

# Beauty Department Sanitation and Hygiene Standards

A quick overview of all the precautions taken as a makeup artists and hair stylist take to keep my talent and my clients safe at all times.

## Prevention is key

All of these precautions are put in place to **stop the spread** of any diseases.

Most have **always** been a part of **safe beauty services**, but some have been made **more strict**.

## The professional's health

- check body temperature the day before and on the **morning of the job**
- inform clients if you **feel unwell**
- wear an **FFP2 mask** and a **shield** during application

## Model's/client's health

- models/clients must **wash** and **disinfect** their **hands** before the start of services
- when possible, they wear a **mask**
- their belongings (bag, jacket) are put **away from the makeup station**
- it's not allowed to **eat, drink** or **use** their phone during application

## Clean hands

- wash hands with **soap** and **hot water** before and after application
- use **hand sanitizer** after coming in contact with possible contaminants
- **nails** must be **short** and clean
- wear **nitrile gloves** when possible (durable and prevent allergies)

## Makeup & hair station

- before the start of services **clean and disinfect** working area with soap, water and **70 % alcohol**
- the makeup station is also **cleaned and disinfected** in between applications
- **cover the station** when on set to protect from airborne pathogens

## Application & Products

- the correct process is always **product to palette to tool**
- avoid any **cross-contamination** and **double dipping** and **never apply** products **directly** from the original container
- **clean** and **sanitize all makeup** and hair tools in between applications
- **wash brushes with soap and hot water** and spray them with **70 % alcohol in between applications**
- **put all cream and liquid** products on a **palette**
- **scrape or ghost** powder products onto a **tissue**

## Once the job is finished

The entire kit must be **cleaned** and **sanitized** before being stored in a **cool and dry place**.
