft 0 in)
Max height	1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL: As for Skyship 600 except:

Envelope volume	6,666 m^3 (235,400 cu ft)
Gondola cabin: Length	4.20 m (13 ft 9½ in)
Height	1.96 m (6 ft 5 in)

WEIGHTS AND LOADINGS:

Max usable fuel	382 kg (842 lb)
Gross disposable load	2,190 kg (4,829 lb)

PERFORMANCE:

Max level speed	53 kt (99 km/h; 62 mph)
Cruising speed	30 kt (56 km/h; 35 mph)
Pressure ceiling	2,135 m (7,000 ft)
Max range	347 n miles (643 km; 400 miles)
Endurance at 35 kt (65 km/h; 40 mph)	17 h

SKYCRUISER SKYSHIP 600

TYPE: Helium non-rigid airship.

PROGRAMME: First flight 6 March 1984; special category C of A awarded by UK CAA 1 September 1984; aerial work certification received second quarter 1986; full passenger-carrying C of A 8 January 1987, initiating Skycruise aerial sightseeing service over London, San Francisco, Munich and Sydney in 1987, and over Paris in 1988. First US FAA type certificate awarded to an airship for civil use was issued to Skyship 600 on 9 May 1989. Certificate passed to Slingsby Aviation on 24 September 1990; Westinghouse Airships Inc on 24 February 1994; Global Skyship Industries on 7 August 1997; and Skycruiser Corporation in November 2002. During 1990 Farnborough Air Show a Skyship 600 (G-SKSC) with two 227 litre (60 US gallon; 50 Imp gallon) long-endurance fuel tanks made unrefuelled flight of 50 hours 15 minutes; sufficient fuel for a further 20 hours remained at end of flight.

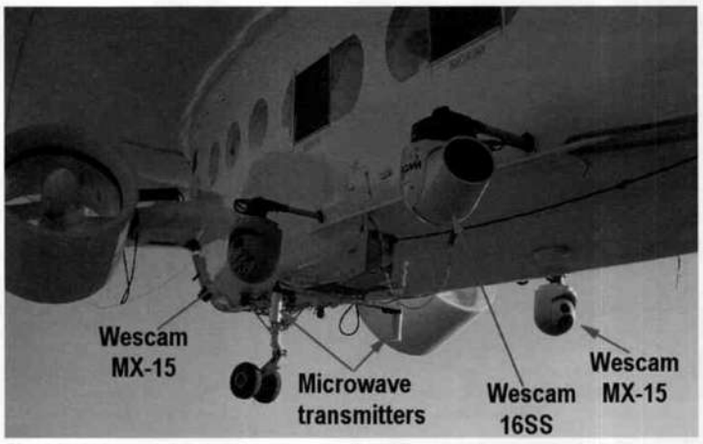
CURRENT VERSIONS: **Skyship 600**: Initial (UK-built) version (nine completed).

Description applies to Skyship 600 except where indicated.

Skyship 600B: With larger envelope, using Tedlar fabric, manufactured by TCOM LP. First example, converted from Skyship 600 c/n 07 (N602SK) and operated for Fuji Film by Airship Management Services, flew for first time 25 July 1998. Second example (c/n 10, N610SK) completed for Airship Operations Inc (Hilfiger contract) to replace destroyed Skyship 500HL.

CUSTOMERS: Total of nine built in UK, of which 01 (G-SKSC) purchased by Global Skyships from UK MoD and 07 (N602SK) converted to 600B in 1998. Two more 600Bs began construction in 1999, of which 02/B-04 (N602CL) was delivered to CargoLifter, Germany, in May 2000, certified by LBA 3 August 2001 and re-registered as D-LCLA *Charly*; for use as a crew trainer. In 2001, N606SA had its Porsche engines replaced by Lycoming IO-540s, making its maiden flight in this form on 18 January 2002 before being redelivered to Airship Management Services Europe in Paris in the second quarter of 2002. In 2003 it was operated by STI Aviation on behalf of the US Office of Naval Research.

COSTS: Skyship 600B approximately USD6 million (2000).



Skyship 600 gondola, showing sensors fitted for security patrols during Olympic Games in Athens, 2004 1040428

DESIGN FEATURES: Non-rigid envelope, with one ballonet forward and one aft (together 26 per cent of total volume); ballonet air intake aft of each propulsor unit. Cruciform tail unit.

FLYING CONTROLS: Vectored thrust propulsion (see Power Plant); differential inflation of ballonets for static fore and aft trim; cable-operated rudders and elevators, each with spring tab; ballast in box below crew seats; disposable water ballast in tanks at rear.

STRUCTURE: Envelope manufactured by TCOM LP from single ply polyester fabric, coated with titanium dioxide-loaded polyurethane to reduce ultraviolet degradation; polyvinylidene chloride film bonded on to inner coating of polyurethane on inside of envelope minimises loss of helium gas. Four parabolic arch load curtains, carrying multiple Kevlar 29 gondola suspension cables. Nose structure is domed disc, moulded from GFRP and carrying fitting by which airship is moored to its mast. Each tail surface attached to envelope at root and braced by wires on each side; all four surfaces constructed from interlocking ribs and spars of Fibrelam with GFRP skins.

One-piece moulded gondola of Kevlar-reinforced plastics, with flooring and bulkheads of Fibrelam panels; those forming engine compartment at rear are faced with titanium for fire protection.

LANDING GEAR: Single two-wheel assembly with double tyres, mounted beneath rear gondola.

POWER PLANT: Two 190 kW (255 hp) Porsche 930/67/AI/3 six-cylinder air-cooled and turbocharged piston engines mounted in rear of gondola. Each drives a ducted propulsor consisting of a Hoffmann HO-V155A-R/137 five-blade reversible-pitch propeller within an annular duct of carbon fibre-reinforced GFRP. Each propulsor can be rotated about its pylon attachment to gondola through an arc of 210°, 90° upward and 120° downward, vectored thrust thus providing both V/STOL and in-flight hovering ability.

Fuel tank, capacity 682 litres (180 US gallons; 150 Imp gallons), at rear of engine compartment; 668 litres (176.5 US gallons; 147 Imp gallons) usable. Auxiliary fuel tanks optional. Engine modifications include provision of automatic mixture control, fuel injection and electronic ignition.

ACCOMMODATION: Seats for pilot and co-pilot, with dual controls. Maximum capacity 12 passengers in addition to pilots. Ground crew of 18.

SYSTEMS: 28 V electrical system, supplied by engine-driven alternators.

AVIONICS: Include Honeywell Silver Crown series dual nav/com, ADF, Omega, VOR/ILS and weather radar.

EQUIPMENT: Night signs (30.48 m; 100 ft long and 9.14 m; 30 ft high) are full-colour aerial boards comprising 8,400 primary-coloured lamps computerised to enable the display of signs, animation and graphic logos in 16 colours.

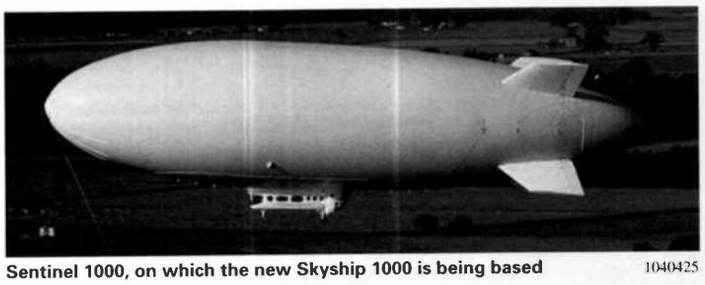
Max range (standard fuel) ..... 347 n miles (643 km; 400 miles)

SKYCRUISER SKYSHIP 1000

TYPE: Helium non-rigid airship.
PROGRAMME: Sentinel 1000 initiated as larger derivative of Skyship 600 by Airship Industries (UK); taken over by Westinghouse Airships and first flown 26 June 1991 (largest non-rigid then flying); certified under FAR Pt 21 for single-pilot operation, 22 October 1993, but destroyed in hangar fire at Weeksville, North Carolina, 2 August 1995. Over 400 hours flown. Last described in 1999-200 *All the World's Aircraft*.

Skyship 1000 now under development based on Type Certificate of Sentinel 1000, from which it differs mainly in having enlarged gondola with greater passenger seating capacity.



Sentinel 1000, on which the new Skyship 1000 is being based 1040425

FLYING CONTROLS: Fibre optic (fly by light) control system; vectored thrust propulsion.
POWER PLANT: Two 224 kW (300 hp) Textron Lycoming IO-540 flat-six piston engines, each driving a vectoring, ducted propeller.
ACCOMMODATION: One or two pilots on flight deck. Seating for up to 24 passengers and/or cabin crew. Lavatory standard, bar or galley optional.
DIMENSIONS, EXTERNAL:
Length overall ..... 67.67 m (222 ft 0 in)
Height overall ..... 19.81 m (65 ft 0 in)
Gondola: Length ..... 12.90 m (42 ft 4 in)
Max width ..... 3.17 m (10 ft 5 in)
DIMENSIONS, INTERNAL:
Envelope volume ..... 10,000 m^3 (353,146 cu ft)
Passenger cabin: Length ..... 7.77 m (25 ft 6 in)
Max width ..... 3.05 m (10 ft 0 in)
Max height ..... 1.93 m (6 ft 4 in)
WEIGHTS AND LOADINGS:
No data released

Tel: (+1 208) 465 71 16
Fax: (+1 208) 465 79 37
e-mail: skyraiderllc@earthlink.net
Web: www.skyraiderllc.com
MANAGER: Fred Parker

Company, previously named Flying K Enterprises, was established by former SkyStar employee, the late Kenny Schrader. A version of its Sky Raider is produced in the UK as Reality Easy Raider.

In 2003, the company added a third version, the Super Sky Raider, to its range.

SKY RAIDER SKY RAIDER

TYPE: Single-seat ultralight kitbuilt; tandem-seat ultralight kitbuilt.
PROGRAMME: First flown in 1996.
CURRENT VERSIONS: **Sky Raider:** Single-seat model, available as certified aeroplane or under FAR Pt 103 ultralight regulations.

Sky Raider II: Tandem-seat version; introduced in 1999.

Super Sky Raider: Slightly larger version with dual controls, introduced 2003.

CUSTOMERS: Total of 250 SkyRaiders, 80 SkyRaider IIs and 70 Super Sky Raiders sold by August 2005.
COSTS: Sky Raider kit USD9,450; Sky Raider II kit USD10,945; Super Sky Raider kit USD13,995 (2006).
DESIGN FEATURES: High wing with tubular V-struts, and two auxiliary struts to each wing. Wire-braced fin and V-strut braced tailplane. Wings foldable for storage without disconnection of control runs. Quoted build time 300 hours for Sky Raider and 350 hours for Sky Raider II.
FLYING CONTROLS: Conventional and manual. Frise ailerons, cable actuated. Slotted flaps.
STRUCTURE: Fabric-covered steel tube. Optional wingtip extensions to Sky Raider and Sky Raider II add 55 cm (21½ in) to span; choice of rounded or square fin on Sky Raider. Heavier wing spar (6 cm; 2½ in diameter) and taller fin on Sky Raider II. Horn-balanced rudder on Sky Raider II.

Sky Raider with engine exposed ***(Paul Jackson)*** 1040496

LANDING GEAR: Tailwheel type: fixed. Two side Vs hinged to lower longerons, plus half-axles, each with bungee cord shock-absorber, attached to compression frame. Mainwheels 8.00–6. Optional floats and skis.
POWER PLANT: *Sky Raider:* One 20.1 kW (27 hp) Rotax 277 two-cylinder two-stroke driving a two-blade propeller for Pt 103; 31.0 kW (41.6 hp) Rotax 447 for normal operations. Optionally, engines up to 37.3 kW (50 hp) can be fitted. Fuel capacity 18.9 litres (5.0 US gallons; 4.2 Imp gallons).

Sky Raider II: One 44.7 kW (60 hp) HKS flat-two, four-stroke engine driving a GSC ground-adjustable three-blade or Powerfin carbon fibre propeller. Optional engines include the 41.8 kW (56.0 hp) Zanzottera MZ 202. Fuel capacity 37.9 litres (10.0 US gallons; 8.3 Imp gallons) due to extra wing fuel tank.

Super Sky Raider: One 59.7 kW (80.0 hp) Jabiru 2200 driving a GSC ground-adjustable two-blade propeller; optional engines include the 68.6 kW (92 hp) Zanzottera MZ 301. Fuel capacity 53 litres (14.0 US gallons; 11.7 Imp gallons).

ACCOMMODATION: *Sky Raider:* Pilot only, in open-sided cabin.

Sky Raider II: Two seats in tandem with single controls within fully enclosed cabin.

Super Sky Raider: Two seats in tandem with dual controls; taller and longer cabin.

DIMENSIONS, EXTERNAL (A: Sky Raider, B: Sky Raider II, C: Super Sky Raider):
Wing span: A, B ..... 7.99 m (26 ft 2½ in)
C ..... 8.53 m (28 ft 0 in)
Length overall: A, B ..... 5.18 m (17 ft 0 in)
C ..... 5.49 m (18 ft 0 in)
Height overall: A ..... 1.57 m (5 ft 2 in)
B ..... 1.73 m (5 ft 8 in)
C ..... 1.83 m (6 ft 0 in)
AREAS:
Wings, gross, A, B:
without extensions ..... 9.10 m^2 (98.0 sq ft)
with extensions; and C ..... 9.94 m^2 (107.0 sq ft)
WEIGHTS AND LOADINGS:
Weight empty: A with Rotax 447 ..... 115 kg (253 lb)
B with HKS ..... 184 kg (405 lb)
C with Jabiru ..... 204 kg (450 lb)
Max T-O weight: A ..... 249 kg (550 lb)
B ..... 431 kg (950 lb)
C ..... 476 kg (1,050 lb)
PERFORMANCE (A with Rotax 447; B with HKS, C with Jabiru 2200):
Never-exceed speed (VNE):
all ..... 86 kt (160 km/h; 100 mph)
Normal cruising speed: A ..... 56 kt (105 km/h; 65 mph)
B ..... 65 kt (121 km/h; 75 mph)
C ..... 70 kt (129 km/h; 80 mph)
Stalling speed, flaps down: A ..... 20 kt (37 km/h; 23 mph)
B ..... 26 kt (49 km/h; 30 mph)
C ..... 28 kt (52 km/h; 32 mph)
Max rate of climb at S/L: A ..... 320 m (1,050 ft)/min
B ..... 396 m (1,300 ft)/min
C ..... 427 m (1,400 ft)/min
T-O and landing run: all ..... 23 m (75 ft)
Range: A ..... 120 n miles (222 km; 138 miles)
B ..... 250 n miles (463 km; 287 miles)

SKYSTAR

SKYSTAR AIRCRAFT CORPORATION

Production rights to Kitfox transferred to Kitfox Aircraft LLC.

SLIPSTREAM

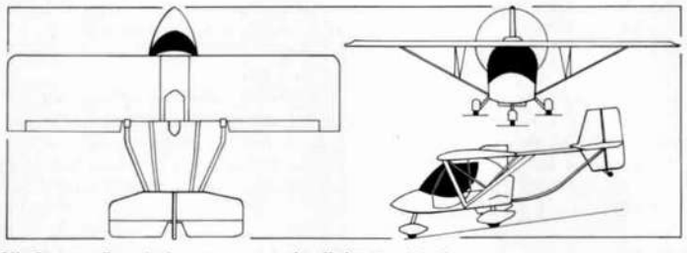
SLIPSTREAM INDUSTRIES INC

9089 Westphal Lane, Neenah, Wisconsin 54956
Tel: (+1 877) 369 43 19
Fax: (+1 920) 968 75 43
e-mail: mail@slipstream.bz
Web: www.slipstream.bz
PRESIDENT: Paul Klomhaus

Formed on 1 April 1999, SlipStream produces a range of ultralight aircraft and accessories, and distributes the Verner range of engines. Rights to the Viking Dragonfly were sold to Dart Industries of South Africa in March 2004. The Skyquest was also withdrawn from the product line at this time; from 2006 the Defiance was withdrawn. In July 2004, the aircraft manufacturing division of SlipStream was sold to Paul and Kim Klomhaus, with the Shark range of amphibious floats being transferred to Downwind Technologies. Downwind has retained the 1,394 m² (15,000 sq ft) factory in Wautona, with Slip Stream moving to Neenah. In April 2004, the workforce numbered six.

SLIPSTREAM GENESIS and REVELATION

TYPE: Side-by-side kitbuilt; side-by-side ultralight kitbuilt.
PROGRAMME: Prototype Genesis first flew 1992; Revelation developed as a lower-powered 'recreational' version.
CURRENT VERSIONS: **Genesis:** Baseline version. Experimental category.
Revelation: Lower-powered version; can be upgraded to Genesis standard by replacement only of windscreen and engine and addition of glass fibre enclosure.
CUSTOMERS: Total of 135 Genesis and 79 Revelation aircraft flying by end 2006.
COSTS: Kit including engine (2006): Genesis USD18,122 estimated complete USD33,000; Revelation USD13,295, estimated complete USD29,000-37,000.
DESIGN FEATURES: Quoted build time for Genesis 400 hours; for Revelation 300 hours (deduct 90 when opting for sailcloth-covered wing).
FLYING CONTROLS: Conventional and manual. Horn-balanced elevator.
STRUCTURE: Preformed glass fibre nose; fabric-covered strut-braced wings; tubular steel rear fuselage; main landing gear legs of 4 cm (1½ in) glass fibre.
LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring glass fibre cantilever mainwheel legs with optional composites wheel fairings. Cable brakes; hydraulic brakes optional. Optional floats.
POWER PLANT: *Genesis:* One 47.8 kW (64.1 hp) Rotax 582 driving Tennessee two-blade wooden propeller. Fuel capacity 76 litres (20.0 US gallons; 16.7 Imp gallons). Other engines including Verner 133M, Rotax 912 UL, 912 ULS and 914 can be fitted. In 2005, Slipstream fitted an 89.5 kW (120 hp) Yamaha Genesis Extreme three-cylinder liquid-cooled engine to a demonstrator; it also plans to offer the 111.9 kW (150 hp) four-cylinder fuel-injected version.



SlipStream Revelation two-seat ultralight *(Paul Jackson)* 0100466

Slipstream Genesis ultralight *(Paul Jackson)* 1040495

Revelation: One 39.3 kW (52.7 hp) Rotax 503B. Fuel capacity 38 litres (10.0 US gallons; 8.3 Imp gallons). Same engine options as Genesis.
Data apply to both versions, except where otherwise stated.

DIMENSIONS, EXTERNAL:
Wing span ..... 9.35 m (30 ft 8 in)
Length overall ..... 5.89 m (19 ft 4 in)
Height overall ..... 1.92 m (6 ft 3½ in)
AREAS:
Wings, gross ..... 16.62 m² (179.0 sq ft)
WEIGHTS AND LOADINGS (A: Genesis, B: Revelation):
Weight empty: A ..... 295 kg (650 lb)
B ..... 211 kg (465 lb)
Max T-O weight: A ..... 589 kg (1,300 lb)
B ..... 499 kg (1,100 lb)
PERFORMANCE (A and B as above):
Never-exceed speed (VNE): A ..... 104 kt (193 km/h; 120 mph)
Normal cruising speed: A ..... 70 kt (129 km/h; 80 mph)
B ..... 57 kt (106 km/h; 66 mph)
Stalling speed: A ..... 39 kt (72 km/h; 45 mph)
B ..... 38 kt (70 km/h; 43 mph)
Max rate of climb at S/L: A ..... 305 m (1,000 ft)/min
B ..... 244 m (800 ft)/min
T-O run: A, B ..... 122 m (400 ft)
Landing run: A ..... 77 m (250 ft)
B ..... 46 m (150 ft)
Range with max fuel: A ..... 252 n miles (466 km; 290 miles)
B ..... 130 n miles (241 km; 150 miles)

SLIPSTREAM SCEPTER

TYPE: Single-seat ultralight kitbuilt.
PROGRAMME: Development of Genesis, introduced in 1999.
CUSTOMERS: Total of 20 flying by end 2006.
COSTS: USD11,495 to USD13,295 (2006) including engine.
DESIGN FEATURES: Quoted build time 120 hours.
Data as Genesis, except that below.
POWER PLANT: One 39.3 kW (52.7 hp) Rotax 503B, 29.5 kW (39.6 hp) Rotax 447 UL-1V or 47.8 kW (64.1 hp) Rotax 582. Fuel capacity 19 litres (5.0 US gallons; 4.2 Imp gallons); options to increase to 37.9 litres (10.0 US gallons; 8.3 Imp gallons) and 75.7 litres (20.0 US gallons; 16.7 Imp gallons) available.
WEIGHTS AND LOADINGS (Rotax 503):
Weight empty ..... 199 kg (438 lb)
Max T-O weight ..... 544 kg (1,200 lb)
PERFORMANCE (Rotax 447):
Normal cruising speed ..... 48 kt (89 km/h; 55 mph)
Stalling speed ..... 24 kt (44 km/h; 27 mph)
Max rate of climb at S/L ..... 229 m (750 ft)/min
T-O and landing run ..... 31 m (100 ft)
Range with max fuel ..... 60 n miles (112 km; 70 miles)

SlipStream Scepter single-seat ultralight *(Paul Jackson)* 0526985

SLIPSTREAM DEFIANCE

TYPE: Two-seat kitbuilt twin.
PROGRAMME: Introduced in 2000 as the Skyblaster; based on Genesis/Revelation with 98 per cent commonality of parts; withdrawn from product line in 2003 for redesign of cowling and front-mounted engine; reintroduced in late-2004 as the Defiance. No further information received and by 2006 it had been withdrawn from the product line.

SOLARIS

SOLARIS AVIATION INC

Palm Beach North County Airport, 11250-4 Aviation Boulevard, West Palm Beach, Florida 33412
Tel: (+1 954) 415 93 37
Fax: (+1 954) 757 51 82
Web: www.solarisaviation.com
PRESIDENT: Nick Schneider
VICE-PRESIDENTS:
George Rodgers
J Cook
CHAIRMAN: David Schuldt

Solaris Aviation was established in 1999 and purchased the assets of Ruschmeyer Luftfahrttechnik GmbH of Germany including Type Certificates, moulds and tooling. Ruschmeyer had filed for bankruptcy in January 1996, having built a small number of R 90 four-seat touring aircraft. Solaris has also acquired a 10,220 m² (110,000 sq ft) manufacturing facility in Bielsko-Biala, Poland, where labour-intensive parts of the relaunched aircraft are produced before being shipped to Florida for final assembly. The Sigma, as the R 90 is now known, was first shown publicly at AirVenture, Oshkosh, in July 2001, the project having been formally announced on 5 July 2001. No new airframe production had ensued by late-2006 although promotion was then continuing and at least one airframe partially built by Ruschmeyer had been completed in 2004 by Aircraft Technology Construction of Germany, with future production reportedly planned at the SZD plant in Poland.

SOLARIS SIGMA and ALPHA

TYPE: Four-seat lightplane.

PROGRAMME: Development of original Ruschmeyer MF-85 started in Germany in 1985; first prototype MF-85P-RG (V0001) flew with Porsche engine; changed to R 90-230 RG using flat-rated Textron Lycoming IO-540 after cessation of Porsche production in March 1990; first flight of prototype V001 (D-EEHE) 8 August 1988; first flight of V002 (D-EERO) 25 September 1990; V003 (D-EERH) first flight 12 February 1992; LBA certification June 1992; FAA 24 June 1994. Main production variant was R 90-230 RG, of which 25 built; Ruschmeyer also produced prototype fixed landing gear R 90-230 FG; lower and higher-powered versions were overtaken by company's bankruptcy. Programme transferred to Solaris in USA, 1999; German-built R 90-230 RG registered N230S in June 2001 as demonstrator. Production deliveries due to begin in third quarter of 2002, but only c/n 029/D-EEHY, partially completed under Ruschmeyer, was manufactured in 2004. US demonstrator N230S was transferred back to Germany in October 2005.

CURRENT VERSIONS: **Sigma 230:** One Textron Lycoming IO-540-C4D5 flat-six, derated to 172 kW (230 hp). Retractable landing gear; intended for European market.

Alpha 230: As above. Fixed gear.

Sigma 250: IO-540-C4D5 engine, fully rated at 186 kW (250 hp). Retractable gear. Baseline US version.

Alpha 230: As immediately above. Fixed gear.

Sigma 310: Teledyne Continental IO-550N flat-six, rated at 231 kW (310 hp). Retractable gear. Uprated US version.

Alpha 310: As immediately above. Fixed gear.

COSTS: Sigma 250 USD244,900; Sigma 310 USD279,900 (2002).

DESIGN FEATURES: Objectives were FAR Pt 23 compliance; high performance by low-drag all-composites airframe, use of derated engine for European version, requiring less cooling, reduced noise by lower engine rpm, special silencer and, originally, matched four-blade constant-speed propeller. Consequently, reduced fuel consumption and emissions; noise level under German regulations demonstrated 66 dBA, 8 dBA below limit; also 10.2 dBA below ICAO Chapter 10 limit. Laminar flow aerofoil. Certified 18,000 hour life.

FLYING CONTROLS: Conventional and manual; all push/pull rod operated to minimise friction; dual controls with sticks standard; fixed tailplane; combined trim and trim tab on port elevator; stall strips on inboard wing leading-edge; three-position Fowler flaps operated by electrohydraulic system are linked to elevator to avoid trim changes; max deflection 30°. Aileron deflections +16/−11°; elevator +18/−15°; rudder starboard 240 mm (9.45 in), port 220 mm (8.66 in).

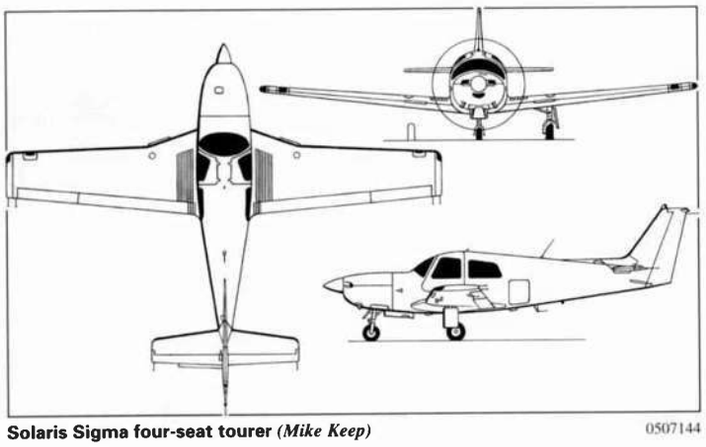
STRUCTURE: All-composites moulded airframe with 70 per cent fewer parts than equivalent metal structure. Ruschmeyer qualified BASF Palatal A430 resin fibre composites material for aviation; advantages are durability at up to 72°C ambient, improved strength, field repair without special tools, negligible allergic risks during manufacture, and material is recyclable. GFRP with Rohacell foam cores and CFRP reinforcement round doors; steel tube running from firewall, over roof and into tail, supports doors and protects against roll-over; components earth bonded to German and FAA standards. Meets 1.75 safety factor for composites airframes.

LANDING GEAR: Tricycle type; retractable. Electrohydraulic actuation; trailing-link levered mainwheel suspension retracts inward and covered by mechanically linked doors; foot-powered hydraulic disc brakes; steerable nosewheel retracts rearward, also covered by doors.

POWER PLANT: As for Current Versions. Hartzell three-blade, constant-speed propeller. Adjustable cowl flaps. Standard Sigma 250/Alpha 250 fuel 311 litres (82.0 US gallons; 68.3 Imp gallons) in integral tanks in inner wings; Sigma 310/Alpha 310 349 litres (92.0 US gallons; 76.7 Imp gallons). Oil capacity 11.4 litres (3.0 US gallons; 2.5 Imp gallons) for Sigma 250/Alpha 250; 12 litres (3.25 US gallons; 2.7 Imp gallons) for Sigma 310/Alpha 310.

ACCOMMODATION: Four-seat interior with ergonomically designed seats; three-point harness; upward-opening gull wing doors; heating and ventilation system with electric blower; baggage compartment accessible from inside and outside.

SYSTEMS: S-Tec 40 (optional 55X) single-axis autopilot. Electrohydraulic actuation for flaps; pitot heater and night lighting. Electrical system 28 V DC; 70 Ah alternator; 24 V 18 Ah battery.



Solaris Sigma four-seat tourer ***(Mike Keep)*** 0507144

Solaris Sigma demonstrator (Ruschmeyer R 90-230 RG) promoting the type at Aero '05, Friedrichshafen, in April 2005 ***(Paul Jackson)*** 1129476

AVIONICS: *Comms:* Garmin GNS-430 transceiver; GTX-327 transponder; GMA-340 audio system; ELT. Optional GNS-530 nav/com with GI-106 moving map indicator.

Flight: Garmin GNS-420 GPS. Optional second GNS-430, S-Tec ST-180 slaved compass, ST-361 flight director, ST-360 altitude selector, Goodrich WX-500 Stormscope and Shadin fuel/air data computer.

DIMENSIONS, EXTERNAL:

Wing span	9.50 m (31 ft 2 in)
Wing aspect ratio	7.0
Length overall	**7.98 m (26 ft 2 in)**
Height overall	**2.74 m (9 ft 0 in)**
Wheelbase	**1.93 m (6 ft 4 in)**
Propeller diameter	**1.88 m (6 ft 2 in)**

DIMENSIONS, INTERNAL:

Cabin: Length	2.86 m (9 ft 4½ in)
Width	1.14 m (3 ft 9 in)
Height	1.24 m (4 ft 0¼ in)
Baggage compartment volume	0.80 m^3 (28.3 cu ft)

AREAS:

Wings, gross	12.94 m^2 (139.3 sq ft)

WEIGHTS AND LOADINGS (Sigma 230, 250 and 310):

Weight empty: S230	850 kg (1,874 lb)
S250	880 kg (1,940 lb)
S310	1,051 kg (2,317 lb)
Baggage capacity: all	50 kg (110 lb)
Max T-O weight: S230	1,352 kg (2,980 lb)
S250	1,372 kg (3,025 lb)
S310	1,587 kg (3,500 lb)
Max wing loading: S230	104.4 kg/m^2 (21.39 lb/sq ft)
S250	106.0 kg/m^2 (21.72 lb/sq ft)
S310	122.7 kg/m^2 (25.13 lb/sq ft)
Max power loading: S230	7.89 kg/kW (12.96 lb/hp)
S250	7.36 kg/kW (12.10 lb/hp)
S310	6.87 kg/kW (11.29 lb/hp)

PERFORMANCE (Sigma 230, 250 and 310):

Max level speed: S230	**175 kt (324 km/h; 201 mph)**
S250	**184 kt (340 km/h; 211 mph)**
S310	215 kt (398 km/h; 247 mph)

PRESIDENT: John Monnett
GENERAL MANAGER: Jeremy Monnett
SALES: Mark Schaible
PUBLIC RELATIONS: Betty Monnett

FACTORY:
511 Aviation Road, Oshkosh, Wisconsin 54902

Company formed by John Monnett, designer of the Sonerai, Monerai and Moni light aircraft, to produce kits of his latest design, the Sonex, its Y-tailed Waiex and motor glider Xenos derivatives. In late 2002 the company had a workforce of four in its 968 m^2 (10,424 sq ft) factory and in November 2004 added a further 520 m^2 (5,600 sq ft) hangar, by April 2006 the workforce had increased to eight.

SONEX SONEX

TYPE: Side-by-side ultralight kitbuilt.

PROGRAMME: Announced March 1996 in response to request for ultralight to meet Italian requirements; first flight of prototype (N12SX) with Jabiru 2200 engine, 28 February 1998. Five prototypes. First customer-built aircraft flown 12 June 2001.

CURRENT VERSIONS: **Sonex:** Kitbuilt, *as described.*

Sonex ST: Introduced May 2005; as Sonex but with controls located on centre console, thus intended as a transition trainer.

Waiex: Y-tailed derivative (name indicates Y-tailed experimental); meets FAA 51 per cent rule. Prototype (N12YX) first flown 19 July 2003 and made public debut at AirVenture 2003 following week. Data as per Sonex, except length 5.51 m (18 ft 1 in), empty weight 283 kg (625 lb), never-exceed speed 166 kt (309 km/h; 192 mph), stalling speed, flaps down 37 kt (68 km/h; 42 mph). First two customer kits delivered 4 June 2004; first customer-built aircraft (N612BW) flown 10 January 2006.

Xenos: Motor glider, based around Sonex front fuselage; *described separately.*

CUSTOMERS: Over 1,000 sets of plans and kits sold and 144 Sonex and five Waiex flying by November 2006.

COSTS: Sonex Airframe kit USD13,495 tailwheel, USD13,845 tricycle both excluding engine and wheels and brakes (2006). Waiex kit USD13,995 (2006). Estimated completed cost: Sonex USD24,730-USD33,735; Waiex USD25,230-USD34,235.

DESIGN FEATURES: Simple to assemble; 198 parts to easy-build kit. Wings removable for transport and storage. Quoted build time 700 hours.

NACA 64-415 aerofoil.

FLYING CONTROLS: Conventional and manual. Flaps.

STRUCTURE: Of 6061-T6 aluminium throughout.

LANDING GEAR: Fixed; nosewheel or tailwheel type. Fuselage-mounted spring titanium tube mainwheel legs with sheet metal trouser and glass fibre wheel fairings. Azusa wheels and brakes. Mainwheels 5.00x5, tailwheel (where fitted) 4x1 in. Optional Czech Aircraft Works floats; prototype first flown 18 May 2004 from land and 12 July 2004 from water.

POWER PLANT: Choice of power plants between 59.7 and 89.5 kW (80 and 120 hp), including 59.7 kW (80 hp) AeroVee 2002 conversion of Volkswagen 2180 motorcar engine and Jabiru 2200 and 3300. Two-blade, wooden, fixed-pitch Sensenich or Sterba propeller. Fuel capacity 61 litres (16.0 US gallons; 13.3 Imp gallons) in single fuel tank.

DIMENSIONS, EXTERNAL:

Wing span	6.71 m (22 ft 0 in)
Length overall	5.36 m (17 ft 7 in)
Height overall: tailwheel	1.63 m (5 ft 4 in)
nosewheel	1.93 m (6 ft 4 in)

AREAS:

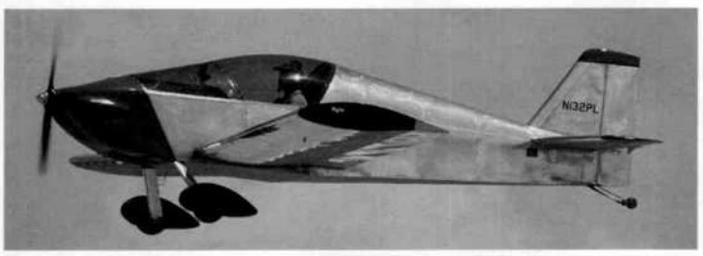
Wings, gross	9.10 m² (98.0 sq ft)

WEIGHTS AND LOADINGS (59.7 kW; 80 hp Jabiru 2200):

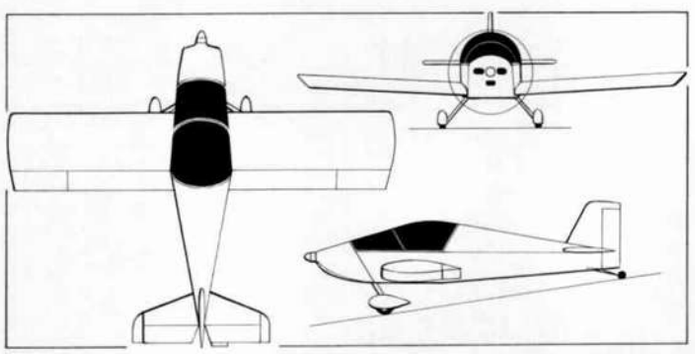
Weight empty	281 kg (620 lb)
Max baggage weight	18 kg (40 lb)
Max T-O weight: Utility	499 kg (1,100 lb)
Aerobatic	430 kg (950 lb)

PERFORMANCE (engine as above):

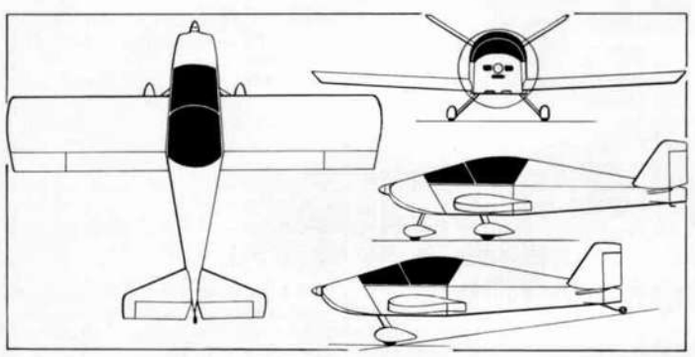
Never-exceed speed (VNE)	171 kt (317 km/h; 197 mph)
Max level speed	130 kt (241 km/h; 150 mph)
Normal cruising speed	113 kt (209 km/h; 130 mph)
Stalling speed: flaps up	40 kt (74 km/h; 46 mph)
flaps down	35 kt (65 km/h; 40 mph)
Max rate of climb at S/L	305 m (1,000 ft)/min
T-O run	91 m (300 ft)
Landing run	153 m (500 ft)
Range with max fuel	412 n miles (764 km; 475 miles)
g limits: Utility	+4.4/–2.2
Aerobatic	+6/–3



Sonex Sonex built by Samuel Pavel *(Paul Jackson)* 1040499



Production version of Sonex Sonex *(James Goulding)* 0530165



Y-tailed Sonex Waiex *(James Goulding)* 0561623

SONEX XENOS

TYPE: Side-by-side ultralight motor glider kitbuilt.

