for some reason, the download wont work for me both with and with out the command the window just pops up and goes or when i immediately execute the jar file it gives me the error "A JNI error has occurred, please test your installation and take a look at again"

similar for me

i had the identical challenge. after putting in jdk sixteen it really works, the primary time you run it it'll generate eula.txt and you need to edit it from false to true after which run it again

obtain this, this labored for me. https://www.oracle.com/java/technologies/javase-jdk16-downloads.html

Hey there! Is the actual file itself downloading? Does the hyperlink result in any particular error/unregistered page? If want be, you can even obtain the jar file directly from this official Mojang webpage: https://www.minecraft.net/en-us/obtain/server

Let me know how that goes for you! Cheers!

It does not work?!?!?

assist plz

Obtain this. search for the one that is your OS https://www.oracle.com/java/applied sciences/javase-jdk16-downloads.html

If anybody is getting an error while launching the server.jar for 1.17 obtain the most recent Java SE. It immediately fastened the problem
https://www.oracle.com/java/technologies/javase-jdk16-downloads.html

i have gotten this error

Error: LinkageError occurred whereas loading main class internet.minecraft.bundler.Principal java.lang.UnsupportedClassVersionError: internet/minecraft/bundler/Most important has been compiled by a more recent model of the Java Runtime (class file version 61.0), this version of the Java Runtime only recognizes class file variations up to 60.Zero

can someone tell what is fallacious?

Hey, you appear to be operating the file utilizing a unique version of java, which is not appropriate with the server file. Please be certain that that you're utilizing java 8 to your server. In case you have any further questions, please do let me know. Cheers!

Hi! I'm trying to download the jar, but it surely downloads as an explore link and it will not let me open it with java. It is supposed to download as a javascript right? how do I repair this? I perceive the remainder, I simply cannot figure out how to alter the way it downloads. Or easy methods to open the discover hyperlink in java. Thank you!
