PHARMACOTHERAPEUTIC GROUP Antibiotic, semisynthetic penicillin + beta-lactamase inhibitor. ATX code: J01CR02.

## Pharmacy Vacation Terms

Prescription drug.

The first time this drug (Augmentin) was prescribed to us, when it was 4 years old.

<http://www.webmd.com/allergies/antibiotics?query=augmentin+for+sinusitis>

There was a fever, cough, runny nose. On the second day of admission, it became much better. Now, we always recommend it for severe colds. The effect is instant, on the second, third day. Only you need to take with it either hilak forte, or bifidumbacterin, so that there are no problems with the intestines.

According to folk wisdom, if a cold is treated, it passes in 7 days. We got such a story, but only with a complication. The child had a runny nose, but there was no fever, no cough, no headache. I thought it was a light cold that would pass soon. But something happened that was not expected: a simple mild runny nose turned into sinusitis. I had to go to the doctor. He prescribed us Augmentin suspension. Signs of improvement appeared only after 3 days of admission. But after 7 days the boy was healthy. True, then another month they restored the intestinal microflora. But, one might say, cost a little fright.
