

# 'Minecraft Earth' Early Access Arrives in The US

It took some time for it to be released, it was a long time, but Minecraft Earth is finally available on Microsoft's own soil. DHAKACOURIER.NET The US has released an early access version for iOS and Android of the augmented reality game Minecraft Earth. Although it's not the full-fledged Microsoft and Mojang version they have been promoting for months, it will let you create dioramas , collaborate with friends on projects and fight mobs in adventures.

The US is the tenth nation to be granted early access. The majority of the world is still in the dark however, the developers have stated that they will be extending support in the weeks ahead. This is an important expansion. It hints that Microsoft and Mojang are becoming more comfortable using Minecraft Earth in its current state and that it may be just a matter of time before most countries have their chance to play.

Hey United States, we found your Minecraft Earth invite, it was behind the couch this entire time! Welcome to early access!
