

PROJECT

ASTRAL

LITEPAPER VERSION 1.0

INTRODUCTION

Project Astral aims to bring comprehensive, accessible and personalized education about blockchain technology, the world of cryptocurrencies, and the vast sea of opportunities that is Decentralized Finance (DeFi) to the masses who have yet to adapt to this market.

The platform will use an AI Tutor powered by the technology of OpenAI and Wolfram Alpha. It will be trained on a large database of peer-reviewed knowledge and fine-tuned for personal use.

The access to the platform will be granted through the **\$ASTRAL** token and verified with a web3 integration and the users' crypto wallet. The platform will also offer help for developers to innovate new DeFi projects with the Astral Copilot.

BACKGROUND

Project Astral was made by a team of developers who will combine OpenAI's GPT-3 with Wolfram Alpha along with Text-to-Speech and Text-to-Video integration to create an AI Tutor that can not only provide an accurate and comprehensive educational material, but will also present it in a human-like interaction.

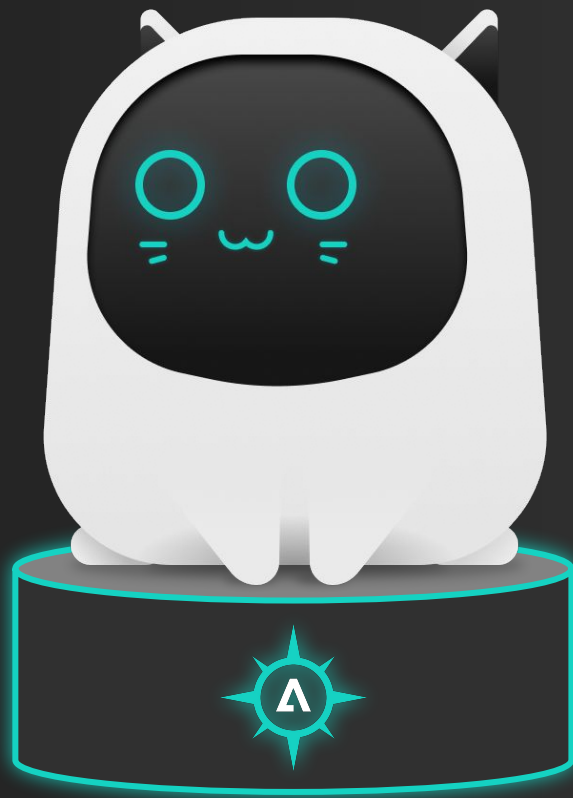

ASTRAL's database will be trained on a large, and constantly updated, peer-reviewed dataset of knowledge about blockchain, DeFi, and cryptocurrency. The project aims to decentralize access to knowledge and skills in the blockchain and crypto ecosystem, and provide a comprehensive and accessible education-hub for newcomers and experts to find available projects and solutions. The goal is to facilitate a large scale adoption of blockchain and crypto, and to restore trust.

PLATFORM DESIGN

Project Astral aims to be user-friendly and accessible to beginners and experts alike, with topics ranging from specific interests to comprehensive courses.

It will feature educative matter generated by Natural Language Processing, Audiobook like presentation, and visual guides for an interactive and engaging learning experience. For Developers, the **ASTRAL** Copilot will boost their capacity, and suggest solutions to overcome obstacles.

Web3 access will connect user wallets, and allow them to participate in analytics, to track progress and receive personalized recommendations. The goal is to provide a seamless integration between education and experience. Learn and apply your knowledge in one place.

TOKEN DESIGN

Project Astral will use a crypto token for the users to access the platform, and its value will be determined by the market demand.

The **\$ASTRAL** token will be ERC-20 standard and launched on the Uniswap decentralized exchange. It will have utility within the platform, such as accessing premium services, and content and it will be used as an internal payment system between users.

The total supply is capped and there will be an initial transaction fee to fund the platform's development, which will reduce with our revenue growth from advertising and business endorsements ensuring self-sustenance and stability.

TOKENOMICS

Token Distribution

Total Supply:

1,000,000,000 ASTRAL

Transaction Limit:

5,000,000 ASTRAL

Max Wallet Size:

7,500,000 ASTRAL

Transaction Fee:

5% DYNAMIC TAX

The supply shares marked with an asterix are Locked.*

2300.0 ASTRAL 

You: I'm new to blockchain, how can I learn more?

Astral: To learn about blockchain as a newcomer, it is recommended to start with understanding the basics of the technology, including how it works and its potential use cases. Then, explore different blockchain networks, such as Bitcoin and Ethereum, to gain a deeper understanding. I can summarise articles to you, or show you educational videos. You can also participate in online forums and communities which can also help expand your knowledge. Consider enrolling in the Astral courses or to get more in-depth information. You can also gain practical experience, such as creating a smart contract and making transactions with me being your Copilot, which is also a helpful learning tool.

You: Ok, where should I start?

Astral: As a beginner, I recommended you to start by familiarizing yourself with the basics of blockchain technology and its underlying concepts, such as cryptography, consensus algorithms, and smart contracts. You can start by requesting introductory articles from me, watching the introductory videos I send you, and begin the Astral online course...
