Dianabol is a relatively strong estrogenic anabolic steroid due to the moderate level of aromatase activity it carries. While its aromatase activity is only moderate, this conversion actually leads Methandrostenolone to be converted to methylestradiol rather than estradiol, which is far more powerful than estradiol.

A variety of non-steroid drugs are commonly found within the illicit anabolic steroid market. These substances are primarily used for one or more of the following reasons: 1) to serve as an alternative to anabolic steroids; 2) to alleviate short-term adverse effects associated with anabolic steroid use; or 3) to mask anabolic steroid use.
