

# GPS Tracking Watch For Dementia Patients

If you are looking for a way to keep your elderly loved one safe, you should consider getting a GPS tracking watch. Dementia Alarm These devices are small, lightweight, and provide real-time updates on your loved one's location. They can help you locate your loved ones, prevent them from wandering away, and reduce stress and anxiety.

GPS trackers are also helpful in avoiding dangers associated with dementia. When your loved one with dementia is out of sight, the built-in GPS can notify emergency services. Getting an alert when your loved one has left their home can be a life-saving process.

Another great feature is the ability to set up safe zones. This feature lets you define a zone - such as a house, town, or city - where your loved one can safely visit. You can also set up an alert to notify you when your loved one enters or leaves a designated area.

Another feature of a GPS tracker is the ability to track your loved one's heart rate. It can also provide verbal instructions. The watch is waterproof, and can be dropped into a body of water, up to a meter deep.

Other features you'll love about a GPS tracker include a free carrying case with belt clip. The device itself is powered by a lithium-ion battery, and should last for up to 48 hours. However, you will need to recharge the battery regularly.

GPS trackers can also allow you to receive phone calls from your loved one. Some models have a speaker system.
