Global Maintenance - USG

The GMUSG Board and members welcome you to the 14th GMUSG Conference and Trade Expo 2018. This event is now South Australia's largest regional gathering of resources and energy leaders.

2018 is the year we see opportunities flowing from major announcements last year. Since our record

Whyalla event, BHP completed the largest smelter

maintenance shut at Olympic Dam and is progressing with its southern mine development. OZ Minerals is well underway on the \$916 m Carrapateena construction and GFG Alliance is planning for a \$1 b transformation of its Whyalla mining and steel assets. You'll hear more from BHP, OZ Minerals, GFG Alliance and others during this year's conference.

We have a high quality two day program on offer and 70 exhibitors ensuring you can explore opportunities, develop business relationships and profit from doing business in the Upper Spencer Gulf.

Global Maintenance USG is South Australia's Resource

Sector Supply Cluster with members from the USG, other regions and Adelaide. We are 110 members strong with a mission to establish the Upper Spencer Gulf as a region of excellence for maintenance services and maximize South Australian participation in resources and energy sectors. We will continue to - promote member capabilities; create opportunities for supplier and customer engagement; offer member services; and promote industry collaboration.

We welcome new members, so get connected and join. Membership Application forms are available at the GMUSG Conference Booth. Alternatively apply online at www.gmusg.com or contact Mark Malcolm, Manager, at mark@markmalcom.com.au.

Port Augusta - Top Location

With its strategic top-of-the-gulf location, Port Augusta offers a healthy waterfront lifestyle at the gateway to Australia's iconic Outback, Flinders Ranges, mineral resources and renewable energy industries, making the city the top choice for lifestyle, tourism and business investment.

Port Augusta is a resilient community, overcoming challenges to forge its own future. It has undergone many changes over the years, including the recent transition from coal-fired power stations to renewable energy production. It has a strong future around a broad range of industries including tourism, the Sundrop Farms large-scale greenhouse project, road and rail transport, and as a service centre for the region. Port Augusta City Council has invested in the City's growth

through infrastructure projects including a new Port Augusta airport terminal and the Central Oval complex which is used extensively for expos, seminars and sporting events. Port Augusta City Council is also environmentally conscious. Throughout the City, 'AridSmart TM' plants grown at the Australian Arid Lands Botanic Gardens are being used in parks, gardens and traffic corridors including the highway and Central Oval complex. These low-rainfall Australian plants use substantially less water than non-indigenous plants and are grown to thrive in the dry climate.

Through the re-use of water, Council sustainably waters its parks and gardens and has a continuous supply of water, even in times of imposed water restrictions. It has established itself as a leader

