Vaccines:

Vaccinated are nearly 6 times more likely to die from COVID variant:

FDA show possible vaccine side effects, later hide it from official publication:

<https://www.infowars.com/posts/oops-fda-accidentally-shows-list-of-covid-vaccine-side-effects-including-myocarditis-autoimmune-disease-death/>

Strong reduction in reticulocytes (baby blood cells) as a result of vaccine (i.e. clotting risk) – page 46 onwards (p.50 haematology)... note that this was only for a single dose, not even accounting for second or now third booster shots... >100% increase in fibrinogen (protein your body uses to make your blood clot):

https://www.ema.europa.eu/en/documents/assessment-report/comirnaty-epar-public-assessment-report_en.pdf

Vaccine spreads throughout the body... i.e., if there is severe blood clotting then it will affect almost all organs (p. 47):

https://www.ema.europa.eu/en/documents/assessment-report/spikevax-previously-covid-19-vaccine-moderna-epar-public-assessment-report_en.pdf

Increased fibrinogen can lead to thrombosis ... this does not necessarily have to be severe or immediately life-threatening clotting, but merely micro clotting that can occur across your body and lead to system problems that, if occurring in the brain, may cause neurological damage:

<https://www.ncbi.nlm.nih.gov/pmc/articles/PMC5324399/>

Low integrity mRNA... ~70% integrity, therefore 30% is essentially rubbish, meaning there is a chance your cells produce suboptimal spike proteins or none or something else (p. 30) ... if RNA is of low integrity then it will be difficult to replicate the spike protein to achieve immunity just as microarrays cannot be done with low integrity RNA:

<https://www.slideshare.net/enave2609/ss-242999249>
<https://bitesizebio.com/13527/how-to-quality-control-check-your-rna-samples/>
<https://www.ncbi.nlm.nih.gov/probe/docs/techmicroarray/>

Cationic lipids are present in vaccines and are toxic to cells of macrophage origin (white blood cells and T-cells etc)... whilst it is claimed that the vaccine contains lipids and RNA “not expected” to be genotoxic (p.43), the EMA Assessment report (p. 23) admits there is a cationic lipid present (ALC-0315)... cationic lipids damage T-cells (“most toxic for cells of macrophage origin”) which have now been found to be important in combatting COVID-19... there is no safety data at all on ALC-0315:

The inoculated are at risk of developing prion disease or similar:

Imperfect or ineffective vaccination can create new strains of the virus... we are already seeing a drastic decrease in the effectiveness of the vaccines, revised from >90+ only months ago to now... in turn, deadlier variants can be created:

Business Insider reported, as other mainstream media outlets did, that the WHO said there is no evidence the vaccine will prevent transmission... whilst they have attempted to delete the article, you can still find it listed in search engine results:

The effectiveness of the vaccines is significantly dropping over time... although the mainstream media gleefully shared the supposed 95% effectiveness of the Pfizer vaccine back in February, they now grapple with the reality of an ineffective vaccine of which the 39% figure is likely lower considering the number includes statistics from two weeks when effectiveness was notably higher:

A study published in the journal Clinical Infectious Diseases proves governments are using excessive sensitivity in testing... the study recommends a cycle threshold (Ct) of 30 or less, however the CDC was still recommending a Ct of 40 in December 2020... Australian medical guidance doesn't even give a specific figure, leaving it to the discretion of the supervising pathologist... this means there could be inconsistency for testing across the entire country:
