

# We, the healthcare providers of the Lakewood Kehilla are unified in support of immunizing children to prevent tragic occurrences within our community.

Our recommendations are based upon exhaustive research and supporting data from years of studies on hundreds of thousands of patients. These studies have found that routine childhood vaccinations, when following the recommended schedules, are safe and free of significant side effects.

Immunizations are critical to maintaining a healthy community and we encourage everyone to be immunized according to the age appropriate schedules recommended by the CDC, so that each of us protects ourselves and each other to the greatest extent possible. This includes the immunization of not only children, but of pregnant women, healthy adults and senior citizens who can also potentially protect our children from harmful disease.

***Let us all join together and immunize to  
protect each and every child and adult.***
