

Minecraft Launcher Will Not Open (Mac)

Hey kinda late response but when this is still a problem for anybody just open exercise monitor find Minecraft launcher and pressure quit it. GAMING NEWS 's not an ideal repair however it's better than rebooting your laptop every time you wanna play.

it labored for me !!! thanks !

legend.

thank you! fixed

Whenever you open an application on macos, that software's logo will bounce up and down a few instances after which open, however with Minecraft, it does not even bounce up and down. It simply won't open.

Restart your pc or delete and then reinstall the sport.

Don't return the game but if u Have tried to return the sport because it will stop the sport from being able to load and the problem will look precisely like that

This happened to me today too

Mine does this too. I ran Minecraft on my final mac with out an issue but I just lately obtained a new one and can't get rid of this situation.