PROGRAMME: Announced in 2000 as a successor to the earlier Monnett Moni; wing static load testing completed March 2001; Jabiru 3300 prototype (N212XS) first flown 19 July 2003, followed same day by Aero-Vee 2002 VW prototype (N112XS). First three customer kits shipped 22 July 2004. Meets FAA 51 per cent rule.

CUSTOMERS: Eleven kits sold and three aircraft flying by November 2006.

COSTS: Kit USD18,995 (2006). Estimated completed cost USD30,430-USD39,435, depending on engine choice.

DESIGN FEATURES: Based on Sonex fuselage (which see). Quoted build time 1,200 hours.

FLYING CONTROLS: Conventional and manual. Speed brakes.

STRUCTURE: Primarily of 6061 aluminium. Wing has Wortmann FX-61 aerofoil. V tail similar to designer's earlier Moni motor glider.

LANDING GEAR: Tailwheel type; fixed. As Sonex.

POWER PLANT: Choice of engines including 2,180 cc Aero-Vee 2002 VW conversion and 2200 and 3300 Jabiru. Fuel capacity 61 litres (16.0 US gallons; 13.3 Imp gallons) in single fuel tank.

All data are provisional.

DIMENSIONS, EXTERNAL:

Wing span: Utility	13.91 m (45 ft 7½ in)
Aerobatic	11.99 m (39 ft 4 in)
Length overall	6.02 m (19 ft 9 in)

AREAS:

Wings, gross: Utility	14.68 m² (158.0 sq ft)
Aerobatic	13.38 m² (144.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: Utility	345 kg (760 lb)
Aerobatic	340 kg (750 lb)
Max T-O weight: Utility	578 kg (1,275 lb)
Aerobatic	476 kg (1,050 lb)

PERFORMANCE, POWERED:

Never-exceed speed (VNE)	130 kt (241 km/h; 150 mph)
Stalling speed: Utility	39 kt (71 km/h; 44 mph)
Aerobatic	36 kt (66 km/h; 41 mph)
g limits: Utility	+4.4/–2.2
Aerobatic	+6.0/–3.0

PERFORMANCE, UNPOWERED:

Best glide ratio: Utility	24
Aerobatic	21

Sonex Xenos motor glider kitplane *(James Goulding)* 0561625

SPECTRUM

SPECTRUM AERONAUTICAL LLC

120 Birmingham Avenue, Suite 110, Cardiff by the Sea, California 92007
Tel: (+1 760) 230 18 85
Fax: (+1 760) 454 46 32
Web: www.spectrum.aero
CEO AND CHAIRMAN: Linden Blue
CHIEF ENGINEER: Dan Cooney

Company founded by management experienced in design of UAVs and employment of composites in aircraft construction. Initial product was Spectrum S-33 light business jet, announced at the NBAA Convention in Orlando 8 November 2005. S-40 announced at following year's convention, October 2006.

Production of prototype and series S-33 by Rocky Mountain Composites at Spanish Fork, Utah, initially in 6,040 m² (65,000 sq ft) plant, to which further 5,575 m² (60,000 sq ft) added in 2006.

SPECTRUM S-33 INDEPENDENCE

TYPE: Business jet.

PROGRAMME: Development began 1998; detail design by Dan Cooney. Proof-of-technique airframe and prototype constructed prior to formal announcement at NBAA Convention, Orlando, Florida, in November 2005. Initial flight of prototype (N332LA—indicating lead composites engineer Larry Ashton) originally scheduled for September 2005, but did not take place until 7 January 2006 because of systems integration delays. This aircraft was destroyed in a crash on take off on 25 July 2006, apparently as a result of misrigged aileron controls following maintenance. S-33 named Independence in October 2006.

Planned four conforming prototypes and one or two fatigue and static test airframes originally due for completion by end of 2006. FAR Pt 23 certification planned for late 2007 or early 2008. However, at NBAA Convention in October 2006, Spectrum announced programme delay and rescheduling first flight of second prototype to August 2007; certification in 2009.

COSTS: USD3.65 million (2005). Ownership and operation stated to cost half as much as equivalent aircraft.

DESIGN FEATURES: High-speed, long-range design, employing latest composites material and assembly techniques for lightness and manufacturing economy. No novel aerodynamic features.

High aspect ratio wing, with winglets, mounted below and towards rear of cabin. T tail and two rear-mounted engines. Dimensions dictated, in part, by cabin size equivalent to Cessna Citation CJ2. Large cabin windows enhance interior appeal.

FLYING CONTROLS: Conventional and manual. Actuation by carbon fibre pushrods. Flaps.

STRUCTURE: Aircraft 99 per cent carbon fibre; no filler; almost all carbon-core-carbon sandwiches eliminated, reducing weight by 33 per cent. Labour-intensive and error-prone hand lay-up replaced by FibeX proprietary filament winding process, relying on computer control, permitting fuselage manufacture in five hours, not including pressure co-curing in low-temperature oven. Basic wing and fuselage structures weigh 279 kg (615 lb).

Wing constructed around five I spars. Fuselage interior walls reinforced by integral lattice of grid stiffeners in tradition of geodetic structure pioneered in aerospace applications by Sir Barnes Wallis. Bonded polycarbonate windows.

LANDING GEAR: Tricycle type; retractable. Single wheel on each unit. Hydraulic mainwheel brakes. Nosewheel retracts forward; mainwheels, on cantilever carbon fibre legs anchored at fuselage and splayed outwards, retract rearwards.

POWER PLANT: Two 7.0 kN (1,568 lb st) Williams FJ33-4 turbofans. Fuel in wing tanks, combined capacity 1,563 litres (413 US gallons; 344 Imp gallons).

ACCOMMODATION: Up to 10 persons, including pilot(s) and fully-enclosed aft lavatory; typically seven, including 'club four' in centre of cabin with single, forward-facing seat, starboard, opposite door and adjacent to emergency exit. Internal features by Infusion Design of Bonner Springs, Kansas. Sidestick controllers. Cabin equivalent pressure 1,830 m (6,000 ft) up to FL450. Externally accesses baggage compartments fore and aft of pressure bulkheads.

AVIONICS: Avidyne three-screen EFIS in prototype; other options under consideration for production aircraft.

DIMENSIONS, EXTERNAL:

Wing span	12.83 m (42 ft 1 in)
Wing aspect ratio	10.4
Length overall	14.00 m (45 ft 11 in)
Height overall	3.56 m (11 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin:	
Length: between pressure bulkheads	5.49 m (18 ft 0 in)
aft of cockpit	3.96 m (13 ft 0 in)
Max width	1.47 m (4 ft 10 in)
Max height	1.47 m (4 ft 10 in)
Baggage compartment volume: front	0.28 m³ (10 cu ft)
rear	1.8 m³ (63 cu ft)

AREAS:

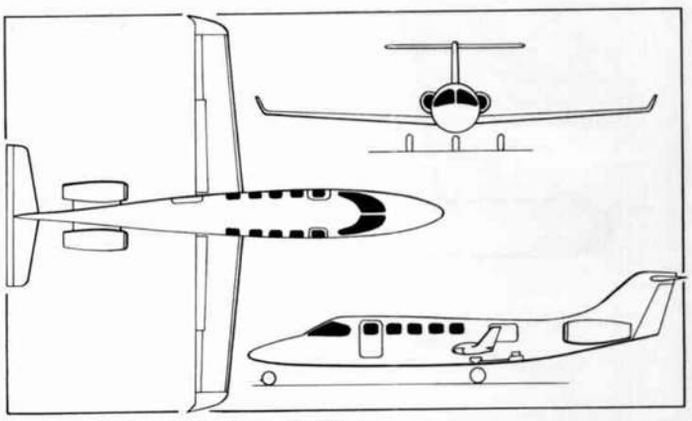
Wings, gross	15.79 m² (170.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,642 kg (3,620 lb)
Max payload	907 kg (2,000 lb)
Max fuel weight	1,257 kg (2,771 lb)
Max T-O weight	3,311 kg (7,300 lb)
Max wing loading	209.7 kg/m² (42.94 lb/sq ft)
Max power loading	237 kg/kN (2.33 lb/lb st)

PERFORMANCE (estimated):

Max level speed:	415 kt (768 km/h; 478 mph)
Normal cruising speed	415 kt (768 km/h; 478 mph)
Stalling speed: flaps up	92 kt (170 km/h; 106 mph)
flaps down	78 kt (145 km/h; 90 mph)
Max rate of climb at S/L	1,549 m (5,082 ft)/min
Rate of climb at S/L, OEI	455 m (1,492 ft)/min
Max certified altitude	13,715 m (45,000 ft)
Service ceiling, OEI	6,100 m (20,000 ft)
T-O balanced field length	914 m (3,000 ft)
Landing balanced field length	823 m (2,700 ft)
Range:	
with max payload	875 n miles (1,620 km; 1,006 miles)
with four passengers, NBAA reserves	1,600 n miles (2,962 km; 1,841 miles)
ferry, VFR	2,000 n miles (3,704 km; 2,301 miles)



Spectrum 33 business jet *(James Goulding)* 1151952

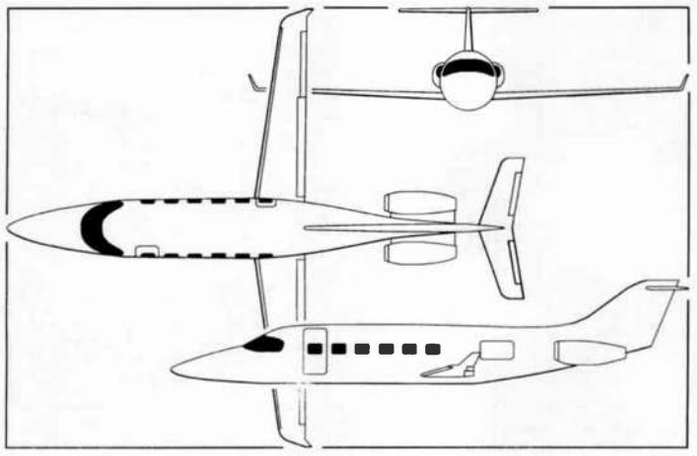
SPECTRUM SA-40 FREEDOM

TYPE: Business jet.

PROGRAMME: Announced 17 October 2006 at the NBAA Convention in Orlando. FAA certification and first customer deliveries scheduled for mid-2010.

COSTS: USD6.2 million (2006).

Spectrum S-33 prototype during its brief flying career 1159707



Spectrum SA-40 Freedom *(Paul Jackson)* 1159575

Artist's impression of the Spectrum SA-40 Freedom mid-size business jet 1159572

Description for Spectrum SA-33 Independence applies generally to the SA-40 Freedom except as follows.

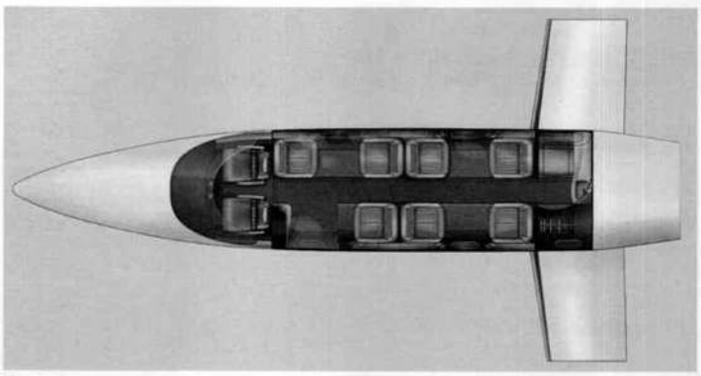
POWER PLANT: Two GE Honda HF120 turbofans, with FADEC, each rated at 9.12 kN (2,050 lb st).

ACCOMMODATION: Single pilot and up to nine passengers. Typical cabin layout for seven passengers features single forward-facing seat on port side immediately aft of entrance door, with club pair opposite, and club-four to rear, with full-enclosed aft lavatory. Alternative layouts include food/drinks cabinet and two-seat sideways-facing divan on starboard side opposite door, with 'club four' to rear. Six cabin windows per side.

AVIONICS: EFIS cockpit with sidestick controllers and keyboard avionics interface.

DIMENSIONS, EXTERNAL:

Wing span	13.90 m (45 ft 7¼ in)
Wing aspect ratio	11.1



Typical seven-seat cabin layout for Spectrum SA-40 Freedom 1159573

Length overall	16.40 m (53 ft 9½ in)
Height overall	3.96 m (13 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin: Length:	
between pressure bulkheads	6.46 m (21 2½ ft in)
excl flight deck	4.88 m (16 ft 0 in)
Max width	1.83 m (6 ft 0 in)
Max height	1.83 m (6 ft 0 in)

WEIGHTS AND LOADINGS:

Weight empty	2,195 kg (4,840 lb)
Basic operating weight	2,286 kg (5,040 lb)
Payload with max fuel	503 kg (1,110 lb)
Fuel weight: max	1,633 kg (3,600 lb)
with max payload	1,048 kg (2,310 lb)
Max T-O weight	4,332 kg (9,550 lb)
Max landing weight	4,115 kg (9,072 lb)
Max zero-fuel weight	3,284 kg (7,240 lb)
Max power loading	238 kg/kN (2.33 lb/lb st)

PERFORMANCE (estimated):

Max cruising speed	M0.76 (435 kt; 806 km/h; 501 mph)
Stalling speed: flaps up	101 kt (187 km/h; 117 mph)
flaps down	85 kt (158 km/h; 98 mph)
Service ceiling	13,715 m (45,000 ft)
Service ceiling, OEI	more than 7,620 m (25,000 ft)
Max rate of climb at S/L	1,372 m (4,500 ft)/min
Max rate of climb at S/L, OEI	533 m (1,750 ft)/min
Time to FL450	20 min
T-O run	less than 914 m (3,000 ft)
Landing run	less than 823 m (2,700 ft)
Max range, IFR reserves	2,200 n miles (4,074 km; 2,531 miles)
Range with pilot and four passengers, IFR reserves	2,030 n miles (3,759 km; 2,336 miles)

SREYA

SREYA AVIATION

Santa Maria Airport, California
Tel: (+1 805) 349 74 55
Web: www.sreyaaviation.com
GENERAL MANAGER: Rienk Ayers
AERONAUTICAL ENGINEER: Andrew Kimble

Established in 1999, Sreya undertook custom-building of kit aircraft and operation of a fractional ownership Beechcraft King Air before embarking on its first newly designed aircraft programme, the Envoy. Completion of the prototype has been delayed by one year.

SREYA ENVOY

TYPE: Six-seat turboprop/kitbuilt.

PROGRAMME: Design began October 2004; partly complete prototype exhibited at AirVenture, Oshkosh, July 2005; first flight was then scheduled for October 2005, but postponed for redesign to incorporate feedback from potential customers, including revised empennage, trailing-link landing gear, Fowler flaps, increased door size, additional fuel and five-blade (replacing three-blade) Avia propeller. Changes required abandonment of original fuselage.

CURRENT VERSIONS: **Low wing:** Envisaged as principal variant for commercial and private owner/operators. Available in **LFT** (low-wing fixed tricycle landing gear) and **LRP** (low-wing, retractable gear, pressurised fuselage) versions.

High wing: Expected to be acquired by missionary organisations, to which Sreya will donate aircraft. High commonality with low-wing version, except upper, centre fuselage.

Sreya Envoy as exhibited at Sun 'n' Fun in April 2006 1037975

COSTS: LFT kit USD449,000, including reconditioned engine and propeller, plus interior and avionics (2005). Includes customer assistance under '51 per cent rule'. Extra USD50,000 for retractable gear and pressurisation.

DESIGN FEATURES: See current versions.

FLYING CONTROLS: Conventional and manual. Fowler flaps.

STRUCTURE: Composites. Carbon fibre structure, control surfaces and cabin; glass fibre wing and fuselage skins. Two-spar wing.

LANDING GEAR: Tricycle type; fixed. Trailing link suspension. Mainwheels 19.5×6.75-8; nosewheel; 6.00-6. Optional retraction.

POWER PLANT: One 490 kW (657 hp) Walter M601D turboprop driving an Avia five-blade, constant-speed propeller. Fuel capacity 1,136 litres (300 US gallons; 250 Imp gallons).

ACCOMMODATION: Two front seats for pilot(s), plus 'club four' cabin. Door port, above wing leading-edge. Baggage compartment behind cabin with external door, port. Accommodation heated and ventilated.

SYSTEMS: TruTrak autopilot. Oxygen system.

AVIONICS: *Instrumentation:* Dynon EFIS with OP Technologies three-screen integrated system.

DIMENSIONS, EXTERNAL:

Wing span	11.96 m (39 ft 3 in)
Wing aspect ratio	7.6
Length overall	10.21 m (33 ft 6 in)
Cabin door: Height	1.07 m (3 ft 6¼ in)
Width	0.68 m (2 ft 2¾ in)

DIMENSIONS, INTERNAL:

Cabin: Max width	1.32 m (4 ft 4 in)
Max height	1.24 m (4 ft 1 in)

AREAS:

Wings, gross	18.95 m^2 (204.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,361 kg (3,000 lb)
Baggage capacity with reduced fuel	136 kg (300 lb)
Max T-O weight	2,721 kg (6,000 lb)
Max wing loading	143.6 kg/m^2 (29.41 lb/sq ft)
Max power loading	5.56 kg/kW (9.13 lb/shp)

PERFORMANCE (estimated):

Cruising speed	217 kt (402 km/h; 250 mph)
Stalling speed, flaps down	60 kt (111 km/h; 69 mph)
Max rate of climb at S/L	610 m (2,000 ft)/min
T-O run	244 m (800 ft)
Landing run	305 m (1,000 ft)
Range with IFR reserves	1,216 n miles (2,253 km; 1,400 miles)
g limits	+4.4/–2.2

STEEN

STEEN AERO LAB LLC

1451 Clearmont Street Northeast, Palm Bay, Florida 32905
Tel: (+1 321) 725 41 60
Fax: (+1 321) 725 30 58

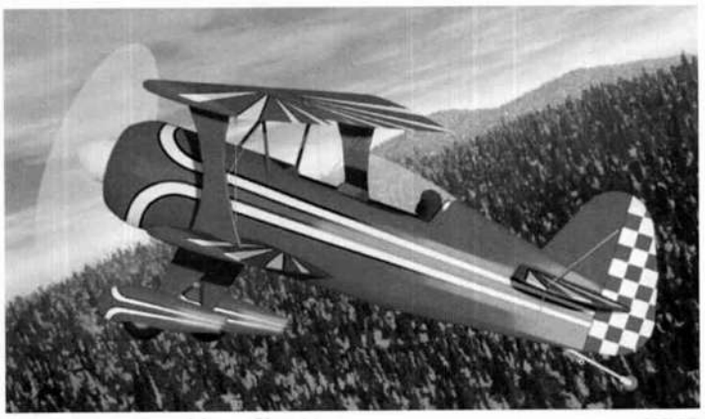
PRESIDENT: David Stone

Steen is a long-established company (formed in the 1970s) which provides plans, materials and components to aircraft builders; products include plans and components for the Steen Skybolt, Pitts S1 and Payne Knight Twister. Its latest product is a new design from the late Curtis Pitts. The company operates from a 1,579 m² (17,000 sq ft) facility.

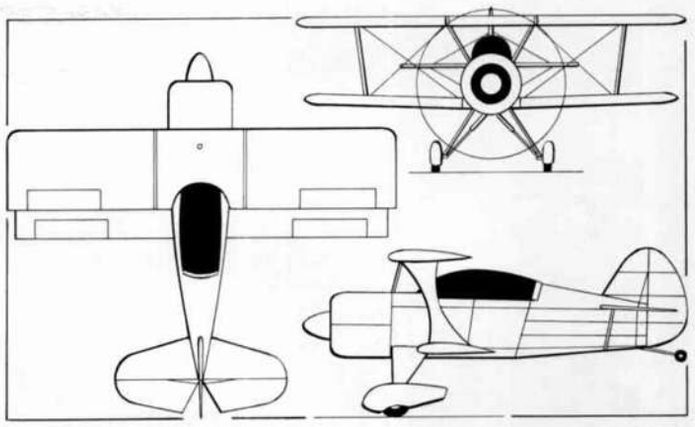
Steen Skybolt plans-built sportplane ***(Paul Jackson)*** 1044937

STEEN PITTS 14

TYPE: Tandem-seat biplane kitbuilt.
PROGRAMME: Frame of prototype revealed at AirVenture, Oshkosh, July 2003; first flight then due before July 2004, but was rescheduled for 2006; had not taken place by November 2006.
COSTS: Not priced as a complete kit, but all components available from Steen Aero Lab.



Artist's impression of Steen Pitts 14 0561653



Steen Pitts 14 aerobatic biplane ***(James Goulding)*** 0567292

DESIGN FEATURES: Continues Pitts' 60-year history of aerobatic biplane development. Differs from earlier designs in concentrating bracing wire loads in a single plane between the interplane struts. Designed for simplicity of structure, low weight, ease of construction and strength. Suitable as airshow aerobatic performer.

Choice of semi-symmetric NACA 23012 aerofoil or symmetric SS. Former on prototype. Straight or swept upper wing, to builder's choice; range of empennage shapes, including classic Samson style.

Single-bay biplane with broad-chord interplane strut each side and supporting cabane for upper wing. Wire-braced empennage.

LANDING GEAR: Tailwheel type; fixed. Two faired-in side Vs, each with half-axle and oleo shock-absorber joined at centreline. Wheel fairings.

POWER PLANT: One 294 kW (394 hp) VOKBM M-14PF nine-cylinder radial. Standard fuel capacity 132 litres (35.0 US gallons; 29.1 Imp gallons); optional 68-litre (18.0 US gallon; 15.0 Imp gallon) tank can be added.

ACCOMMODATION: Two in tandem beneath single-piece blown canopy.

EQUIPMENT: Optional 'smoke tank' in lower fuselage with external filler.

Provisional data follow:

DIMENSIONS, EXTERNAL:
- Wing span: upper ..... 6.55 m (21 ft 6 in)
- lower ..... 6.25 m (20 ft 6 in)
- Wing aspect ratio 5.7

AREAS:
- Wings, gross ..... 14.59 m² (157.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ..... 680 kg (1,500 lb)
- Max baggage weight ..... 16 kg (35 lb)
- Airshow weight ..... 848 kg (1,871 lb)
- Max aerobatic weight ..... 907 kg (2,000 lb)
- Max T-O weight ..... 1,021 kg (2,250 lb)
- Wing loading: aerobatic ..... 62.2 kg/m² (12.74 lb/sq ft)
- max ..... 70.0 kg/m² (14.33 lb/sq ft)
- Power loading: aerobatic ..... 3.08 kg/kW (5.06 lb/hp)
- max ..... 3.47 kg/kW (5.70 lb/hp)

PERFORMANCE (estimated):
- Never-exceed speed (VNE) ..... 204 kt (378 km/h; 235 mph) TAS
- Max speed ..... 165 kt (306 km/h; 190 mph)
- Cruise speed at 75% power ..... 156 kt (290 km/h; 180 mph)
- Stalling speed ..... 54 kt (100 km/h; 62 mph)
- Max rate of climb ..... 1,067 m (3,500 ft)/min
- *g* limits: standard ..... +6/–4.5
- ultimate ..... +9/–6

TAYLORCRAFT

TAYLORCRAFT AVIATION INC

2045 Les Mauldin Road, Brownsville, Texas 78521-5635
Tel: (+1 956) 986 07 00
Fax: (+1 956) 986 07 09
e-mail: sales@taylorcraft.com
Web: www.taylorcraft.com
PRESIDENT: Harry Ingram

Present Taylorcraft Aviation inherits traditions of Taylor-Young Airplane Company, formed 1935 on C G Taylor's departure from Piper. Taylor produced A, BC, BF, DC, 15, 16, 18, 19 and 20 until late 1950s; Taylorcraft Aviation Corporation established 1971 at Alliance, Ohio, to build F-19 and, from 1971, F21 until 1985, when transferred to Lock Haven, Pennsylvania, where 16 more built before bankruptcy. Taylorcraft Aircraft Company re-established in 1989 to manufacture F22, of which only 17 produced up to 1992 closure. Type Certificate passed through several hands, including Taylorcraft Aerospace and Taylorcraft 2000, none of which initiated production.

Taylorcraft Aviation established by Harry Ingram in 5,020 m² (54,000 sq ft) plant at La Grange, Texas, to deliver new F22s from 2004 onwards; total of 20 full-time staff by mid-2004. Obtained F22 Type Certificate 5 March 2003. Transferred operations to Brownsville on 1 June 2005, manufacturing being outsourced to Nova/Link Inc, with consequent delay to start of new production.

Planned to relaunch modernised (Continental O-200 engine) version of 1930s Taylor E2 Cub in 2006; cost USD69,995.

Original Taylor Cub, similar to planned production version of 2006 1159045

TAYLORCRAFT F22 and SPORT

TYPE: Two-seat lightplane.
PROGRAMME: Taylorcraft 19 awarded FAA certification 20 June 1951, followed by F19 on 3 July 1973, F21 on 2 July 1980, F21A (fuel tanks transferred to wings) 15 November 1982, F21B (793 kg; 1,750 lb MTOW) 6 September 1985 and F22 (prototype N180GT) on 1 August 1988. Production re-launch delayed from 2004 to 2005. Priority for production changed to Model 19, which returned to range in 2005 as basis of Sport, meeting US LSA requirements.
CURRENT VERSIONS: **F22 Classic:** Derived from F21B with addition of flaps, wider doors, up-hinged windows and adjustable individual seats. Lycoming O-235 engine. Tailwheel.

F22A Tracker: F22 with tricycle landing gear. Prototype N14KV; certified 20 February 1991.

F22B Ranger: F22 with Lycoming O-360 engine. Prototype N24UK; certified 14 July 1992.

F22C Trooper: F22A (tricycle gear) with O-360 engine. Prototype N223UK; certified 20 February 1992.

Sport: Taylorcraft 19 with certified Teledyne Continental O-200-A of 74.6 kW (100 hp), increased (F22) fuel capacity and hydraulic brakes. Prototype N170TX completed November 2005 and granted airworthiness certificate 9 January 2006.

CUSTOMERS: Previous series comprised four F22s; 11 F22As; one F22B; and one F22C up to 1992.

First Taylor Sport, N170TX *(R W Simpson)* 1159031

COSTS: F22 USD79,995; F22A USD84,995; F22B USD89,995; F22C USD94,995; Sport USD69,995 (all 2006).

DESIGN FEATURES: Progressive development of Taylorcraft 19 series, incorporating classic features of earlier designs. High, constant-chord wing with rounded tips and V-type braces with intermediate struts. Wire-braced empennage.

Wing section NACA 23012.

FLYING CONTROLS: Conventional and manual. Flaps, except Sport. Flight-adjustable tab in elevator. Control movements: ailerons ±23°; elevators +27/ −25°; rudder ±26°. Max flap deflection 30°.

STRUCTURE: Welded steel tube airframe with fabric covering.

LANDING GEAR: Nosewheel or tailwheel type; fixed. Split type with bent half-axles incorporating bungee shock absorbers. Mainwheels 6.00–6 (4 ply). Optional nosewheel 5.00–5. Cleveland mainwheel brakes.

POWER PLANT: F22 series has one 88.0 kW (118 hp) Textron Lycoming O-235-L2C flat-four or 134 kW (180 hp) O-360-A4M driving a Sensenich (72CK-0-50 or 76EM8S-0-60, respectively) two-blade, metal, fixed-pitch propeller. Fuel tank in each wing; total capacity 159 litres (42.0 US gallons; 35.0 Imp gallons), of which 151 litres (40.0 US gallons; 33.3 Imp gallons) are usable.

ACCOMMODATION: Two, side by side; door each side. Baggage area behind seats. Cabin heated and ventilated.

SYSTEMS: Electrical system includes 14 V 60 A alternator and 25 Ah battery.

AVIONICS: Provision for IFR avionics.

Data apply to all versions, except where otherwise stated.

DIMENSIONS, EXTERNAL:

Wing span	10.97 m (36 ft 0 in)
Length overall: except Sport	6.78 m (22 ft 2¾ in)
Sport	6.74 m (22 ft 1¼ in)
Height overall: F22, F22B	1.88 m (6 ft 2 in)
F22A, F22C	2.31 m (7 ft 7 in)
Sport	1.98 m (6 ft 6 in)
Propeller diameter: O-235	1.83 m (6 ft 0 in)
O-360	1.93 m (6 ft 4 in)

AREAS:

Wings, gross	17.07 m² (183.7 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: F22	494 kg (1,090 lb)
F22A	517 kg (1,140 lb)
F22B	538 kg (1,185 lb)
F22C	560 kg (1,235 lb)
Sport	404 kg (890 lb)
Baggage capacity	91 kg (200 lb)
Max T-O weight: except Sport	793 kg (1,750 lb)
Sport	598 kg (1,320 lb)
Max wing loading: except Sport	46.5 kg/m² (9.53 lb/sq ft)
Sport	35.1 kg/m² (7.19 lb/sq ft)
Max power loading: F22, F22A	9.03 kg/kW (14.83 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	128 kt (238 km/h; 148 mph)
Max level speed: F22, F22A	96 kt (177 km/h; 110 mph)
F22B, F22C	109 kt (201 km/h; 125 mph)
Sport	110 kt (204 km/h; 127 mph)
Cruising speed at 75% power:	
F22, F22A	87 kt (161 km/h; 100 mph)
F22B, F22C	104 kt (193 km/h; 120 mph)
Sport	100 kt (185 km/h; 115 mph)
Stalling speed, power off: flaps up, except Sport	42 kt (78 km/h; 48 mph)
Sport (no flaps)	38 kt (70 km/h; 43 mph)
flaps down	37 kt (68 km/h; 42 mph)
Max rate of climb at S/L: F22, F22A	229 m (750 ft)/min
F22B, F22C	457 m (1,500 ft)/min
Sport	236 m (775 ft)/min
Service ceiling	5,485 m (18,000 ft)
T-O run: F22, F22A	153 m (500 ft)
F22B, F22C	122 m (400 ft)
Sport	115 m (375 ft)
T-O to 15 m (50 ft): F22, F22A	243 m (795 ft)
F22B, F22C	199 m (650 ft)
Sport	214 m (700 ft)
Landing from 15 m (50 ft): except Sport	176 m (575 ft)
Sport	190 m (625 ft)
Landing run: except Sport	107 m (350 ft)
Sport	115 m (375 ft)
Range at 75% power, 30 min reserves:	
F22, F22A	530 n miles (981 km; 610 miles)
F22B, F22C	398 n miles (737 km; 458 miles)
Sport	564 n miles (1,046 km; 650 miles)

TBG

THUNDER BUILDERS' GROUP LLC

Tel: (+1 719) 591 93 73

MANAGING MEMBER: John McCartney

Scale replica of the classic P-51 Mustang fighter was originally produced by Papa 51 company which ceased trading on 1 December 2000. Group of 25 kitbuilders (six of them with almost complete aircraft) then formed Thunder Builders' Group LLC and acquired company's intellectual rights and production moulds with a view to sustaining their own projects and resuming manufacture. This seemed to have been achieved on 13 September 2001, when GUT Works reached agreement with Group; however, the two partners parted on 25 July 2002 when TBG again put the assets up for sale. In mid-2006, a Canadian company was reported to be interested in purchasing the project.

Thunder Mustang completed in 2005 by Tom Gaston 1040482

There has been no production of kits since that time, although completions have continued. By November 2006, flying aircraft totalled 12.

PRESIDENT: Mark Frederick

Team Rocket was formed in 1998. Its F1 kitbuilt was developed by Team Rocket's subsidiary division, International High Performance Aircraft of Lobeček 732, CZ-728 01 Kralupy nad Vlatava, Czech Republic, and Venice, Florida (www.international-hpa.com).

A tapered-wing version, the F1EVO, was introduced in 2003. In June 2004, Team Rocket had a workforce of 35 in its 470 m² (5,060 sq ft) factory.

TEAM ROCKET F1

TYPE: Tandem-seat sportplane kitbuilt.

PROGRAMME: Developed from Van's RV-4 by way of Harmon Rocket. First flight (in USA) November 2000 (N121JC). Second flew in Australia, July 2001.

CURRENT VERSIONS: **Team Rocket F1:** Baseline version.

Description applies to this version, unless otherwise indicated.

Team Rocket F1 QB: Quick build version, introduced 2006. Build time reduced by up to 40 per cent.

Team Rocket F1EVO: Tapered-wing version announced as under development in 2003, first flown late 2003 (N84MF). As F1, except where otherwise indicated.

Team Rocket F2: Planned side-by-side two-seat version, announced at Oshkosh in July 2002 but discontinued; project has been moved to High Performance Aircraft of USA.

CUSTOMERS: Sales totalled 145 kits by October 2004, of which 130 had been delivered and 29 were flying in Australia, Canada and the USA. Some 46 flying by mid-2005, and 61 by November 2005, plus six F1EVOs.

COSTS: Kit, excluding engine, propeller and avionics, F1 USD39,750, F1EVO USD45,200 (2006).

DESIGN FEATURES: Intended to combine high performance and low price. Low-wing monoplane with closely cowled engine. Constant-chord wings, tapered tailplane and moderately sweptback fin.

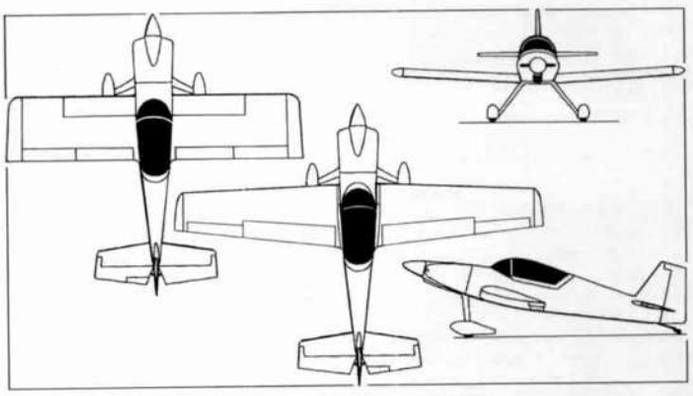
Meets '51 per cent' rule. Quoted build time 2,000 hours (1,200 for fast-build kit). Aerofoil on F1 is NACA 23013.5, that on F1EVO is MS(1)-313.

FLYING CONTROLS: Conventional and manual. Flaps. Horn-balanced rudder and elevators.

STRUCTURE: Principally of aluminium, primed with epoxy chromate for corrosion resistance. Titanium mainwheel legs; glass fibre engine cowling and wingtips.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted, raked back spring titanium cantilever mainwheel legs with wheel fairings. Mainwheels 5.00–5.

Team Rocket F1 built by Vincent Frazier *(Paul Jackson)* 1040502



Team Rocket F1, with additional plan view (lower) of F1EVO 0567251

POWER PLANT: One flat-six piston engine rated between 175 and 224 kW (235 and 300 hp), driving a two- or three-blade propeller recommended for both versions; typically prototypes have Textron Lycoming IO-540 and three-blade, constant-speed MTV-9-B-C/C198-52 propeller. Fuel capacity 197 litres (52.0 US gallons; 43.3 Imp gallons).

ACCOMMODATION: Two persons in tandem, beneath rearwards-sliding canopy. Fixed windscreen.

