algorithm and AI-enabled app that uses tongue-twisters instead of breathalyzers to detect intoxication levels solely based on voice recordings.

Canker sore - Diagnosis and treatment - Mayo Clinic

SYMPTOMS OF CANKER SORE

Small Oval-Shaped Sore On Inside Of Mouth

Canker sores tend to be circular or oval sores located around the mouth or tongue. They can vary widely in size, from tiny dots to sores the size of a penny.

Tingling, Burning, and Sensitivity

Some people who develop canker sores report that the site where the sore develops is initially tingly and sensitive. You may also notice a burning sensation in that area before the formation of the sore.

Pain in Mouth

Most canker sores are painful to the touch. Spicy or acidic foods can worsen this pain. This pain tends to be at its worst a few days after the sores form and gradually diminishes as the sore begins to heal and close.

Shallow Sores

Although canker sores can be quite painful, they are usually shallow. If you notice that your sores are getting deeper, you may have a different, more serious oral health problem. In that case, you should talk to your doctor to determine the cause of the sore.

White Or Yellow Center

Most canker sores have a noticeable white or yellow center. The sores tend to be whitest a few days after they form, and then the color gradually fades as the sore begins to heal. But if your sores have a different color, they may not be canker sores, and you should talk to your doctor.

Usually Heals On Its Own

Although canker sores can be quite painful, they usually heal on their own. Most canker sores clear up within a week or so.

If you have sores that are not healing with time, you may have a more serious oral health issue or a problem with your immune system. Contact your doctor if you notice that your sores aren't going away after a few weeks.

www.bulksupplements.com BULK SUPPLEMENTS

Ranula A ranula is a spit-filled cyst that forms under your tongue. It can result from a blocked salivary gland. Instead of saliva draining from the gland into your mouth, it leaks into nearby tissues, forming a cyst or "bubble. " Ranulas aren't serious, and they typically aren't painful.
