What is Qlik Sense Mashups?

A <u>Qlik Sense mashup</u> may be a website or web application that integrates Qlik Sense objects through the utilization of 1 or more Qlik Sense apps. These apps are used for creating unique web services with one graphical interface. A mashup can also be considered to be the mixture of Qlik Sense Web API alongside a website--it enables web integration on Qlik Sense. With the assistance of knowledge and visualization using Qlik Sense apps, responsive web pages or website are often created.
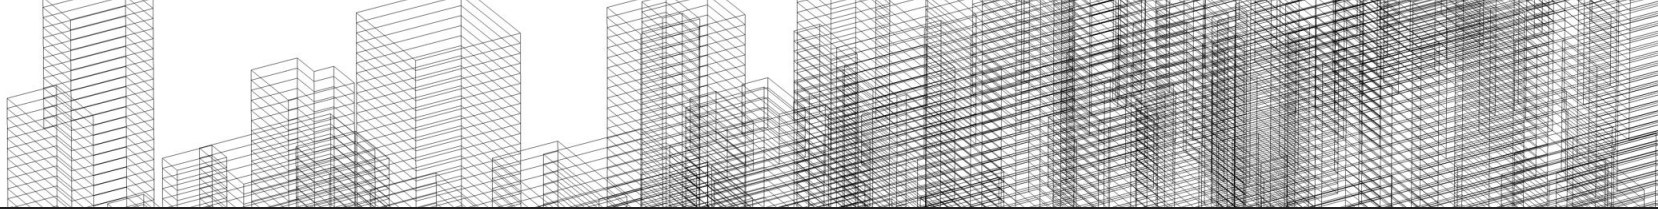

Customizing layout

Visualization mashups enable you to increase the visualization capabilities of Qlik Sense by using standard Web technologies. The concept of visualization mashups, generally, are often seen as a plugin mechanism that permits developers to mix the facility of the Qlik Sense APIs with the just about unlimited capabilities of the online.

Grouping Content On The Same Page

Leveraging grouping content on the same page approach and incredibly intuitive user experience, Qlik teams can save countless development hours and deliver solutions that take organisations from data reporting to data storytelling in no time.

Multiple QVDs In The Same Mashup

You can have your mashup running on the same server as your Qlik Sense app, or you can have your mashup and your Qlik Sense app running on different servers. You can only run a mashup on the same server running Qlik Sense if you are using Qlik Sense Enterprise on Windows.

Organization Wide Templates

[Qlik sense mashups](#) is fully customisable. Whether you're following your brand guidelines or tailoring your dashboard's style to a particular industry, topic or requirement, you've got complete control over all the planning elements from colours to fonts to line thickness.

Why We Need Qlik Sense Mashups?

Mashups allow an easy web integration of Qlik Sense apps and its objects. It offers great UI flexibility in terms of design (background color etc) and functions. Mashups enable integrating Qlik Sense into a web framework involving HTML, CSS, JavaScript etc.
