Outperform the market based on value investment principles

March 26 2018, Edition 1

Numerous cryptocurrencies are still in the early stages of technology development, and the possibilities for development are endless. Technological advances and investments in cryptocurrency are overwhelming. The security and convenience of cryptocurrency will increase the demand for more people.

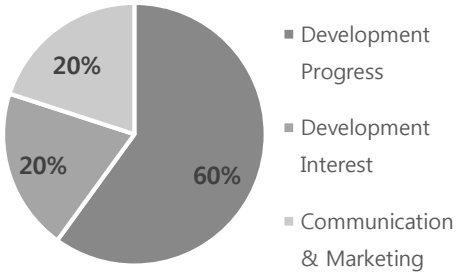

But why would we hesitate to invest in cryptocurrency? Because it is difficult to know what will become the most promising cryptocurrency. It is also difficult to choose precisely what cryptocurrencies are being developed properly to avoid countless scam cases using cryptocurrency.

To solve these problems, DCbox (Developer's Cryptocurrency box) team was created. We will continue to update our most appropriate portfolio continuously in the following ways to ensure proper cryptocurrency selection and appropriate investment.

1) Development Progress (60%): Based on the status of development in the latest four weeks, we have scored according to the order of the passwords that are actively developed.

2) Development Interest (20%): We scored the developers' interest in the development items being updated in the latest four weeks to reflect the appropriate weights for the interest.

3) Communication & Marketing (20%): We have given scores that reflect the weight of users interested in Twitter, Facebook, Reddit, and other communities that have been updated in the last month.

The above scores are summed together to form the final investment portfolio of promising cryptocurrency. In order to invest in undervalued cryptocurrency in viewpoint of the value investment, we have also ranked the undervalued cryptocurrency by the difference from the market ranking against the current score. The combined score of these rankings is composed of the final portfolio, which has yielded a high rate of return compared to the bitcoin in many areas. This is because we make the most of the following value investment methods.

This portfolio is characterized by the regular review of the most important technical progress, and the evaluation of the scores for each individual by the developers themselves.

This portfolio is distributed for a free of charge. If you like this portfolio, please donate to the following address and we will try to provide better information. Thank you very much.

To BTC : 1AgDYnWmjmFRrswW6fELbZqz18xKRBNTAZ

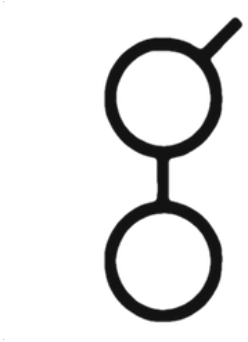

To ETH : 0xB696410f14B02Cc7457b3ca7F1ACF64b2b7a6D2B

Sincerely,

DCbox Team

(Note) This portfolio information is the portfolio created for value investment from the above point of view. Even if this portfolio is utilized, it can lead to a loss of investment depending on the time of investment, method of operation and market conditions. Please note that the portfolio is for reference purposes only and we are not responsible for any investments that use this portfolio.

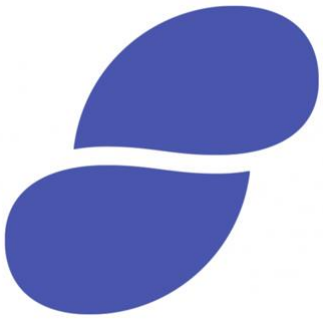

This Edition's Best Choice 3

GOLEM

CARDANO

STATUS

Best Portfolio 10

NO	Coin Name	Symbol	Priority	Features
★ 1	Golem	GNT	●●●●●	Airbnb for computers by renting unused CPU/GPU cycles.
★ 2	Cardano	ADA	●●●●●	A decentralised public blockchain and a smart contract platform.
★ 3	Status	SNT	●●●●●	An interface to access Ethereum, built for Android & iOS.
4	Ethereum	ETH	●●●●○	A decentralized platform for applications.
5	Lisk	LSK	●●●●○	For developers to build and deploy blockchain applications in JavaScript
6	Augur	REP	●●●●○	A decentralized oracle and prediction market platform.
7	Aeternity	AE	●●●●○	Lightning smart contracts. Turing-complete state-channels.
8	EOS	EOS	●●●○○	The powerful infrastructure for decentralized applications.
9	TRON	TRX	●●●○○	A global free content entertainment system, utilizing blockchain technology.
10	Steem	STEEM	●●○○○	A new way for publishers to monetize their online content and community.

We have derived the above portfolio based on our self-assessed scoring method focusing on the development process. The technical value of the investment is highly promising for all of the above coins, but we recommend investing evenly in the above 10 coins as much as possible in consideration of the rapid change in the cryptocurrency market and risk diversification. If you want to invest different amounts of money on the cryptocurrency you want to invest, you can adjust the investment portfolio weight considering the above mentioned priority.

Evaluated 10

Rank	Name	Score
1	Ethereum	94.8
2	Cardano	62.5
3	TRON	53.2
4	Lisk	51.2
5	EOS	47.1