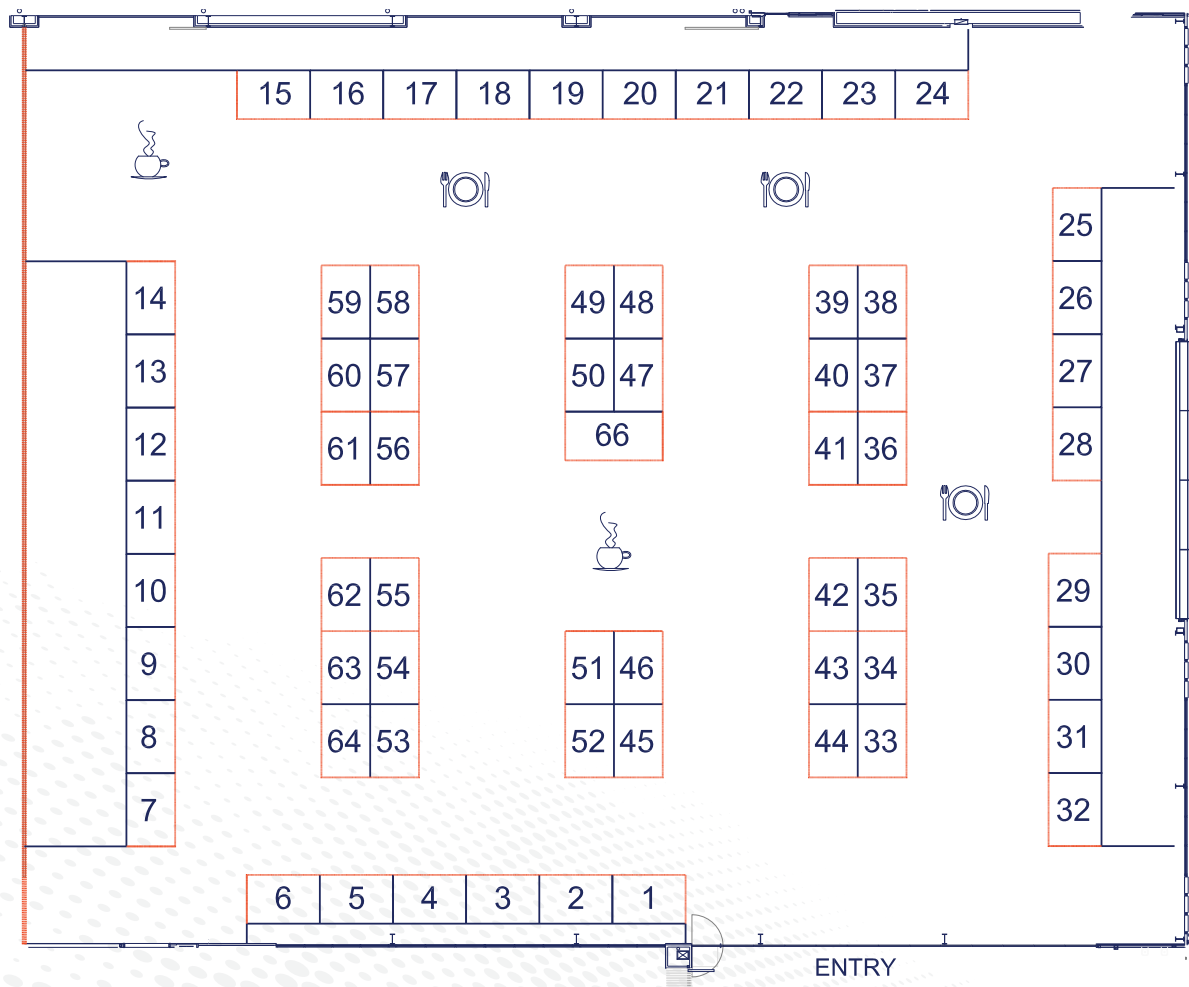

in water re-use by increasing the water production of the Waste Water Treatment Plan and constructing a dam to store up to 75 mega litres of treated waste water which can be used in peak periods.

Port Augusta City Council is also supporting community educational opportunities through the Children's University Australia program, university research projects undertaken at the Australian Arid Lands Botanic Gardens and support of the Community Owned Tertiary Education Centre due to commence in January 2020.

Port Augusta is a community supportive of new industry and business and welcomes all delegates to the Resource Industry Conference and Trade Expo 2018.

BHP OLYMPIC DAM

BHP's Olympic Dam is one of the world's largest ore bodies with significant deposits of copper, gold, uranium and silver. Employing around 3,500 people, the scale of the Olympic Dam orebody means it is a cornerstone of the resource industry and a generational resource for South Australia. In FY16, Olympic Dam produced 203 kt of copper cathode– the highest level of production since 2006 - and the operation is currently in an exciting period of sustainable growth. Through significant investment in infrastructure and with a move into the high-grade Southern Mine Area, the Olympic Dam operation will underpin jobs and economic development in South Australia into the future.

GFG ALLIANCE

Redefining the future of industry - GFG Alliance is an international group of businesses, founded and owned by the British Gupta Family. It combines some of the world's leading industrial, natural and financial resources, working together towards the delivery of a common industrial strategy.

