

500mg test e 400mg deca bloods | BS-Board.org

500mg testosterone + 400mg deca is a much better option all around. Anything over 750mg/week of testosterone is going to really start aromatizing into estrogen (even with an AI) and potentially lead to side effects like gyno, water retention etc. I just wrote a long article on how much testosterone to use in a bulking cycle. Hey legends already put a thread up but wanted to show both the blood tests I got so I'm on a cycle of test e 500mg a week and deca 400 mg a week. I got bloods done at start of week 5 about 24 hours after I pinned, total t came back at 1782, estrogen 372. Testosterone falsely elevated because of the deca most likely .

yes although 1500 test on 500mg seems low as piss. maybe could mean excess test to estrogen conversion He said his test level is "1500>". So his test is over 1500. Probably ordered the capped blood test. Sent from my SM-G920P using Tapatalk L littlefrank Senior Member Member Oct 15, 2016 #10

500mg test e 400mg deca bloods | Page 2 | BS-Board.org

So that test was just normal testosterone this is lcms to exclude the deca. Disappointing to say the least, nearly 9 weeks into cycle on 500 test E a week and 400 mg deca. Testosterone lcms test total 48. Terrible numbers on 500 a week. I dump 2 ml in the delt and do get a bit of leakage but surely would not be losing that much oil haha.

deca 400mg - Steroidology

I've ran test as low as 300 with deca up to 450. I do this to keep my hair thinning more than it has. no probs at all. i don't believe in the whole test/deca ratio thing. hell, i even kickstarted a cycle with npp and used cyp throughout. npp kicked in and test was barely even warming up and everything was fine. Testosterone 400mg and deca 200mg cycle for recomp

#1 im running: dbol at 40 mg for 4 weeks deca at 500/wk for 12 weeks sust at 600/wk for 12-14 weeks i have been told 500 mg of deca is too much, but, some say its perfect!!!! opinions please!!!! Sweekaters Member Awards 0 Oct 4, 2011 #2 You'll need a dopamine agonist of some sort of you could potentially be in a world of hurt. dustinr334 Banned

One thing I noticed is that the deca sides hit hard once you go over 350-400mg's a week. Bloating, gyno, shutdown.etc. Test sides are much more easily controlled IMO, which makes it the better choice if you're going to bump up the dose. Also..... I noticed that I gained no more in terms of gains once i went over 300mg's with deca.

- Is 500 mg of deca to much???? - AnabolicMindscom
- 300mg of DECA/week enough or up to 400mg/week?
- First cycle help/ Test E 500 mg Deca 250mg wk | iSARMS Forums

Test and Deca Stack - Pharma - Forums - T NATION

400 mgs of testosterone are good for a blast, but definitely it is not a healthy way of cruising on TRT. At most, you should be using 250 mgs of testosterone while cruising. As for deca, for a blast I would rather recommend you to use 500 mgs of testosterone, and 300 mgs of deca. As far as Deca-dick goes it is rare and usually occurs in Deca only cycles greater than 400mg/wk and/or cycles longer than 16 weeks. 1 Like infin_ty December 14, 2015, 5:25pm #6 In my opinion the perfect first cycle is Test E @ 500mg/week.

Test plus deca vs just test - Questions About Steroids

Topic starter 16/03/2020 3:24 pm All else being equal, is there likely to be any significant difference in the strength and mass gained from doing a 12 week cycle of 500mg/week of test cypionate stacked with 400mg/week of deca versus a doing a 12 week cycle of 900mg/week of just test cypionate? Thanks. Quote guijr (@guijr) Prominent Member [dig this](#)
