

The Importance of Trump’s Health

The Institute of BioAcoustic Biology & Sound Health recently examined Hillary’s health amid much speculation about what was going on medically with Hillary. Interactions

BioAcoustically Speaking it was revealed that Hillary had brain damage likely from a stroke. At the request of many, we decided to provide the same kind of BioAcoustically evaluation regarding Trump.

As background for the reader who may not know about Human BioAcoustics and Vocal Profiling, the protocols were developed by Sharry Edwards, MEd. The Duke Encyclopedia of New Medicine and the Definitive Guide to Alternative Medicine both credit Edwards as being the pioneer of this very novel research that has proven that people with similar issues (diseases, toxins, traumas, syndromes....) have similar if not identical vocal anomalies.

Over the last 30 years Edwards has been amassing a database of persons who have substantiated diagnoses. Using this as a foundation, a vocal print can be compared against others who have the same maladies; physically, emotionally or mentally.

When compared to others, a score of 20 or more begins to become significant; unless the database is very specific. That is the case here with Statins; any score here is significant indicating that a Statin drug frequency may be present in the database. REMEMBER: One frequency can represent many items. It is common in the nomenclature of BioAcoustics to say, “BioAcoustically Speaking almost everything is something else”, when considering the realm of Frequency Equivalents. A numeric representation of anything is referred to as a Frequency Equivalent and if more complex than can be explained here.

Below is Trump’s BioAcoustic Evaluation:

A score above 20 is significant. Disturbing Liver evaluates the Liver Functions as an organ.							
Liver Factors BioAcoustically examines the interaction of all of the systems that interface with the Liver.							
	Cholesterol	Circulation	Inflammation	Liver Factors	Disturbing Liver	Statins	
	17	25	14	95	26	3	

This BioAcoustic comparison indicates that Liver Factors, with a score of 95, as compared to other with known Liver Issues is significantly stressed; with Circulation and Liver Function coming in a not even close second and third.

It is interesting to note that gout – a form of arthritis that is known for creating pain the big toe joints – shows up but indications are that this issues is under control.

Of significance to some people with high liver scores, the cholesterol related Mavalonate pathway shows to be stressed as a Protein and Gene.

There are indicators of high blood pressure dealing with arginine vasopressin, insulin resistance and stress dealing with Co Enz A (an energy cycle biochemical).

Vitamin C frequencies are low; along with phosphytidal choline, threonine, and Vitamin unbalance; Vitamin B12 indicators are high.

Glucose storage stress is indicated which would be part of fatty liver stress. His highest score for anyone frequency is for a note of B that indicates circulation issues at a capillary level, inflammatory proteins and a lack of liver clarity.

Three frequencies found in his chart indicate that he is on Statins or has been on Statins in the past.

Trump's Medical Report Is More Insane Than His Campaign Somehow

Donald Trump's doctor released a medical report so silly that when we asked the American Medical Association about its language, their spokesman started to laugh.

RUSSELL SAUNDERS

BETSY WOODRUFF

12.14.15 6:00 PM ET

Donald Trump's doctor appears to be just as bombastic as he is.

It's the only conclusion to be drawn from a [hilariously bizarre letter](#) that the mogul's doctor—Harold Bornstein—wrote about his yuuuugely terrific health. And the letter raises as many questions as it answers.

Bornstein, a Manhattan gastroenterologist who shared a medical practice with his father, writes he has been Trump's doctor since 1980. His father, Jacob Bornstein, died in 2010 at the age of 93. But that didn't stop Trump from Twitter-thanking Bornstein the elder for writing up his letter.

“I am proud to share this health report, written by the highly respected Dr. Jacob Bornstein of Lenox Hill Hospital,” the mogul tweeted, linking to the letter.

Trump later deleted the tweet, probably because Jacob Bornstein is dead. Harold Bornstein, however, is very much alive and says Donald Trump is the picture of

health. In the letter, he describes his health over the past few decades using language that veers from standard to bizarre.

For example, he describes Trump's recent physical exam as "show[ing] only positive results."

While it's clear he means to say everything was normal, the word "positive" is an odd use of the term in medicine. Rather, it typically means that some result or finding was present—and those findings aren't always great news (think testing positive for a disease). The wording is clearly chosen more for rhetorical effect than clear medical communication—and that choice left some experts scratching their heads.

"It's very odd for a doctor to say, 'He's had a complete medical examination that showed only positive results,'" said Jonathan Moreno, a professor of medical ethics at the University of Pennsylvania. "Normally a positive result in the language of medicine is not a good thing. Nonetheless, I will not accuse Dr. Bornstein of not writing his own letter."

Bornstein also describes Trump's "laboratory test results" as "astonishingly excellent" (without noting which tests were run). That is a weird thing to say, as not many doctors would describe themselves as "astonished" at their patient's lab results.

Like Trump, Bornstein seems allergic to detail. And there's one conspicuous absence in the letter, according to Moreno: It has no mention of whether the mogul has ever had a colonoscopy. Bornstein is a gastroenterologist—not a general practitioner—so if Trump has had a colonoscopy, Bornstein probably did it. And at 69, Trump is of age to get the routine (if unpleasant) test.

"I think that's a very reasonable question at this point for a journalist to ask: Has he had a colonoscopy?" said Moreno.

If the mogul has had one, Moreno added, voters may be curious as to whether the exam found any colon polyps and, if so, if any had to be removed. A Trump

spokesperson did not respond to a request for comment on whether the real estate magnate has had a colonoscopy or had any colon polyps removed.

The letter uses standard language to report that Trump is cancer-free and hasn't had any significant surgeries. An interesting omission, however, in a letter that goes out of its way to praise Trump's "extraordinary" strength and stamina is the status of those bone spurs that were so bad they kept him out of serving in Vietnam. Maybe they got better all on their own, as the report makes clear he's never had any orthopedic surgeries.

And then it goes completely off the rails.

"If elected," Bornstein writes, "Mr. Trump, I can state unequivocally, will be the healthiest individual ever elected to the presidency."

This is, of course, hoey. It's embarrassing that a doctor even wrote it—unless, of course, Bornstein time-traveled to the 19th century to check on Millard Fillmore and William Henry Harrison. Reached for comment regarding this, a spokesperson at the American Medical Association just giggled.

They weren't the only ones who found the comment perplexing.

"I don't want to question Dr. Bornstein," said Jeffrey Singer, a practicing general surgeon and adjunct scholar at the libertarian Cato Institute. "But doctors don't usually say that kind of thing."

"I could understand Donald Trump saying that, because that's the kind of thing he says—just like he's the smartest guy and the richest guy and all that," Singer continued. "But doctors don't usually make those kind of superlative comments." Unless, of course, you're Donald Trump's doctor.
