Description Primo-25 - 50 Tabs - Meditech. Primobolan is an anabolic with an extremely low androgenic component. The anabolic effect of Primobolan is moderately strong. Primobolan tablets have only a limited effect in building up muscle mass and strength and it is mostly taken over a prolonged period. So when you catch yourself stressing, worrying, fearful, anxious or depressed... Stop yourself from those thoughts and replace them with good self-talk. Primobolan is therefore mostly taken over a prolonged period since it gives only a slow but also a high quality muscle gain, which mostly remains after use of the compound is discontinued. An effective daily dose observed in athletes is in the range of 50-150 mg so that the 25 mg tablets are preferred to the 5 mg tablets.
