## Interventional Gastroenterology Fellowship Personal Statement Sample

One of the most important admission procedure parts is personal statement writing. Applicant's success depends on this document's quality. To craft winning one you need a good [interventional gastroenterology fellowship personal statement sample](#).

### Interventional gastroenterology fellowship personal statement

My decision to enter the field of medicine proves to be a coalescence of different reasons. My respect and admiration for doctors, along with their noble job is one of the main reasons for striving hard to achieve a career in this field. The other is the fact that it can provide me with a vast ocean of interesting knowledge, as well as the continual advancements made available, as well as the capability to cure diseases. In medical school, my experiences and open mind in a wide array of specialties were the main factors in my career objectives as well as personal growth.

During my rotations in interventional gastroenterology, I have worked with different patients, from different social, economic as well as cultural backgrounds, featuring a wide array of conditions. While I have already mastered the techniques in taking the histories of patients, while conducting physical examinations, each of the patients I have met has taught me new things. I involve myself actively in all my ward duties, as well as routine diagnostic procedures in order to achieve hands-on experience, stayed up willingly in order to discuss, while monitoring patients together with my colleagues, and spend free hours just sitting in the wards.

I have long been interested in community outreach and education, I also delved into different community services such as rural school health checkups, HIV counseling, as well as health camps which were organized by our institution. I plan to take advantage of a fellowship program in interventional gastroenterology and use the knowledge I will be learning in order to heal patients, while being able to train others who are also interested in this particular field. My diverse experience have made me realize that I have the resilience, determination, compassion and mental strength in order to succeed as a very important asset in the medical team.

## Internal Medicine and Gastroenterology Personal Statement Sample

Are you struggling with your personal statement writing? This [internal medicine and gastroenterology personal statement sample](#) helps you to ease your application process.

### Internal medicine and gastroenterology fellowship personal statement

I believe that passion stems from awareness. My awareness in healthcare at school has led me to becoming passionate about the medicine field. Working together with my father who was a physician has allowed me to travel to different rural health camps in order to distribute free medicine. I have personally witnessed firsthand that the complicated issues that were involved, as well as the atmosphere involved in problem solving in Internal Medicine and Gastroenterology has excited me, sparking my interest in order to make it my personal career.

There were unique cases that I encountered during my rotations. Some were common, while others were obscure. I just loved the challenge in correlating symptoms with the various diseases. After completing medical school, my passion in Internal Medicine and Gastroenterology increased while working for around two years while serving as junior resident. It also enabled me to intellectually challenge myself while being exposed to different pathologies, as well as patient management systems. These two years have shown that Internal medicine and Gastroenterology is definitely the career that is fit for me, while the skills that I have acquired will certainly be helpful in any type of clinical setting.

Right after arriving in the United States after getting married and excited for a clinical experience in the US, I have completed my observership in Cardiology in San Antonio along with the externships in the field of Internal medicine and Gastroenterology at the Marine Medical Center. Aside from discussing the cases, I have learned carefully how the relationships between doctors and patients are being established in taking down of the history as well as patient education. In my externship, I have gained lessons of the expected duties on intern. I have loved that experience, and looking forward to this fellowship program as well.

## Gastrointestinal Oncology Fellowship Personal Statement Sample

A high quality personal statement is a meaningful part of successful admission process as it gives your application extra boost. Here is a [gastrointestinal oncology fellowship personal statement sample](#) from experienced writers that will increase your chances.

Gastroenterology oncology fellowship  
personal statement

I was initially attracted to the field of gastroenterology oncology while I was doing research at Big University. As an intern in research in the field of molecular virology, I became really interested in the actual proto-oncogene role in cancer. During my first year in medical school, my expanded has expanded further to include gastroenterology as well as pathophysiology, and the treatment of different human malignancies.

However, ultimately, it was my work at St. Vincent Research Hospital that established my desire to become a gastroenterology oncologist. While doing a research on the late therapy effects for cancers on children, I have worked with several oncologists in the hospital. There, I became fascinated immediately with the capability of gastroenterology oncologists to create an individual treatment plan by combining knowledge of the human anatomy, histology, pathology, as well as disease stage along with the treatment history of the patient, as well as co-morbidities. While I was watching a planning session for one of the patients who was suffering retinoblastoma, I have already made a deal with myself to practice the field.