DIMENSIONS, EXTERNAL:

Wing span: F1	6.56 m (22 ft 6 in)
F1EVO	7.57 m (24 ft 10 in)[1]
Wing aspect ratio: F1	4.8
F1EVO	6.0
Length overall	6.40 m (21 ft 0 in)

DIMENSIONS, INTERNAL:

Cockpit max width	0.64 m (2 ft 1 in)

AREAS:

Wings, gross: F1	9.85 m² (106.0 sq ft)
F1EVO	9.48 m² (102.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: F1	544 kg (1,200 lb)
F1EVO	568 kg (1,252 lb)
Max T-O weight: F1	907 kg (2,000 lb)
F1EVO	952 kg (2,100 lb)
Max wing loading: F1	92.1 kg/m² (18.87 lb/sq ft)
F1EVO	102.5 kg/m² (21.00 lb/sq ft)
Max power loading: F1	4.06 kg/kW (6.67 lb/hp)
F1EVO	4.26 kg/kW (7.00 lb/hp)

PERFORMANCE (224 kW; 300 hp engine):

Max level speed: F1	220 kt (407 km/h; 253 mph)
F1EVO	230 kt (426 km/h; 265 mph)
Cruising speed at 75% power:	
F1	200 kt (370 km/h; 230 mph)
F1EVO	209 kt (386 km/h; 240 mph)
Stalling speed: F1	47 kt (87 km/h; 54 mph)
F1EVO	44 kt (81 km/h; 50 mph)
Max rate of climb at S/L	1,067 m (3,500 ft)/min
T-O run	92 m (300 ft)
Landing run	214 m (700 ft)
Range at 55% power	1,000 n miles (1,850 km; 1,150 miles)

[1] *Company's scale drawings indicate span of some 8.2 m (27 ft)*

TEAM TANGO

TEAM TANGO INC

1990 SW 19th Avenue, Williston, Florida 32696
Tel: (+1 352) 528 09 82
e-mail: teamtango@teamtango.com
Web: www.teamtango.com
PRESIDENT AND CEO: Tom Miller

The former DFL was purchased by a consortium of constructors of its projects in June 2002 and now a subsidiary of Revolution Aviation. A new 557 m² (6,000 sq ft) Builder's Center has been opened at Williston Municipal Airport, where the company continues to develop and market the Tango and Foxtrot.

TEAM TANGO FOXTROT

TYPE: Four-seat kitbuilt.

PROGRAMME: Development began in 1999; first engine runs of prototype (N747F) completed 27 August 2001; first flight was due before end of 2001 and achieved 23 December 2002. Two further aircraft had flown by mid-2003. By June 2003, prototype had completed 35 hours of flying. An MTOW upgrade to 1,361 kg (3,000 lb) is planned.

Team Tango Foxtrot *(Paul Jackson)* 1040503

COSTS: Basic kit USD35,995 (2006).

CUSTOMERS: Two flying and two more partially completed by November 2006.

DESIGN FEATURES: Conventional design similar in appearance to Tango. Vinylester resin used in place of epoxy to reduce cure time of composites.

FLYING CONTROLS: Conventional and manual. Flaps (electric actuation) optional.

STRUCTURE: Extensive use of composites throughout.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring cantilever mainwheel legs with wheel fairings. Steerable nosewheel with wheel fairings.

POWER PLANT: Prototype fitted with 224 kW (300 hp) Textron Lycoming IO-540; engines in the range 149 to 224 kW (200 to 300 hp) are recommended. Standard fuel capacity 379 litres (100 US gallons; 83.3 Imp gallons).

ACCOMMODATION: Pilot and three passengers in two pairs of seats. Upward-opening, centreline-hinged door each side; fixed windscreen. Baggage stowage behind seats.

DIMENSIONS, EXTERNAL:

Wing span	9.75 m (32 ft 0 in)
Wing aspect ratio	8
Length overall	7.56 m (24 ft 9½ in)
Height overall	2.21 m (7 ft 3 in)

DIMENSIONS, INTERNAL:

Cabin: Max width	1.17 m (3 ft 10 in)
Max height	1.09 m (3 ft 7 in)
Baggage volume	0.40 m³ (14.0 cu ft)

AREAS:

Wings, gross	11.89 m² (128.0 sq ft)

WEIGHTS AND LOADINGS (224 kW; 300 hp engine):

Weight empty	774 kg (1,706 lb)
Max baggage weight	68 kg (150 lb)
Max payload	250 kg (552 lb)
Max T-O weight	1,270 kg (2,800 lb)
Max wing loading	106.8 kg/m² (21.88 lb/sq ft)
Max power loading	5.68 kg/kW (9.33 lb/hp)

PERFORMANCE (224 kW; 300 hp engine):

Never-exceed speed (VNE)	212 kt (394 km/h; 245 mph)
Max operating speed	200 kt (370 km/h; 230 mph)
Normal cruising speed	189 kt (351 km/h; 218 mph)
Stalling speed, flaps down	54 kt (100 km/h; 62 mph)

Max rate of climb at S/L ..... 914 m (3,000 ft)/min
Service ceiling ..... 7,315 m (24,000 ft)
T-O run ..... 107 m (350 ft)
Landing run ..... 244 m (800 ft)
Range with max fuel ..... 1,564 n miles (2,896 km; 1,800 miles)
g limits ..... +6/–4

TEAM TANGO TANGO 2

TYPE: Side-by-side kitbuilt.

PROGRAMME: Developed from the Aero Mirage TC-2 of 1983. Prototype flew November 1996. First two production aircraft displayed at Oshkosh in July 1999; third flew March 2000. Production delayed from mid-2001 to mid-2002 whilst buyer sought for company.

CUSTOMERS: By November 2006, at least 22 kits had been sold, at which time 10 aircraft were on the US register.

COSTS: Basic kit USD27,995. Firewall forward USD50,000 (2006).

DESIGN FEATURES: Conventional design optimised for amateur assembly; low-mounted, constant-chord wings and mid-positioned tailplane. Steeply raked windscreen. Quoted build time 570 hours for quick-build kit version; company has building facility to enable purchasers to complete in 30 to 45 days. Roll rate 120°/s.

FLYING CONTROLS: Conventional and manual. Flaps deflect 10/20/35°.

STRUCTURE: Generally of composites. Two-spar wing has modified NACA64415 aerofoil and 3° dihedral.

POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360 flat-four driving a two-blade Hartzell HCC2YR-7666A constant-speed propeller. Fuel capacity 216 litres (57 US gallons; 47.5 Imp gallons) in two wing tanks; two optional extra 62 litre (16.5 US gallon; 13.7 Imp gallon) tanks can be fitted. Optionally, 149 kW (200 hp) IO-360.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring glass fibre cantilever mainwheel legs; cantilever 4130 steel tube nosewheel leg with trouser; speed fairings on all wheels. Main units have Cleveland wheels and brakes with Goodyear 5.00–5 tyres; nosewheel is steerable and has 4.50–5 Lamb tyre.

ACCOMMODATION: Two, side by side. Upward-opening, centreline hinged door each side; fixed windscreen. Baggage stowage behind seats.

AVIONICS: To customer's specification. Standard VFR option includes Honeywell KLX 135 GPS/com, KT 76A transponder and Sigtronics intercom; IFR version adds KX 155 nav/com and KI 209 VOR/LOC.

DIMENSIONS, EXTERNAL:
Wing span ..... 7.62 m (25 ft 0 in)
Wing aspect ratio 8.3
Length overall ..... 6.31 m (20 ft 8½ in)
Height overall ..... 2.06 m (6 ft 9 in)
Wheel track ..... 2.54 m (8 ft 4 in)
Propeller diameter ..... 1.93 m (6 ft 4 in)

AREAS:
Wings, gross ..... 6.97 m² (75.0 sq ft)

DIMENSIONS, INTERNAL:
Cockpit: Max width ..... 1.12 m (3 ft 8 in)
Max height ..... 0.94 m (3 ft 1 in)
Baggage compartment volume ..... 0.34 m³ (12.0 cu ft)

WEIGHTS AND LOADINGS:
Weight empty ..... 488 kg (1,075 lb)
Max baggage weight ..... 45 kg (100 lb)
Max T-O weight ..... 839 kg (1,850 lb)
Max wing loading ..... 120.4 kg/m² (24.67 lb/sq ft)
Max power loading ..... 6.26 kg/kW (10.28 lb/hp)

PERFORMANCE:
Never-exceed speed (VNE) ..... 212 kt (394 km/h; 245 mph)
Max level speed ..... 191 kt (354 km/h; 220 mph)
Max cruising speed ..... 174 kt (322 km/h; 200 mph)
Stalling speed ..... 53 kt (97 km/h; 60 mph) IAS
Max rate of climb at S/L ..... 549 m (1,800 ft)/min
Service ceiling ..... 7,315 m (24,000 ft)
T-O run ..... 107 m (350 ft)
Landing run ..... 244 m (800 ft)
Max range ..... 869 n miles (1,609 km; 1,000 miles)
g limits ..... +6/–4

Team Tango Tango 2 ***(Paul Jackson)*** 1040506

TERRAFUGIA

TERRAFUGIA

Cambridge, Massachusetts
e-mail: info@terrafugia.com
Web: www.Terrafugia.com

Terrafugia (Latin for 'escape from the Earth') is a group of graduates of the Department of Aeronautics at the Massachusetts Institute of Technology formed in 2006 to develop a roadable aircraft.

TERRAFUGIA TRANSITION

TYPE: Technology demonstrator.

PROGRAMME: Announced 2006. First flight planned for 2008 and initial deliveries in 2009.

COSTS: USD148,000 (estimated for 2009).

DESIGN FEATURES: 'Flying car'. Conforms aeronautically to LSA weight limits. Intended to overcome the technical compromises which have prevented previous vehicles of this type from entering quantity production. Folding wing, foreplane and twin fin design obviates requirement to detach wings and empennage before road travel.

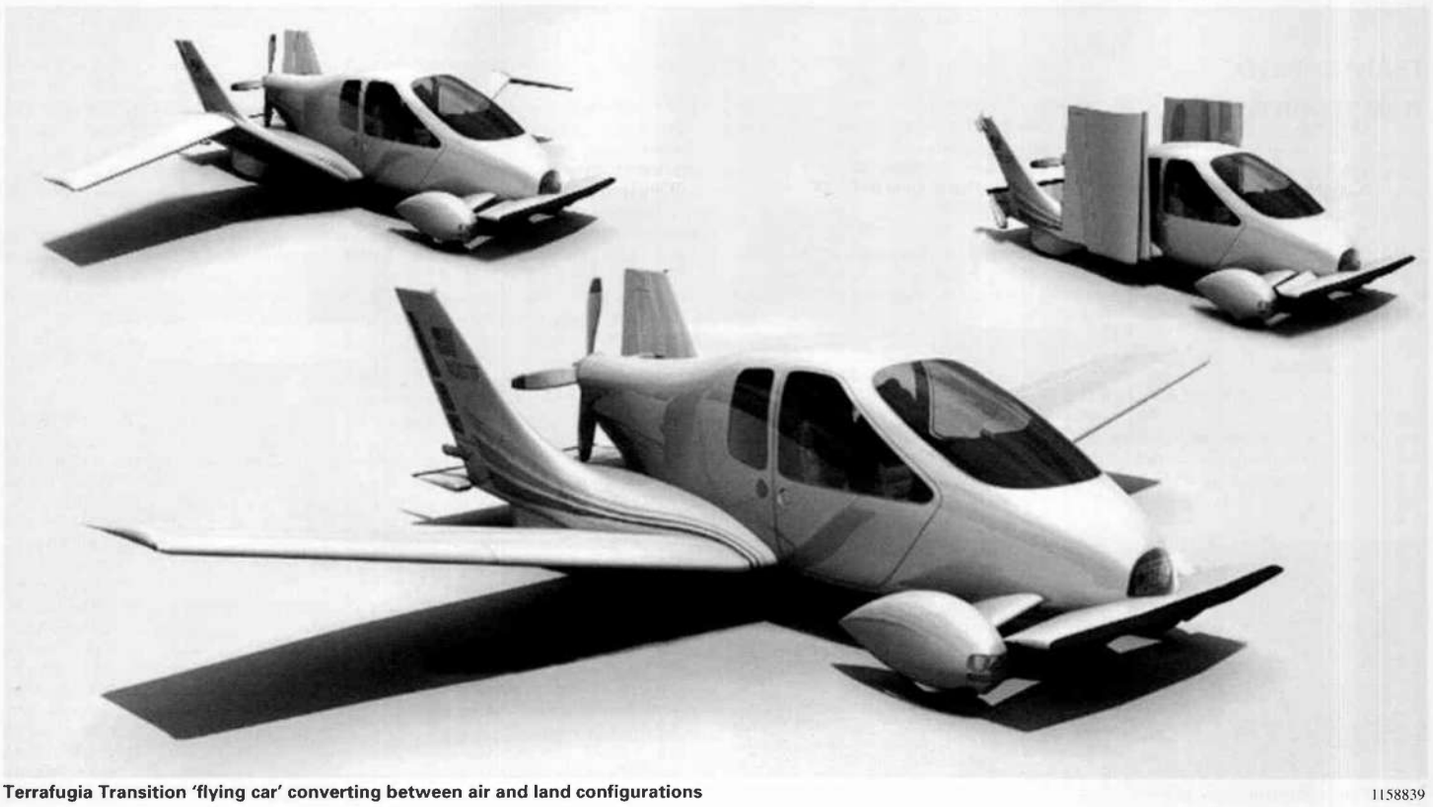
Low-mounted wings fold upwards at root and downwards at mid-span to lie vertically against the passenger pod sides when not required. Pusher propeller between twin fins which mounted in narrow V configuration. Short, fixed foreplane serves as mounting for front roadwheels.

Fuel consumption in flight and in city traffic estimated identical at 13.7 km/litre (30 miles/US gallon; 36 miles/Imp gallon); 33 per cent more for motorway driving.

FLYING CONTROLS: Manual. Pitch control by foreplane

LANDING GEAR: Four-wheel gear in rectangular layout; fixed. Wheel fairings.

POWER PLANT: One 73.5 kW (98.6 hp) Rotax 912 ULS flat-four driving a four-blade pusher propeller and, when required, road wheels. Fuel capacity 76 litres (20.0 US gallons; 16.7 Imp gallons).



Terrafugia Transition 'flying car' converting between air and land configurations 1158839

DIMENSIONS, EXTERNAL:
- Wing span ..... 8.25 m (27 ft 1 in)
- Length overall ..... 5.71 m (18 ft 9 in)
- Width folded ..... 2.03 m (6 ft 8 in)
- Height overall ..... 2.03 m (6 ft 8 in)

WEIGHTS AND LOADINGS:
- Max payload ..... 195 kg (430 lb)
- Max T-O weight ..... 598 kg (1,320 lb)

PERFORMANCE (airborne, estimated):
- Cruising speed at 75% power ..... 104 kt (193 km/h; 120 mph)
- Stalling speed ..... 45 kt (84 km/h; 52 mph)
- T-O run ..... 458 m (1,500 ft)

THRUSH

THRUSH AIRCRAFT INC

PO Box 3149, Albany, Georgia 31706-3149
Tel: (+1 229) 883 14 40
Fax: (+1 229) 439 97 90

Web: www.thrushaircraft.com
PRESIDENT: Larry Bays
EXECUTIVE VICE-PRESIDENT: Joni Kehoe
VICE-PRESIDENT, MANUFACTURING: Gene Vaughn
PRODUCTION MANAGER: Ken Gum
DIRECTOR OF INTERNATIONAL SALES AND SERVICE: Fred Ayres

Former Ayres Corporation bought Albany factory and manufacturing and world marketing rights to Thrush Commander-600 and-800 from Rockwell International General Aviation Division in November 1977. Acquired 93 per cent shareholding in Let Kunovice of Czech Republic in 1998, but stopped providing finance in July 2000 after Czech bank cancelled a debt repayment freeze; Let declared bankrupt in October 2000.

Ayres filed for Chapter 11 bankruptcy protection in late November 2000 and was seeking further investment of US$80 million; work restarted on the Loadmaster programme after a financing agreement with GATX, as debtor-in-possession, was concluded. However, GATX foreclosed on the company on 7 August 2001, securing all assets in return for a debt reduction of US$10.3 million.

Quality Aerospace established, also on 7 August 2001, to take over almost all of Ayres's assets at 21,100 m² (227,000 sq ft) Albany plant and continues to produce aerostructures, support existing Thrush fleet and promote Turbo-Thrush. Thrush Aircraft Inc purchased Ayres assets on 30 June 2003, and began the process of restarting the production line, with intention to manufacture two new aircraft by November 2003. Employment stood at about 300 in 2004.

THRUSH TURBO-THRUSH S2R

TYPE: Agricultural sprayer.

PROGRAMME: Leland Snow designed S-1 prototype, first flown with radial engine on 17 August 1953; entered production as S-2; Type Certificate for original S2D issued 1 November 1965; SR2 followed 21 March 1968; over 1,800 built by Snow and (following 18 February 1970 transfer of Type Certificate) Rockwell. Type Certificate obtained by Ayres on 28 November 1977; Ayres introduced turboprop version, having previously specialised in turbine conversions. PT6-engined S2R-T34 certified 28 April 1977; Garrett TPE331 versions certified from 5 March 1992 (S2R-G6) onwards. Quality Aerospace obtained Type Certificate on 26 November 2001 and this transferred to Thrush Aircraft on 2 September 2003. New company standardised version designations, adopting marketing names of Model 400, 510 and 660.

CURRENT VERSIONS: **Thrush 400:** Light airframe version with 1,514 litre (400 US gallon; 333 Imp gallon) hopper. Undergoing redesign in 2006, prior to relaunch of marketing.

S2RHG Thrush 510: Baseline version with 1,931 litre (510 US gallon; 425 Imp gallon) hopper and option of PT6A (designation S2RHG-T34) or TPE331 turboprop. *As described.*

Thrush 660: Described separately.

S2R-T34: 559 kW (750 shp) P&WC PT6A-34AG turboprop; standard or optional hoppers. High Gross (4,763 kg; 10,500 lb) MTOW version certified 5 November 1997.

S2RHG-T65: Certified 8 June 1988 with PT6A-65AG engine.

CUSTOMERS: Over 2,500 of all versions delivered to 80 countries.

Production by new Thrush company began with 273rd S2R-T34 (temporarily N550AG) registered December 2003. This delivered to Christopher Carranza in Arizona, early 2005; further two to Tommy's Flying Service and Riddell Flying Service by August 2005; seven S2R-T34s built by Thrush up to early 2006. Thrush 510 continues to be registered as S2RHG-T34, of which four produced in 2004 for Thrush; Hamlin Flying Services; Valley Air Applicators; and Allen Chormant & Son; none further in following two years. Also in current production is S2RHG-T65, of which 10 built by Thrush up to mid-2006.

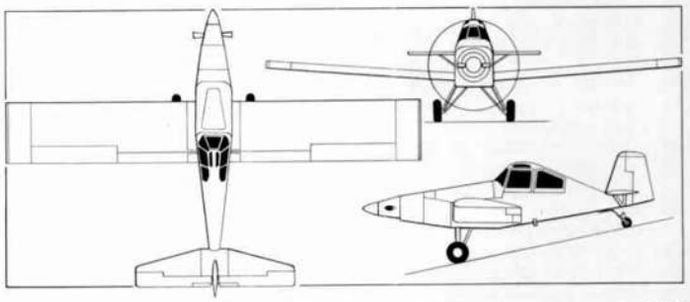
COSTS: About US$600,000, depending on engine and customer fit.

DESIGN FEATURES: Conventional crop-sprayer configuration, with hopper ahead of cockpit; cantilever low wing of constant chord; braced empennage with sweptback leading-edges; robust landing gear.

Advantages over piston-engined versions include much improved take-off and climb, 454 kg (1,000 lb) higher payload because of lower engine weight, operation on aviation turbine fuel or diesel, 3,500 hour TBO, quieter operation and ability to feather propeller without stopping engine while refuelling and reloading.

FLYING CONTROLS: Conventional and manual. Plain ailerons; servo tab in each elevator; electrically actuated flaps.

Ayres-built TPE331-engined Thrush S2R-G10 0559124



Turbo-Thrush S2R-T34 ***(James Goulding)*** 0569767

STRUCTURE: Two-spar light alloy wing with 4130 chrome molybdenum steel spar caps; welded chrome molybdenum steel tube fuselage structure covered with quickly removable light alloy skin panels; underfuselage skin of stainless steel; all-metal tail surfaces and strut-braced tailplane; metal ailerons and flaps. Extended wing, originally optional, is now standard, replacing earlier 13.54 m (44 ft 5 in), 30.34 m² (326.6 sq ft) version.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring steel cantilever mainwheel legs standard from 2004. Ayres-built aircraft have narrower track (2.51 m; 8 ft 3 in) gear comprising two side Vs hinged to lower longerons, plus half-axles sprung under centreline with rubber-in-compression shock-absorbers; 8.50–10 (10 ply) tyres. Hydraulically operated Cleveland dual calliper disc brakes. Parking brakes. Wire cutters on main gear. Steerable, spring steel locking tailwheel, size 5.00-5.

POWER PLANT: One turboprop rated at 559 kW (750 shp): P&WC PT6A-34G standard, Honeywell TPE331-6 optional. Hartzell three-blade, constant-speed, feathering and reversing propeller; usable fuel capacity 515 litres (136 US gallons; 113 Imp gallons) in 400 gallon hopper version and 863 litres (228 US gallons; 190 Imp gallons) in 510 gallon hopper version.

ACCOMMODATION: Single adjustable mesh seat in 'safety pod' sealed cockpit enclosure, with steel tube overturn structure; aft fuselage pressurised to prevent chemical ingress. Tandem seating optional, with forward-facing second seat. Dual controls optional with forward-facing rear seat, for pilot training; these versions have 'DC' suffix to c/n; available since 1985. Adjustable rudder pedals. Downward-hinged door on each side. Tempered safety glass windscreen. Cockpit wire cutter. Dual inertia reel safety harness with optional second seat. Baggage compartment standard on single-seat aircraft.

SYSTEMS: Electrical system powered by a 24 V 50 A alternator. Dual lightweight 24 V 35 Ah batteries.

AVIONICS: To customer's requirements.

EQUIPMENT: GFRP 'clear view' hopper forward of cockpit can hold 2,082 litres (550 US gallons; 458 Imp gallons) of liquid, equivalent to 1.87 m³ (66.0 cu ft). Standard equipment includes Universal spray system with external 50 mm (2 in) stainless steel plumbing, 50 mm pump with wooden fan, Transland gate, 50 mm valve, quick-disconnect pump mount and strainer. Streamlined spraybooms with outlets for 68 nozzles. Micro-adjust valve control (spray) and calibrator (dry). A 51 mm (2 in) side-loading system is installed on the port side. Smoke drift detection system standard. Stainless steel rudder cables. Navigation lights, instrument lights and two strobe lights. Windscreen washer/wiper.

Optional items are a Transland high-volume spreader; agitator installation; 10-unit AU5000 Micronair installation in lieu of standard booms and nozzles; Transland gatebox with stiffener casting; quick-disconnect flange and kit; night working lights including landing light and wingtip turn lights; cockpit fire extinguisher; and water-bomber configuration.

DIMENSIONS, EXTERNAL:
- Wing span ..... 14.48 m (47 ft 6 in)
- Wing chord, constant ..... 2.29 m (7 ft 6in)
- Wing aspect ratio 6.4
- Length overall ..... 10.06 m (33 ft 0 in)
- Height overall ..... 2.79 m (9 ft 2 in)
- Tailplane span ..... 5.18 m (17 ft 0 in)
- Wheel track ..... 2.74 m (9 ft 0 in)
- Wheelbase ..... 5.88 m (19 ft 3½ in)

AREAS:
- Wings, gross ..... 32.52 m² (350.0 sq ft)

WEIGHTS AND LOADINGS (Thrush 510):
- Weight empty ..... 1,950 kg (4,300 lb)
- Typical operating weight (CAM 8) ..... 4,400 kg (9,700 lb)
- Max wing loading ..... 135.3 kg/m² (27.71 lb/sq ft)
- Max power loading ..... 7.87 kg/kW (12.93 lb/shp)

PERFORMANCE (Thrush 510):
- Never-exceed speed (VNE) ..... 138 kt (256 km/h; 159 mph)
- Max level speed with spray equipment ..... 138 kt (256 km/h; 159 mph)
- Cruising speed at 55% power ..... 130 kt (241 km/h; 150 mph)
- Working speed at 30–50% power ..... 78–130 kt (145–241 km/h; 90–150 mph)
- Stalling speed: flaps up ..... 61 kt (113 km/h; 70 mph)
  - flaps down ..... 57 kt (106 km/h; 66 mph)
- Stalling speed at normal landing weight:
  - flaps up ..... 51 kt (95 km/h; 59 mph)
  - flaps down ..... 50 kt (92 km/h; 57 mph)
- Max rate of climb at S/L ..... 267 m (875 ft)/min
- T-O run ..... 366 m (1,200 ft)
- Landing run ..... 183 m (600 ft)
- Landing run with propeller reversal ..... 122 m (400 ft)
- Ferry range at 45% power ..... 669 n miles (1,239 km; 770 miles)

THRUSH 660 TURBO-THRUSH

TYPE: Agricultural sprayer.

PROGRAMME: Prototype produced in 1997 to verify new hopper and landing gear designs, but was otherwise as S2R. Certification achieved 13 March 2000 with first delivery same day. Is also marketed as Thrush 710 to reflect gross capacity of spray system.

CUSTOMERS: Eight delivered by October 2000; ninth was first of type registered to Thrush company (c/n T660-109, N204PE), December 2003. This delivered to Farmers Aerial Seeders of Arkansas; further 14 registered by July 2006. Total 23, including 15 by Thrush.

DESIGN FEATURES: Based on S2R (which see) but with enlarged hopper, made possible by change to cantilever main landing gear. Enlarged wing centre-section extends span. Wing section NACA 4412 modified; incidence root 3.5°, tip 1.72°, twist 1.784°. Tailplane section NACA 0008 modified. Rear fuselage is pressurised.

Data as for Turbo-Thrush S2R, except as below.

FLYING CONTROLS: Aileron droop system, plus enlarged flaps. Control surface deflections: ailerons +21°, −17°; elevators +27°,−17°; rudder 19° or 20° on dual cockpit versions. flaps −15°.

LANDING GEAR: Tailwheel type; fixed. Fuselage mounted spring steel cantilever mainwheel legs with heavy-duty 29 in tyres (31 in tyres optional) and Cleveland dual calliper hydraulic disc brakes. Wire cutters on main undercarriage legs. Tailwheel 6.00x6.

POWER PLANT: One 969 kW (1,300 shp) Pratt & Whitney Canada PT6A-67AG turboprop driving a Hartzell HC-B5MA-3D/M11276NS five-blade, constant-speed, feathering and reversing propeller. Optionally, one 783 kW (1,050 shp) P&WC PT6A-60AG or -65AG turboprop with Hartzell HC-B5MP-3C/M10876 (60AG) or HC-B5MP-3F/M11276NS (65AG) propeller. Dual cockpit aircraft have -65AG engines rated at 969 kW (1,300 shp) and B5MP-3F propellers. Fuel capacity 871 litres (230 US gallons; 191.5 Imp gallons), of which 854 litres (225.6 US gallons; 187.8 Imp gallons) are usable.

ACCOMMODATION: Generally as for S2C, including dual cockpit option. Optional air conditioning.

EQUIPMENT: GFRP hopper can hold 2,500 litres (660 US gallons; 550 Imp gallons) of liquid. Total capacity, including spray system, is 2,687 litres (710 US gallons; 591 Imp gallons); total capacity with fire-bomber equipment 2,971 litres (785 US gallons; 654 Imp gallons). Side loader size 76 mm (3 in) on port side. Standard equipment includes Universal spray system with external 76 mm (3 in) stainless steel plumbing, five-blade Weath-Aerofan, 76 mm Transland pump, 68-nozzle sprayboom extending over 70 per cent of span and smoke drift detection system. Optional equipment as per Turbo-Thrush S2R.

DIMENSIONS, EXTERNAL (PT6A engine):

Wing span	16.46 m (54 ft 0 in)
Wing aspect ratio	7.2
Wing chord, constant	2.29 m (7 ft 6 in)

Thrush 660 Turbo-Thrush *(James Goulding)* 0569764

Length overall	10.89 m (35 ft 8¾ in)
Height overall	3.08 m (10 ft 1¼ in)
Tailplane: span	5.18 m (17 ft 0 in)
chord: at root	1.36 m (4 ft 5½ in)
at tip	1.13 m (3 ft 8½ in)
Wheel track	2.90 m (9 ft 6 in)
Wheelbase	2.76 m (9 ft 0¾ in)
Propeller diameter: HC-B5MA-3D	2.92 m (9 ft 7 in)
HC-B5MP-3C	2.82 m (9 ft 3 in)

DIMENSIONS, INTERNAL:

Hopper volume	2.5 m^3 (88 cu ft)

AREAS:

Wings, gross	37.63 m^2 (405.0 sq ft)
Flaps, total	4.26 m^2 (45.87 sq ft)
Ailerons, total	4.34 m^2 (46.71 sq ft)
Tailplane	6.58 m^2 (70.78 sq ft)
Elevators, total	2.29 m^2 (24.61 sq ft)
Fin	3.15 m^2 (34.0 sq ft)
Rudder	1.39 m^2 (15.0 sq ft)

WEIGHTS AND LOADINGS (PT6A-65AG):

Weight empty	2,880 kg (6,350 lb)
Max T-O weight: exemption	6,418 kg (14,150 lb)
normal	5,670 kg (12,500 lb)
Max landing weight	5,670 kg (12,500 lb)
Max wing loading: exemption	170.6 kg/m^2 (34.94 lb/sq ft)
normal	150.7 kg/m^2 (30.86 lb/sq ft)
Max power loading (PT6A-67AG): exemption	6.62 kg/kW (10.88 lb/shp)
normal	5.85 kg/kW (9.62 lb/shp)

PERFORMANCE (PT6A-65AG):

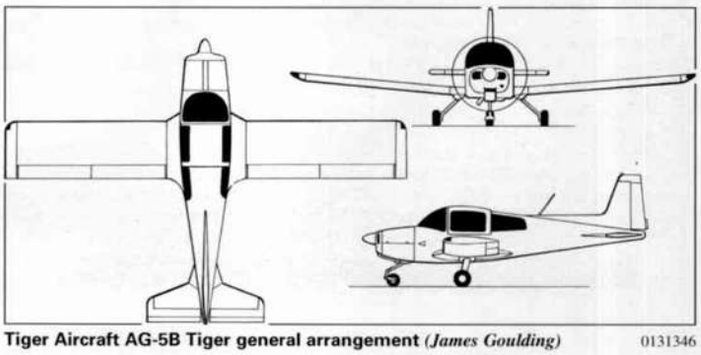
Never-exceed speed (VNE)	191 kt (354 km/h; 220 mph)
Cruising speed at 55% power	161 kt (298 km/h; 185 mph)
Working speed	86–152 kt (185–282 km/h; 100–175 mph)
Stalling speed, power off, flaps down	50 kt (92 km/h; 57 mph)
Max rate of climb at S/L:	
at 5,670 kg (12,500 lb)	312 m (1,025 ft)/min
at 6,418 kg (14,150 lb)	213 m (700 ft)/min
T-O run	335 m (1,100 ft)
Landing run	183 m (600 ft)
Ferry range at 50% power	521 n miles (966 km; 600 miles)

TIGER

TIGER AIRCRAFT LLC

226 Pilot Way, Martinsburg, West Virginia 25401

On 12 May 2000, Tiger Aircraft acquired the Type Certificate for the AG-5B Tiger, last employed by American General Aircraft Corporation. It also holds the AA-1 Type Certificate and intends to produce new designs. The company employed 63 at the end of 2001 with plans to increase workforce to 85 over following 12 months. In late 2002, it was owned jointly by Teleflex (30 per cent) and Taiwanese investors. Production certification for Tiger granted by FAA on 3 September 2002. Proposed sale of company to Florida-based Tiger Aircraft Corporation (TAC) did not materialise and was formally rejected by TAC in August 2006. Company directors approved motion to apply for bankruptcy on 31 July 2006; deliveries totalled three in first ten months of 2006 (compared with 15 in 2005) and Chapter 7 bankruptcy petition filed on 16 January 2007, citing debts in excess of USD929,000.



Tiger Aircraft AG-5B Tiger general arrangement *(James Goulding)* 0131346

TIGER AG-5B TIGER

TYPE: Four-seat lightplane.

PROGRAMME: Original two-seat BD-1 designed by Jim Bede; prototype first flown 11 July 1963; developed into AA-1 by American Aviation (later bought by Grumman and then by Gulfstream American), which built 461 AA-1s, 470 AA-1As, 680 AA-1Bs and 211 AA-1Cs. Four-seat AA-5 certified 12 November 1971 and 3,054 built before designs sold to American General Aircraft in 1989. Updated AG-5B Tiger first flown 21 April 1990; certified 21 September 1990; company sold to Teleflex in early 1992 but later filed for bankruptcy in January 1994 after building 89 examples.

Tiger Aircraft AG-5B Tiger *(Paul Jackson)* 1158588

First Tiger Aircraft AG-5B (N999TE) made maiden flight 9 July 2001. Symbolically delivered to new owner, Herb Hortman, 26 July 2001 at AirVenture 2001. Certification completed 3 December 2001, when first three aircraft handed over. In late 2002 Tiger Aircraft was negotiating with Chengdu Aircraft Industrial Corporation (CAC) of China with a view to licensed assembly of the AG-5B for Chinese commercial pilot training schools. Nothing further reported of this initiative, although Chinese type certification was obtained in July 2005.

CUSTOMERS: Production included 15 in 2005, and three in the first six months of 2006; total 51 had received airworthiness certificates by February 2006; none further in following six months.

COSTS: USD239,500 (2005).

DESIGN FEATURES: Conventional low-wing monoplane with constant-chord wings and tailplane and moderately sweptback fin with fillet. Extensive use of honeycomb and adhesive bonding throughout the structure.

FLYING CONTROLS: Conventional and manual with adjustable tab on each aileron and rudder. Electrically operated flaps, maximum deflection 45°.

STRUCTURE: Semi-monocoque fuselage of aluminium honeycomb. Cantilever low wing with tubular single spar, section NACA 64_2415 (modified), clad in aluminium skin. Dihedral 5°, incidence 1° 25'.

LANDING GEAR: Tricycle type; fixed. Mainwheels 6.00–6, tyre pressure 2.34 bar (34 lb/sq in); nosewheel 5.00–5, tyre pressure 1.72 bar (25 lb/sq in). Cleveland hydraulic brakes.

POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-A4K flat-four, driving a two-blade fixed-pitch Sensenich 76EM8S-10-0 propeller. Fuel in two wing tanks, combined

capacity 199 litres (52.6 US gallons; 43.8 Imp gallons), of which 193 litres (51.0 US gallons; 42.5 Imp gallons) are usable. Oil capacity 7.6 litres (2.0 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Pilot and three passengers in individual pairs of leather seats; baggage area behind rear seats. Fixed wraparound windscreen; entry to cockpit via sliding canopy. Amsafe Aviation inflatable restraints (AAIRS) standard on front seats and optional on rear seats from late 2005.

SYSTEMS: 24 V electrical system.

AVIONICS: Full Garmin IFR panel standard. G430 standard; G1000 certified 2005 as option.

Comms: Dual GNS 430 com/nav with VOR/LOC/GPS/GPS-LOC; GMA 340 audio panel with marker beacon and four-place intercom system; GTX 327 digital transponder, and ground clearance system

Flight: Dual Garmin 106A glideslope indicators; S-Tec 30 two-axis autopilot with altitude hold.

Instrumentation: Sigma/Tek electronic instrument cluster comprising vacuum, load amp, oil pressure, oil temperature, fuel pressure and CHT gauges; Davtron M800 chronometer and A301C digital OAT gauge, and Datcom Hobbs meter.

EQUIPMENT: Standard equipment includes leather interior; leather-wrapped control yokes, machined aluminium instrument panel with backlit instruments and panel/instrument light dimmers, cabin dome light, map light, and flush-mounted anti-collision beacons and landing lights.

