To speed up the drying out procedure, use followers, dehumidifiers or increase the interior air temperature. First, understand that behind all mold development is a water or moisture issue. Second, come to be a master of dampness-- understand where moisture originates from as well as just how it gets into the house.

VISUAL MOLD ASSESSMENT

FIRST, WE VISUALLY INSPECT FOR "RED FLAGS"

VISIBLE MOLD
Mold commonly hides inside walls and relies on moisture to grow and colonize. Sometimes you can see it on walls or ceilings, but often it grows undetected.

HIDDEN MOISTURE
Mold thrives on moisture, so you often find it growing in bathrooms, kitchens, and humid basements.

WATER INTRUSION
Mold growth occurs when there is long-term moisture from water damage, excessive humidity, water leaks, condensation, water infiltration, or flooding.

THE ASSESSMENT
We will often utilize non-invasive testing equipment such as infrared cameras and moisture meters to see if there is potential moisture or mold within walls or ceiling in your home.
