

This Game has Amazing Controls

Mojang did a really good job in 1.15 which improved the overall performance. Minecraft gets 9/10 for performance. TNT is still causing lag spikes, so it doesn't receive the full score.

Overall gameplay: We will break this category into 6 sub-categories - open-world, story structures, enemies, animals bosses, animals.

The open-world in this game is huge. This game definitely gets 10/10 for open-world.

It's now getting interesting - Minecraft has almost no story however! You can create your own adventure maps based on stories and then share them online. However, this will be better placed under the customization category. Minecraft scores 5/10 in the story category, but I believe that's for the best.

Well, this is a difficult game. This game has some great structures like the ocean monument, shipwrecks and woodland mansions. It also includes some boring structures, like desert pyramids, that just need a little bit of variety and the same about the jungle pyramids. It also has some horrible structures, such as the desert wells which are boring, as are the dungeons. These structures can be a real challenge. Minecraft is rated 6/10. This rating is given because I am a fan of the shipwreck-torque mechanic however, I believe that the majority of the structures are simple to construct.

The game features a wide variety of enemies. Personally, I really enjoy fighting most of them. Minecraft gets 10/10 for this category, as I really like fighting them and I believe they're perfect for this game.

While the game's animal collection isn't as extensive as the enemy variety it's still very large. I believe that they should include more wild animals, and as a result, Minecraft gets 8/10 for this category.

The game has two main bosses - Ender Dragon, Wither and a few minibosses like Elder Guardian, Evoker. I don't think that bosses fit in with Minecraft however, at least one more boss is acceptable, right? Minecraft is rated 8/10 in this category.

I've made my calculations and have determined, that Minecraft receives 8/10 marks in the overall category of gameplay.

Graphics: The game has its own unique style that is very similar to 8-bit games. It can be

improved with shaders. More information is available in the customization section. Minecraft scores 10/10 in this category. Minecraft was 9/10 before 1.14 however Mojang did a fantastic job in 1.14.

Controls: The controls in Minecraft are amazing and you are able to alter them to your preference. Minecraft definitely gets 10/10 for this category.

Customization It is the most customizable game ever created. It lets you make and install mods, shaders and datapacks, as well as maps. Minecraft is rated 10/10 in this category.

Comparison of price and enjoyment Minecraft allows you to do almost anything for only \$26.95 Minecraft gets 10/10 for this category.

Judgment: Minecraft is a very customizable game that allows you can do just about anything. The final score was 9/10.