DIMENSIONS, EXTERNAL:

Wing span	9.60 m (31 ft 6 in)
Wing chord, constant	1.35 m (4 ft 5¼ in)
Wing aspect ratio	7.1
Length overall	6.71 m (22 ft 0 in)
Height overall	2.44 m (8 ft 0 in)
Tailplane span	2.65 m (8 ft 8½ in)
Wheel track	2.51 m (8 ft 3 in)
Wheelbase	1.64 m (5 ft 4½ in)
Propeller diameter	1.93 m (6 ft 4 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.98 m (6 ft 6 in)
Max width	1.04 m (3 ft 5 in)
Max height	1.23 m (4 ft 0¼ in)
Floor area	2.18 m² (23.5 sq ft)
Baggage hold volume	0.34 m³ (12.0 cu ft)

AREAS:

Wings, gross	13.02 m² (140.1 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	680 kg (1,500 lb)
Baggage capacity: four-seat	54 kg (120 lb)
two-seat	154 kg (340 lb)
Max T-O weight	1,089 kg (2,400 lb)
Max wing loading	83.6 kg/m² (17.13 lb/sq ft)
Max power loading	8.12 kg/kW (13.33 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	173 kt (93 km/h; 200 mph)
Max operating speed (VMO)	148 kt (274 km/h; 170 mph)
Max cruising speed at 75% power at FL85	143 kt (265 km/h; 165 mph)
Stalling speed: flaps up	56 kt (104 km/h; 65 mph)
flaps down	53 kt (99 km/h; 61 mph)
Max rate of climb at S/L	259 m (850 ft)/min
Service ceiling	4,205 m (13,800 ft)
T-O run	260 m (854 ft)
T-O to 15 m (50 ft)	472 m (1,550 ft)
Landing from 15 m (50 ft)	341 m (1,120 ft)
Landing run	125 m (410 ft)
Range: no reserves	681 n miles (1,261 km; 783 miles)
with 45 min reserves	572 n miles (1,059 km; 658 miles)
Endurance, no reserves	4 h 42 min

TITAN

TITAN AIRCRAFT

1419 State Route 45 South, PO Box 190, Austinburg, Ohio 44010
Tel: (+1 440) 275 32 05
Fax: (+1 440) 275 31 92
e-mail: info@titanaircraft.com
Web: www.titanaircraft.com
PRESIDENT: John Williams

While continuing to produce five variants of the Tornado ultralight, Titan has expanded its range with a scaled-down representation of the Second World War North American P-51 Mustang.

TITAN T-51 MUSTANG

TYPE: Tandem-seat sportplane kitbuilt.

PROGRAMME: Construction started September 2001 and prototype (N151TD) flew 17 June 2002. By late 2003, a turbocharged version with a Rotax 914 was nearing completion.

COSTS: Standard kit USD49,900 Light Sport Aircraft version USD48,400, both less engine, propeller and instruments; estimated total cost to completion USD70,000 (2006).

Titan T-51 Mustang *(Paul Jackson)* 1040507

CUSTOMERS: More than 53 sold and four flying by mid-2006.

DESIGN FEATURES: Configuration approximates to 75% scaled-down NA P-51 of 1940s. Laminar flow wing is 72% scale. Quoted build time 600 hours.

FLYING CONTROLS: Conventional and manual. Horn-balanced elevators and rudder; flight-adjustable tab in starboard elevator; elevator airflow energised by vortex generators above and below tailplane. Fowler flaps; maximum deflection 30°.

STRUCTURE: Welded 4130 steel tube fuselage. Aluminium wing has foam-filled D section. Composites wing-, fin- and elevator tips.

LANDING GEAR: Tailwheel type; retractable; Light Sport Aircraft version has fixed landing gear. Mainwheels 120/90-10; tailwheel 2.8/2.5–4. Hydraulic retraction; hydraulic brakes.

POWER PLANT: One 73.5 kW (98.6 hp) Rotax 912S flat-four, driving a three-blade IVO, ground-adjustable pitch propeller; 84.6 kW (113.4 hp) Rotax 914 optional. Fuel capacity 91 litres (24.0 US gallons; 20.0 Imp gallons) of which 87 litres (23.0 US gallons; 19.2 Imp gallons) are usable.

ACCOMMODATION: Canopy slides rearward; baggage compartments fore and aft of cabin accessed by doors on port side of fuselage.

DIMENSIONS, EXTERNAL:

Wing span	7.32 m (24 ft 0 in)
Length overall	7.16 m (23 ft 6 in)
Height overall	2.79 m (9 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin max width	0.61 m (2 ft 0 in)

AREAS:

Wings, gross	10.96 m² (118.0 sq ft)

WEIGHTS AND LOADINGS (Rotax 912S engine):

Weight empty	386 kg (850 lb)
Max T-O weight	657 kg (1,450 lb)
Max wing loading	60.0 kg/m² (12.29 lb/sq ft)
Max power loading	8.95 kg/kW (14.71 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	171 kt (317 km/h; 197 mph)
Max cruising speed	130 kt (241 km/h; 150 mph)
Stalling speed, flaps down	34 kt (63 km/h; 39 mph)
Max rate of climb at S/L	365 m (1,200 ft)/min
Service ceiling	4,875 m (16,000 ft)
T-O and landing run	92 m (300 ft)
Range	625 n miles (1,158 km; 720 miles)
g limits	+6/–4

Robert Bulaga

Company founded in 1996 to conduct research on powered-lift, ducted rotor aircraft. US Defense Advanced Research Projects Agency (DARPA) awarded a 36 month, USD4.7 million development contract in December 2000. NASA Ames assisting with development of stability augmentation system. Initial proof-of-concept vehicle, SoloTrek XFV (see *Jane's All the World's Aircraft* 2003-04), conducted first controlled, tethered flight on 18 December 2001. Proof-of-concept vehicle retired in March 2002 after 39 hours of tethered flight testing.

Pre-series vehicle (001) first tethered flight on 13 December 2002. This was seriously damaged four days later when the rotors ingested the overhead safety tether and the craft fell from a height of 1.3 m (4 ft). Additional design and safety enhancements were made throughout 2003. Activities temporarily suspended on 31 December 2002, but resumed with further funding in following year. Pre-series vehicle (002) was constructed in July/August 2003 and successfully completed the DARPA contract in February 2004.

Company's efforts in 2005 were directed principally towards development of Oviwun miniature UAV, incorporating Trek's core technology.

TREK SPRINGTAIL EFV-4

TYPE: Exoskelitor flying vehicle.

PROGRAMME: Follow-on aircraft to previously tested SoloTrek XFV. Designed in early 2003. First tethered flight (N401XV) 2 October 2003. First free (untethered) hover 20 October 2003. First transitional, forward flight 5 November 2003.

CURRENT VERSIONS: **EFV-4A:** Prototype N401XV; employed for pure research.

EFV-4B: Redesigned fans with variable pitch blades. Prototype, nicknamed 'Bluey' completed March 2005 and embarked on programme of 'non-pure research' and envelope expansion. Registrations N403FV, N404FV and N501FV reserved in 2004 for unspecified Trek Aerospace products, but allowed to lapse in following year.

COSTS: USD125,000 including operation and maintenance training (2006).

DESIGN FEATURES: Proprietary, core technology consists of twin, counter-rotating, variable-pitch ducted rotors which have the ability to generate 4.8 kg/kW (8 lb/hp) of thrust, which Trek states is superior to other designs. Use of the twin counter-rotating, variable-pitch ducted rotors also has the advantage of eliminating torque problems associated with some VTOL vehicles. EFV-4 uses an advanced fly-by-wire stability augmentation system (SAS) which allows it to be operated either manned, remotely piloted, or autonomously. SAS

TREK Springtail EFV-4A in forward flight, 16 March 2005 1129596

significantly reduces the pilot workload; reduces RPV operator-training time: and can be programmed to limit vehicle performance to operator's capabilities (low, medium or high performance).

Twin, counter-rotating, variable-pitch ducted rotors are tilted in conjunction with power variation to achieve vertical take-off, climb, forward flight and vertical landing. Maximum duct forward tilt angle 35°. Windmilling, variable-pitch rotors limit power-out descent rate to 5 m (17 ft)/s.

Airframe configuration supports pilot in standing position: engine behind pilot. Power transmitted by a short driveshaft with universal joints to self-lubricating main gearbox above and behind the pilot's head. Twin driveshafts to fans, each with satellite gearboxes. Small cooling fan for main gearbox. Projected time between overhauls 1,000 hours.

FLYING CONTROLS: No conventional aerodynamic surfaces. Ducted rotors tilted by electromechanical actuators; small vanes, electromechanically actuated, behind each fan for precise control at slow speed and hover. Three-axis trim.

STRUCTURE: Aluminium honeycomb airframe with carbon fibre, Kevlar, stainless steel and titanium components. Welded, aluminium tube landing skids. Composites ducts.

LANDING GEAR: Twin skids incorporate crush technologies that reduce damage in the event of a hard landing. Pneumatic forward mainwheels; solid, castoring rear wheels for ground handling and taxying.

POWER PLANT: One 88 kW (118 hp) Wankel-type rotary engine driving pair of three-blade, variable-pitch rotors. Fuel tank below engine; capacity 46 litres (12.3 US gallons; 10.2 Imp gallons). Other power plant options are possible.

ACCOMMODATION: One person in standing position, supported by safety harness. Two hand levers for engine and flight control; engine/vertical axis, left; longitudinal and lateral axes, plus trim, right. Small area between landing gear for a limited cargo.

SYSTEMS: Fully FBW stability control system. 24 V DC electrical system.

AVIONICS: *Instrumentation:* Production aircraft utilise a helmet-mounted display for all necessary flight data. A small touch-screen 'maintenance' panel to monitor system health.

EQUIPMENT: Ballistic recovery parachute as backup to power-out descent capability.

DIMENSIONS, EXTERNAL:

Height over rotor hub	2.53 m (8 ft 4 in)
Width over ducts	2.95 m (9 ft 8 in)
Width at landing gear	1.07 m (3 ft 6 in)
Length (front to rear)	1.63 m (5 ft 4 in)

WEIGHTS AND LOADINGS:

Weight empty	170 kg (375 lb)
Payload with max fuel	162 kg (358 lb)
T-O weight: normal	281 kg (622 lb)
max	378 kg (834 lb)

PERFORMANCE (estimated):

Max level speed	98 kt (181 km/h; 113 mph)
Cruising speed	82 kt (152 km/h; 94 mph)
Loiter speed	56 kt (104 km/h; 64 mph)
Max rate of climb at S/L	1,676 m (5,500 ft)/min
Hovering ceiling, OGE	3,475 m (11,400 ft)
Range	160 n miles (296 km; 184 miles)
Endurance	2 h 10 min

TREK DRAGONFLY UMR-1

TYPE: Lifting vehicle.

PROGRAMME: Development began in 2004. Remained in conceptual phase in 2006.

Trek Dragonfly UMR-1 enclosed lifting vehicle 1047813

TSI

TECHSPHERE SYSTEMS INTERNATIONAL LLC

750 Hammond Drive, Building 10, Suite 100, Atlanta, Georgia 30328

CHAIRMAN AND COO: Keith Vierela

PRESIDENT AND CEO: Mike Lawson

EXECUTIVE VICE-PRESIDENTS:

Ed Pickett (Government Applications)
John Youngbeck

COMMUNICATIONS SPECIALIST: Josh Vierela

Techsphere Systems was formed in mid-2002 to manufacture, own, operate, lease and sell spherical airship platforms for manned and unmanned use in commercial, research and government applications. To this end, in November 2002 it entered an agreement giving it worldwide exclusive rights to manufacture and sell certain types of airship of this configuration designed by the Canadian company 21st Century Airships. That company's 19.05 m (62.5 ft) diameter SPAS-70-1A, redesignated AeroSphere SA-60 and registered N8041X, was acquired as a low-altitude prototype for larger new products, the first of which is a 28.65 m (94 ft) diameter AeroSphere, the SA-90, under construction in second half of 2005 and capable of flying for up to two days and reaching altitudes up to 6,100 m (20,000 ft). As of late 2006, this was not known to have made its maiden flight.

Exclusive marketing rights are delegated to Cyber Aerospace Corporation of West Palm Beach, Florida; TSI became a wholly owned subsidiary of Cyber Defense Systems on 20 September 2005. SA-60 prototype was evaluated by US Naval Air Systems Command for a surveillance role in 2004, then being sold on to Sierra Nevada Corporation (SNC) of Sparks, Nevada, for systems integration to convert it to unmanned operation. SNC holds exclusive integration contract rights for government end-users of TSI airships. Also in 2004, Cyber took delivery of a 23.2 m (76 ft) SA-76, a five-engined variant intended as an optionally piloted vehicle with the ability to operate at up to 4,880 m (16,000 ft). Georgia Tech Research Institute (GTRI) is assisting in developing some TSI platforms for unmanned (UAV) applications.

Immediate TSI production is at an initial 3,902 m^2 (42,000 sq ft) manufacturing facility on Phillips Drive, Columbus, Georgia, opened on 10 November 2004. At a second Columbus location, TSI planned to complete a 10,035 m^2 (108,000 sq ft) modern factory during 2006, as well as a hangar able to house airships of up to 91.4 m (300 ft) diameter. A payload integration production facility in Reno, Nevada, was due to open in 2005.

TSI AEROSPHERE SA-60

TYPE: Helium non-rigid special shape airship.

Demonstration by AeroSphere SA-60 1133373

PROGRAMME: Prototype (N8041X) acquired from 21st Century Airships; subsequently sold to Cyber Aerospace Corporation (early 2004), evaluated by US Navy (June 2004), then sold on to Sierra Nevada Corporation (July 2004). Subjected to successful flight tests in Nevada 21 June 2006 in which envelope treated with so-called 'paint-on' conformal antennas developed by Applied EM Inc and Unitech LLC under research contract from US Air Force

Research Laboratory at Hanscom AFB. These antennas transmitted and received voice and data links via the Iridium global satellite system. The flight also included a NASA Langley experiment to evaluate airship applications for soil moisture remote sensing missions.

CUSTOMERS: Lease of two SA-60s to an unidentified 'Fortune 100' company, at an estimated initial contract value of approx USD4.2 million, was announced on 13 June 2006.

DESIGN FEATURES: Spherical.

FLYING CONTROLS: Autonomous; 5 kW onboard power for payload.

POWER PLANT: Diesel/electric hybrid.

DIMENSIONS, EXTERNAL:

Diameter	19.05 m (62 ft 6 in)

WEIGHTS AND LOADINGS:

Max payload	227 kg (500 lb)

PERFORMANCE:

Cruising speed	30 kt (56 km/h; 35 mph)
Operating altitude	2,280-3,050 m (7,500-10,000 ft)
Ceiling (demonstrated)	6,234 m (20,453 ft)
Endurance on station	5 h

TSI AEROSPHERE SA-90

TYPE: Helium non-rigid special shape airship.

PROGRAMME: Under construction in 2005. No further news of progress by late 2006.

DESIGN FEATURES: Part-spherical, with 'deployable aerofoil', resulting in 'teardrop' overall shape.

FLYING CONTROLS: Autonomous; 4 kW onboard power for payload.

POWER PLANT: Diesel.

DIMENSIONS, EXTERNAL:

Max diameter	28.65 m (94 ft 0 in)

WEIGHTS AND LOADINGS:

Max payload	454 kg (1,000 lb)

PERFORMANCE (estimated):

Max level speed	46 kt (85 km/h; 53 mph)
Max cruising speed	35 kt (64 km/h; 40 mph)
Ceiling	6,100 m (20,000 ft)
Endurance on station	48 h

VICE-PRESIDENT, OPERATIONS: Thomas Dapogny

VICE-PRESIDENT, ENGINEERING: Bill Davies

VICE-PRESIDENT, MARKETING: Scott Jacox

American Utilicraft Corporation formed August 1990 to design and produce Freight Feeder cargo transport. Headquarters at Gwinnett County, Atlanta, Georgia; final assembly at that time planned in San Juan Pueblo, New Mexico, in a purpose-built 7,430 m² (80,000 sq ft) facility funded in part by USD11 million investment TSAY Native American casino and construction company.

USD50 million of financing secured during June 2001 but economic slowdown in late 2001 affected progress with construction of prototype Freight Feeder; however on 25 June 2002 AUC signed an MoU with Averitt Express for lease of capacity of first 25 aircraft, and announced a more aggressive merger and acquisition strategy. In March 2003, AUC announced the formation of a new division in conjunction with Averitt, AUC X-press, offering air cargo services with a fleet of Cessna 404 and Beechcraft 1900 aircraft, which to have been supplemented by the FF-1080 in due course; agreement since lapsed.

In July 2003, AUC signed a further MoU, this time with Alpine Air Express, for development of the FF-1080; again agreement has lapsed.

In November 2003, AUC signed an MoU with WSI Hong Kong to cover intended purchase of 300 FF-1080s, including exclusive Far East sales and support; in January 2004, WSI signed an initial firm purchase agreement for 36.

By mid-2004, AUC was in negotiations with Metalcraft of Cedar City, Utah, which planned fuselage production, plus initial assembly at AUC plant, Lawrenceville, Georgia. This rapidly overtaken on 8 December 2004, when signed agreement for formation of Utilicraft Aerospace Industries as partnership with Navajo Nation of indigenous Americans, latter obtaining 25 per cent share in exchange for USD34 million investment to bring FF-1080-300 variant to Phase 1 of FAA certification. Subassembly planned in three plants within Navajo homelands and final assembly at Double Eagle II Airport, Albuquerque, New Mexico. Partnership now AMI for design; Metalcraft for subassembly of fuselage; D3 for structures engineering; DERS for systems engineering; and wing subassembly yet to be allocated.

UAI FF-1080 FREIGHT FEEDER

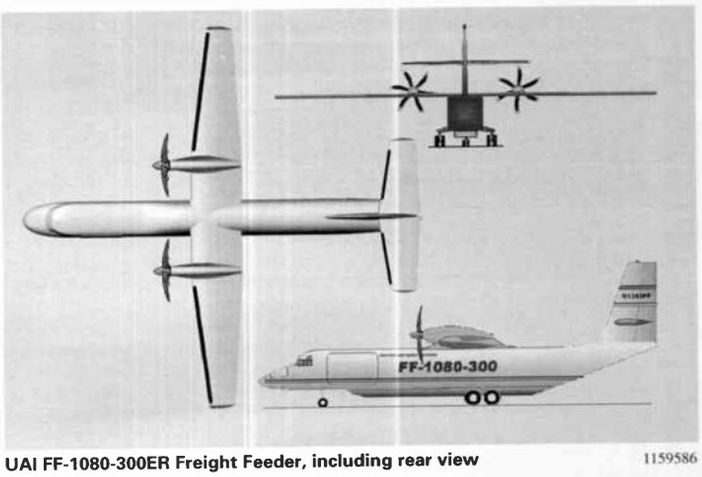
TYPE: Twin-turboprop freighter.

PROGRAMME: Design started 1990; patents filed 1991; original capacity for four LD3 containers increased to six in 1997. Two flying prototypes planned; first flight due 18 months after programme financing in place, followed by FAR Pt 25 certification. Mock up completed end 1999 at which time pre-production prototype intended for completion early 2002 and first flight was due before end 2002, with certification in 2003. FAA Pt 25 certification; this was revised following market downturn at end 2001.

In November 2003, company signed MoU with WSI Hong Kong for acquisition of 300 aircraft; purchase agreement for first 36 signed January 2004.

Manufacture of first 36 aircraft planned to run concurrently with certification programme starting six months from launch. Prototype first flight in 12th month; pre-series aircraft in 18th month; first production (c/n 001) aircraft joining test programme in final year before certification. Start of work on construction of prototype was authorised on 7 February 2005.

Artist's impression of UAI Freight Feeder 300ER 1159585



UAI FF-1080-300ER Freight Feeder, including rear view 1159586

In December 2004, Series 300 became baseline version, powered by 5,458 kW (4,637 shp) RR AE2100D turboprops and six blade propellers. This overtaken in August 2006 by Series 300ER, featuring longer fuselage, additional fuel and increased MTOW. Schedule in mid-2006 was first flight of prototype in September 2007 and of initial production machine in December 2008, followed by FAA certification in June 2009.

CURRENT VERSIONS: **FF-1080-100**: Short fuselage version; four LD3 containers; PW121 engines. Not now intended for construction.

FF-1080-200: Previously proposed standard version; six LD3 containers; wing span 27.10 m (88 ft 11 in); MTOW 17,236 kg (38,000 lb); PW127F turboprops; replaced as launch version by larger -300.

FF-1080-300ER: Announced December 2004; new standard version, *as described*.

FF-1080-500: Enlarged version.

CUSTOMERS: Company estimates market for 5,000 aircraft and aims to capture 10 per cent. Target market is Cessna 208 replacement/growth and F27 all-cargo market. Discussions in hand with several unidentified potential customers; first production batch to comprise 36 aircraft to be built during two-year certification period and available for rapid delivery thereafter. WSI Hong Kong is new launch customer. In June 2004 an LOI was signed with Global Air Group of Brisbane, Australia, for 50 Freight Feeders, plus option on further 50, to be delivered from 2007 for African services of Ghana-based CTK-CiTylinK.

COSTS: Operating cost per ton/mile USD0.48 over 500 n miles (926 km; 575 miles), increasing to USD0.62 over 2,000 n miles (3,704 km; 2,301 miles).

DESIGN FEATURES: High-mounted wings, tapered outboard of overwing engine nacelles; box-section fuselage with ventral pannier; upswept rear fuselage with rear-loading door; angular tail surfaces with large dorsal fin fairing. Onboard freight management system.

FLYING CONTROLS: Conventional and manual. Upper surface blowing (USB) via overwing engine mounting.

STRUCTURE: All-aluminium construction.

LANDING GEAR: Non-retractable tricycle type; twin nosewheels and tandem pairs of mainwheels.

POWER PLANT: Two 3,781 kW (5,071 shp) Pratt & Whitney PW150C turboprops, each driving a Hamilton Sundstrand NP 2000 six-blade propeller. Fuel capacity 14,301 litres (3,778 US gallons; 3,146 Imp gallons) in landing gear panniers.

ACCOMMODATION: Flight crew of two on IPECO seats. Designed for single-pilot operation. Main cargo hold accommodates up to 10 LD3 or five A-1 containers. Cargo roller floor from AAR Cargo Systems. Large cargo double door on port side, forward of wing; rear-loading door hinged at rear and raised to roof for access; crew airstair door on port side of flight deck. Flight deck pressurised; main cargo bay unpressurised. Additional capacity in cargo pannier and nose compartment.

SYSTEMS: Securaplane smoke detection system; HS Dynamic Controls anti-icing and de-icing systems; electrical system integration by Thales Avionics Electrical Systems. Shaw Aero Devices fuel management system.

AVIONICS: Collins Pro Line 21 five-screen EFIS.

DIMENSIONS, EXTERNAL:

Wing span	34.92 m (114 ft 7 in)
Length overall	34.32 m (112 ft 7 in)
Height overall	11.18 m (36 ft 8 in)

PRESIDENT: Dave Ekstrom

Marketing of the third-generation Cumulus motor glider began in 2003.

USA CUMULUS

TYPE: Single-seat ultralight motor glider/kitbuilt.
PROGRAMME: Original Cloud Dancer designed by Erwin Rodger; prototype flew mid 1980s; Cumulus development redesigned by Jim Collie; made flying debut at Sun 'n' Fun 1996 but crashed, killing Collie. Marketing in considerably modified present form began 2003 as third-generation design; exhibited at Sun 'n' Fun, Lakeland, Florida, April 2004. Will also be LSA compliant.
CURRENT VERSIONS: **Cumulus:** Standard version, *as described*.
Stratus: Proposed short-span version.
ViperJet Mk II: Production version, *as described*.
CUSTOMERS: Total 19 under construction plus eight flying by end 2005.
COSTS: Kit less instruments USD8,995; power plant USD3,939 (2006). Estimated total cost to first flight USD15,500.
DESIGN FEATURES: Low-wing, open cockpit (optionally enclosed) pusher of pod-and-boom configuration with strut-braced cruciform tailplane.
Quoted build time 150 hours.
Optional short-span wing.
FLYING CONTROLS: Conventional and manual. One-third span flaps with upward reflex for improved cruising speed. Door-type spoilers in wing upper surface. Horn-balanced rudder.
STRUCTURE: Spec 6061-T6 aluminium (optional 4130 steel) boom and cockpit frame with glass fibre skin. Tubular metal wing with single spar; aluminium skin with fabric covered ailerons and flaps.
LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring steel cantilever mainwheel legs with optional speed fairings. Steerable, solid tailwheel.
POWER PLANT: One 31.0 kW (41.6 hp) Rotax 447 two-cylinder piston engine driving a Tennessee Propellers Inc two-blade wooden propeller. Fuel capacity 19 litres (5.0 US gallons; 4.2 Imp gallons).
EQUIPMENT: Optional BRS-5 ballistic recovery parachute.
DIMENSIONS, EXTERNAL:
Wing span ..... 13.11 m (43 ft 0 in)

USA Cumulus kitbuilt motor glider *(Paul Jackson)* 1133281

UNITED STATES AIRSHIPS INTERNATIONAL

153 Little John Road, Statesville, North Carolina 28625
Tel: (+1 704) 876 12 34
e-mail: airships@statesville.net
Web: www.usairships.com
WORKS (under construction):
Kerr Chapel Road, Caswell County, Matkins, North Carolina
OWNER AND PRESIDENT: Willian S Meadows

USAI founder/owner William Meadows formed Ballon Ascensions Ltd as a balloon training facility 1969; was sales director for The Balloon Works 1975 to 1980; founded National Balloon Racing Association 1980; became sales director for The Blimp Works 1990; USAI founded 1997 to manufacture one- and two-person small helium airships. Manufacturing facility at 10.1 ha (25 acre) site with 549 m (1,800 ft) grass airstrip. Main airship hangar construction scheduled for late 2004, but not reported by late 2006. Airship deliveries to start within three months of hangar completion.

USAI UL1 and UL2

TYPE: Helium non-rigid airship.
PROGRAMME: First flight March 2001. Production started 2003, but no sales or deliveries reported by late 2006.
CURRENT VERSIONS: **UL-1B:** Basic single-seater; 6.7 kW (9 hp) single-cylinder engine. Smallest in current range.
UL1-S: Standard single-seater; 8.2 kW (11 hp) single-cylinder engine; increased diameter propeller; larger gondola.
UL1-D: De luxe single-seater; 9.7 kW (13 hp) single-cylinder engine; vectored thrust propeller at rear, powered by electric motor; dual controls.
UL2-B: Basic two-seater; 13.4 kW (18 hp) two-cylinder engine; larger gondola, as in UL1-S.
UL2-S: Standard two-seater; 14.9 kW (20 hp) two-cylinder engine.
UL2-D: De luxe two-seater; 17.9 kW (24 hp) two-cylinder engine; vectored thrust, as in 1-D; dual controls.
COSTS: USD90,000 (UL1-B), USD120,000 (UL1-S), USD150,000 (UL1-D), USD180,000 (UL2-B), USD210,000 (UL2-S) and USD240,000 (UL2-D) (all 2005).

DESIGN FEATURES: All USAI airships can be dismantled by two persons in one or two hours and loaded onto a pick-up truck or into a 4.27 m (14 ft) long trailer.

FLYING CONTROLS: Rudders and elevators fly by wire. In addition, 1-D and 2-D have electric motors at rear which can be vectored left/right and up/down to provide secondary directional control.

STRUCTURE: Envelope of 9 mm polyurethane; all seams overlapped and heat-sealed. Single internal ballonet. Welded, aluminium tube open frame gondola, attached to envelope at 13 points each side; can be disconnected in less than 2 minutes by removing two rods that slide through attachments.

LANDING GEAR: Floats optional on 1-D and 2-D.

POWER PLANT: See Current Versions above. B versions have pull start, S and D versions electric starting. Standard fuel capacity 19 litres (5.0 US gallons; 4.2 Imp gallons); second tank of same capacity optional.

ACCOMMODATION: See Current Versions above. Optional lightweight gondola cover for cold-weather flying.

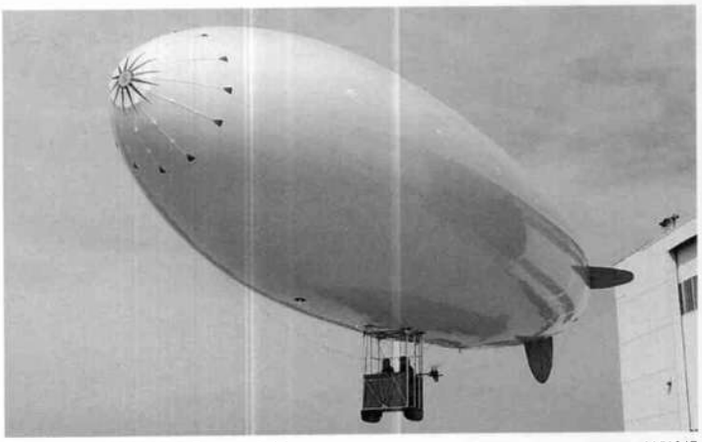
AVIONICS: Suffixes B, S and D indicate basic, standard and de luxe levels of instrumentation.

DIMENSIONS, EXTERNAL:

Envelope: Length: 1-B	18.29 m (60 ft 0 in)
1-S	19.81 m (65 ft 0 in)
1-D	21.34 m (70 ft 0 in)
2-B	22.86 m (75 ft 0 in)
2-S	24.38 m (80 ft 0 in)
2-D	25.91 m (85 ft 0 in)
Fineness ratio: 1-B	3.58
1-S	3.52
1-D	3.79
2-B	3.73
2-S	3.67
2-D	3.90

DIMENSIONS, INTERNAL:

Envelope volume: 1-B	250.4 m³ (8,843 cu ft)
1-S	328.2 m³ (11,592 cu ft)
1-D	353.5 m³ (12,484 cu ft)
2-B	450.7 m³ (15,918 cu ft)



Two-place USAI UL2-D non-rigid 1151047

2-S	564.3 m³ (19,927 cu ft)
2-D	599.5 m³ (21,172 cu ft)
Gondola max height: 1-B, 1-D	1.83 m (6 ft 0 in)
1-S, 2-B, 2-S, 2-D	1.98 m (6 ft 6 in)

PERFORMANCE:

Max cruising speed: 1-B	21 kt (39 km/h; 24 mph)
1-S	23 kt (42 km/h; 26 mph)
1-D	24 kt (44 km/h; 28 mph)
2-B	26 kt (48 km/h; 30 mph)
2-S	28 kt (52 km/h; 32 mph)
2-D	30 kt (56 km/h; 35 mph)

VAN'S

VAN'S AIRCRAFT INC

14401 NE Keil Road, Aurora, Oregon 97002
Tel: (+1 503) 678 65 45
e-mail: info@vansaircraft.com
Web: www.vansaircraft.com
PRESIDENT: Richard VanGrunsven

Founded in 1970, the company derives its name from its president's nickname and began with the sale of plans (and, later, kits) for the RV-3 sporting homebuilt. More than 14,000 Van's kits sold by October 2006, of which 4,867 were flying by 30 November 2006. The four-seat RV-10 was announced in October 2001 and made its first flight on 29 May 2003.

The company constructed a new 5,110 m² (55,000 sq ft) facility at Aurora, Oregon, to which it moved during 2000; by June 2002 the workforce numbered 60 and by December 2006, 70. All Van's kits conform to the FAA's 51 per cent rule.

The company is now working on the RV-11 motor glider; by early 2004 the forward fuselage was under construction.

The RV-12 was introduced in 2006 to meet LSA criteria.

VAN'S RV-4

TYPE: Tandem-seat kitbuilt.

PROGRAMME: First flight of prototype 21 August 1979. Plans and kits available to homebuilders.

CURRENT VERSIONS: **RV-4:** *As described.*

CUSTOMERS: Over 4,600 sets of plans and kits sold, with about 1,800 aircraft under construction and 1,197 RV-4s flying by September 2006..

COSTS: Kit: USD14,015 (2006).

DESIGN FEATURES: Cantilever low-wing monoplane with constant-chord, low aspect ratio wings, tapered horizontal tail surfaces and sweptback fin.

Wing section Van's Aircraft 135; dihedral 3° 30'; incidence 1°.

FLYING CONTROLS: Conventional and manual. Horn-balanced elevators; Frise ailerons; plain flaps. No tabs.

Vans RV-4 tandem-seat kitbuilt ***(Paul Jackson)*** 1040504

STRUCTURE: Generally of light alloy. I-beam main wing spar and pressed ribs; moulded glass fibre wingtips and engine cowling.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted, rakedback Wittman spring tapered steel cantilever mainwheel legs with glass fibre trouser and wheel fairings; tyre size 5.00-5; steerable tailwheel, tyre size 6 in.

POWER PLANT: One 112 kW (150 hp) Textron Lycoming O-320-E1F flat-four engine; two-blade fixed-pitch propeller. Options for engine up to 134 kW (180 hp). Fuel capacity 121 litres (32.0 US gallons; 26.6 Imp gallons).

ACCOMMODATION: Two persons in tandem under starboard-hinged canopy. Baggage compartments forward of instrument panel and aft of rear seat.

DIMENSIONS, EXTERNAL:

Wing span	7.01 m (23 ft 0 in)
Wing aspect ratio	4.8
Length overall	6.20 m (20 ft 4 in)
Height overall	1.65 m (5 ft 5 in)
Wheel track	1.88 m (6 ft 2 in)
Propeller diameter	1.73 m (5 ft 8 in)

DIMENSIONS, INTERNAL:

Cabin: Length	1.91 m (6 ft 3 in)
Max width	0.72 m (2 ft 4 in)
Max height	1.02 m (3 ft 4 in)
Baggage volume	0.21 m³ (7.3 cu ft)

AREAS:

Wings, gross	10.22 m² (110.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	411 kg (905 lb)
Max baggage weight	23 kg (50 lb)
Max T-O weight	680 kg (1,500 lb)
Max wing loading	66.6 kg/m² (13.64 lb/sq ft)
Max power loading	6.09 kg/kW (10.00 lb/hp)

PERFORMANCE (112 kW; 150 hp engine; MTOW):

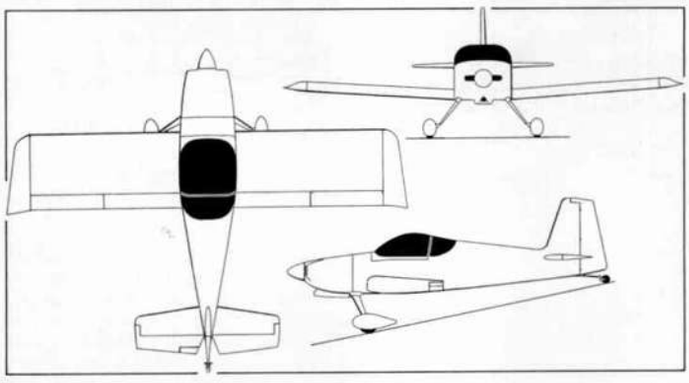
Max level speed at S/L	174 kt (322 km/h; 200 mph)
Cruising speed at FL80:	
at 75% power	163 kt (303 km/h; 188 mph)
at 55% power	148 kt (274 km/h; 170 mph)
Stalling speed	47 kt (87 km/h; 54 mph)
Max rate of climb at S/L	457 m (1,500 ft)/min
Service ceiling	5,485 m (18,000 ft)
T-O run	145 m (475 ft)
Landing run	130 m (425 ft)
Range with max fuel at 55% power	686 n miles (1,271 km; 790 miles)

VAN'S RV-7 and RV-7A

TYPE: Side-by-side kitbuilt.

PROGRAMME: Replacement for the RV-6 and RV-6A. Design work undertaken during 2000; prototype (N137RV) first flown 19 March 2001. Public debut at Sun 'n' Fun in April 2001. RV-6/6A kits currently under construction can be completed to RV-7/7A standard by using optional parts.

Van's RV-7A nosewheel version *(Paul Jackson)* 1040508



Van's RV-7 general arrangement *(Paul Jackson)* 0110689

CURRENT VERSIONS: **RV-7:** Tailwheel version.
RV-7A: Nosewheel version.

CUSTOMERS: Total of 2,850 kits sold by September 2006, of which 350 were flying by that date.

COSTS: RV-7 kit USD17,580, quick-build kit USD25,705; RV-7A kit USDD18,355, quick-build kit USD26,480 (2006).

DESIGN FEATURES: Shares commonality of parts with the RV-8/8A and RV-9A. Quoted build time reduced to 1,400 hours compared to RV-6 family due to improvements made in kit production.

FLYING CONTROLS: Conventional and manual. Horn-balanced rudder and elevators, flight-adjustable tab in port tailplane. Plain electric flaps.

STRUCTURE: Fuselage and wings of metal, with composites wingtips, tailplane tip, fintip, fin-root fairing, cowling, landing gear legs, fairings and spats.

