

Planet Eclipse Etha 2 Airsoft Review - An Honest Opinion From Someone Realistic About This Airsoft Gun

Planet Eclipse is an outstanding brand. Their Etha airsoft gun is the most heavy ever manufactured. It is extremely reliable, easy to pump with an exterior spring, and it sounds amazing. The downside is that it can be difficult to find fields where it works well. I've been on over 100 of these at different fields but have never had much success. I am yet to see someone with a Gtek sidearm in an airsoft skirmish and have yet to come across anyone with a Gtek in a paintball field.

So what makes Etek sidearm different from Eclipse and other high-performance paintball guns similar to Eclipse? The answer is simple. A full-automatic AEG gives you more bang per buck. For some people, a lower weight high performance AEG is just not enough.

The Etek EAE weighs four pounds unloaded and has an astounding sixteen pounds of usable weight when it's fully loaded with ammo. The marker's comfortable grip makes it easy to use for hours. The aluminum barrel features a pivot in two positions and an adjustable hop up.

Since the beginning of time, valve markers have dominated the airsoft industry. There are many benefits to using an airsoft valve marker, such as its weight and portability. Aluminum bodies offer additional power and efficiency. Aluminum bodies offer many benefits including the ability to produce shots that are much sturdier than other types of paintball guns. The aluminum body of the Planet Eclipse EAE has an aluminum shell, which helps to increase its durability. An o-ring is included to help reduce wear on the grip frame.

Many paintball guns are plagued by problems cleaning the batteries. The Eclipse EA, like other brands, has a deep cleaning system. Others only need a quick dip in water. This is not an issue for the planet Eclipse, as the entire unit can be covered with high-quality vinyl material. You don't have to worry about your gun getting clogged up.

One other positive feature about these guns is the ease of replacing the pellets. The Planet Eclipse EA features a foregrip, which is a departure from many other older brands of marker brands. mechanical paintball marker This foregrip fits inside the front end of the barrel completely covering the bolt system. The bolt system can also be adjusted in a variety of positions. This allows for considerable customization.

Eclipse is unique because of its foregrip and two other features. The air transfer mechanism is the first. This paintball gun's air transfer system is very useful and makes it possible to play more realistically with a smoother feel. A second distinctive feature is the adjustable rear sights.

Planet Eclipse has put a lot of time, money and effort into their new model, the Eclipse EA. These guns are extremely popular with tournament players, as well those who enjoy high speed action. The gun's range is a little shorter than that of many competitors brands but the gun makes up for this by its speed with fast shooting. The general quality and performance of the planet eclipse etha 2 are above average for an airport marker.