Through its forward-looking GREENSTEEL and GREENALUMINIUM strategies, the Alliance aims to trigger the revival and regrowth of industry in the countries in which it operates in. Its main focus is sustainability - both economic and environmental - as a means of delivering long-term solutions to cyclical industries. Commercialisation of new technologies and the regeneration of manufacturing and engineering skills are also cornerstones of GFG's plan to deliver a step change for manufacturing.

ID FABRICATION

ID Fabrication is a fast growing steel fabricator and supplier of industrial access solutions. We manufacture and supply gratings, handrail systems, stanchions and other walkway infrastructure components. We are a privately owned South Australian business and all material used in our handrail systems is sourced from Australian steel mills.

Our fundamental objective is to be a steel fabrication partner of choice. Our focus and core business is infrastructure. We have a vast experience in complex civil, marine, water, resources and defence infrastructure projects.

Our key capabilities are:

- Structural Steel Fabrication
- Installation
- Access Systems
- Aluminium and Stainless Steel Fabrication
- Plant Manufacture and Repair
- Architectural Steel

INTRACT

Intract was launched in 2010 as a business unit of McMahon Services. Today, Intract is a standalone 51% Indigenous owned, managed and controlled enterprise. The civil contracting and general building organisation has bases in Darwin, Alice Springs, Adelaide, operating throughout Australia. Since its inception, Intract has provided training and employment for over 150 Indigenous people across Australia, proudly boasting a majority Indigenous workforce.

Intract provides a skilled and experienced Indigenous workforce, tradespersons, machine operators and project supervisors. Our team is experienced in the delivery of detailed and general civil works, building construction and general maintenance, with a strong track record working in remote areas across Australia.

Intract has delivered on its mission to provide long-term employment opportunities and instil confidence into local Indigenous communities through the provision of stable jobs, skills training, mentoring and support.

- Our vision – to provide long-term economic independence for Indigenous people and their communities
- Our mission – to provide effective and culturally aware employment and training within the construction industry
- Our commitment – to provide a work environment which is culturally appropriate

LEIGH CREEK ENERGY

Leigh Creek Energy plans to produce energy from coal using a process known as in situ gasification (ISG) at the Telford Basin of the previously mined Leigh Creek Coalfield.

The remaining resource in the Telford Basin at Leigh Creek is deep and no longer economic to mine using open cut mining methods. ISG technology is able to access the deep coal via a system of drilled linked wells to produce syngas.

Syngas can be used for a variety of downstream applications, such as, power generation, or as a feedstock for recognised chemical products like methanol, ammonia, fertilizers, synthetic natural gas, or liquid fuels

LUCAS TCS

Lucas TCS specialises in civil construction, contract mining, quarrying, crushing and waste management. With a reputation built with over 45 years' experience on delivering a diverse range of infrastructure projects as well as projects for Australia's leading Mining and Resource companies, at Lucas TCS we are about the solution. We approach mining and construction projects in new and innovative ways to ensure our clients have reliable, successful and cost-effective outcomes.

Our Services include:

- Civil and concrete construction
- Contract mining and crushing
- Contract maintenance
- Drill and blast
- Bulk earthworks
- Heavy haulage
- Plant hire
- Marine infrastructure

Our solutions are your success

PIPESERV

PipeServ Solutions focus on three main areas: Pipe Spools, Pipelines and Heat Exchangers. Our Products are recognised in industry standards and have proven themselves globally in being more cost effective for repairing / getting assets back up online in a quicker timeframe than traditional methods.

PipeServ specialise in three main areas, Pipe Spool repairs, Pipeline repairs and Heat Exchanger Leak Testing and Plugging. We can train and qualify your personal onsite in to carry out the repair in house, except for a few applications that are require our specialised technicians.