LANDING GEAR: Fixed; tailwheel or tricycle type. Fuselage-mounted, rakedback Wittman spring tapered steel cantilever mainwheel legs with composites trouser and wheel fairings; contilever tailwheel leg with solid tyre. Optional trailing link nosewheel with trouser and wheel fairing; mainwheel legs attached further aft.

POWER PLANT: Prototype has 149 kW (200 hp) Textron Lycoming IO-360 driving a two-blade Hartzell constant-speed propeller; the design accepts engines in the 112 to 149 kW (150 to 200 hp) range. Fuel capacity 159 litres (42.0 US gallons; 35.0 Imp gallons) in two wing tanks.

ACCOMMODATION: Pilot and passenger side by side under forward-hinged one-piece canopy; optional rearward-sliding canopy with fixed windscreen. Compared to RV-6, cabin room is increased.

DIMENSIONS, EXTERNAL:

Wing span	7.62 m (25 ft 0 in)
Wing aspect ratio	5.2
Length overall	6.20 m (20 ft 4 in)
Height overall: RV-7	1.78 m (5 ft 10 in)
RV-7A	2.39 m (7 ft 10 in)

DIMENSIONS, INTERNAL:

Cabin max width	1.09 m (3 ft 7 in)
Baggage volume	0.34 m³ (12.0 cu ft)

AREAS:

Wings, gross	11.15 m² (120.0 sq ft)

WEIGHTS AND LOADINGS (149 kW; 200 hp engine):

Weight empty	505 kg (1,114 lb)
Max baggage weight	45 kg (100 lb)
Max T-O weight	816 kg (1,800 lb)
Max wing loading	73.2 kg/m² (15.00 lb/sq ft)
Max power loading	5.48 kg/kW (9.00 lb/hp)

PERFORMANCE (149 kW; 200 hp engine):

Never-exceed speed (VNE)	199 kt (370 km/h; 230 mph)
Max operating speed: RV-7	188 kt (348 km/h; 216 mph)
RV-7A	185 kt (343 km/h; 213 mph)
Cruising speed:	
at 75% power:	
RV-7	179 kt (332 km/h; 206 mph)
RV-7A	177 kt (328 km/h; 204 mph)
at 55% power: RV-7	162 kt (299 km/h; 186 mph)
RV-7A	159 kt (295 km/h; 183 mph)
Stalling speed, flaps down:	
RV-7, RV-7A	51 kt (94 km/h; 58 mph)
Max rate of climb at S/L: RV-7	579 m (1,900 ft)/min
RV-7A	564 m (1,850 ft)/min
Service ceiling: RV-7	6,860 m (22,500 ft)
RV-7A	6,555 m (21,500 ft)
T-O and landing run	152 m (500 ft)
Range with max fuel, 55% power:	
RV-7	812 n miles (1,504 km; 935 miles)
RV-7A	803 n miles (1,488 km; 925 miles)

VAN'S RV-8 and RV-8A

TYPE: Tandem-seat kitbuilt.

PROGRAMME: First flown (N118RV) 22 July 1995; launched at Oshkosh five days later. Second prototype (N58RV) flew early 1997 and accumulated 325 hours in seven months. In 2006, manufacturing was refined to offer 'matched hole' kits, intended to reduce build time by up to 20 per cent.

CURRENT VERSIONS: **RV-8:** Tailwheel version.
RV-8A: Tricycle version; first flown (N58VA) April 1998; public debut at Sun 'n' Fun, same month.

CUSTOMERS: By September 2006 over 2,600 kits had been sold and 632 were flying.

COSTS: RV-8 kit USD18,335, quick-build kit USD26,460; RV-8A kit USD18,620, quick-build kit USD26,745 (2006).

DESIGN FEATURES: Similar in appearance to the RV-4, but with wider, longer fuselage; rounded engine cowling; non-sweptback main landing gear legs; larger canopy; however, very little parts commonality with RV-4. Quoted build time 1,600 hours.
Description generally as for RV-4.

LANDING GEAR: Fixed; tailwheel or tricycle type. Fuselage-mounted, rakedback Wittman spring cantilever mainwheel legs with composites trouser and wheel fairings; cantilever tailwheel leg. Optional trailing link nosewheel with trouser and wheel fairing; mainwheel legs attached farther aft.

POWER PLANT: One 149 kW (200 hp) Textron Lycoming IO-360-A16D four-cylinder piston engine driving two-blade Hartzell HC-C2YK-BF/F7666A4 constant-speed propeller; optionally 119 kW (160 hp) Textron Lycoming O-320 driving two-blade Sensenich 70CM2 propeller. Fuel capacity 159 litres (42.0 US gallons; 35.0 Imp gallons). Oil capacity 7.6 litres (2.0 US gallons; 1.7 Imp gallons).

ACCOMMODATION: Tandem seating for pilot and passenger under sliding canopy. Separate windscreen.
Specification for RV-8/RV-8A, except where noted.

DIMENSIONS, EXTERNAL:

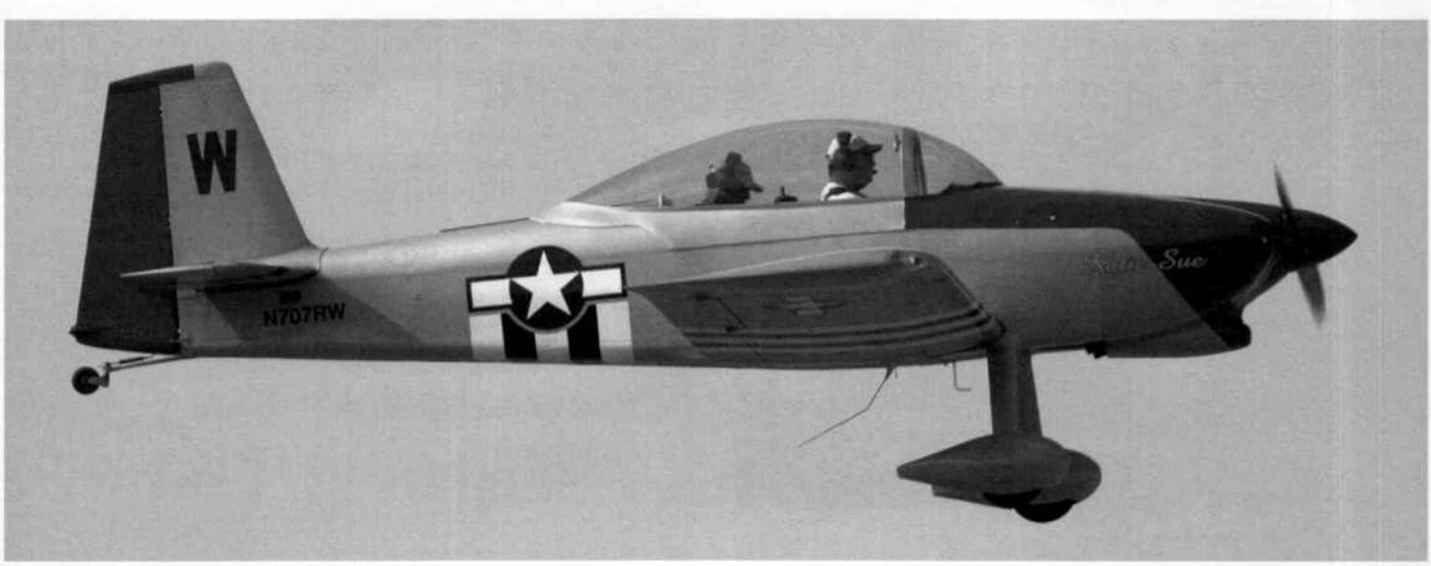
Wing span	7.32 m (24 ft 0 in)
Wing chord, constant	1.47 m (4 ft 10 in)
Wing aspect ratio	4.8
Length overall: RV-8	6.40 m (21 ft 0 in)
RV-8A	6.35 m (20 ft 10 in)
Height overall: RV-8	1.70 m (5 ft 7 in)
RV-8A	2.24 m (7 ft 4 in)
Wheel track	1.90 m (6 ft 3 in)
Propeller diameter	1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:

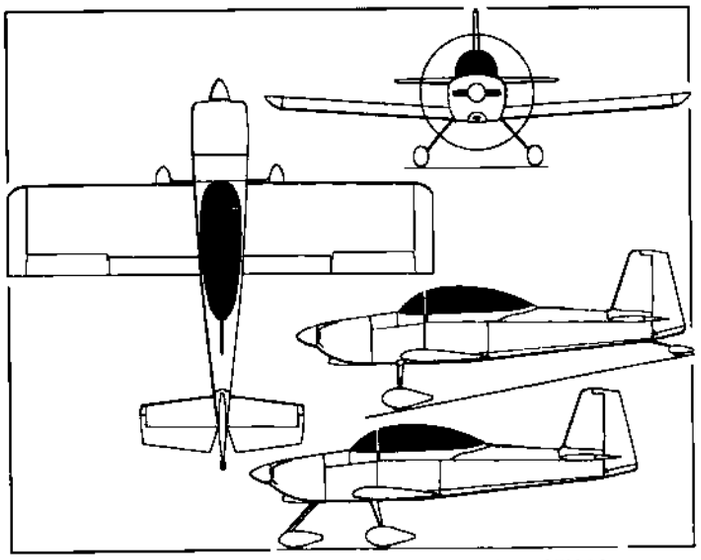
Cockpit max width	0.91 m (3 ft 0 in)
Baggage volume	0.21 m³ (7.5 cu ft)

AREAS:

Wings, gross	10.78 m² (116.0 sq ft)



Van's RV-8 in 1944-style markings *(Paul Jackson)* 1040505



Van's RV-8 two-seat light aircraft, with additional side view of RV-8A *(Paul Jackson)* 1158988

WEIGHTS AND LOADINGS:
- Weight empty ..... 508 kg (1,120 lb)
- Max baggage weight ..... 57 kg (125 lb)
- Max T-O weight ..... 816 kg (1,800 lb)
- Max wing loading ..... 79.9 kg/m² (16.36 lb/sq ft)
- Max power loading ..... 5.48 kg/kW (9.00 lb/hp)

PERFORMANCE (two persons, 149 kW; 200 hp engine):
- Max operating speed: RV-8 ..... 191 kt (354 km/h; 220 mph)
- RV-8A ..... 189 kt (351 km/h; 218 mph)
- Cruising speed at 55% power at FL80:
- RV-8 ..... 162 kt (301 km/h; 187 mph)
- RV-8A ..... 161 kt (298 km/h; 185 mph)
- Stalling speed, power off:
- one occupant: both ..... 45 kt (83 km/h; 51 mph)
- two occupants: both ..... 51 kt (94 km/h; 58 mph)
- Max rate of climb at S/L: RV-8 ..... 579 m (1,900 ft)/min
- RV-8A ..... 549 m (1,800 ft)/min
- Service ceiling: RV-8 ..... 6,860 m (22,500 ft)
- RV-8A ..... 6,550 m (21,500 ft)
- T-O and landing run: both ..... 153 m (500 ft)
- Range at 55% power:
- RV-8 ..... 816 n miles (1,512 km; 940 miles)
- RV-8A ..... 808 n miles (1,496 km; 930 miles)

VAN'S RV-9 and RV-9A

TYPE: Side-by-side kitbuilt.

PROGRAMME: Prototype RV-9A (N96VA) first flown late 1997; was hybrid proof-of-concept aircraft using unique RV-6T fuselage plus new wings; had flown more than 200 hours when lost in accident 2 April 2000; second prototype, and first 'true' RV-9A (N129RV), flown 15 June 2000. Empennage kits became available in late 1999, followed by wing and fuselage/finishing kits in mid-2000 and quick-build kits in late 2000; first customer-built aircraft flown 17 June 2001. RV-9 prototype (N179RV) first flown 4 March 2002.

CURRENT VERSIONS: **RV-9**: Tailwheel version.

RV-9A: Tricycle version.

CUSTOMERS: 1,500 kits sold by September 2006 of which 232 were flying.

COSTS: Basic kit RV-9 USD17,925, RV-9A USD18,715; quick-build RV-9 USD26,050, RV-9A USD26,840 (2006).

DESIGN FEATURES: Based upon, and similar in appearance to, RV-6/6A, but with redesigned wing (Roncz aerofoil and sheared wingtips) and enlarged, constant-chord horizontal tail surfaces.

FLYING CONTROLS: Conventional and manual. Horn-balanced rudder. Slotted electric flaps extend approximately two-thirds of wing span, compared with one-half on other RV designs.

LANDING GEAR: Fixed; tailwheel or tricycle type. Fuselage-mounted, rakedback Wittman spring tapered steel cantilever mainwheel legs with composites trouser and wheel fairings; cantilever tailwheel leg. Optional trailing link nosewheel with trouser and wheel fairings; mainwheel legs attached farther aft.

POWER PLANT: First prototype flown with 88.0 kW (118 hp) Textron Lycoming O-235-L2C flat-four driving two-blade Sensenich 72 × 66 fixed-pitch metal propeller. Second prototype has 119 kW (160 hp) Textron Lycoming O-320-D3G driving three-blade MT propeller. Engines between 80.5 and 119 kW (108 and 160 hp) can be fitted. Fuel capacity 136 litres (36.0 US gallons; 30.0 Imp gallons) in two wing tanks. Wilksch reportedly developing conversion during 2002, to enable use of its 90 kW (120 hp) WAM-120 diesel engine.

ACCOMMODATION: Pilot and passenger side by side under sliding canopy. Dual controls.

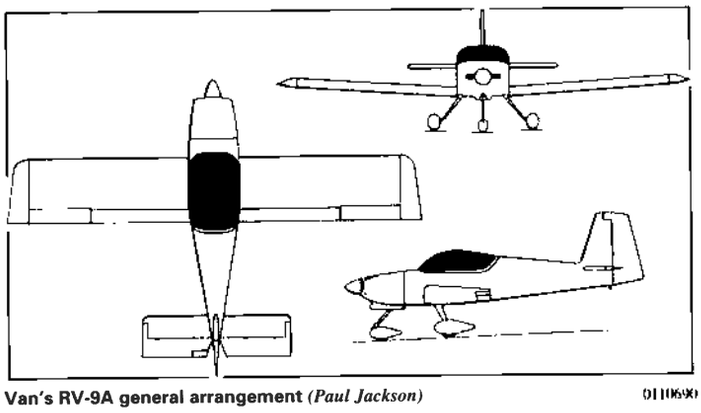
DIMENSIONS, EXTERNAL:
- Wing span: both ..... 8.53 m (28 ft 0 in)
- Length overall: both ..... 6.22 m (20 ft 5 in)
- Height overall: RV-9 ..... 1.83 m (6 ft 0 in)
- RV-9A ..... 2.39 m (7 ft 10 in)
- Propeller diameter ..... 1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL: As RV-7

AREAS:
- Wings, gross ..... 11.52 m² (124.0 sq ft)

WEIGHTS AND LOADINGS (119 kW; 160 hp engine):
- Weight empty ..... 476 kg (1,050 lb)
- Max baggage weight ..... 45 kg (100 lb)
- Max T-O weight ..... 793 kg (1,750 lb)
- Max wing loading ..... 68.9 kg/m² (14.11 lb/sq ft)
- Max power loading ..... 6.66 kg/kW (10.94 lb/hp)

PERFORMANCE (119 kW; 160 hp engine):
- Max operating speed: RV-9 ..... 170 kt (315 km/h; 196 mph)
- RV-9A ..... 169 kt (312 km/h; 194 mph)
- Cruising speed at 75% power:
- RV-9 ..... 163 kt (303 km/h; 188 mph)
- RV-9A ..... 162 kt (299 km/h; 186 mph)
- Stalling speed, flaps down: both ..... 44 kt (81 km/h; 50 mph)
- Max rate of climb at S/L: both ..... 427 m (1,400 ft)/min
- Service ceiling: RV-9 ..... 5,790 m (19,000 ft)
- RV-9A ..... 5,640 m (18,500 ft)
- T-O run: both ..... 145 m (475 ft)
- Landing run: both ..... 137 m (450 ft)
- Range at 75% power:
- RV-9 ..... 617 n miles (1,142 km; 710 miles)
- RV-9A ..... 608 n miles (1,126 km; 700 miles)



Van's RV-9A general arrangement *(Paul Jackson)* 0110690

Van's RV-9 two-seat kitbuilt *(Paul Jackson)* 1040509

VAN'S RV-10

TYPE: Four-seat kitbuilt.

PROGRAMME: Programme announced in late 2001 and wooden mockup of cabin shown when first flight expected second quarter of 2003; this achieved by prototype (N410RV) on 29 May 2003. Exhibited at AirVenture, Oshkosh, July 2003. Kit deliveries started 25 September 2003. Second prototype (N220RV) first flown 31 August 2004.

CUSTOMERS: By September 2006, 631 kits had been sold and 49 aircraft were flying.

COSTS: Standard kit USD36,180; quick-build kit USD46,230 (2006).

DESIGN FEATURES: Similar to other members of RV series; designed to carry four 1.90 m (6 ft 3 in) tall adults. Wing incidence 1°, dihedral 3.5°. Van's proprietary aerofoil.

FLYING CONTROLS: Conventional and manual. Horn-balanced rudder and elevator; actuation by cables (rudder) and pushrods. Fowler electric flaps. Tabs in both elevators.

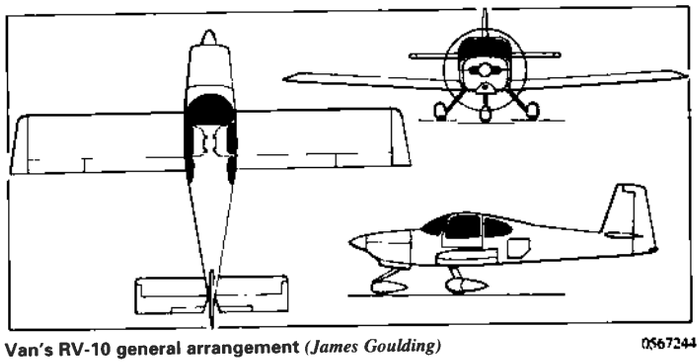
STRUCTURE: Similar to RV-7 and RV-9; monocoque with composites cabin top, wingtips and wingroot. Two-spar wing.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted, rakedback Wittman tapered steel cantilever mainwheel legs with composites trouser; cantilever trailing-link nosewheel leg with trouser and compressed rubber shock-absorber. 6.00-6 tyres on all wheels; Cleveland disc brakes on mainwheels. Optional speed fairings.

POWER PLANT: Prototype fitted with one 194 kW (260 hp) Textron Lycoming IO-540 flat-six driving a Hartzell F8477-4 two-blade, constant-speed propeller. Engines in the range 149 to 194 kW (200 to 260 hp) can be fitted. Second prototype fitted with 157 kW (210 hp) Teledyne Continental IO-360. Total fuel capacity 227 litres (60.0 US gallons; 50.0 Imp gallons) in two wing leading-edge tanks.

ACCOMMODATION: Pilot and three passengers in two pairs of seats; rear seatbacks remove to increase baggage space. Cabin has gull-wing door on each side. Baggage door on port fuselage side behind cockpit.

DIMENSIONS, EXTERNAL:
- Wing span ..... 9.68 m (31 ft 9 in)
- Wing aspect ratio 6.8
- Length overall ..... 7.44 m (24 ft 5 in)
- Height overall ..... 2.64 m (8 ft 8 in)



Van's RV-10 general arrangement *(James Goulding)* 0567244

Four-seat Van's RV-10 ***(Paul Jackson)*** 1040510

DIMENSIONS, INTERNAL:
- Cabin: Max width ..... 1.23 m (4 ft 0¼ in)
- Max height ..... 1.03 m (3 ft 4½ in)
- Baggage volume ..... 0.37 m³ (13.0 cu ft)

AREAS:
- Wings, gross ..... 13.75 m² (148.0 sq ft)

WEIGHT AND LOADINGS (194 kW; 260 hp engine):
- Weight empty ..... 726 kg (1,600 lb)
- Max baggage weight ..... 45 kg (100 lb)
- Max T-O weight ..... 1,224 kg (2,700 lb)
- Max wing loading ..... 89.1 kg/m² (18.24 lb/sq ft)
- Max power loading ..... 6.32 kg/kW (10.38 lb/hp)

PERFORMANCE (194 kW; 260 hp engine):
- Max operating speed (VMO) ..... 180 kt (334 km/h; 208 mph)
- Normal cruising speed at 75% power ..... 171 kt (317 km/h; 197 mph)
- Econ cruising speed at 55% power ..... 152 kt (282 km/h; 175 mph)
- Stalling speed, flaps down ..... 55 kt (102 km/h; 63 mph)
- Max rate of climb at S/L ..... 442 m (1,450 ft)/min
- Service ceiling ..... 6,096 m (20,000 ft)
- T-O run ..... 152 m (500 ft)
- Landing run ..... 198 m (650 ft)
- Range at 75% power at FL80 ..... 716 n miles (1,327 km; 825 miles)

VAN'S RV-11

TYPE: Motor glider.

PROGRAMME: Private, slow-moving project being built by Richard VanGrunsven, with forward fuselage under construction by 2004. Initially to be proof-of-concept aircraft; neither first flight nor decision whether it will be available as a kit or production aircraft had taken place by end 2006.

DESIGN FEATURES: Wings from Schreder HP-18 sailplane.

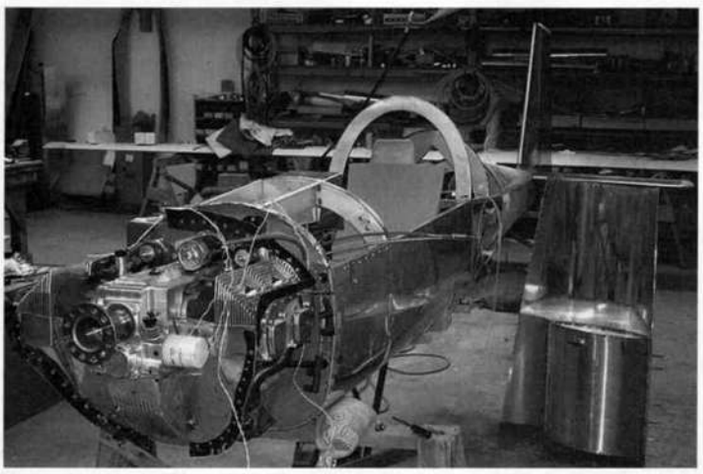
STRUCTURE: Fuselage of aluminium. Wings have metal spars and PVC ribs bonded to aluminium skins.

LANDING GEAR: Semi-retractable monowheel.

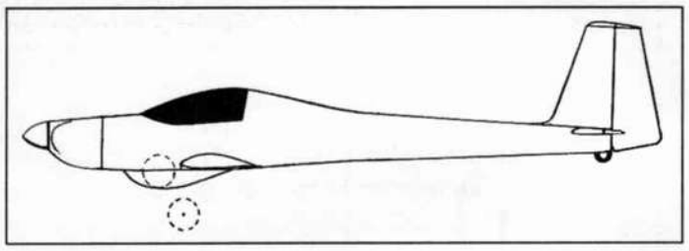
POWER PLANT: One 59.7 kW (80 hp) Jabiru 2200 engine. Fuel in single tank behind cockpit and attached to upper fuselage skin.

ACCOMMODATION: Canopy taken from RV-4 and modified.

DIMENSIONS, EXTERNAL:
- Wing span (provisional) ..... 15.00 m (49 ft 2½ in)



Incomplete Van's RV-11 airframe 1040479



Side view of Van's RV-11 1047712

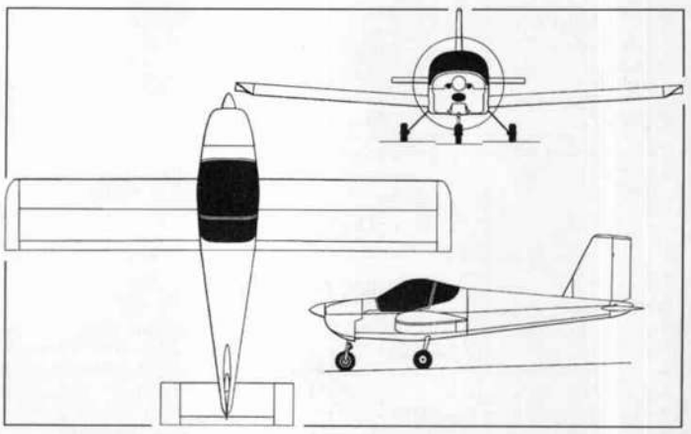
VAN'S RV-12

TYPE: Side-by-side kitbuilt.

PROGRAMME: Incomplete proof-of-concept aircraft shown at AirVenture, Oshkosh, July 2006. First flight (N912VA) 9 November 2006. Kits expected to be available by end 2007.

Van's RV-12 proof-of-concept prototype taxying for its first flight on 9 November 2006 1040484

Van's RV-12 instrument panel 1040485



Van's RV-12 general arrangement ***(Paul Jackson)*** 1158986

DESIGN FEATURES: Objectives for homebuilders include low parts count, to reduce kit costs and assembly time; systems installation at the lowest possible level of structural subassembly; minimal use of composites; maximum use of simple hand tools, possibly eliminating the need for pneumatic tools. Performance intended to meet LSA criteria.

Low, constant-chord wing with Hoerner tips; trapezoidal fin and low-mounted tailplane. Wings removable for storage: two spar stubs projecting from the inboard ends of the wings overlap inside the fuselage and are secured with two large pins, fitting into machined bushings.

FLYING CONTROLS: Manual. Full-span flaperons and all-moving tailplane.

STRUCTURE: Generally of riveted aluminium; glass fibre engine cowling.

LANDING GEAR: Fixed. Fuselage-mounted cantilever spring steel mainwheel legs; steerable nosewheel.

POWER PLANT: One 73.5 kW (98.6 hp) Rotax 912S flat-four, driving a Sensenich ground-adjustable pitch propeller. Fuel capacity 76 litres (20.0 US gallons; 16.7 Imp gallons).

ACCOMMODATION: Two persons, side by side. Forward-hinged canopy/windscreen; rear window each side.

AVIONICS: All-glass instrument panel including two-screen Dynon EFIS/engine monitor, Garmin SL40 com/nav, 196 GPS and GTX 327 transponder.

DIMENSIONS, EXTERNAL:
- Wing span ..... 8.13 m (26 ft 8 in)
- Wing aspect ratio 5.9
- Length overall ..... 6.07 m (19 ft 11 in)

DIMENSIONS, INTERNAL:
- Cabin max width ..... 1.09 m (3 ft 7 in)

AREAS:
- Wings, gross ..... 11.14 m² (120.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ..... 340 kg (750 lb)
- Max baggage weight ..... 23 kg (50 lb)
- Max T-O weight ..... 598 kg (1,320 lb)
- Max wing loading ..... 53.7 kg/m² (11.00 lb/sq ft)
- Max power loading ..... 8.15 kg/kW (13.38 lb/hp)

PERFORMANCE (estimated):
- Max level speed ..... 120 kt (222 km/h; 138 mph)
- Stalling speed ..... 45 kt (83 km/h; 51 mph)

PRESIDENT: Bradley G Clark

Formed in 1989, Vertical Aviation Technologies Inc is FAA-approved repair facility for various Sikorsky helicopters. The company remanufactures Sikorsky S-55/H-19s, S-58/H-34s and S-62s. In 1984, began to modify four-seat Sikorsky S-52-3 former production helicopter (of which 95 originally produced, mainly for US Marine Corps as HO5S) into kit for assembly by individuals, corporations or military; all tooling and fixtures completed by 1988. Promotion and manufacture was interrupted by S-55 upgrade effort, but resumed at Sun 'n' Fun in April 2002, when upgraded S-52 was first shown.

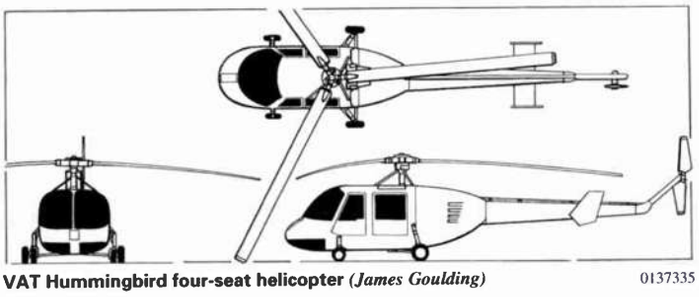
The company had 844 m² (9,090 sq ft) of manufacturing space and a workforce of 11 in 2006.

VAT HUMMINGBIRD

TYPE: Four-seat helicopter kitbuilt.

PROGRAMME: Based on previously type-certified Sikorsky S-52-3 and first flown 1990. (S-52 prototype flew 12 February 1947; total 95 built). First batch of sales between 1989 and 1993; promotion lapsed between 1993 and 2001, when VAT efforts directed towards S-55QT Whisper Jet conversion. Modified Hummingbird shown at Sun 'n' Fun in April 2002; twin anhedral tail strakes replaced by more conventional horizontal stabilisers with endplates; Lycoming engine replacing 194 kW (260 hp) Ford Taurus V-8; doors and engine cowling of composites. Lycoming version renamed **Hummingbird 260L** to reflect new engine; first flew with Lycoming on 11 November 2002.

CUSTOMERS: Nine Hummingbird kits sold in 2006 in addition to 14 earlier versions. Customers in Australia (four), China, Hungary, New Zealand, Slovak Republic, South Africa, USA and UK. Further deliveries due from second production run in 2007.



VAT Hummingbird four-seat helicopter *(James Goulding)* 0137335

COSTS: Kit USD170,520 (2006), including engine, but excluding avionics and upholstery. Quick-build fuselage USD48,300.

DESIGN FEATURES: Newly manufactured airframes and tailcones identical to S-52-3, except for nose section, which is based on Bell JetRanger. Quoted build time 800 hours; kit includes original Sikorsky components. Quick-build version introduced November 2006, reducing build time by up to 75 per cent.

FLYING CONTROLS: Conventional and manual. Two anhedral stabilisers of original S-52 replaced from 2002 by horizontal unit with endplates.

STRUCTURE: Mainly aluminium, with GFRP nose (from Bell JetRanger), doors, engine cowling, tailplane endplates and tailcone. Monocoque cabin and tailboom; metal tube centre-section.

LANDING GEAR: Four-wheel type, fixed. Rear wheels on horizontal, tubular metal hinged Vs with shock plunger braced to fuselage side. Front wheels attached to vertical shock-absorbers by scissor links, absorbers mounted outboard of fuselage on metal arms to increase track. Rear wheels 5.00-5; forward wheels 4.10/3.50. Hydraulic brakes on rear.

POWER PLANT: One 194 kW (260 hp) Textron Lycoming VO-435-A1F derated to 186 kW (250 hp) driving three-blade fully articulated main rotor and two-blade tail rotor. Unlimited transmission. Fuel capacity 216 litres (57.0 US gallons; 47.5 Imp gallons); optional 83 litre (22.0 US gallon; 18.3 Imp gallon) auxiliary fuel tank available. Oil capacity 11 litres (3.0 US gallons; 2.5 Imp gallons).

ACCOMMODATION: Four persons, including pilot(s); door each side at front; rear door port only.

DIMENSIONS, EXTERNAL:

Main rotor diameter	10.06 m (33 ft 0 in)
Tail rotor diameter	1.75 m (5 ft 9 in)
Length: overall, rotors turning	12.11 m (39 ft 9 in)
fuselage	9.30 m (30 ft 6 in)
Distance between rotor centres	6.07 m (19 ft 11 in)
Height: to top of rotor head	2.62 m (8 ft 7 in)
overall	2.95 m (9 ft 8 in)
Fuselage max width	1.52 m (5 ft 0 in)
Wheel track: forward	1.83 m (6 ft 0 in)
rear	2.49 m (8 ft 2 in)
Wheelbase	1.88 m (6 ft 2 in)

AREAS:

Main rotor disc	79.46 m² (855.3 sq ft)
Tail rotor disc	2.41 m² (25.97 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	794 kg (1,750 lb)
Max T-O weight	1,225 kg (2,700 lb)
Max disc loading	15.4 kg/m² (3.16 lb/sq ft)
Max power loading	6.57 kg/kW (10.80 lb/hp)

PERFORMANCE (three-blade rotor):

Never-exceed speed (VNE)	95 kt (177 km/h; 110 mph)
Cruising speed	78 kt (145 km/h; 90 mph)
Max rate of climb at S/L at 1,043 kg (2,300 lb)	381 m (1,250 ft)/min
Hovering ceiling: IGE	2,745 m (9,000 ft)
OGE	1,220 m (4,000 ft)
Service ceiling	3,660 m (12,000 ft)
Range: normal fuel	325 n miles (603 km; 375 miles)
max fuel	434 n miles (804 km; 500 miles)

PRESIDENT: Scott Swing
VICE-PRESIDENT: R Scott Baker

Velocity was formed in 1984 by Danny Maher to develop a four-seat canard aircraft based on the Rutan LongEz; prototype first flew in July 1985; company was purchased by the Swing family in 1992. Latest version is the XL-5; the company also provides support for the SE model.

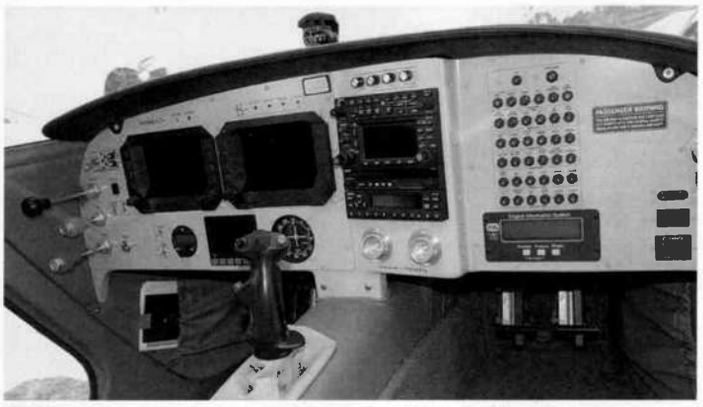
In October 2005, Velocity had a workforce of 15.

VELOCITY XL-5

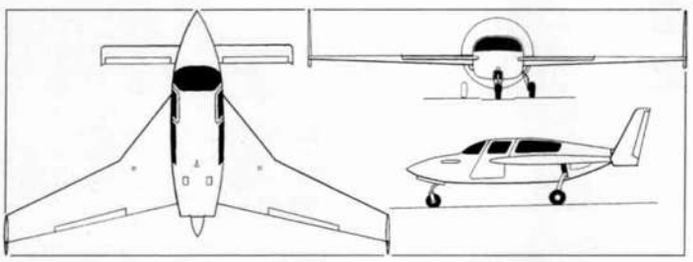
TYPE: Four-seat kitbuilt.

PROGRAMME: Design of the initial fixed-gear Velocity (N401DM), based upon the Rutan LongEz, began in December 1984 and was first flown in July 1985 after making public non-flying debut at Sun 'n' Fun that year. Retractable landing gear option introduced in 1990; LW (formerly 173) with larger wing introduced in 1992 and Elite in 1995, latter becoming SE (Standard Elite). Earlier versions, including the LW (Type 173), are no longer available.

Velocity XL-5 demonstrator 1040480



EFIS instrument panel of a recently-completed Velocity XL *(Paul Jackson)* 1040511



Velocity XL-RG canard kitbuilt *(Paul Jackson)* 1133251

CURRENT VERSIONS: **Velocity SE-FG:** Standard version with fixed landing gear, powered by engines in 119 to 149 kW (160 to 200 hp) range.

Velocity SE-RG: As SE-FG with retractable landing gear.

Velocity XL-FG: Introduced July 1997; large cabin version (14 cm; 5½ in wider, 25 cm; 10 in fuselage stretch) with fixed landing gear; engines in 194 to 231 kW (260 to 310 hp) range.

Velocity XL-RG: As XL-FG with retractable landing gear. One aircraft recently fitted with Sky Watcher surveillance system and described as optionally piloted.

Velocity TXL-RG-5: As XL-RG but with 231 kW (310 hp) Continental TSIO-550 turbocharged engine. Flight testing under way in 2006.

Velocity XL-5: Introduced in 2003; externally as XL models; internally has three-person rear bench seat.

Velocity UAV: Self-funded development by Proxy Aviation Systems; three built by 2006.

CUSTOMERS: Around 700 Velocity kits of all versions sold by September 2006. Total of 210 SE, 100 XL and 35 XL-55 flying at this time.

COSTS: SE standard kit USD31,950; XL standard kit USD42,950; fastbuild options for both include wings (USD11,500), fuselage (USD7,700); retractable landing gear (USD8,500) and -5 conversion (for XL only), USD2,800 (all 2006).

