

Bank fishing is a popular and accessible way to enjoy the thrill of fishing without the need for a boat. However, finding a suitable rod holder can be a challenge, especially if you're on a budget. In this article, we will explore some innovative tips and tricks for creating your own DIY bank fishing rod holders without breaking the bank.

## 1. PVC Pipe Rod Holders

One of the most cost-effective and versatile options for DIY bank fishing rod holders is using PVC pipes. PVC pipes are affordable and readily available at any hardware store. By cutting the pipes to the desired length and attaching them to a sturdy base, you can create a simple and effective rod holder.

For added stability, consider using T-connectors or elbow joints to create a T-shape or L-shape design. This will prevent the rod from slipping or tipping over, even when you get a strong bite. Additionally, you can customize the height and angle of the rod holder by adjusting the length and angle of the PVC pipes.

## 2. Bungee Cord Rod Holders

If you're looking for a more flexible and adjustable option, bungee cords can be a great choice for DIY bank fishing rod holders. Simply attach two bungee cords to a sturdy base, such as a wooden board or a metal frame, and secure them in an X-shape. Then, use the hooks of the bungee cords to hold your fishing rods in place.

The advantage of using bungee cords is that they provide a secure grip on your fishing rods while allowing for easy removal when you get a bite. You can also adjust the tension of the bungee cords to accommodate different rod sizes and weights. This makes bungee cord rod holders a versatile and budget-friendly option for bank fishing.

### 3. Bank Stick Rod Holders

Another popular DIY option for bank fishing rod holders is using bank sticks. Bank sticks are long, sturdy metal rods that can be easily inserted into the ground to hold your fishing rods. They are lightweight, portable, and adjustable, making them ideal for bank fishing.

To create a bank stick rod holder, simply insert the bank stick into the ground at an angle and secure it in place. Then, attach a rod rest or a V-shaped holder to the top of the bank stick to hold your fishing rod. Bank sticks are available in various lengths, allowing you to adjust the height of your rod holder based on your preference.

### 4. Bucket Rod Holders

If you're looking for a budget-friendly and portable option, consider using a bucket as a rod holder. Simply drill a hole in the side of the bucket and insert a PVC pipe or a bank stick into the hole. This will create a stable and secure rod holder that can be easily transported to different fishing spots.

By filling the bucket with water or sand, you can add weight and stability to the rod holder. This will prevent it from tipping over, even in windy conditions. Additionally, you can use the bucket to store your fishing gear and bait, making it a convenient and practical solution for bank fishing.

Creating your own DIY bank fishing rod holders on a budget doesn't have to be complicated. With a little creativity and resourcefulness, you can design and build rod holders that suit your needs and preferences. Whether you choose PVC pipe holders, bungee cord holders, bank stick holders, or bucket holders, the key is to ensure stability, adjustability, and ease of use.

### Conclusion

Bank fishing rod holders are essential for a successful and enjoyable fishing experience. By utilizing these DIY tips and tricks, you can create your own rod holders without spending a fortune. Remember to consider the materials, stability, adjustability, and portability when designing your DIY rod holders.
