

The Morning After - Engadget

If current types of wireless earbuds have by no means quite labored for you, Bose is able to strive a new design. These wireless Sport Open Earbuds don't go in or over your ear canal. As an alternative they sit above it, permitting you to get the audio and still hear sounds of every thing happening round you.

The design looks somewhat awkward in comparison with different buds, but Bose claims they'll stay securely positioned in any weather circumstances, with loud, clear audio you'll be able to hear with out blasting it to everyone else. I'll need to see evaluations from one among our audio consultants before I consider absolutely in what it's selling, however the possibility of a headset with a greater fit is worth a shot.