DESIGN FEATURES: Mid-wing monoplane with foreplanes. Rear-mounted wings with Eppler aerofoil section. Three Roncz vortillons under leading edge of each wing. Fin and rudder at end of each wing; constant chord foreplanes on nose. Early versions had electro-hydraulic speed brake under fuselage. Quoted build time 1,200 to 1,500 hours, which reduces to around 800 hours with fast-build kit.

FLYING CONTROLS: Manual. Top-hinged Frise ailerons on trailing edge of wing; almost full-span elevators on foreplane with Flettner fixed tab on starboard elevator; rudder on each fin hinges outwards only. No flaps. Fixed landing gear versions have drag-producing speed brake on underside of fuselage, operable by electric linear actuator; optional on RG versions.

STRUCTURE: Primarily foam composite construction using E-glass and Divyncell foam core materials of varying thicknesses. S-glass construction used on spars and main landing gear. Carbon fibre also used throughout airframe; 4130 steel tube and aluminium front landing gear, control linkages and flight control systems.

LANDING GEAR: Tricycle type; option of fixed or retractable. Mainwheel legs of glass fibre. On retractable versions, nosewheel retracts rearwards and mainwheels outwards into underside of strakes; retraction achieved with electro-hydraulic pump. Mainwheel doors attached to legs. SE and XL have Matco mainwheels and Asuza (SE) or Matco (XL) nosewheel; XL-5 has Cleveland mainwheels and Matco nosewheel. SE has 15×6.00-6 low profile mainwheel tyres and 340×5.00 nosewheel tyre; XL versions have 6.00×6 mainwheel tyres and 5.00×5 nosewheel tyre. Speed fairings on fixed-gear models.

POWER PLANT: *SE:* Typically one 149 kW (200 hp) Textron Lycoming IO-360 flat-four driving a three-blade MT Propeller MTV-9-D/LD178-102 constant-speed composites propeller; other recommended engines include 119 kW (160 hp) Textron Lycoming IO-320, 164 kW (220 hp) Franklin 6A-350-C1R and 134 kW (180 hp) Superior TNIO-360. Fuel capacity 227 litres (60.0 US gallons; 50.0 Imp gallons).

XL and XL-5: Typically one 231 kW (310 hp) Teledyne Continental IO-550 flat-six with optional FADEC driving three-blade Catto fixed-pitch propeller; other recommended engines include 194 kW (260 hp) Textron Lycoming IO-540D. Standard fuel capacity 265 litres (70.0 US gallons; 58.3 Imp gallons) on XL-RG and 322 litres (85.0 US gallons; 70.8 Imp gallons) on XL-FG; option to increase to 352 litres 93.0 US gallons; 77.4 Imp gallons) on latter.

Velocity also offers 119 kW (160 hp) DeltaHawk DH160V4 four-cylinder turbocharged Diesel engine on SE; can also be retrofitted to earlier Standard and LW (173) versions.

ACCOMMODATION: Individual seats in SE and XL; XL-5 has bench seat in rear; latter splits 60-40 to allow access to baggage compartment behind seats. Gull-wing doors each side of cockpit.

AVIONICS: Glass cockpit options include Garmin suite of GNS-430 GPS/NAV/COM; GTX327 transponder and GMA340 audio panel.

EQUIPMENT: Optional BRS ballistic recovery parachute in XL-5.

DIMENSIONS, EXTERNAL:

Wing span: SE	8.94 m (29 ft 4 in)
XL, XL-5	9.45 m (31 ft 0 in)
Foreplane span: SE	4.17 m (13 ft 8 in)
XL, XL-5	4.77 m (15 ft 8 in)
Length overall: SE	5.79 m (19 ft 0 in)
XL, XL-5	6.10 m (20 ft 0 in)
Height overall: all	2.36 m (7 ft 9 in)
Wheel track: all	2.03 m (6 ft 8 in)
Wheelbase: SE	2.54 m (8 ft 4 in)
XL, XL-5	2.79 m (9 ft 2 in)

DIMENSIONS, INTERNAL:

Cabin: Length: SE	2.13 m (7 ft 0 in)
XL, XL-5	2.39 m (7 ft 10 in)
Max width: SE	1.07 m (3 ft 6 in)
XL, XL-5	1.21 m (3 ft 11½ in)
Max height: SE	1.07 m (3 ft 6 in)
XL, XL-5	1.10 m (3 ft 7½ in)

AREAS:

Wings, gross: SE	9.48 m² (102.0 sq ft)
XL, XL-5	11.38 m² (122.5 sq ft)
Foreplanes (total): SE	1.84 m² (19.80 sq ft)
XL, XL-5	2.12 m² (22.80 sq ft)

WEIGHTS AND LOADINGS (A: SE-RG with 149 kW; 200 hp Lycoming; B: XL-FG with 194 kW; 260 hp Lycoming; C: XL-RG with 231 kW; 310 hp Continental):

Weight empty: SE	590 kg (1,300 lb)
XL	771 kg (1,700 lb)
XL-5	816 kg (1,800 lb)
Max T-O weight: SE	1,043 kg (2,300 lb)
XL	1,224 kg (2,700 lb)
XL-5	1,315 kg (2,900 lb)
Max wing loading: A	110.1 kg/m² (22.55 lb/sq ft)
B	107.6 kg/m² (22.04 lb/sq ft)
C	115.6 kg/m² (23.67 lb/sq ft)
Max power loading: A	7.00 kg/kW (11.50 lb/hp)
B	6.32 kg/kW (10.38 lb/hp)
C	5.69 kg/kW (9.35 lb/hp)

PERFORMANCE (A, B, C as above):

Never-exceed speed (VNE): all	200 kt (370 km/h; 230 mph) IAS
Normal cruising speed at 75% power: A, B	175 kt (324 km/h; 201 mph)
C	205 kt (380 km/h; 236 mph)
Stalling speed: A	60 kt (112 km/h; 69 mph)
B, C	65 kt (121 km/h; 75 mph)
Max rate of climb at S/L: A, B	366 m (1,200 ft)/min
C	457 m (1,500 ft)/min
Service ceiling: A	5,486 m (18,000 ft)
B, C	more than 6,096 m (20,000 ft)
T-O run: A, B	427 m (1,400 ft)
C	396 m (1,300 ft)
Landing run: all	457 m (1,500 ft)
Range at 65% power: A:	1,240 n miles (2,296 km; 1,427 miles)
B	875 n miles (1,620 km; 1,006 miles)
C	1,000 n miles (1,852 km; 1,150 miles)
g limits: SE	+12/–7
XL, XL-5	+9/–7

VIPER

VIPER AIRCRAFT CORPORATION

4020 Stearman Avenue, Pasco, Washington 99301
Tel: (+1 509) 543 35 70
Fax: (+1 509) 547 31 42

Web: www.viper-aircraft.com
PRESIDENT: Scott Hanchette
VICE-PRESIDENT: Dan Hanchette

Viper Aircraft's first product is the ViperJet. Series production is now under way.

VIPER VIPERJET

TYPE: Two-seat jet sportplane kitbuilt.

PROGRAMME: Development began in 1988; engineering by AirBoss Aerospace; tooling began in 1996; prototype was initially designed around a Teledyne Continental TSIO-520 and named ViperFan; in early 1999 a switch to jet propulsion was revealed and aircraft renamed ViperJet; development of ViperFan will continue as a lower priority. Prototype (N520VF), officially registered as Hanchette ViperJet) first flown 22 October 1999 and displayed publicly at Oshkosh in July 2000; underwent further modifications; seriously damaged in crash at St George, Utah, on 13 March 2002, but repaired and rolled out October 2004. Demonstrated at AirVenture, Oshkosh, in July 2005 following return to airworthy standard (certificate issue) 11 May 2005 and first flight (as Viperjet II) on 12 June 2005.

Middle East marketing begun in late 2005 by Jordan Aerospace Industries as JAI **Shibel**.

Viper ViperJet demonstrator in Mk II form *(Paul Jackson)* 1040515

CURRENT VERSIONS: **ViperFan:** Initial piston-engined version.
ViperJet: Jet-powered prototype.
ViperJet Mk II: Production version, *as described.*

CUSTOMERS: Total 18 sold and one flown by mid-2005; three aircraft registered by 2003, including No.3 (N999VJ) to Russell Skinner of Dana Point, California, although not declared complete by late 2006.

COSTS: Kit US$183,400; engine extra. Pressurisation upgrade US$39,000; builder-assistance programme US$75,000 (2006).

DESIGN FEATURES: High-performance personal jet at self-build price. Low wing with sweptback leading-edge and initially with winglets; sweptback tail surfaces with fin fillet and twin ventral strakes.

Wing aerofoil section NACA 65-215 at root, NACA 65-212 at tip; horizontal tail NACA 66-212; vertical tail NACA 63-015. Wing incidence at root 1.84°, twist 2.86°.

Quoted build time 2,000 hours using builder-assistance programme.

FLYING CONTROLS: Conventional and manual. Ailerons have inboard horn balance and trim tab, port; horn-balanced rudder; mass- and horn-balanced elevators with anti-balance tab starboard and trim tab port. Electric double-slotted flaps, span 1.65 m (5 ft 5 in) deflecting between 0 and 45°; aileron span 1.22 m (4 ft 0 in), deflection 27° up and 18° down; rudder deflection ±25°; elevator deflection ±30°. Perforated airbrake below each wingroot.

STRUCTURE: Extensive use of composites; much of this provided by Unlimited Composites of Scappoose, Oregon. Preformed skins and wing spars. 'Glue and bolt' assembly.

LANDING GEAR: Tricycle type; retractable. Nosewheel retracts rearwards, mainwheels inwards. Mainwheels 4.5×5.5-6, hydraulic brakes; nosewheel 5.00-5, steerable. Oleo on each leg. Mainwheels partly visible when retracted; production aircraft will not have landing gear doors.

POWER PLANT: Prototype initially powered by one refurbished Turbomeca Marboré 2 turbojet rated at 3.91 kN (880 lb st); later changed to converted General Electric T58-8F rated at 4.44 kN (1,000 lb st). Other engine options include versions of Marboré up to 4.89 kN (1,100 lb st). Performance data based on 13.12 kN (2,950 lb st) General Electric J85/CJ-610 derated to 12.0 kN (2,700 lb st). Fuel capacity 511 litres (135 US gallons; 112 Imp gallons) in prototype; 1,022 litres (270 US gallons; 225 Imp gallons) of which 1,004 litres (265 US gallons; 221 Imp gallons usable) in wingroot tanks on production models.

ACCOMMODATION: One or two pilots in tandem in unpressurised cockpit; cockpit pressurisation upgrade is available. Single-piece windscreen; separate, rear-hinged, single-piece canopy also holds rear instrument panel.

AVIONICS: *Comms:* Garmin GMA 340 nav/com and Bendix/King KY 96A transponder in prototype.

Instrumentation: Op Technologies Flight Op 200 MFD.

DIMENSIONS, EXTERNAL:

Wing span	9.14 m (30 ft 0 in)
Wing chord: at root	1.78 m (5 ft 10 in)
at tip	0.61 m (2 ft 0 in)
Wing aspect ratio	6.9
Length overall	7.75 m (25 ft 5 in)
Height overall	3.25 m (10 ft 8 in)
Tailplane span	4.06 m (13 ft 4 in)

DIMENSIONS, INTERNAL:

Cockpit: Length	2.92 m (9 ft 7 in)
Max width	0.76 m (2 ft 6 in)
Max height	1.24 m (4 ft 1 in)

AREAS:

Wings, gross	12.08 m² (130.0 sq ft)
Horizontal tail	3.77 m² (40.56 sq ft)
Vertical tail	1.92 m² (20.63 sq ft)

WEIGHTS AND LOADINGS (J85 engine):

Weight empty	1,292 kg (2,850 lb)
Max T-O weight: normal	2,268 kg (5,000 lb)
max	2,494 kg (5,500 lb)
Max baggage weight	45 kg (100 lb)
Max wing loading	206.6 kg/m² (42.31 lb/sq ft)
Max power loading	208 kg/kN (2.04 lb/lb st)

PERFORMANCE (estimated):

Never-exceed speed (VNE)	456 kt (844 km/h; 525 mph)
Max level speed at FL180	380 kt (703 km/h; 437 mph)
Stalling speed, flaps down	77 kt (143 km/h; 89 mph)
Max rate of climb at S/L	3,050 m (10,000 ft)/min
Service ceiling	10,665 m (35,000 ft)
T-O run	366 m (1,200 ft)
Landing run	762 m (2,500 ft)
Range with max fuel, 45 min reserve	800 n miles (1,481 km/h; 920 miles)
Endurance	2 h 0 min
g limits	±12

VSTOL

VSTOL AIRCRAFT CORPORATION

6861 Cadet Avenue, Fort Myers, Florida 33905
Tel: (+1 866) 218 54 68
e-mail: infonew@vstolaircraft.com
Web: www.vstolaircraft.com
CEO: Dick Turner

VSTOL is responsible for marketing the SST 2000 Pairadigm and SS 2000 Super Solution series of kitbuilt aircraft, notably for crop spraying. Mr Turner has been designing ultralight aircraft since 1983. Kits are produced in Venezuela.

VSTOL SST 2000 PAIRADIGM

TYPE: Agricultural sprayer twin.

PROGRAMME: Designed by Dick Turner and developed from the Star Flight XC 280 Stiletto, which first flew January 1997. A previous single-engined version is known as the **Super Solution 2000**, hence, PAIRadigm for twin version.

CUSTOMERS: Over 400 of both single- and twin-engined versions are flying. Some used for crop-spraying.

COSTS: USD85,000 with full spray equipment (2006). Estimated total cost to completion USD105,000.

VSTOL Pairadigm agricultural sprayer with exposed rear fuselage and cruciform empennage 1044876

DESIGN FEATURES: Designed for slow speed and high AOAs; engines close to centreline for optimum control in the event of failure of one. Two pusher engines mounted side by side at rear of fuselage; propellers partly overlap and rotate in same direction. Wings have full length leading-edge slats and are removable for storage. Versions exist with exposed and covered fuselage structure and low and medium tailplane positions.

FLYING CONTROLS: Conventional and manual. Actuation by stainless steel cables. Leading-edge slats. Frise ailerons, slotted three position flaps and horn-balanced rudder.

STRUCTURE: 4130 steel and aluminium tubing throughout; fabric-covered V-braced wings and composites fuselage skin; braced tailplane. Extended wings are optional. Cabin enclosure removable.

LANDING GEAR: Fixed; choice of nose- or tailwheel versions; Fuselage mounted spring metal tube cantilever mainwheel legs with wire cross-bracing to fuselage centreline. Hydraulic disk brakes; wheel size 152 mm (6 in). Steerable nosewheel on tricycle model.

POWER PLANT: Two engines, each between 37.3 and 74.6 kW (50 and 100 hp); 48.5 kW (65 hp) Hirth 2706 engines are recommended. Fuel capacity 75.7 litres (20.0 US gallons; 16.7 Imp gallons) in two wing tanks.

EQUIPMENT: Crop-spraying kit includes 189 litre (50.0 US gallon; 41.6 Imp gallon) chemical tank and 8.23 m (27 ft) sprayboom with 16 nozzles. Swath width 16.76 m (55 ft).

DIMENSIONS, EXTERNAL:

Wing span	10.52 m (34 ft 6 in)
Wing aspect ratio	6.3
Length overall	7.16 m (23 ft 6 in)
Height overall	2.59 m (8 ft 6 in)

AREAS:

Wings, gross	17.65 m² (190.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	408 kg (900 lb)
Max T-O weight	771 kg (1,700 lb)
Max wing loading	43.7 kg/m² (8.95 lb/sq ft)

PERFORMANCE:

Never-exceed speed (VNE)	108 kt (201 km/h; 125 mph)
Max level speed	78 kt (145 km/h; 90 mph)
Normal cruising speed	61 kt (113 km/h; 70 mph)
Stalling speed	26 kt (47 km/h; 29 mph)
Max rate of climb at S/L	244 m (800 ft)/min
Rate of climb at S/L, OEI	61 m (200 ft)/min
Service ceiling	3,660 m (12,000 ft)
T-O run	46 m (150 ft)
Landing run	31 m (100 ft)
Range at cruising speed	250 n miles (463 km; 287 miles)
g limits	+4.4/−2.2

WACO

WACO AIRCRAFT COMPANY OHIO INC

174 Barklow, Portsmouth, Ohio 45662
Tel/Fax: (+1 740) 820 51 00
e-mail: wacoohio@falcon1.net
Web: www.wacokit.com
DIRECTORS:
Mike Fisher
John Kennard
Ben Bagnall

Founded 1 June 2001, Waco produced kit replicas of the UMF design built in the early 1930s by the US company of the same name and certified under ATC 546 on 11 July 1934. Mike Fisher is founder of Fisher Flying Products. The company had a workforce of four at its 297 m² (3,200 sq ft) factory but all the company's stock of jigs, patterns and materials was auctioned on 17 October 2006.

(Weaver Aircraft Company formed 1920 and traded as WACO; renamed Waco Aircraft Company at Troy, Ohio, in 1928 and ceased aircraft production in 1947.)

WACO UMF

TYPE: Three-seat biplane/kitbuilt.

PROGRAMME: UMF indicates Continental R-670 or W-670 engine; 1934 open cockpit; tandem cockpits. Originals built 1934 and 1935; production totalled 77. Prototype of recent series (N2021N) built 1999 and first flown 4 June 2000. Demonstrator N30056, built 2002 and first public display at AirVenture '02, July 2002; registered as Waco YMF, having Jacobs R755-B2 engine (for which ZMF more accurate designation).

Production terminated and company liquidated in 2006.

WACO CLASSIC

WACO CLASSIC AIRCRAFT CORPORATION

PO Box 1229, Battle Creek, Michigan 49016-1229
Tel: (+1 296) 565 10 00
Fax: (+1 296) 565 11 00

PRESIDENT: Mitchell Lampert
GENERAL MANAGER: Patrick Horgan

Waco Classic (known until 1997 as Classic Aircraft) delivers some five or six aircraft per year. It originated in 1983 at Lansing, Michigan, and acquired the Waco YMF-5 type certificate from the FAA; manufacturing authority was assigned in February 1984. The company moved into a purpose-built, 2,800 m² (30,000 sq ft) factory at W K Kellogg Airport, Battle Creek, in April 2000; 90th aircraft handed over at official opening of factory on 20 May 2000; 100th followed in 2002, with 112th delivered in April 2006, to a customer in Massachusetts. By November 2006, the 118th airframe had been completed and was awaiting a customer.

WACO CLASSIC YMF SUPER

TYPE: Three-seat biplane.

PROGRAMME: Construction began March 1984 under type certificate of original, pre-Second World War Waco YMF-5; first flight of prototype (N1935B) 20 November 1985; FAA certification 10 March 1986; marketed initially as F-5, differing from original in having 300 modifications, including new throttle control, wheels, brakes, electrical system, starting system, engine and propeller, plus steerable tailwheel; modern constructional materials and methods; MTOW 1,202 kg (2,650 lb). Recertified 28 January 1988 at 1,256 kg (2,770 lb) from 10th aircraft onwards, and Supplemental Type Certificate issued 24 June 1991 incorporating changes to throttle control, wheels and brakes, electrical and starting system, engine, propeller and tailwheel.

YMF Super certified 24 June 1991 with stretched fuselage and further increase in MTOW; balanced rudder; designation F5C; introduced at 40th aircraft.

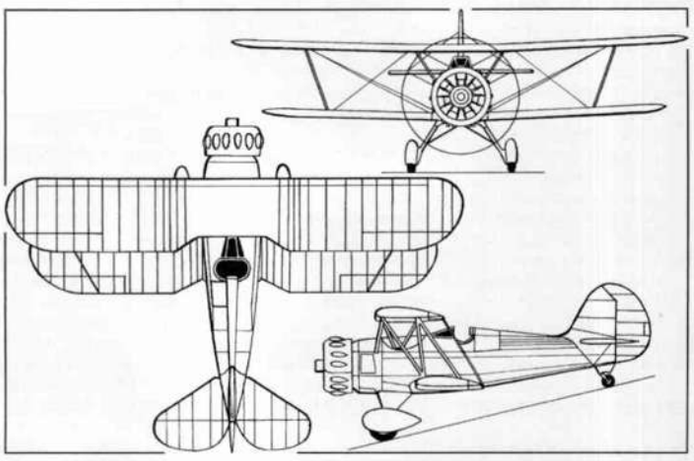
CURRENT VERSIONS: **YMF Super:** Fuselage stretched 15 cm (6 in); larger front cockpit than previous standard F-5 version for commercial pleasure flying; enlarged forward door; front and rear cockpits 10 cm (4 in) longer; front cockpit 6.3 cm (2½ in) wider.

CUSTOMERS: Total 116 (including F-5s) sold by November 2006. Exported to Australia, Canada, Germany, Japan, Kenya, Mexico, South Africa, Switzerland and the Caribbean. One delivered to Germany in February 2005, and one to the UK in April 2005.

COSTS: Standard equipped aircraft USD349,000 (2005).

DESIGN FEATURES: Single-bay biplane of 1930s vintage. Wings braced with N-type interplane struts, plus flying and landing wires, with double-N cabane. Elliptical wingtips. Cross-braced landing gear. Helmeted engine cowling.

Wing section Clark Y; dihedral 2°, incidence 0° on upper and lower wings.



Waco Classic YMF Super three-seat biplane *(James Goulding)* 1158557

G-WOCO, the United Kingdom's first Waco Classic YMF Super *(Paul Jackson)* 1129524

FLYING CONTROLS: Conventional and manual. Interconnected ailerons on upper and lower wings; no tabs. Horn-balanced tail surfaces. Tailplane trim by screw-jack actuator; ground-adjustable trim tab on rudder. Control surface movements; ailerons ±25°; elevator +33°/–27°; rudder ±30°.

Waco Classic YMF Super built in 2006 *(Paul Jackson)* 1158599

STRUCTURE: Modern construction techniques, tolerances and materials applied to original design. Steel interplane struts; streamlined stainless steel flying and landing wires; all-wood wing with Dacron covering; aluminium ailerons with external chordwise stiffening. Fuselage of 4130 welded steel tubes with internal oiling for corrosion protection; wooden bulkheads; Dacron covering. Braced welded steel tube tail surfaces with Dacron covering. Helmeted aluminium engine cowling.

LANDING GEAR: Tailwheel type; fixed. Shock-absorption by oil and spring shock-struts with radius rod bracing. Steerable tailwheel. Cleveland 30-67F hydraulic brakes on mainwheels only. Cleveland 40-101A mainwheels, tyre size 7.50–10; Cleveland 40-199A tailwheel, tyre size 3.50–10. Fairings standard on main legs and wheels; tailwheel fairing optional. DeVore Aviation PK3000 floats optional.

POWER PLANT: One 205 kW (275 hp) Jacobs R-755-B2M or –B2 air-cooled radial engine (remanufactured), driving a Sensenich W90T6J- or W96J-series two-blade, fixed-pitch, wooden propeller. Hamilton Standard 2B20 constant-speed propeller with spinner optional. Fuel in two aluminium tanks in upper wing centre-section, usable capacity 182 litres (48.0 US gallons; 40.0 Imp gallons). Refuelling point for each tank in upper wing surface. Auxiliary tanks, usable capacity 45.4 litres (12.0 US gallons; 10.0 Imp gallons) each, optional in either or both inboard upper wing panels. Oil capacity 15 litres (4.0 US gallons; 3.3 Imp gallons) standard;18.9 litres (5.0 US gallons; 4.2 Imp gallons) when additional fuel tanks installed. Fuel injection system optional.

ACCOMMODATION: Three seats in tandem open cockpits, two side by side in front position, single seat at rear. Controls in both cockpits; toe brakes in rear only. Seat belts with shoulder harness, and pilot's adjustable seat, standard. Lockable front and rear baggage compartments. Front windscreen removable.

SYSTEMS: 24 V electrical system with two batteries, alternator and starter for electrical supply to navigation, strobe and rear cockpit lights. Hydraulic system for brakes only.

AVIONICS: Customer specified. Bendix/King and Garmin VFR and IFR packages available. S-Tec 30 autopilot optional.

Instrumentation: Compass, airspeed indicator, turn and bank indicator, rate of climb indicator, sensitive altimeter, recording tachometer, cylinder head temperature gauge and oil pressure and oil temperature gauges standard in rear cockpit. Front cockpit instruments optional. Other options include exhaust gas temperature gauge, carburettor temperature gauge, *g* meter, vacuum or electrically driven gyro system, Hobbs meter (engine-time recorder), outside air temperature gauge and manifold gauge.

EQUIPMENT: Instrument post lighting, heated pitot, three-colour paint scheme with choice of two designs, landing and taxying lights, front and rear cockpit heaters, also standard. Optional equipment includes ground service plug, flight-approved metal front cockpit cover, glider tow hook, deluxe interior with carpet, leather sidewalls and interior trim, and special exterior paint designs.

DIMENSIONS, EXTERNAL:

Wing span: upper	9.14 m (30 ft 0 in)
lower	8.18 m (26 ft 10 in)
Length overall	7.26 m (23 ft 10 in)
Height overall	2.59 m (8 ft 6 in)
Wheelbase	1.95 m (6 ft 5 in)
Propeller diameter	2.44 m (7 ft 8 in)

DIMENSIONS, INTERNAL:

Rear baggage compartment volume	0.21 m^3 (7.5 cu ft)

AREAS:

Wings, gross	21.69 m^2 (233.5 sq ft)

WEIGHTS AND LOADINGS:

Basic weight empty	900 kg (1,985 lb)
Baggage capacity: front	11 kg (25 lb)
rear	34 kg (75 lb)
Max T-O and landing weight	1,338 kg (2,950 lb)
Max wing loading	61.7 kg/m^2 (12.63 lb/sq ft)
Max power loading	6.53 kg/kW (10.73 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	186 kt (344 km/h; 214 mph)
Max level speed at S/L	117 kt (217 km/h; 135 mph)
Max cruising speed at S/L	104 kt (193 km/h; 120 mph)
Econ cruising speed at FL80	95 kt (177 km/h; 110 mph)
Stalling speed, power off	51 kt (95 km/h; 59 mph)
Max rate of climb at S/L	235 m (770 ft)/min
T-O run	152 m (500 ft)
Range, standard fuel, 30 min reserves	286 n miles (531 km; 330 miles)
g limits	+5.5/–2.2

WAG-AERO

WAG-AERO INC

PO Box 181, 1216 North Road, Lyons, Wisconsin 53148
Tel: (+1 262) 763 95 86
Fax: (+1 262) 763 75 95
e-mail: wagaero-sales@wagaero.com
Web: www.wagaero.com
PRESIDENT: Mary M Myers
DIRECTOR, SALES: Sandy Hana
DIRECTOR, TECHNICAL: Tom O'Neill
MARKETING SUPERVISOR: Mary Pat Henningfield

Company founded in early 1960s, initially to supply light aircraft spares. Three aircraft types currently offered, based on Piper designs. Founders Dick and Bobbie Wagner sold Wag-Aero to Bill Read and Mary Myers on 1 September 1995. Some 7,000 kits or sets of plans have been sold; kit sales represent approximately 15 per cent of company revenue.

Recent additions to the company product line include replacement wing spars for a wide range of Aeroncas.

WAG-AERO SPORT TRAINER

TYPE: Tandem-seat kitbuilt.

PROGRAMME: Modernised kitbuilt version of 1937 Piper J3. Sport Trainer first flew 12 March 1975.

CURRENT VERSIONS: **Sport Trainer:** Basic two-seat design. Quoted build time of 1,200 hours; conforms to FAA 51 per cent rule.

Description applies to Sport Trainer.

Acro Trainer: Differs from standard version by having strengthened fuselage, shortened wings (8.23 m; 27 ft 0 in), modified lift struts, improved wing fittings and rib spacing, and new leading-edge.

Observer: Replica of Piper L-4 military liaison aircraft.

Super Sport: Structural modifications to accept engines of up to 112 kW (150 hp), making it suitable for glider towing, bush operations, or as floatplane.

CUSTOMERS: 4,193 sets of plans and kits sold by mid-2001; more than 200 flying by December 2006.

COSTS: Plans: USD125; kit USD31,849 with Continental engine finishing kit, USD33,501 with Lycoming finishing kit (2006).

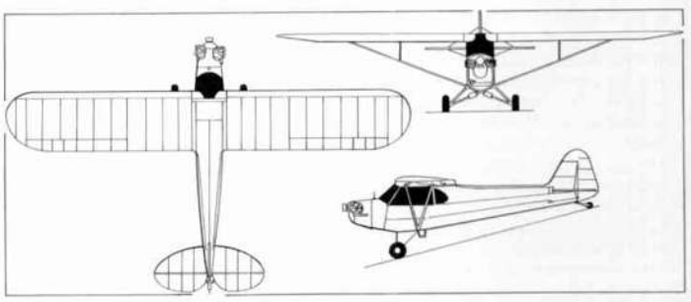
DESIGN FEATURES: High-wing cabin monoplane with braced wings and tailplane.

FLYING CONTROLS: Conventional and manual. Horn-balanced rudder.

STRUCTURE: Fuselage and empennage of welded 4130 chrome molybdenum steel tube with fabric covering; wooden wing with light alloy leading-edge and fabric covering.

LANDING GEAR: Tailwheel type; fixed. Two faired-in welded steel tube side Vs hinged to lower longerons, plus half axles, each with bungee cord shock-absorber, attached to compression frame. Optional wheel fairings.

Wag-Aero Sport Trainer *(Paul Jackson)* 1040512



General arrangement of the Wag-Aero Sport Trainer *(Paul Jackson)* 0526902

POWER PLANT: Can be powered by any flat-four Teledyne Continental, Franklin or Textron Lycoming engine between 48.5 and 93 kW (65 and 125 hp). Standard fuel capacity 45.4 litres (12.0 US gallons; 10.0 Imp gallons); auxiliary fuel capacity 98.4 litres (26.0 US gallons; 21.7 Imp gallons).

ACCOMMODATION: Two persons in tandem. Horizontally split door on starboard side.

DIMENSIONS, EXTERNAL:

Wing span	10.73 m (35 ft 2½ in)
Wing chord, constant	1.60 m (5 ft 3 in)
Wing aspect ratio	6.9
Length overall	6.82 m (22 ft 4½ in)
Height overall	2.03 m (6 ft 8 in)
Wheel track	1.80 m (5 ft 11 in)

AREAS:

Wings, gross	16.58 m^2 (178.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	327 kg (720 lb)
Max T-O weight	635 kg (1,400 lb)
Max wing loading	38.3 kg/m^2 (7.84 lb/sq ft)
Max power loading	6.82 kg/kW (11.20 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	104 kt (193 km/h; 120 mph)
Max level speed at S/L	89 kt (164 km/h; 102 mph)
Cruising speed	82 kt (151 km/h; 94 mph)
Stalling speed	34 kt (63 km/h; 39 mph)
Max rate of climb at S/L	149 m (490 ft)/min
Service ceiling	3,660 m (12,000 ft)
T-O run	122 m (400 ft)
Landing run	130 m (425 ft)
Range:	
at cruising speed with standard fuel	270 n miles (500 km; 310 miles)
with auxiliary fuel	395 n miles (732 km; 455 miles)

WAG-AERO WAG-A-BOND

TYPE: Side-by-side kitbuilt.

PROGRAMME: Replica of 1948 Piper PA-17 Vagabond. Prototype Wag-A-Bond completed May 1978; plans and kits available. Conforms to FAA 51 per cent rule.

Alternative engine installation tested late 2005 when NX707SV flown with 74.6 kW (100 hp) Corvair O-164 converted motorcar engine and Ware Drive two-blade composites propeller (later replaced by Sensenich wooden unit).

CUSTOMERS: 1,519 plans and kits sold by mid-2001; more than 70 flying by December 2006.

COSTS: Plans USD125 (2006). Kit USD18,000 (2003).

DESIGN FEATURES: Two versions (**Classic** and **Traveler**); Traveler is modified and updated version of Vagabond with port and starboard doors, overhead skylight window, extended sleeping deck (conversion from aircraft to camper interior taking about 2 minutes and

Wag-Aero Wag-A-Bond with Corvair O-164 engine *(Paul Jackson)* 1040513

accommodating two persons), extended baggage area, engine of up to 85.7 kW (115 hp), and provision for full electrical system.
Wing section USA 35B.

FLYING CONTROLS: Conventional and manual; all controls cable-actuated. Frise ailerons. Horn-balanced rudder. Tab on port elevator. Pitch trim by variable incidence tailplane.

STRUCTURE: All-wood wing and aluminium alloy aileron structures. Welded 4130 steel tube and flat plate fuselage structure, and steel tube tail unit. Single streamlined wing bracing strut. Complete airframe is fabric covered.

LANDING GEAR: Tailwheel type; fixed; faired-in side V main gear with compressed rubber suspension and half axle. Mainwheel tyres 7.00–6; Cleveland hydraulic brakes. Optional skis.

POWER PLANT: Traveler can be powered by a Textron Lycoming engine of 80.5 to 85.7 kW (108 to 115 hp). Classic can be powered by a Teledyne Continental engine of 48.5 to 74.5 kW (65 to 100 hp). Fuel capacity: Traveler 98.4 litres (26.0 US gallons; 21.6 Imp gallons), Classic 45.4 litres (12.0 US gallons; 10.0 Imp gallons).

ACCOMMODATION: Two persons side by side on adjustable bench seat; cabin includes baggage stowage. Forward-opening cabin door on each side of fuselage.

SYSTEMS: Optional electrical system in Traveler.

DIMENSIONS, EXTERNAL:

Wing span	8.32 m (29 ft 3½ in)
Wing chord, constant	1.60 m (5 ft 3 in)
Wing aspect ratio	5.0
Length overall	5.70 m (18 ft 8½ in)
Height overall	1.83 m (6 ft 0 in)
Wheel track	1.83 m (6 ft 0 in)

DIMENSIONS, INTERNAL:

Cabin max width	1.02 m (3 ft 4 in)

AREAS:

Wings, gross	13.70 m² (147.5 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: Classic	318 kg (700 lb)
Traveler	363 kg (800 lb)
Max baggage weight: Classic	18 kg (40 lb)
Traveler	27 kg (60 lb)
Max T-O weight: Classic	567 kg (1,250 lb)
Traveler	658 kg (1,450 lb)
Max wing loading: Classic	41.4 kg/m² (8.47 lb/sq ft)
Traveler	48.0 kg/m² (9.83 lb/sq ft)
Max power loading: Classic	7.61 kg/kW (12.50 lb/hp)
Traveler	7.67 kg/kW (12.61 lb/hp)

PERFORMANCE:

Max level speed: Classic	91 kt (169 km/h; 105 mph)
Traveler	118 kt (219 km/h; 136 mph)
Cruising speed: Classic	83 kt (153 km/h; 95 mph)
Traveler	104 kt (193 km/h; 120 mph)
Stalling speed: Classic, Traveler	39 kt (71 km/h; 44 mph)
Max rate of climb at S/L: Classic	190 m (625 ft)/min
Traveler	259 m (850 ft)/min
Service ceiling: both	4,260 m (14,000 ft)
T-O run: both	119 m (390 ft)
Landing run: both	232 m (760 ft)
Range: both	620 n miles (1,148 km; 713 miles)

WAG-AERO 2+2 SPORTSMAN

TYPE: Four-seat kitbuilt.

PROGRAMME: Version of the Piper PA-14 Family Cruiser. Plans and material kits available. Conforms to FAA 51 per cent rule.

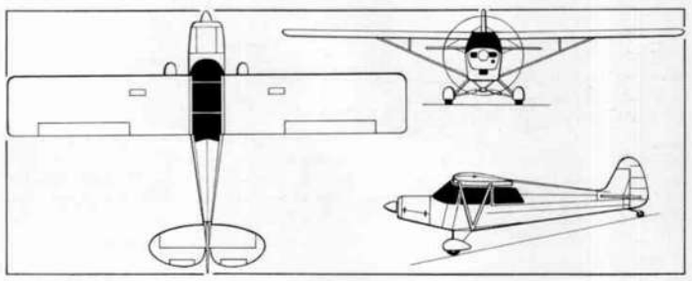
CUSTOMERS: 1,971 sets of plans and kits sold by May 2001; more than 30 flying by December 2006.

COSTS: Plans: USD125; kit USD18,000 (2006).

DESIGN FEATURES: True four-seater, with option of hinged rear fuselage decking to provide access to baggage and rear seat areas. Conventional, high-wing configuration with V-type bracing struts, wire-braced empennage, mid-mounted tailplane and classic fin and rudder.
Wing section USA 35B.

