Management variables embody the richness of a neighborhood's voluntary public API reporting, its whole number of installed plugins (each governance associated and non-governance related), a date of the server's measured activity in weeks, and its duration to date, in weeks. We used these categories to classify rules into varieties, and to count each community's guidelines by its governance traits. Second, I argue that the social and technological mechanisms mirrored in the server guidelines and moderators' practices are characteristic of servers that self-describe as child-/household-pleasant. Administrators choose software rules from a single central neighborhood-managed plugin repository. A server's rule specialization was the median, over all plugins, of the number of different

servers that plugin was observed on. A group's rule variety and rule scope (resource diversity) are the ecological selection (number of varieties) represented by its whole system of guidelines: a server with no governance plugins has ecological number of zero, whereas a server with not less than one plugin in two completely different classes has selection two.