- Lokring ASME permanent cold repair system for joining pipe together – (equivalent to a weld with no hot work.) (ASME qualified) Feedback from End users is you looking at 30%-70% cost savings vs hot work.
- ClockSpring Clock Spring wraps which are designed as a permanent repair satisfying ASME and ISO requirement (include wraps for touch point corrosion at pipe supports, 90% external corrosion and a wrap that can cater for 100% wall loss and internal corrosion)
- Isolation and Hydro-Test Plugs – benefits include eliminating welding on end caps for testing open ended pipe and testing flange welds with a minimal amount of water (time savings on hydrotesting are as much as 80%)
- Ramfill -Steel repair sleeves for pipeline defects or leaking flanges, repair clamps etc.
- Pop-A-Plug – Engineered tube plugging system which is recommended as a best practice is ASME PCC2 (controlled install process to plug tubes without causing damage to the tube)

SACOME

The South Australian Chamber of Mines and Energy (SACOME) is the leading industry body representing companies with interests in the South Australian minerals, energy, extractive, and oil and gas sectors, including those who provide services to these companies.

Resources are South Australia's largest export group contributing significantly to the State's economy and jobs. SACOME has grown hand-in-hand with SA's resources industry for almost forty years, supporting its growth in a sustainable manner alongside SA's other valuable industries.

SACOME's policy positions focuses on four priority themes:

- State Economic Development – ensuring a pipeline of projects to support a sustainable and profitable resources sector.
- Energy – reform requires a balanced approach to provide secure, reliable and affordable energy, with greater access to oil and gas.
- Infrastructure – addressing bottlenecks to 'open up' the north and west of the state to boost productivity.
- Legislation and Regulation – influencing the development of efficient, effective and transparent regulation of the resources sector to promote investment.

We are a small, dedicated team serving the needs of member organisations. We are governed by a council that oversees organisational priorities and policy direction and are guided by many committees that focus on specific aspects of the sector. Our work is supported by Annual Sponsors - BHP, Heathgate Resources, OZ Minerals, Finlaysons, Iluka, Exact Mining Services, Fyfe, Alexander Symonds, CU River Mining, Petro Diamond Australia

SOLARRESERVE

SolarReserve is a leading global developer, owner and operator of utility-scale solar power projects, with more than \$1.8 billion USD of projects in operation worldwide.

- SolarReserve has commercialised its proprietary ThermaVault™ solar thermal technology with integrated molten salt energy storage that delivers renewable energy that is dispatchable 24/7.
- The technology is now one of the world's leading energy storage technologies and allows solar to operate like traditional fossil-fired electricity generation – except with zero emissions and zero dependence on fuel price volatility.
- The Aurora project, to be built north of Port Augusta, will utilise SolarReserve's technology to deliver power into the NEM at high value electricity periods, providing additional capacity, energy security, reliability services, and competition into the SA market.

SPENCER GULF CITIES

The Upper Spencer Gulf Common Purpose Group (trading as 'Spencer Gulf Cities') is an alliance of the Port Augusta, Whyalla and Port Pirie Councils, formed in 1998 as a forum for the three cities to progress the transition the Upper Spencer Gulf to cleaner, more innovative, liveable and economically diverse cities.

The Upper Spencer Gulf has some of the most significant mineral and renewable energy resources, natural biodiversity and landscapes in the world. In addition, the three cities of Whyalla, Port Augusta and Port Pirie have a strong heritage, culture and capability in manufacturing and provide a range of retail, sports, arts, health, education and specialist services for surrounding rural communities.

There is considerable potential to build on these comparative strengths and reposition the economy as a hub for renewable energy generation and testing; defence; intermodal transport and logistics; value-adding and innovation in agriculture; event and marine-based tourism; advanced manufacturing to support the mining and energy sectors; and as centres for delivery of government services and higher education/research.

The focus of Spencer Gulf Cities is on:

- Political advocacy on behalf of the three cities
- Local Government collaboration
- Economic transition of the USG

ST JOHN'S AMBULANCE AUSTRALIA

NOTES

This image shows a full page of a notebook or worksheet. It features horizontal blue dashed lines spaced evenly down the page. A light gray dot grid pattern is visible, particularly concentrated on the left side and fading towards the right. The background is white. There are no markings, text, or drawings on the page.