FLYING CONTROLS: Conventional and manual. Horn-balanced rudder. Upper and lower spoilers; trim tabs on both elevators. Aileron limits ±17°; elevator limits 34° up, 29° down.

Wag-Aero 2+2 Sportsman *(Paul Jackson)* 1040516



Wag-Aero 2+2 Sportsman *(James Goulding)* 0526903

STRUCTURE: Similar construction to Wag-A-Bond, with glass fibre wingtips. Alternatively, drawings and materials provided to modify standard PA-12, PA-14 or PA-18 wings. Prewelded fuselage structure also available.

LANDING GEAR: Tailwheel type; fixed; as Sport Trainer; main units use 8.00-6 or 7.00-6 tyres. Optional floats.

POWER PLANT: Engine of 93 to 149 kW (125 to 200 hp). Usable fuel capacity 148 litres (39.0 US gallons; 32.5 Imp gallons).

ACCOMMODATION: Four persons; two separate front seats, plus rear bench seat which is removable for stretcher or cargo carrying. Baggage area to rear of bench seat. Forward-opening cabin door on each side.

DIMENSIONS, EXTERNAL:

Wing span	10.90 m (35 ft 9 in)
Wing chord, constant	1.60 m (5 ft 3 in)
Wing aspect ratio	7.3
Length overall	7.12 m (23 ft 4½ in)
Height overall	2.02 m (6 ft 7½ in)
Wheel track	1.98 m (6 ft 6 in)

DIMENSIONS, INTERNAL:

Cabin max width	0.99 m (3 ft 3 in)

AREAS:

Wings, gross	16.18 m² (174.1 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	490 kg (1,080 lb)
Max T-O weight	998 kg (2,200 lb)
Max wing loading	61.7 kg/m² (12.63 lb/sq ft)
Max power loading	6.70 kg/kW (11.00 lb/hp)

PERFORMANCE (typical; actual data depend on engine fitted):

Max level speed	112 kt (207 km/h; 129 mph)
Cruising speed	108 kt (200 km/h; 124 mph)
Stalling speed	33 kt (62 km/h; 38 mph)
Max rate of climb at S/L	244 m (800 ft)/min
Service ceiling	4,510 m (14,800 ft)
T-O run	70 m (230 ft)
Landing run	104 m (340 ft)
Range at cruising speed	670 n miles (1,240 km; 771 miles)

WARNER

WARNER AEROCRAFT COMPANY

9415 Laura Court, Seminole, Florida 33776-1625
Tel: (+1 727) 595 23 82
Fax: (+1 617) 598 10 14
e-mail: info@warnerair.com
Web: www.warnerair.com
PRESIDENT: Dana Axelrod
SALES MANAGER: Mike Dwyer

Warner Aerocraft markets the Warner Sportster. Its earlier Spacewalker and Revolution have been sold to Serenity Aviation of Singapore.

WARNER SPORTSTER

TYPE: Tandem-seat sportplane kitbuilt.

PROGRAMME: Development of Country Air (later Warner and now Serenity) Space Walker, of which 46 built. Two-seat versions of Space Walker developed as Revolution I (48.5 kW; 65 hp Teledyne Continental) and Revolution II (74.6 kW; 100 hp Textron Lycoming); further power increase produced Sportster; prototype (N269U) first flown 18 April 1998. New version with revised canopy introduced 2002 and has replaced original model aircraft; length reduced to 6.20 m (20 ft 4 in). Prototype registered N69DA. An LSA compliant example was under construction and was expected to appear at Sun 'n' Fun, April 2007; original Sportster has been withdrawn in anticipation.

CUSTOMERS: 125 Space Walkers and Revolutions built, plus 11 Sportsters by 2006.

COSTS: Basic kit USD16,495; fast-build kit USD19,995 (2006). Cost of LSA compliant version estimated at USD69,900.

DESIGN FEATURES: Quoted build time 700 hours. Roll rate 45°/s.

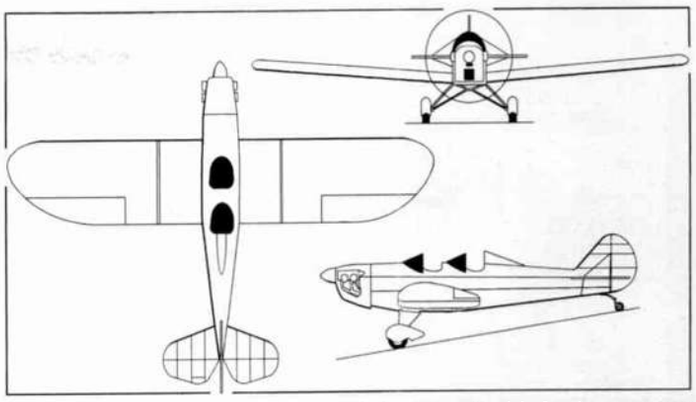
FLYING CONTROLS: Conventional and manual. Horn-balanced rudder and elevators; trim tab in port elevator. Dual controls.

STRUCTURE: 4130 steel tube and fabric fuselage with wooden turtle deck; fabric-covered two-spar metal wings. Glass fibre cowling and wingtips. Tail unit identical to Revolution/Space Walker. Compared to early version, new Sportster has lower bottom longeron and lowered bulkheads forward of cockpit.

LANDING GEAR: Tailwheel type; fixed. Two faired-in side Vs hinged to lower longerons with crossover half-axles and spring shock-absorbers. 6.00-6 tyres, Cleveland wheels with disc brakes. Steerable 15 cm (6 in) Maule tailwheel. Speed fairings on mainwheels.

POWER PLANT: Engines from 63.4 to 119 kW (85 to 160 hp) can be fitted; LSA version has 74.6 kW (100 hp) Teledyne Continental O-200. Fuel capacity 76 litres (20.0 US gallons; 16.7 Imp gallons).

Warner Sportster with covered rear cockpit *(Paul Jackson)* 1040517



Warner Sportster tandem-seat, open-cockpit version *(Paul Jackson)* 1158980

ACCOMMODATION: Pilot and passenger in tandem in individual open cockpits; choice of three styles of windscreen; alternatively, rear cockpit can be covered with a bubble canopy and front canopy temporarily faired over. Compared to early Sportster, new version has slightly more curved lips to accommodate canopy curvature, and instrument panel moved forward.

DIMENSIONS, EXTERNAL:

Wing span	8.53 m (28 ft 0 in)
Wing chord, constant	1.37 m (4 ft 6 in)
Wing aspect ratio	7.0
Length overall	6.20 m (20 ft 4 in)
Max diameter of fuselage	0.76 m (2 ft 6 in)
Height overall	1.68 m (5 ft 7 in)
Propeller ground clearance	0.46 m (1 ft 6 in)
Tailplane span	2.41 m (7 ft 11 in)
Wheel track	1.83 m (6 ft 0 in)
Wheelbase	4.41 m (14 ft 5½ in)

DIMENSIONS, INTERNAL:

Cockpit max width	0.76 m (2 ft 6 in)

AREAS:

Wings, gross	10.41 m² (115.0 sq ft)

WEIGHTS AND LOADINGS (O-290 engine):

Weight empty	386 kg (850 lb)
Max baggage weight	11 kg (25 lb)
Max T-O weight	680 kg (1,400 lb)
Max wing loading	65.4 kg/m² (13.39 lb/sq ft)
Max power loading	7.94 kg/kW (13.04 lb/hp)

PERFORMANCE (O-290 engine):

Never-exceed speed (VNE)	130 kt (241 km/h; 140 mph)
Max level speed	115 kt (212 km/h; 132 mph)
Normal cruising speed	104 kt (193 km/h; 120 mph)
Stalling speed	40 kt (73 km/h; 43 mph)
Max rate of climb at S/L	358 m (1,200 ft)/min
Service ceiling	3,660 m (12,000 ft)
T-O and landing run	130 m (350 ft)
Range with max fuel	356 n miles (659 km; 410 miles)
g limits	+6/–4

WEATHERLY

WEATHERLY AIRCRAFT COMPANY

5000 Bailey Loop, McClellan, California 95652
Tel: (+1 916) 640 01 20
Fax: (+1 916) 640 01 16
e-mail: fly@weatherlyaircraft.com
Web: www.weatherlyaircraft.com
PRESIDENT AND CEO: Gary Beck
MANUFACTURING MANAGER: Carl Lange

Formed in 1961 by John C Weatherly; developed conversions of Fairchild M-62 for agricultural role, and in 1966 designed the Model 201 of which 97 were built. Further refinement resulted in the Weatherly 620 of 1991, production of which continued at a low rate. Weatherly Aviation Company was declared bankrupt and purchased by GBECK Inc in September 2000, becoming Weatherly Aircraft. The company, with eight employees, moved to a 6,782 m² (73,000 sq ft) facility at McClellan Park, California, the former McClellan AFB, which closed in July 2001. Trading officially began on 13 June 2005. Transfer of the Weatherly 620 Type Certificate was effected on 20 October 2000.

WEATHERLY 620

TYPE: Agricultural sprayer.

PROGRAMME: Developed from Weatherly 201; prototype (N9256W) first flown 1979. Final Weatherly Aviation aircraft was c/n 1655 (N9045Z) in December 1999. Production by Weatherly Aircraft began with c/n 1656, delivered in October 2002 to Banana Fruit Growers, Belize.

CURRENT VERSIONS: **620:** Initial version; no longer available.

620-B: Current piston-engined version, powered by Pratt & Whitney radial engine. Length 8.15 m (26 ft 9 in); height 2.44 m (8 ft 0 in). Slightly different spray equipment but same sized hopper. Total 73 current on US civil register in 2006.

620-TP: Initial turboprop version, with P&WC PT6A-11AG; no longer available. One (N9259W) currently on US register.

620-BTG: Current turboprop version; engine can be retrofitted to earlier versions. None current in US.

Description applies to Weatherly 620-BTG.

CUSTOMERS: By 1999, 155 Weatherly 620s of all versions had been built. Deliveries by Weatherly Aviation included one 620-B for Belize; a 620-BTG for Argentina in 2003; and one to Mid-Continent Aircraft in 2005 and one further in 2006. An order was concluded with Golden Fly on behalf of a North African customer for 20 aircraft on 14 October 2005, valued at USD6.1 million.

Weatherly 620-B (one Pratt & Whitney R-985) 1044831

COSTS: 620-B USD245,000; 620-BTG USD392,000 (2004).

DESIGN FEATURES: High lift:drag ratio wings, with tip vanes for vortex diffusion and increase of swath width; vanes fold downwards for ground handling. Hinged wing leading-edges aid inspection.

FLYING CONTROLS: Conventional and manual. Stainless steel rudder cables.

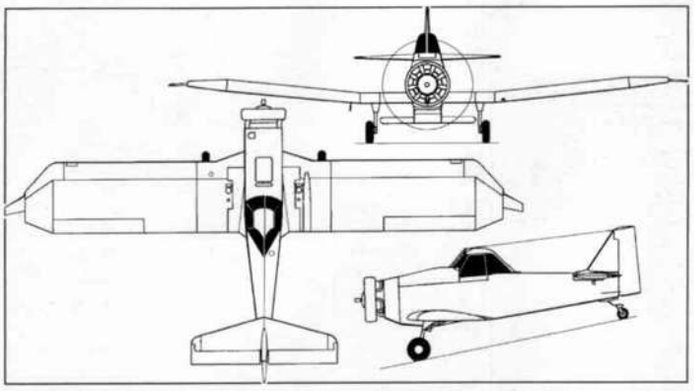
STRUCTURE: All-metal monocoque fuselage; metal wings and control surfaces; glass fibre tail fairings. Rudder deflects ±20°: elevator 27° up and 15° down; ailerons 29° up and 11° 30' down.

Wing incidence 3° at centre-section and 1°12' at tip; dihedral 6°.

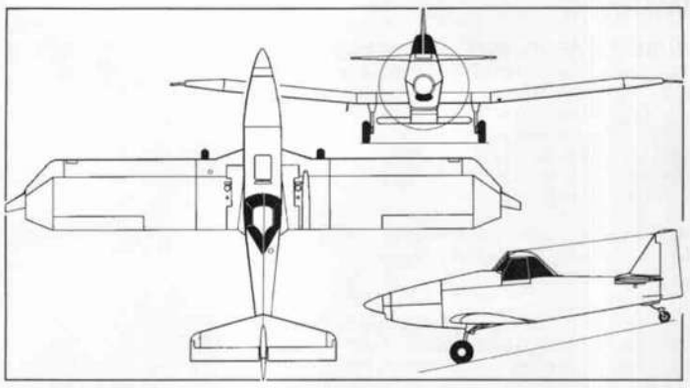
LANDING GEAR: Tailwheel type; fixed. Wing-mounted cantilever mainwheel legs with oleo-pneumatic shock-absorbers attached to main Spar. Cantilever tailwheel assembly with fully castoring and locking wheel. Three-piston Cleveland brakes. Mainwheel tyre size 8.5–10; tailwheel 12.5-4.5.

POWER PLANT: *620-B:* One Pratt & Whitney 336 kW (450 hp) R-985-AN radial engine driving a Hartzell HC-B3R30-4 or -4B three-blade propeller. Fuel capacity 369 litres (97.5 US gallons; 81.1 Imp gallons), of which 341 litres (90.1 US gallons; 75.1 Imp gallons) is usable. Oil capacity 25.3 litres (6.7 US gallons; 5.6 Imp gallons).

620-BTG: One Honeywell TPE331-1 turboprop, derated to 373 kW (500 shp), driving a McCauley 3GFR34C602/100LA-2 three-blade propeller. Fuel capacity 492 litres (131 US gallons; 108 Imp gallons) in seven tanks (two in each wing and three in wing centre-section) of which 439 litres (116 US gallons; 96.5 Imp gallons) usable. Oil capacity 0.6 litre (1.6 US gallons; 1.3 Imp gallons).



Weatherly 620-B (Pratt & Whitney R-985 radial) *(Paul Jackson)* 1158985



Weatherly 620-BTG (Honeywell TPE331 turboprop) 1158984

ACCOMMODATION: Pilot only. Four-way adjustable mesh seat. Baggage compartment behind seat.

SYSTEMS: 24 V electrical system; 50 A Jasco starter/generator in 620-B, 250A Jasco model in 620-BTG. Optional air conditioning and windshield washer/wiper.

EQUIPMENT: Agricultural dispersal system comprises a 1,268 litre (335 US gallon; 279 Imp gallon) hopper in forward fuselage, size 1.35 m³ (47.5 cu ft); Weath-Aero fan; 5 cm (2 in) SS bottom load pump; 5 cm (2 in) Agrinautics spray pump with three-way valve; 6.10 m (20 ft) pylon-mounted drop boom with nozzles every 15 cm (6 in); 63.5 cm (2 ft 1 in) Transland gate box. Main gear and cockpit wire deflectors, plus deflector cable from cabin to fin. Rinse-out system optional, as are stainless steel spray system and flow meters.

DIMENSIONS, EXTERNAL:

Wing span (with vanes extended)	14.22 m (46 ft 8 in)
Wing aspect ratio	7.9
Wing chord	1.98 m (6 ft 6 in)
Length overall	8.15 m (26 ft 9 in)
Height overall	2.90 m (9 ft 6 in)
Wheel track	3.20 m (10 ft 6 in)
Propeller diameter: 620-B	2.43 m (7 ft 11½ in)
620-BTG	2.49 m (8 ft 2 in)

AREAS:

Wings, gross	25.73 m² (277.0 sq ft)
Ailerons	1.21 m² (12.99 sq ft)
Horizontal tail	4.02 m² (43.30 sq ft)
Vertical tail	1.60 m² (17.21 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	1,374 kg (3,030 lb)
Max T-O weight under CAM 8	2,721 kg (6,000 lb)
Baggage shelf	11 kg (25 lb)
Max wing loading	105.8 kg/m² (21.66 lb/sq ft)
Max power loading	8.12 kg/kW (13.33 lb/shp)

PERFORMANCE:

Never-exceed speed (VNE)	153 kt (283 km/h; 176 mph)
Normal operating speed	122 kt (226 km/h; 140 mph)
Stalling speed	62 kt (115 km/h; 72 mph)
Max rate of climb at S/L	427 m (1,400 ft)/min
Service ceiling	4,572 m (15,000 ft)
T-O run	287 m (940 ft)

WINDCRAFTER

WINDCRAFTER INC

430 West Enterprise Road, Building 3, Shelton, Washington 98584
Tel/Fax: (+1 360) 462 94 63
e-mail: windcrft@hctc.com
Web: www.windcrafter.com
OWNERS/FOUNDERS: Steve Swearingen
Therin Laney
PILOT: Aaron Shell
SECRETARY/TREASURER: Rick Marecle

Windcrafter manufactures a range of airships of unorthodox design, both manned (ultralight) and unmanned. Basic manned version is the CA 108.

In July 2005, company reduced size of premises leased from Port of Shelton free trade zone at South Puget Sound from 232 m² (2,500 sq ft) to 70 m² (756 sq ft). In September 2006 it reported that it was "in the process of new lighter than air discoveries", and was "exploring flight dynamics that have previously eluded airship designers". No details were given.

WINDCRAFTER CA 108

TYPE: Helium non-rigid airship.

PROGRAMME: No programme history known. A larger model, the CA 2010 (6.10 × 3.05 m; 20 × 10 ft advertising area) is also available. Nothing further reported by late 2006.

COSTS: From USD16,000 including training and accessories (2004).

DESIGN FEATURES: Upright rectangular envelope, of carangifoil (fish-shaped) aerofoil section, with low or negative internal pressure. Engine at base.

POWER PLANT: Electric brushless motor, powered by lithium polymer battery.

DIMENSIONS, EXTERNAL:

Height	3.53 m (11 ft 7 in)
Advertising banner area (each side):	
Height	3.05 m (10 ft 0 in)
Width	2.44 m (8 ft 0 in)

DIMENSIONS, INTERNAL:

Volume	more than 2.83 m³ (100 cu ft)

email: wingtiptowingtip@aol.com
PRESIDENT: Greg Panzl

Since 1990, total of 37 aerobatic aircraft in the S-300 family have been built and have gained high placings in competitions in the US and abroad. The Staudacher company was purchased in 1999 by Greg Panzl, brother of S-300 aerobatic pilot Chris Panzl, and has launched an improved version under the new name of Wingtip to Wingtip. The company has its own private airstrip at Onsted. Staudachers have proved popular subjects for aeromodellers/building scale radio-controlled examples.

WINGTIP TO WINGTIP PANZL S-330

TYPE: Aerobatic two-seat sportplane.

PROGRAMME: Designed by Jon A Staudacher. First Staudacher S-300 built for Mike Goulian in 1990; design progressively refined throughout 1990s. Seven Staudachers participated in 1993 US national championships.

CURRENT VERSIONS: **S-300:** Baseline version; *as described*. Several subvariants, up to S-300E.

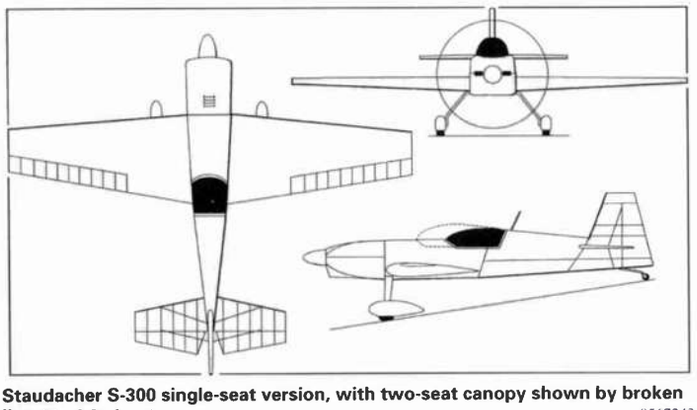
S-300RG: Retractable landing gear; cantilever tailplane; IO-540-K engine and two-blade Hartzell propeller. One only (N126RG), first flown 22 February 1998.

S-600: Tandem two-seat version; cockpit enlarged forward. Four S-600/S-600N built.

S-600F: Tandem two-seat derivative of S-300 and S-600 intended for cross-country and aerobatic training. Full dual controls and second baggage space between firewall and cockpit; composites shell over tubular fuselage. Prototype (N603SA) under construction during 2003 and completed in 2004; second aircraft, N252CW, then under construction; third and fourth built in 2005 and 2006.

Panzl S-330 P: Prototype (N330LS) delivered to Loren Smith 24 July 2000; second built 2001; third registered in July 2002; fourth in July 2003; fifth (N541FC) in July 2004. Derived from S-300, but with improved canopy and carbon fibre panels throughout, resulting in weight saving. Empty weight, equipped, 585 kg (1,289 lb); 246 kW (330 hp) Textron Lycoming IO-540-G1D5 and MTV-9-B-C propeller. Aerobatic fuel 87 litres (23.0 US gallons; 19.2 Imp gallons); ferry tank in each wingroot, combined capacity 159 litres (42.0 US gallons; 35.0 Imp gallons).

Additionally, several custom versions of Staudacher, comprising **S-341** (N341SA), built 1992 with Textron Lycoming GO-480; **S-1000** (N6195V), built 1996 for Jon Staudacher; **DC 11** (N327MS), with Textron Lycoming O-320 built 1992; and **GU 11** (N11GU), with Teledyne Continental O-200 built for Jon Staudacher in 2000.



Staudacher S-300 single-seat version, with two-seat canopy shown by broken line *(Paul Jackson)* 0567243

Latest (fifth) Wingtip-to-Wingtip Panzl S-330, owned by Frank Chenevert *(Paul Jackson)* 1040518

CUSTOMERS: Total 37 aircraft of Staudacher design built by end of 2006, including five Panzl S-330s and four S-600Fs.

DESIGN FEATURES: Created to rival Sukhoi and Extra Unlimited class aerobatic aircraft; roll rate in excess of 420°/s. Low-wing monoplane with wire-braced tail surfaces. Moderately tapered wing; ailerons occupy two-thirds of trailing-edges; all subvariants have same aerofoil.

FLYING CONTROLS: Conventional and manual. Spade-type aileron servos. Trim tab in each elevator. Twin arrowhead-shape horn balance at fin tip.

STRUCTURE: Sitka spruce (wooden) wing built on box spar reinforced with carbon fibre and covered with 3 mm (⅛ in) plywood. Metal (4130 steel) tube fuselage and fabric-covered empennage; carbon fibre front panels, cowling and turtledeck. Fabric-covered ailerons.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted, spring aluminium cantilever mainwheel legs with wheel fairing. Cantilever tailwheel leg.

POWER PLANT: One 186 kW (250 hp) Textron Lycoming IO-540-B1A5 or 224 kW (300 hp) IO-540-K1B5 flat-six driving an MTV-9-B-C/C200-15 three-blade, constant-speed propeller. Fuel tank ahead of pilot, capacity 129 litres (34.0 US gallons; 28.3 Imp gallons).

ACCOMMODATION: One or two (in tandem) pilots, according to version.

DIMENSIONS, EXTERNAL:

Wing span	7.72 m (25 ft 4 in)
Length overall	6.64 m (21 ft 9½ in)
Height overall	1.80 m (5 ft 11 in)

AREAS:

Wings, gross	10.29 m² (110.8 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	567 kg (1,250 lb)
Max T-O weight (Aerobatic)	725 kg (1,600 lb)
Max wing loading	70.3 kg/m² (14.44 lb/sq ft)
Max power loading (IO-540-K)	3.25 kg/kW (5.33 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	217 kt (402 km/h; 250 mph)
Stalling speed	52 kt (95 km/h; 59 mph)
Max rate of climb at S/L:	
S-330	more than 1,219 m (4,000 ft)/min

YESTERYEAR

BIPLANES OF YESTERYEAR LLC

DIRECTOR AND DESIGNER: Rod Cowgill

Having won several awards and mentions for his evocation of a First World War German biplane fighter, Mr Cowgill founded Biplanes of Yesteryear in late 2001 and launched a production kit version in 2003.

YESTERYEAR MIFYTER

TYPE: Single-seat ultralight biplane kitbuilt; side-by-side ultralight biplane kitbuilt.

PROGRAMME: Prototype (N666RC) first flown 12 August 1996. Nominated Champion at Arlington 1997 and Grand Champion two years later; further awards at AirVenture, Oshkosh, in 1997 and 2002. Kit available to order from July 2003 and was due to ship early 2004, but no evidence of this. Pronounced 'my fighter'.

CURRENT VERSIONS: **Mifyter:** *As described.*

Biplanes of Yesteryear Mifyter *(Paul Jackson)* 1040522

Bifyter: Side-by-side two-seat version; prototype (N66BY) completed mid-2004. Also marketed as Mifyter II.

COSTS: Kit USD14,995, excluding engine, propeller and instruments (2006). Spoked wheels, dummy bombs, flowing white scarf and machine guns optional.

DESIGN FEATURES: Based on Fokker biplane, with third 'aerofoil' surface between wheels but with same main wing aerofoil as Avid series. Two-bay wings with N-type interplane struts. Quoted build time 650 to 850 hours. Cross-axle lifting surface has Clark 23012 airfoil and is free-floating to accommodate landing gear movement during take-off and landing. Fuselage breaks immediately behind cockpit for transport and storage.

FLYING CONTROLS: Conventional and manual. Large, horn-balanced rudder. Ailerons on both mainplanes.

STRUCTURE: Fuselage of 4130 welded steel tube; wood and 6061-T6 steel wing. Both covered in Stits Polyfiber. Glass fibre nose cowling and wingtips.

POWER PLANT: One piston engine of between 48.5 and 55.9 kW (65 and 75 hp); prototype has inverted 47.0 kW (63.1 hp) Rotax 532 with radiator installed vertically under louvered top cowling. Fuel capacity 57 litres (15.0 US gallons; 12.5 Imp gallons) in upper wing tank.

LANDING GEAR: Tailwheel type; fixed. Two side Vs of metal tube with added streamline fairings hinged to lower longerons, plus half axles spring under centreline. False axle with auxiliary 'aerofoil' between wheels. Main wheels are 35 cm (14 in) with heavy-duty spokes and 51 cm (20 in) Cheng Shin tyres; 17 cm (7 in) Matro tailwheel on prototype; kit aircraft will have 13 cm (5 in) version.

EQUIPMENT: Options include two fake 7.92 mm Spandau machine guns mounted forward of cockpit and bomb beneath fuselage.

DIMENSIONS, EXTERNAL:

Wing span: upper	6.25 m (20 ft 6 in)
lower	5.64 m (18 ft 6 in)
Length overall	5.03 m (16 ft 6 in)
Height overall	2.01 m (6 ft 7 in)

AREAS:

Wings, gross	13.56 m² (146.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	195 kg (430 lb)
Max T-O weight	342 kg (755 lb)

PERFORMANCE:

Max level speed	83 kt (153 km/h; 95 mph)
Cruising speed	65 kt (121 km/h; 75 mph)
Stalling speed	33 kt (60 km/h; 37 mph)
Max rate of climb at S/L	411 m (1,350 ft)/min
T-O run	31 m (100 ft)
Landing run	61 m (200 ft)
Range	304 n miles (563 km; 350 miles)

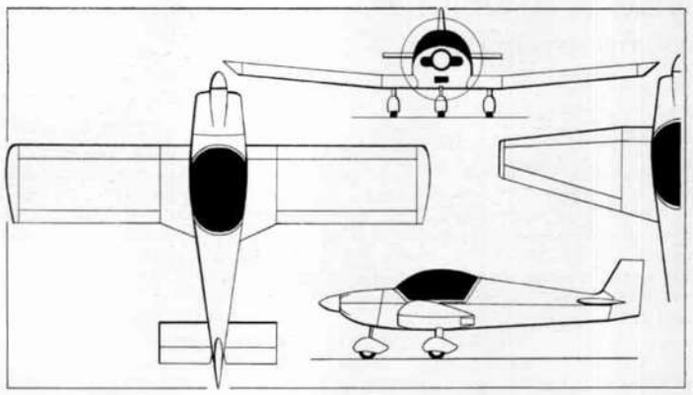
PRESIDENT: Sebastien C Heintz
CHIEF DESIGNER: Christophe Heintz
MANAGER, OFFICE: Joyce Fort
MANAGER, PRODUCTION: Nicholas M Heintz

Zenith Aircraft Company has acquired all rights to manufacture and sell the Canadian Zenair range of light aircraft kits, detailed below. For details of the CH 2000, see AMD in this section. By the end of 2002, over 2,700 kits had been produced.

In 1997, Zenith announced a joint venture with Czech Aircraft Works (CZAW, which see) to assemble the CH 601 and CH 701 for the European market; the agreement was amicably dissolved on 31 December 2006. Additionally these Zenith aircraft are marketed both as complete aircraft and in kit form in Germany and Austria by Roland Aircraft; they are distinguished by the suffix 'D' in model numbers.



Zenith Zodiac CH 601HD, with half-plan view of tapered CH 601HDS wing *(James Goulding)* 1158983

ZENITH ZODIAC CH 601HD

TYPE: Side-by-side ultralight kitbuilt.

PROGRAMME: First flight of CH 600 prototype June 1984. Plans and kits of parts (45 per cent premanufactured) for improved model followed. New **CH 601UL** developed to meet TP 10141 advanced ultralight (AULA) category in Canada. Construction of prototype CH 601 (59.7 kW; 80 hp Rotax 912) began September 1990 (first flight October that year). Kit production started January 1991. UL version (2001 cost USD12,380) remains available.

CURRENT VERSIONS: **CH 601HD:** Offers wider cockpit and extra power for increased performance and true cross-country capability.

CH 601HDS: First flown August 1991. Has shorter, tapered 'speed' wing of 7.01 m (23 ft 0 in) span. HD and UL are available as kits and as 85 per cent pre-assembled kits requiring only quoted 120 working hours to complete, compared to quoted 400 hours for unassembled kits.

Description applies to CH 601HD.

CUSTOMERS: Over 800 of all versions flying by end 2005.

COSTS: Plans: USD315. Kit: USD12,620. Information pack with DVD: USD35 (2006). Materials and component parts are available.

DESIGN FEATURES: Conventional low-wing monoplane with all-moving vertical tail. Conforms to Canadian TP 10141 airworthiness standards. Quoted build time 500 hours.

Wing section NACA 65018 (modified); dihedral 6°, incidence 8°.

FLYING CONTROLS: Manual; push-rod operated. Long-span ailerons; elevators; and Zenith all-moving vertical fin.

STRUCTURE: All-metal semi-monocoque. Single-piece, starboard-hinged canopy.

LANDING GEAR: Fixed; tricycle or tailwheel type. Wing-mounted cantilever main and nose legs with integral shock-absorbers; optional wheel fairings.

POWER PLANT: One engine of 47.7 to 85.75 kW (64 to 115 hp), including 59.6 kW (79.9 hp) Rotax 912 UL, with reduction gear, driving three-blade ground adjustable propeller, 47.8 kW (64.1 hp) Rotax 582 UL, 48.5 to 74.5 kW (65 to 100 hp) Teledyne Continental or 52 kW (70 hp) Volkswagen. 74.6 kW (100 hp) four-cylinder four-stroke liquid-cooled Subaru EA81 is available from Stratos for the CH 601HD. Fuel capacity 60 litres (16.0 US gallons; 13.3 Imp gallons); wing baggage lockers may be fitted with two 26.5 litre (7.0 US gallon; 5.8 Imp gallon) auxiliary tanks.

DIMENSIONS, EXTERNAL:

Wing span	8.23 m (27 ft 0 in)
Wing chord (constant)	1.24 m (4 ft 1 in)
Wing aspect ratio	5.6
Length overall	5.79 m (19 ft 0 in)
Height overall: tailwheel	1.90 m (6 ft 2¾ in)
nosewheel	1.98 m (6 ft 6 in)
Tailplane span	2.31 m (7 ft 7 in)
Wheel track	1.88 m (6 ft 2 in)
Wheelbase	1.30 m (4 ft 3¼ in)
Propeller diameter	1.73 m (5 ft 8 in)

DIMENSIONS, INTERNAL:

Cockpit max width	1.12 m (3 ft 8 in)

AREAS:

Wings, gross	12.08 m² (130.0 sq ft)

WEIGHTS AND LOADINGS (Rotax 912 for power loading):

Weight empty	290 kg (640 lb)
Max baggage weight	36 kg (80 lb)
Max T-O weight	544 kg (1,200 lb)
Max wing loading	45.1 kg/m² (9.23 lb/sq ft)
Max power loading	9.11 kg/kW (15.00 lb/hp)

PERFORMANCE (Rotax 912):

Never-exceed speed (VNE)	130 kt (241 km/h; 150 mph)
Max level speed at S/L	117 kt (217 km/h; 135 mph)
Econ cruising speed	104 kt (193 km/h; 120 mph)
Stalling speed	41 kt (76 km/h; 47 mph)
Max rate of climb at S/L	351 m (1,150 ft)/min
Service ceiling	4,875 m (16,000 ft)
T-O run	131 m (430 ft)
Landing run	159 m (520 ft)
Range with max fuel	677 n miles (1,255 km; 780 miles)
Endurance	4 h
g limits	±6

ZENITH ZODIAC CH 601XL

TYPE: Side-by-side kitbuilt; two-seat lightplane.

PROGRAMME: Certifiable version of CH 601 (which see), with new wing planform and 589 kg (1,300 lb) MTOW. Introduced at Oshkosh in July 1998. A Zodiac CH601XL (N1777W) was displayed at Sun 'n' Fun 2004 fitted with a 2,700 cc (164 cu in) Corvair 0-164 automobile engine; first flight 12 May 2004. A quick-build kit was introduced in 2005; quoted build time 250 hours.

Description generally as for CH 601, except that below.

CURRENT VERSIONS: **CH 601XL:** US kitbuilt version.

CH 601DX: German kitbuilt designation.

Zodiac 601XL SLSA: Factory-built version; see entry under Aircraft Manufacturing and Development (AMD).

Zodiac 601XLi SLSA: As 601XL SLSA, but with full IFR panel; described separately in Aircraft Manufacturing and Development (AMD) section.

COSTS: Plans USD395; Kit USD15,890; quick-build kit USD23,975; factory-built LSA compliant USD75,900; IFR USD89,900 (2006).

DESIGN FEATURES: Wing section NACA 23018 at root, NACA 23015 at tip.

FLYING CONTROLS: Flaps added, maximum deflection 24°. Control surface deflections: ailerons ±12.5/12.5°, elevators +32/–30°, rudder ±22°.

LANDING GEAR: Nosewheel type; fixed. Fuselage-mounted spring cantilever mainwheel legs.

POWER PLANT: One 89 kW (120 hp) Jabiru 3300 flat-six or 86.5 kW (116 hp) Textron Lycoming O-235. Options include 73.5 kW (98.6 hp) Rotax 912 ULS (standard in LSA-compliant models) and conversions of Subaru motorcar engines. Fuel capacity 91 litres (24.0 US gallons; 20.0 Imp gallons) in two wing tanks in 601XL; 114 litres (30.0 US gallons; 25.0 Imp gallons) in 601XLi.

Zenith Zodiac CH 601UL *(Paul Jackson)* 1040519

Zenith Zodiac CH 601XL flown in France as an ultralight *(Paul Jackson)*

1040520

DIMENSIONS, EXTERNAL:
- Wing span ..... 8.23 m (27 ft 0 in)
- Wing chord: at main panel root ..... 1.60 m (5 ft 3 in)
- at tip ..... 1.33 m (4 ft 4¼ in)
- Wing aspect ratio 5.5

DIMENSIONS, INTERNAL:
- Cabin max width ..... 1.12 m (3 ft 8 in)

AREAS:
- Wings, gross ..... 12.26 m² (132.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ..... 363 kg (800 lb)
- Max baggage weight ..... 18 kg (40 lb)
- Max T-O weight ..... 589 kg (1,300 lb)
- Max wing loading ..... 47.5 kg/m² (9.85 lb/sq ft)
- Max power loading ..... 6.82 kg/kW (11.21 lb/hp)

PERFORMANCE (O-235):
- Never-exceed speed (VNE) ..... 156 kt (289 km/h; 180 mph)
- Max level speed ..... 129 kt (238 km/h; 148 mph)
- Normal cruising speed ..... 120 kt (222 km/h; 138 mph)
- Stalling speed, flaps down ..... 39 kt (71 km/h; 44 mph)
- Max rate of climb at S/L ..... 283 m (930 ft)/min
- Service ceiling ..... 4,267 m (14,000 ft)
- T-O and landing run ..... 152 m (500 ft)
- Max range ..... 521 n miles (965 km; 600 miles)
- Endurance, no reserves ..... 4 h 30 min
- *g* limits ..... ±6

ZENITH ZODIAC CH 640

TYPE: Four-seat kitbuilt.