All through my clinical years, I have worked on my research at St. Mary's and have enjoyed each and every opportunity to work together with different clinicians that are involved in different types of cancer treatment. Working with the pediatric and the adult hospice patients has allowed me to develop such respect for end-of-life concerns, as well as the passion to offer palliative care medicine.

Ultimately, I believe that my intellectual development, dedication, as well as warm bedside attitude will allow me to become an integral part of a multi-discipline treatment team, and offer a compassionate care to all of my patients. I also believe that it can provide me the satisfaction that I am looking for in life.

## Surgical Gastroenterology Fellowship Personal Statement Sample

Writing a quality personal statement can become more challenging than it may seem at first, so a good [surgical gastroenterology fellowship personal statement sample](#) can be helpful to succeed in your admission procedure.

Surgical gastroenterology fellowship personal statement

A passion to impact the lives of other people positively while being engaged intellectually and challenged constantly has led me into the field of medicine. Those goals, along with the insights I have gained through years of hands-on experiences during my medical school training has eventually encouraged me to pursue a career in surgical gastroenterology.

The patients I have encountered have provided me insights to the problems I will be treating. The physicians I have worked with have also shown me the type of doctor I want myself to be. During my first day of my clerkship, I was introduced to Mr. N, who had gone through colon resection. It was my job on the team to undress her abdominal wounds every day so that we can easily monitor her healing.

Since I was just new to surgery, I only had little experience in dealing with open wounds. The thought of stuffing damp gauze to a body's deep hole in the patient's abdomen was foreign to me. Eventually, I became accustomed to it, understanding the need. Those tasks were part of my first exposure to the interest of healing.

On the surgical gastroenterology part, the operating room has attracted me the most. The capability of the attending surgeon to possibly remove and cure disease manifestations which could have easily ended the life of the patient was just inspiring. The complexity and beauty of the human anatomy has driven me to learn everything that I could regard the function and the structure of the human body. The interaction of the surgeons teaching, along with the residents have encouraged me to master the necessary techniques to provide treatment as a surgeon. While all of my experiences originally captured my imagination, I have found that dealing with complicated surgical patients are both challenging and rewarding in their own rights.

## Pediatric Gastroenterology Fellowship Personal Statement Sample

Your fellowship personal statement plays a huge role in your application process. So look at [pediatric gastroenterology fellowship personal statement sample](#) and write the best document with your personality introducing.

Pediatric gastroenterology fellowship personal statement

It has been said for a long time that we are what we eat. However, I could not understand the fact why even younger children get affected by certain problems when they only eat a limited amount of food as compared to adults. I started my discovery and exploration of pediatric gastroenterology when my two year old niece was diagnosed with diverticulitis, and need to have a big part of her colon taken off.

Since that experience, I have already started working on various non-surgical treatments, focusing on different gastroenterology related issues, particularly on the younger patients. I have studied the mechanisms that can be used in the progression of the disease. Diverticulitis is a disease which impacts more than 60% of the elderly adults. My goal is to eliminate it for good.

I am currently working at the National Health Institute, where I have been doing a research on different gastrointestinal disorders for more than six years. My current task includes the inflammatory NF-kB transcription factor as well as its role towards the inflammation of the gastrointestinal system.

My work in the field of pediatric gastroenterology will continue as it is even after I graduate from school. With the scholarship, I know I will be capable of completing multiple projects without having to worry about working really hard in order to support my classes. I have the passion for teaching, and I am currently working as a teaching assistant for a class in undergraduate cellular mechanisms.

I am looking forward to becoming a professor in this particular field, as well as the head of my laboratory, which is dedicated to possibly elucidating pathways to gastrointestinal diseases. I firmly believe that a part of studying science is being capable of inspiring others to do just the same things. I know that this fellowship will allow me to do both teaching and doing research.
