

PixelmonCraft.com Pixelmon Server

We are PixelmonCraft. Are you a fan of Minecraft? Are you a fan of Pokemon? You are at the right spot! SKIN NIGHT PixelmonCraft blends two of our games on our user-friendly Pixelmon Server.

PixelmonCraft takes the popular Pokemon-themed Pixelmon mod and makes it multiplayer. It is split across multiple servers based on the Pokemon regions of the super-popular Nintendo games, PixelmonCraft not only recreates the towns and areas of those games, but also recreates as much of the gameplay as possible. Animals in Minecraft are not only substituted with Pokemon however, they can be caught and battled with. There are gym leaders to fight, Pokemarts to shop in, and long-grass to avoid.

The blocky style of Minecraft adorably recreates the look of Pokemon games, and makes this genuinely feel like an accurate depiction of the Pokemon MMO. There's a real sense of love on the server, with a friendliness and warmth that only forcing cute animals to smack each other to near-death could give.

Donators are keeping PixelmonCraft up and running. You are directly supporting PixelmonCraft by purchasing any of the packages from our store. Thank you!
