Enhancing the ABAQUS Thermomechanics Code to Simulate Steady and Transient Fuel Rod Behavior

R. L. Williamson and D. A. Knoll

Abstract – A powerful multidimensional fuels performance capability, applicable to both steady and transient fuel behavior, is developed based on enhancements to the commercially available ABAQUS general-purpose thermomechanics code. Enhanced capabilities are described, including: UO_2 temperature and burnup dependent thermal properties, solid and gaseous fission product swelling, fuel densification, fission gas release, cladding thermal and irradiation creep, cladding irradiation growth, gap heat transfer, and gap/plenum gas behavior during irradiation. The various modeling capabilities are demonstrated using a 2D axisymmetric analysis of the upper section of a simplified multi-pellet fuel rod, during both steady and transient operation. Computational results demonstrate the importance of a multidimensional fully-coupled thermomechanics treatment. Interestingly, many of the inherent deficiencies in existing fuel performance codes (e.g., 1D thermomechanics, loose thermo-mechanical coupling, separate steady and transient analysis, cumbersome pre- and post-processing) are, in fact, ABAQUS strengths.

I. INTRODUCTION

Important aspects of fuel rod behavior, for example pellet-clad interaction (PCI), fuel fracture, and non-axisymmetric cooling and oxide formation, are inherently multidimensional. Current fuel rod simulation codes typically approximate such behavior using a quasi 2D (or 1.5D) approach¹⁻³ and, often, separate codes must be used for steady and transient (or accident) conditions. Notable exceptions are the EPRI proprietary code FALCON⁴ which is 2D and can be applied to steady or transient operation, and the French codes TOUTATIS⁵ and ALCYONE⁶ which are 3D. Recent studies have indicated the need for multidimensional fuel rod simulation capability, particularly for accurate predictions of PCI.⁷

The Idaho National Laboratory (INL) is currently developing next-generation capability to model nuclear fuel rod performance. The goal is to develop a 2D/3D computer code (BISON) which solves the fully coupled thermomechanics equations, includes multiphysics constitutive behavior for both fuel and cladding materials, is applicable to both steady and transient operation, and is designed for efficient use on parallel computers.^{8, 9} To provide guidance and a prototyping environment for this effort, plus provide the INL with near-term multidimensional fuel modeling capability, the

commercially available ABAQUS¹⁰ thermomechanics software has been enhanced to include the fuel behavior phenomena necessary to afford a practical fuel performance simulation capability. This paper details the enhancements which have been implemented in ABAQUS to date, and provides results of a multi-pellet fuel rod problem which demonstrates the new capability.

II. CAPABILITY DEVELOPMENT

II.A. ABAQUS Framework

ABAQUS provides a reasonable general framework for fuel performance modeling. The code employs modern finite element methods to solve the nonlinear thermomechanics equations in one, two, or three-dimensions, using linear or quadratic elements. The temperature and displacement fields are solved in a fully-coupled fashion, using sophisticated iteration and time integration error control. The code includes robust contact algorithms, essential for computing multidimensional pellet-pellet or pellet-clad interaction. Extensive constitutive models are available, including isotropic and anisotropic elasticity, thermal expansion, plasticity, and thermal creep. Due to its commercial nature and widespread use, ABAQUS includes powerful pre- and

We track 54th Street store-wide discount codes, which unlock discounts on all items throughout 54th Street's online store. Email discount rate codes. Email voucher discount codes are excellent for just one purchase, and our neighborhood members share email codes for 54th Street and countless other retailers. Considering that these codes end after a single usage, you might require to try a couple of codes prior to you discover one that works.

com. To utilize a 54th Street email discount rate code, simply copy the coupon code from this page, then enter it in the "Discount Code" box at 54thstreetgrill.com during checkout to secure your savings. 54th Street free shipping discount coupons. Looking for free shipping at 54th Street? We track and complimentary shipping provides for 54th Street and countless other brands, which you can easily find on our Promo Code Finder tool.
