Moreover, Proviron (active ingredient - Mesterolone) is an anabolic steroid preparation, a derivative of dihydrotestosterone. According to the structure, Mesterolone molecule is very similar to Methenolone, in fact, the difference between the two drugs is approximately the same as between men and women. Mesterolone, known also by the brand name Proviron, is a compound that's very similar to Masteron - as you might be able to tell from their similar names. Mesterolone is an orally active compound that's similar to dihydrotestosterone. Specifically, it's a 1-methylated dihydrotestosterone molecule.

The ideal dose of Mesterolone is 25-100 mg per day for men and 25 mg every day for women, although some athletes, both men and women, increase the dose by 50-125 mg. Tablets of Proviron should not be chewed, they need to be swallowed and washed down with copious amounts of water. Proviron 25mg, known as Mesterolone, is one of the oldest AAS on the market. Mainly it is used to treat the low level of testosterone and male infertility. Some steroid users use it during the cutting phase of the cycle. more

Proviron is used to replace testosterone in men with hypogonadism. Male hypogonadism is a condition when the body does not produce enough testosterone. Testosterone is a natural male hormone, known as an androgen, which controls normal sexual development in men. #dementia #brainhealth #braindisease #hearthealth #hearthealthmonth #gored #heart #brain #neurology #neurologist #virginiaspineinstitute #emg #weimprovelives #headache #migraine #migrainerelief #prevention #parkinsondisease #treatment @american_heart @virginia__heart Recommended dosage : 25mg/day The Proviron is a very powerful anti-estrogen. It prevents gynecomastia while decreasing water retention and fat, it allows the recovery of testosterone production in the testicles and prevents the aromatization of anabolic steroids.

#healthyliving #lowcarb #goals To treat androgen insufficiency, Proviron is usually given in a dose of 1
tablet (25 mg) three times per day at the initiation of therapy. The drug is later continued at a lower
maintenance dose, which usually consists of taking 1 tablet (25 mg) one to two times per day.