PROGRAMME: Design work started 2 January 2001; prototype (N640Z) first flown 1 March 2001. Public debut at Sun 'n' Fun, April 2001.

CUSTOMERS: Four completed by October 2006, at which time 52 kits had been sold..

COSTS: Standard kit USD24,800; quick-build kit introductory price USD35,190, both without engine, propeller, instruments, electrics and upholstery (2006). Can be purchased in smaller kit packages.

DESIGN FEATURES: Fuselage based on AMD CH 2000 with cabin rear wall moved to allow extra seating; 90 per cent commonality of parts. Influenced by other Zenith designs: area forward of firewall is based on similarly engined Zenith CH 801. However, wings are of new design, incorporating high-lift aerofoil. Quick-build kit includes almost-complete fuselage, wings, ailerons, flaps and tailplane; quoted build time 1,500 hours. Standard kit build time quoted as 1,500 hours. Meets FAA 51 per cent rule.

Wing section LS(1)0417 (mod).

FLYING CONTROLS: Manual. Single-piece all-flying tailplane and rudder. Electrically operated split flaps with maximum deflection of 30°. Anti-balance tab on both ailerons.

STRUCTURE: Stressed-skin semi-monocoque all-metal fuselage of 6061-T6 aluminium sheet riveted to aluminium extrusions. All-metal stressed-skin wings consist of two panels bolted to fuselage spar-box assembly; Hoerner wingtips.

LANDING GEAR: Tricycle type; fixed. Cantilever main legs comprise single piece of 19 mm (¾ in) aluminium. Steerable nosewheel with heavy-duty bungee shock absorption. Cleveland 5.00x5 wheels standard throughout, with option to fit 6.00x6. Cleveland hydraulic single-disc brakes on mainwheels. Optional wheel fairings. Tailskid protects empennage in hard landings.

POWER PLANT: One 134 kW (180 hp) Lycoming IO-360-A1A driving a Sensenich 76-EM8-0-63 two-blade, fixed-pitch propeller; engines between 112 and 149 kW (150 and 200 hp) can be fitted. Standard fuel capacity 144 litres (38.0 US gallons; 31.6 Imp gallons) in two wing tanks forward of wing spar; optional capacity 174 litres (46.0 US gallons; 38.3 Imp gallons).

ACCOMMODATION: Two pairs of seats, designed to withstand loads of 27 *g* . Dual controls. Gull-wing cabin door on each side of fuselage. Roll-over protection bar of 4130N tubing between two forward seat backs is bolted to top of wing main spar.

SYSTEMS: 12 V battery and 14 V 70 A alternator standard. Auxiliary electric fuel pump.

AVIONICS: To customer's choice.

DIMENSIONS, EXTERNAL:
- Wing span ..... 9.60 m (31 ft 6 in)
- Wing chord at root ..... 1.46 m (4 ft 9½ in)
- Wing aspect ratio 6.6
- Length overall ..... 7.01 m (23 ft 0 in)
- Height overall ..... 2.24 m (7 ft 4 in)
- Tailplane span ..... 3.00 m (9 ft 10 in)

DIMENSIONS, INTERNAL:
- Cabin: Length ..... 1.88 m (6 ft 2 in)
- Max width ..... 1.17 m (3 ft 10 in)
- Height, front seat to roof ..... 0.96 m (3 ft 2 in)

AREAS:
- Wings, gross ..... 13.94 m² (150.0 sq ft)
- Tailplane ..... 2.79 m² (30.0 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ..... 520 kg (1,147 lb)
- Max T-O weight ..... 998 kg (2,200 lb)
- Max wing loading ..... 71.6 kg/m² (14.66 lb/sq ft)
- Max power loading ..... 7.44 kg/kW (12.22 lb/hp)

PERFORMANCE:
- Never-exceed speed (VNE) ..... 139 kt (257 km/h; 160 mph)
- Max operating speed ..... 136 kt (253 km/h; 157 mph)
- Normal cruising speed at 75% power at FL70 ..... 130 kt (241 km/h; 150 mph)
- Stalling speed: flaps up ..... 51 kt (94 km/h; 58 mph)
- flaps down ..... 41 kt (76 km/h; 47 mph)
- Max rate of climb at S/L ..... 290 m (950 ft)/min
- Service ceiling ..... 3,900 m (12,800 ft)
- T-O run ..... 302 m (990 ft)
- Landing run ..... 351 m (1,150 ft)
- Range with standard fuel ..... 443 n miles (820 km; 510 miles)
- Endurance ..... 3 h 45 min

ZENITH SUPER STOL CH 801

TYPE: Four-seat kitbuilt.

PROGRAMME: Based on STOL CH 701 design; work started in 1988 for an undisclosed customer, but was suspended when order cancelled. Subsequently revived; prototype built by Flypass Ltd in Ontario, Canada, and first flown March 1998. Launched at Oshkosh, July 1998, with kit deliveries following.

In 2003, Jordan Aerospace Industries of Amman announced the Hawk-I CH801, a locally marketed and assembled CH 801.

CUSTOMERS: 250 kits sold and at least 20 flying by end 2005. Marketing by CZAW (Czech Republic), which offers builder's assistance programme.

COSTS: Kit excluding engine USD20,950 (2006).

DESIGN FEATURES: High-wing, strut-braced monoplane. Although visually similar to the CH 701, no commonality of parts. Quoted build time 750 hours.

Wing aerofoil NACA65015.

FLYING CONTROLS: Manual. Full-span Junkers flaperons with outboard section offset 2° higher; deflection to 35° elevator; all-moving, horn-balanced fin. Fixed full-span leading-edge wing slats.

STRUCTURE: All-metal semi-monocoque construction, making extensive use of blind rivets. Single-spar 6061-T6 aluminium wing. Fuselage welded 4130 tubular steel frame.

LANDING GEAR: Tricycle type; fixed. Fuselage-mounted spring cantilever mainwheel legs optimised for rough-field operations with Matco or Cleveland wheels and brakes. Nosewheel steerable ±15°. Tundra tyres on all wheels. Optional flotation gear.

POWER PLANT: One 134 kW (180 hp) Textron Lycoming O-360-A driving two-blade, fixed-pitch Sensenich 76-EMB-O-54 metal propeller in production prototype; engines in the range 112 to 179 kW (150 to 240 hp) can be fitted, including four-stroke LOM M337B of 173 kW (232 hp). Standard fuel capacity 151 litres (40.0 US gallons; 33.3 Imp gallons); optional fuel capacity 303 litres (80.0 US gallons; 66.6 Imp gallons).

ACCOMMODATION: Pilot and three passengers in enclosed cabin. Single door on port side. Underfuselage cargo pod optional.

DIMENSIONS, EXTERNAL:
- Wing span ..... 9.45 m (31 ft 0 in)
- Wing chord, constant ..... 1. 60 m (5 ft 3 in)
- Wing aspect ratio 5.8
- Length overall ..... 7.47 m (24 ft 6 in)
- Height overall ..... 2.67 m (8 ft 9 in)
- Tailplane span ..... 2.54 m (8 ft 4 in)
- Tailplane chord ..... 0.91 m (3 ft 0 in)
- Wheel track ..... 2.03 m (6 ft 8 in)
- Wheelbase ..... 1.65 m (5 ft 5 in)
- Passenger door: Height ..... 0.97 m (3 ft 2 in)
- Width ..... 0.91 m (3 ft 0 in)

DIMENSIONS, INTERNAL:
- Cabin: Length ..... 1.98 m (6 ft 6 in)
- Max width ..... 1.12 m (3 ft 8 in)
- Max height ..... 1.17 m (3 ft 10 in)

AREAS:
- Wings, gross ..... 15.51 m² (167.0 sq ft)
- Tailplane ..... 2.32 m² (25.00 sq ft)

WEIGHTS AND LOADINGS:
- Weight empty ..... 522 kg (1,150 lb)
- Max T-O weight ..... 975 kg (2,150 lb)
- Max wing loading ..... 62.9 kg/m² (12.87 lb/sq ft)
- Max power loading ..... 7.27 kg/kW (11.94 lb/hp)

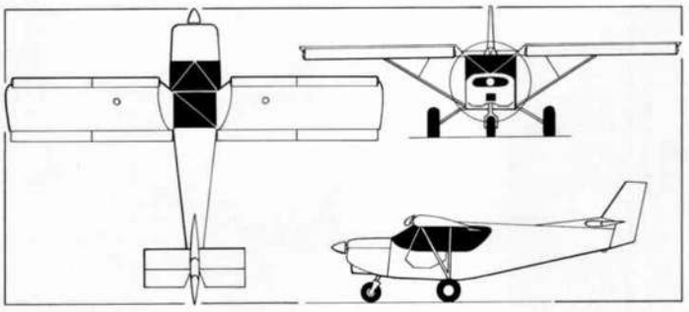
1133370

Zenith Super STOL CH 801 *(Paul Jackson)*

1040521



Zenith STOL CH 801 *(James Goulding)* 0051861

PERFORMANCE:

Never-exceed speed (VNE)	130 kt (241 km/h; 150 mph)
Max level speed	96 kt (177 km/h; 110 mph)
Max cruising speed at 75% power	91 kt (169 km/h; 105 mph)
Stalling speed: flaps up	48 kt (89 km/h; 56 mph)
flaps down	34 kt (63 km/h; 39 mph)
Max rate of climb at S/L	219 m (720 ft)/min
Service ceiling	4,267 m (14,000 ft)
T-O run	119 m (390 ft)
T-O to 15 m (50 ft)	122 m (400 ft)
Landing from 15 m (50 ft)	91 m (300 ft)
Landing run	46 m (150 ft)
Range:	
with standard fuel	273 n miles (507 km; 315 miles)
with optional fuel	547 n miles (1,013 km; 630 miles)
Endurance: with standard fuel	3 h 0 min
with optional fuel	6 h 0 min
g limits	+6/–3

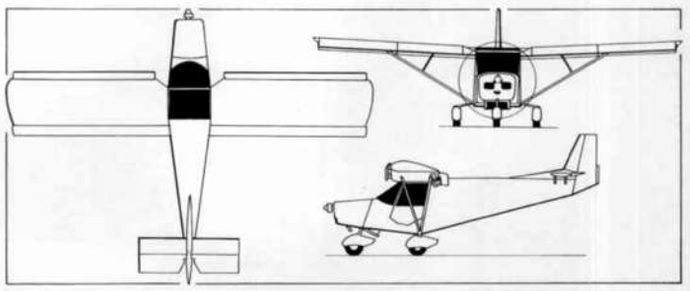
ZENITH STOL CH 701

TYPE: Side-by-side ultralight kitbuilt.

PROGRAMME: Experimental category prototype made first flight mid-1986. Plans, 49 or 85 per cent kits available. Meets Canadian TP 10141 standards for advanced ultralight trainers. German promotion as **CH-701D**. Unauthorised copies are available in Czech Republic as **Kappa-1**, with slight performance differences. Ekoflug of Slovak Republic builds version designated MXP-740. CH-701-AG agricultural version ceased US production after 55 completed, but revived by Czech Aircraft Works (CZAW). Marketed in Italy as **ICP Savannah** and previously in France as **Aerotrophy TT 2000**; several other look-alikes exist.

In July 2001 design was upgraded with redesigned wing spar to accommodate increased MTOW, increased fuel capacity, top-hinged cabin doors and redesigned windscreen. Aircraft from serial number 7–4512 are affected.

Zenith STOL CH 701 ultralight *(Paul Jackson)* 1040524



Zenith STOL CH 701 light aircraft *(Paul Jackson)* 0051860

CUSTOMERS: Over 700 flying by end 2002 (latest data supplied). Indian National Cadet Corps, part of the Indian Air Force, ordered 85 plus 48 options in 2000; these assembled by CZAW.

COSTS: Plans: USD380. Kit: USD12,980. Information pack: USD35 (2006). Materials and component parts available.

DESIGN FEATURES: Strut-braced, high-wing, STOL cabin monoplane with foldable wings and fixed leading-edge slats. In most countries, CH 701 can be registered either as advanced ultralight (AUL) or as experimental homebuilt. Quoted build time of standard CH 701 400 hours.

FLYING CONTROLS: Manual. Junkers-type flaperons deflect maximum 24°; elevators; and Zenith all-moving fin. Full-span leading-edge slats for STOL performance. Control surface deflections: Ailerons ±15°, elevators +32/–28°, rudder ±23°.

STRUCTURE: All-metal semi-monocoque.

LANDING GEAR: Fixed; tricycle or tailwheel type. Fuselage-mounted spring cantilever mainwheel legs with optional wheel fairings. Steerable nosewheel; optional floats, amphibious or ski gears.

POWER PLANT: One 37.0 kW (49.6 hp) Rotax 503 UL-2V engine in prototype, but 59.6 kW (79.9 hp) Rotax 912 UL, 47.8 kW (64.1 hp) Rotax 582 UL, 44.7 to 52.2 kW (60 to 70 hp) VW or 48.5 to 67.1 kW (65 to 90 hp) Teledyne Continental engine optional. Two- or three-blade propeller. Standard fuel capacity 75.7 litres (20.0 US gallons; 16.7 Imp gallons) in two wing tanks.

DIMENSIONS, EXTERNAL:

Wing span	8.23 m (27 ft 0 in)
Length overall	6.38 m (20 ft 11 in)
Width, wings folded	2.06 m (6 ft 9 in)
Height overall	2.62 m (8 ft 7 in)

DIMENSIONS, INTERNAL:

Cabin max width	1.07 m (3 ft 6 in)

AREAS:

Wings, gross	11.33 m² (122.0 sq ft)

WEIGHTS AND LOADINGS:

Weight empty	218 kg (480 lb)
Max T-O weight	499 kg (1,100 lb)

PERFORMANCE (47.8 kW; 64.1 hp engine):

Max level speed at S/L	82 kt (152 km/h; 95 mph)
Max cruising speed	70 kt (129 km/h; 80 mph)
Stalling speed	27 kt (49 km/h; 30 mph)
Max rate of climb at S/L	427 m (1,400 ft)/min
T-O run	28 m (90 ft)
Landing run	24 m (80 ft)
Range: standard fuel	182 n miles (338 km; 210 miles)
with wing tanks	360 n miles (667 km; 415 miles)

ZIVKO

ZIVKO AERONAUTICS INC

502 Airport Road, Building 11, Guthrie, Oklahoma 73044
Tel: (+1 405) 282 13 30
Fax: (+1 405) 282 13 39
Web: www.zivko.com
PRESIDENT: Bill Zivko
VICE PRESIDENT: Eric Zivko

Founded in 1987, Zivko manufactures the Edge 540 series of aerobatic monoplanes from a 1,858 m² (20,000 sq ft) factory on the airport at Guthrie. In August 2000, it received FAA certification under Pt 21.191(g). The improved Edge 540A was introduced in April 2001. In mid-2002 the workforce numbered 20.

In addition to the Edge, Zivko also supplies custom-built components to other engineering organisations, including NASA, Hartzell and the University of California at Berkeley.

ZIVKO EDGE 540

TYPE: Single-seat sportplane kitbuilt; tandem-seat sportplane kitbuilt.

PROGRAMME: Initial version was Zivko Edge 360. Design work on 540 began in 1992 with first flight in 1993; 540T followed in 1999 with first flight 2000. Kit built aircraft are denoted by a 'K' suffix to model number.

CURRENT VERSIONS: **540:** Single-seat version.

540A: Improved version introduced at Sun 'n' Fun, April 2001 (N24KC); has larger rudder and elevator for improved handling.

540T: Two-seat model introduced March 2000; two are TK versions.

CUSTOMERS: Totals of 28 540s and nine 540Ts built by end of 2006, including examples to Mexico, South Africa, Switzerland and Australia.

COSTS: Programme cost USD1.1 million by 2003. Edge 540 USD231,655; Edge 540T USD245,632 (2004).

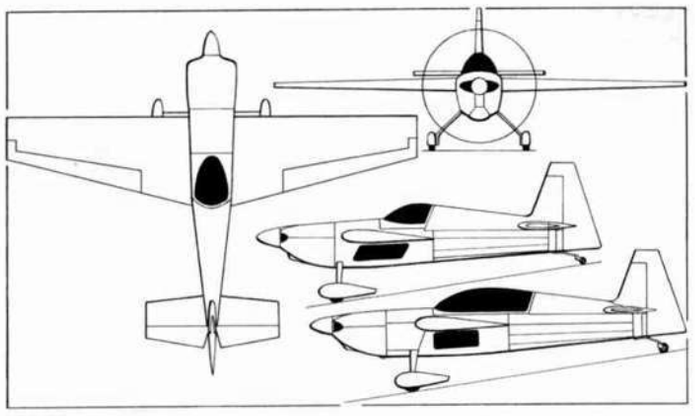
DESIGN FEATURES: Optimised for aerobatics; customised John Roncz aerodynamic design; rate of roll 420°/s. Mid-positioned, tapered wing with straight leading-edge and large, horn-balanced ailerons and unique aerofoil. Transparencies in lower sides and floor of cockpit.

Zivko Edge 540A displayed by Pip Borrman *(Paul Jackson)* 1040525

FLYING CONTROLS: Conventional and manual. Ailerons and elevator actuated by pushrods; horn-balanced rudder by cables. Flight adjustable tabs in port elevator. Suspended, spade-type tab on each aileron; electric trim.

STRUCTURE: 4130 Steel tube fuselage; upper fuselage and fairings of composites; lower aft fuselage fabric covered, stressed to ultimate ±15 *g*; all-composites fully cantilevered two-spar wing. Fully composites empennage with no wire bracing.

LANDING GEAR: Tailwheel type; fixed. Fuselage-mounted spring steel aluminium cantilever mainwheel legs; cantilever tailwheel leg. Cleveland 5.00–5 wheels and hydraulic brakes;



Zivko Edge 540, with additional profile of two-seat 540T *(James Goulding)* 1158982

optional speed fairings. Tyre pressure 3.45 bar (50.0 lb/sq in). Spring steel tail gear, with chrome-plated, solid 4.00–4 tailwheel, choice of fixed or steerable.

POWER PLANT: One Textron Lycoming IO-540 modified to produce 254 kW (340 hp), driving Hartzell HC-C3YR-4AX or optional Hartzell HC-C3YR-1AX1 three-blade, composites propeller. Edge 540 has single 72 litre (19.0 US gallon; 15.8 Imp gallon) forward fuselage fuel tank, plus optional total of 159 litres (42.0 US gallons; 35.0 Imp gallons) in wing tanks; Edge 540T has single 76 litre (20.0 US gallon; 16.6 Imp gallon) fuselage tank and two optional 83 litre (22.0 US gallon; 18.3 Imp gallon) wing tanks. Oil capacity 11.4 litres (3.0 US gallons; 2.5 Imp gallons). Inverted oil (Christen) and fuel (ZAI) systems.

ACCOMMODATION: Pilot (pilot and passenger in tandem in 540T) under one-piece perspex canopy hinged on starboard side; carbon fibre contoured seats. Baggage compartment forward of front seat.

SYSTEMS: 12 V DC system with light weight B&C 8 A alternator and regulator. Bendix fuel injection system.

AVIONICS: *Comms:* Becker com and Mode C transponder.
Flight: Optional Sierra Flight Systems EFIS.

DIMENSIONS, EXTERNAL:

Wing span: 540	7.42 m (24 ft 4 in)
540T	7.67 m (25 ft 2 in)
Wing chord:	
at root: 540	1.57 m (5 ft 2 in)
540T	1.68 m (5 ft 6 in)
at tip: 540	0.74 m (2 ft 5 in)
540T	0.84 m (2 ft 9 in)
Length overall: 540	6.27 m (20 ft 7 in)
540T	6.91 m (22 ft 8 in)
Height overall	2.36 m (7 ft 9 in)
Tailplane span	2.46 m (8 ft 1 in)

AREAS:

Wings, gross: 540	9.10 m² (98.0 sq ft)
540T	9.87 m² (106.2 sq ft)

WEIGHTS AND LOADINGS:

Weight empty: 540	531 kg (1,170 lb)
540T	562 kg (1,240 lb)
Max baggage weight	5 kg (10 lb)
Max T-O weight:	
540: Aerobatic	703 kg (1,550 lb)
Utility	816 kg (1,800 lb)
540T: Aerobatic	726 kg (1,600 lb)
Utility	885 kg (1,950 lb)
Max wing loading:	
540: Aerobatic	77.2 kg/m² (15.82 lb/sq ft)
Utility	89.7 kg/m² (18.37 lb/sq ft)
540T: Aerobatic	73.6 kg/m² (15.07 lb/sq ft)
Utility	89.6 kg/m² (18.36 lb/sq ft)
Max power loading: 540	3.22 kg/kW (5.29 lb/hp)
540T: Aerobatic	2.86 kg/kW (4.71 lb/hp)
Utility	3.49 kg/kW (5.74 lb/hp)

PERFORMANCE:

Never-exceed speed (VNE)	230 kt (426 km/h; 265 mph)
Max cruising speed at 75% power:	
540	180 kt (333 km/h; 207 mph)
540T	185 kt (343 km/h; 213 mph)
Stalling speed:

TAPO

TASHKENTSKOYE AVIATSIONNOYE PROIZDSTVENNOYE OBEDINENIE IMENI V P CHKALOVA (TASHKENT AIRCRAFT PRODUCTION ENTERPRISE NAMED FOR VALERY P CHKALOV)

ulitsa Elbek 61, 700016 Tashkent
Tel: (+810 99871) 136 11 67
Fax: (+810 99871) 268 03 18
e-mail: UFO@ishonch.uz
GENERAL DIRECTOR: Vladim P Kucherov
DEPUTY GENERAL DIRECTOR: Nabil A Artykov
TECHNICAL DIRECTOR: Nikolai A Kuznetsov
MARKETING DIRECTOR: Zafar M Islamov

Tashkent plant established 20 November 1941 on arrival of first elements of GAZ 84 (formed 1932 and incorporating Polikarpov from 1936) evacuated from Khimki, Moscow. Enterprise, dating from 1972 in current form, is said to be the largest aircraft manufacturing centre on the Asian continent. It comprises five plants at Tashkent, Andizhan and Fergana. Total of over 7,000 aircraft built, including I-15s, I-16s, I-153s, Li-2s (total 2,258), Il-14s, An-8s, Ka-22s, An-12s, An-22s and Il-76s. It has manufactured wing centre-sections for the An-124 and An-225 transports and two An-70 prototypes, and has repaired MiG and Sukhoi fighters and Tu-22M bombers. It developed the Il-78 tanker version and collaborated with Beriev on the A-50 AEW derivative of the Il-76. Low-rate production is under way of the Ilyushin Il-114 twin-turboprop transport and Il-76, for which TAPO is the sole source, although airframes are stored partly complete until orders are received. After decade of stagnation, manufacture of new Il-76s resumed in 2005 with launch of Batch 97. Final report of State Tests of Il-76MF stretched version issued 24 April 2003, paving way for manufacture. Russia plans own assembly line, although costs of establishment have thrown project into doubt. Offers Il-114s retrofitted with US engines.

TAPO was registered as a joint stock company in May 1996; the state holds 82.7 per cent, National Bank of Foreign Economic Activity 6.7 per cent and employees 10.6 per cent. An attempt in 1997 to sell 14 per cent of the company was unsuccessful; by mid-1998, offers were being invited for a 25.6 per cent share, but no acceptances have been reported. Company began airbrake manufacture for Avro RJ in 1997; this now discontinued. Following April 2000 foundation of Ilyushin International company, TAPO expected to join forces with design bureau responsible for its current production aircraft. Gained ISO 9002 certification in 1998 and Boeing D1-9000 subcontractor approval in 2000.

Subsidiary, TAPO-Avia operates commercial freight charter flights with fleet of three An-12s and three Il-76MDs. TAPO aircraft are marketed via Uzavialeasing, established December 1997 in collaboration with local government and Russian and Uzbek banks.

One of several uncompleted Ilyushin Il-76s at TAPO plant 1159176

Vietnam

A-41

CONG TY SU'A CHU'A MAY BAY A-41 (AIRCRAFT REPAIR COMPANY A-41)

Sô Bis Đuòng Thăng Long, Phuòng 4, Quân Tân Bình-TP, Hô Chí Minh
Tel: (+84 8) 844 11 42
Fax: (+84 8) 811 06 47
Web: www.doemod.gov.vn/a41
DIRECTOR Vo Ta Que

ARC-41 of the Vietnamese Air Force Technology Department is manufacturing Russian-designed lightplanes under licence, with 70 per cent indigenous content. Formed in 1993, ARC-41 also overhauls and repairs Antonov An-2, An-26, Aero L-39 and Yak-52 aircraft, with a maximum capacity of six of each type per year. Additionally repairs and produces avionics and refurbishes ground servicing vehicles and airfield fire engines.

A-41 VNS-41

TYPE: Three-seat amphibion.

PROGRAMME: Original Che-22 design by Boris Chernov in Russian Federation; more recently marketed by Gidroplan OOO of Samara as Che-22 Korvet, under which heading in *Jane's All the World's Aircraft* a full description will be found.

A-41 VNS-41 prototype (left) and pre-production aircraft 1158165

Manufacturing in Vietnam begun June 2003 to meet requirements for forestry patrol and SAR. First known flight by prototype on 9 December 2004; official demonstration, including water landing, on 24 December 2004, aircraft wearing military markings and serial number '401'. Further demonstrations by initial production aircraft '502' and '503' between 3 and 5 August 2005 at Lake Tri An and Bien Hoa Airport, southern Dong Nai Province, marking completion of flight development and launch of marketing. Two latter differ from prototype in having wingtip hydroplanes.

CUSTOMERS: Three built, including prototype, by September 2005; plans in hand at that time for further four.

COSTS: VND2 billion (USD125,000) (2005).

POWER PLANT: Two 47.8 kW (64.1 hp) Rotax 582 two-cylinder, liquid-cooled piston engines.

VMA

VIETNAM MECHANICS ASSOCIATION

Ho Chi Minh City
www.cohocvietnam.org.vn
PROJECT MANAGER: Nguyen Xuân Hùng

At a press conference on 23 August 2003, Professor Nguyen Van Dao revealed a model of an ultralight aeroplane then under construction by the VAM. Reports published in the West initially described the aircraft as a helicopter. A prototype eventually flew in December 2005.

A four-seat aircraft, believed designated VAM-3, is planned to have 90 per cent local content.

VAM VAM-1 and VAM 2

TYPE: Tandem-seat ultralight.

PROGRAMME: Vietnamese adaptation of Beaver RX550, marketed in Canada by Aircraft Sales and Parts (www.ultralight.ca). Construction of prototype began April 2003, following granting of government approval on 18 April and donation of private financial resources. Announced August 2003, when first flight predicted in following month; however maiden sortie delayed. Aircraft made first fast taxying runs at Phuoc Long Airport, Binh Phuoc province, on 28 March 2004, following which an application for permission to fly was lodged. This appears to have been considerably delayed; first flight (pilot Pham Duy Long) not achieved until 8 December 2005 at Nuoc Trong Airport, Long Thanh, Dong Nai province.

VAM-2 variant, with local content increased from 20 to 70 per cent, was due for completion in 2006.

CUSTOMERS: Requirement for 120 to be imported into the USA by expatriate Vietnamese partners Ngyuen Sang and Tim Trung Tran, who are investing US$5 million in the project.

COSTS: USD45,000 (2004).

DESIGN FEATURES: Pod-and-boom configuration with high-mounted, V strut-braced, constant-chord, slightly sweptback wings.

FLYING CONTROLS: Conventional and manual. Full-span ailerons. No aerodynamic balances on tail surfaces. Boom-mounted empennage with sweptback leading-edges.

VAM-1 ultralight flying in December 2005 1159193

STRUCTURE: Aluminium 6061-T6 tube with fabric covering.

POWER PLANT: Unspecified piston engine, believed 48.0 kW (64.4 hp) Rotax 582, driving a two-blade, pusher propeller.

LANDING GEAR: Tricycle type; fixed. Mainwheels mounted on hinged horizontal, metal tube Vs with damped compression arm attached at wing strut junction with central boom.

DIMENSIONS, EXTERNAL:

Wing span	9.75 m (32 ft 0 in)
Length overall	6.30 m (20 ft 8 in)
Height overall	2.03 m (6 ft 8 in)

WEIGHTS AND LOADINGS:

Weight empty	150 kg (330 lb)
Max T-O weight	470 kg (1,035 lb)

PERFORMANCE (estimated):

Max level speed	71 kt (132 km/h; 82 mph)
T-O run	70 m (230 ft)
Service ceiling	2,500 m (8,200 ft)

AIR-LAUNCHED MISSILES

The following pages support the Armament paragraphs of aircraft descriptions by explaining in brief how the potential of an individual aircraft is enhanced by its missile armament. Coverage is restricted to missiles carried by, or applicable to, aircraft in the current edition; for this reason, some older missiles are excluded, as are future projects still in the early stages of definition. Contents do include certain anti-tank and shoulder-launched anti-aircraft missiles which have airborne applications, mostly on helicopters.
To expedite retrieval of data, missiles are listed in alphabetical order of name or designation, with full cross-references to alternative epithets. In many instances, the 'manufacturer' of Chinese and Russian missiles is actually the export sales agency. More detailed information is contained in *Jane's Air-Launched Weapons*.

Key

Roles

- **AAM** Air-to-air missile
- **ARM** Anti-radiation missile
- **ASM** Air-to-surface missile
- **ASHM** Anti-ship missile
- **ATM** Anti-tank missile
- **LGB** Laser-guided bomb
- **SOM** Standoff missile

Guidance

- **AL** Active laser
- **AP** Autopilot
- **A/P** Active/passive radar
- **ARH** Active radar homing
- **GPS** Global Positioning System
- **I** Inertial
- **IM** Imaging
- **IR** Infra-red
- **L** Laser
- **LR** Laser radar
- **MMW** Millimetric-wave
- **PR** Passive radar
- **RC** Radio command
- **RF** Radio frequency
- **SAL** Semi-active laser
- **SARH** Semi-active radar homing
- **T** Terrain reference
- **TV** Television

AERO-ENGINES

Introduction

The following pages summarise the vital statistics of power plants mentioned in the main body of this book. They are divided into piston engines, turboprops/turboshafts and jet engines, and listed in alphabetical order of the manufacturer's name. Readers requiring further data on the two last-mentioned categories are referred to *Jane's Aero-Engines*. Some very small engines, employed by UAVs (and ultralights), are described in *Jane's Unmanned Aerial Vehicles and Targets*; those for large missiles and spacecraft, in *Jane's Space Directory*; and turboshafts, in *Jane's Helicopter Markets and Systems*. Space precludes an entry on each subvariant of more widely produced power plants, and therefore the aero-engine or helicopter publications should be consulted for these data.

Note that engine power ratings given below have been supplied, principally, by their manufacturers and are usually uninstalled output; data may thus vary from that quoted in the Aircraft section of this book, in which information is mainly supplied by the producer of the airframe. In most cases, the engine manufacturer's data reflect take-off power, generally under ISA sea-level conditions. Many gas-turbine engines, especially those for helicopters, are cleared to higher powers for brief periods in an emergency. Conversely, piston (and rotary) engine outputs are normally the maximum possible, which may be time-limited.

Piston Engines

Arrangement: 4-O (2) means an engine with four cylinders, horizontally opposed, two-stroke; 8-IV (4) means eight cylinders in inverted-vee form, four-stroke; 4-X (2D) means four cylinders in X configuration, two-stroke diesel; 9-R is a nine-cylinder radial; L indicates in line. Wankel-type engines (W) are alternatively known as rotary (or, more accurately, rotating-piston) engines; 2 × 2-O is two horizontally opposed pistons within single cylinder. Cooling: A = air cooling, L = liquid. In many cases the engines exist in numerous variants, for example with a geared drive or a supercharger (mechanically driven or turbo). Horsepower ratings to one place of decimals are based on metric (CV/PS) original data.

Manufacturer	Country	Designation/ name	Arrangement	Cooling	Bore mm (in)	Cylinder Stroke mm (in)	Cylinder capacity cc (cu in)	Dry weight kg (lb)	Max power kW (hp)

Turboprop Engines

Arrangement: A = axial stages, C = centrifugal stages, C+C= two centrifugal stages on the same shaft, C, C two stages on different shafts.Prop drive: FT = free turbine, SS = single shaft, 2S = two-shaft engine but nodependent power turbineFor turboshaft engines, T-O rating is the maximum except contingency, usually a 30 minute, or maximum continuous power.

Manufacturer	Country	Designation/ name	Arrangement	Air flow kg/s (lb/s)	Prop drive	Length mm (in)	Width mm (in)	Weight, dry kg (lb)	T-O rating kW (shp)	Remarks

Jet Engines

Arrangement: A = number of axial stages, C = centrifugal stages, F = fan stages, a/b = afterburner or augmentor
Air flow: Flow is through fan, where applicable, not core; BPR = bypass ratio; PF = propfan
<: Various ratings up to this maximum

without reverser (other NK-8 family include it)
measured over propfan blades
has vectored nozzle(s)

PROPELLERS

Propellers

In the table will be found explanations of various manufacturers' designation systems, to be read in conjunction with data supplied in the 'Engines' paragraph of aircraft descriptions.

First and simplest of the propeller types is **fixed-pitch**, constructed of carved wood (normally glued multiple-ply for warp resistance), wood with composites skin, or aluminium. Pitch is blade angle in respect to a flat plane; proportional to the distance the propeller will advance through the air on each rotation. Fine pitch — a small angle — allows a low-power engine to develop a high rotational speed, but delivers low forward airspeed. Coarse pitch is optimised for higher speeds, but requires proportional engine power.

While diameter and blade area are related factors in performance, as is the subtle change of pitch along the blade's length, fixed-pitch is, by definition, a compromise made at the time of manufacture. Light aircraft options are normally restricted to the operator's choice of a fine-pitch 'climb propeller' or coarse-pitch'cruise propeller', according to operating environment and preference.

Increasingly, light aircraft have a **ground-adjustable pitch** propeller. Blades are mounted in sockets in the hub and clamped in place by a bolt. In theory, the pitch can be re-set to meet the specifics of each flight, but it is more normal for the owner to experiment with blade angles until the optimum for the aircraft is reached. Wood and wood/composites are used in construction, as is carbon fibre.

For special applications, such as motor gliders, a fixed-pitch, but **folding propeller** offers the simplest means of eliminating propeller drag in engine-off models. The propeller is at rest in a folded position (blades either parallel to the axis of motion or at right-angles to it, held in place by spring or bungee rubber) and extends when engine torque is applied

Variable pitch enables fine pitch to be used to enhance take-off and initial climb performance (maximum engine power at low airspeed), before a change to coarse pitch for fastest cruising speed without overspeeding the engine. Before and during landing, fine pitch and a low throttle setting will have the effect of increasing drag. Several methods of variable pitch are available:

TWO-POSITIONThe propeller is pre-set in fine pitch for take-off and the pilot provided with a once-only means of reverting to coarse pitch. Rare in current usage.

AUTOMATIC PITCHAutomatic alteration of pitch angle according to airspeed, often indicated by a vaned spinner ahead of the propeller. Rare in current usage.

FLIGHT-ADJUSTABLE PITCHChange controlled manually by the pilot and constantly monitored for each stage of flight, in concert with selected engine power. Electric or hydraulic actuation. The term 'variable pitch' is often used, loosely, to describe flight-adjustable pitch.

CONSTANT-SPEEDA governor (constant-speed unit) is set by the pilot to the desired engine (and propeller) speed and pitch is constantly and automatically altered to maintain the desired value. Throttle changes (in fact, manifold pressure variations) can then be made by the pilot without reference to the propeller, which will adjust to the correct setting. However, the setting is changed manually for each stage of the flight (take-off, climb and cruise).

The availability of flight-adjustable and constant-speed mechanisms permits two further options:

FEATHERINGBlade pitch can be extended to neutral (edge-on to the airflow), reducing drag upon engine failure, or when deliberately gliding. The propeller may 'windmill' (turn slowly on account of residual pitch).

REVERSE PITCHChange of pitch beyond feathering angle to produce forward thrust for more rapid stopping or ground and water manoeuvring.

AIRCRAFT—PREVIOUS TEN EDITIONS

Index begins with aircraft generally identified only by numbers. Most were previously listed as 'Model 707' and so on under M

Note that many aircraft deleted from *All the World's Aircraft* at the end of their production runs continue to be described and updated in *Jane's Aircraft Upgrades*.

* Indicates aircraft or companies which have subsequently returned to *All the World's Aircraft*, possibly under different ownership or a slightly changed name.
