Minecraft Mod Maker Minecraft Mod Maker

With the help of MCreator's mod generator that you can create Minecraft mods, Bedrock Edition Add-Ons, and datapacks without a single line of code. While MCreator is an all-inclusive IDE, anyone can use it without any prior programming experience. It is a fantastic tool to master Minecraft modding and to learn concepts of software programming.

Create your mods using wizards, WYSIWYG editors, and other elements of the interface that make it easier for realization of your mod idea.

Filled with features and tools

We created tools like a texture maker, which allows you to create textures in seconds because of the presets that are included. Animation maker allows you to create animated textures that are created from templates, GIFs or custom images.

The integrated resource browser makes it easy to manage sounds, textures and other assets in your mod.

Your imagination is the only limit.

With MCreator, you can do almost everything. You can make anything from an ordinary block to a dimension with mobs and biomes that can do whatever you want by modifying their AI. Make the Minecraft game as you want!

You can make anything from a simple ore extension mod to advanced technology mods that include a custom energy system. MCreator offers ways to make simple mods, and also to create custom mods using custom code. This gives it excellent ideas for Minecraft camps in summer, and is a great way for teaching programming to children while having fun.

Integrated code editor

The code editor has syntax highlighter, advanced autocomplete and the tools that every code editor comes with. You can also inspect the source code of Minecraft and Minecraft Forge from within the editor.
