

Minecraft Java And Bedrock Editions Are No Longer Separately

We hope that you're not too connected to either of the Minecraft Java and Bedrock editions of one of the best building games on PC because Microsoft and Mojang have confirmed that both will end on June 7 and will be replaced by Minecraft Java and Bedrock Edition which means you won't need to play them separately.

There is a chance that you are confused by the existence of two versions of Minecraft on PC that is the Java and Bedrock editions. PCGamesN offers a helpful guide to help you understand the differences between the two versions. If you've paid for one, you won't be able to get access to the other. WICKED FRISE is a bit absurd.

Mojang and Microsoft are in complete agreement, as they have now announced (thanks to Neowin) the Minecraft Java Edition and Bedrock Edition. This single-purchase edition of Minecraft for PC replaces the separate editions. It will go on sale June 7 and will become "the only and standard edition of vanilla Minecraft on Windows PC."

Anyone who owns either the Java or Bedrock editions will be upgraded to the combined edition without any other purchase needed This should happen automatically - although "it could take between two and three days for the game to be available when we release it to all eligible players." Additionally, Minecraft players should be able to crossplay between versions without difficulty.

Mojang confirms that "Java and Bedrock will remain separate games that have their own distinct features," with the only difference is that you don't need to buy them separately and can access both from the same Minecraft launcher. This is great news for everyone, except for those who recently bought both separately. It will make the downloading of Minecraft much simpler.
