

# Business Proposal to build Gaia Ships 23<sup>rd</sup> Oct 2014

## Intention

Main objectives :

- Empowerment of the light community to ease their financial hardship and allow them to break away from the control grid.
- Empowerment of the new Crystalline earth grid by physically grounding and anchoring our energetic intent with the physical construction of sacred educational centres.
- Empowerment through education of those who are unaware of the deception by providing evidence and to provide guidance and leadership when disclosure finally takes place.
- To provide spiritual empowerment, releasing people from the mind control of doctrine and church and allowing people to discover their innate spirituality.
- The new centres will create a global network of the light community, allowing and encouraging travel and providing lodging and meeting space within each centre to further raise the vibrational state of humanity and assist with its passage into 5D.
- Each centre will be used to show case suppressed and new 5d technologies
- To provide alternative medicine and healing and freely share this knowledge and outreach into its community
- To provide a working example of how higher consciousness can lead to peace and cooperation.
- To provide a model of New Earth living and ways of being, including sustainable lifestyle practices in harmony with the planet and all living beings.

## How can this be achieved?

To create a foundation to fund the construction and management of low impact structures based upon “earth ships”. These are sustainable buildings incorporating known building construction methods, cheap sustainable or recycled building materials, and do it yourself technology to provide all amenities such as water, waste water, power, cooling and heat - basically a show case for “off-the-grid” living.

Once a building is complete the team that assisted in its construction would either:

- share and assist their newly acquired knowledge working with new teams working on the new building projects or
- remain working within the completed building to ensure the overall management of the sacred centre and organize outreach to the local population and tourists.

The benefit of this proposal is that we would be providing the means to allow the light community to involve themselves in a positive project which would offer them a fair exchange for their labour and allow them to free themselves of the day job and the dependence upon the current system.

Each centre would be proof of the forthcoming New Earth and demonstrate ideas and practices that are counter intuitive to 3D thinking and programming. Outreach would be extended to schools, the elderly and the dispossessed.

Sustainable and viable alternatives would be presented and actioned to show healing and improved treatments for many of the problems of today's society.

Education will include new information and exposure of corporate greed and manipulation, suppression of new technologies and how the historical record has been corrupted and falsely recorded.

The buildings can also become a shop front for all new emerging 5D technologies and free energy technologies.

The centres will provide much needed information and education to allow the local population to assimilate the newly emerging truth and guide people to reduce panic and confusion.

The centre will provide sacred space to provide a spiritual focus and provide instruction and practice for individuals to explore their own spirituality without church or religious doctrine.

Each project should take around 3 to 4 months to build dependent upon weather, local legislation, availability of materials and the number of people involved. The technology is simple and easily taught.

Utilizing the idea of cell division of each construction team to spread knowledge and experience, it would be reasonable to expect a rapid expansion of new building projects as the compound effect really begins to kick in.

Therefore the aim is to immediately identify interested teams in each country who would like to get involved and to provide the cross pollination, i.e. to mix people from each country from the onset.

This will ensure that the global vibrational connection commences from the get go to ensure as much diversity as possible and commence the spiritual bond between all groups.

## How much to build?

Globally, there will be wild variance in the cost to purchase land, pay for materials, wages, accommodation, travel and administration costs. Therefore each team will need to assess the constraints of their own project, region and team.

## Information required, in order to apply for funding

To include;

- overall site plan.
- Information of the site and its geography.
- Its position on the crystalline grid or the relevance of its location.
- A simple layout and size of construction.
- Where the different materials will be sourced from.
- The skills and experience of the main construction team
- Also the team members willing to travel abroad to assist and swap with other teams.
- Projected programme of completion showing all stages of construction.
- A cash flow forecast showing cash requirement for construction phase.
- A cash flow forecast showing cash requirement to run the centre for the next 3 years
- And ideas of what outreach can be achieved in the local community.

The speed of construction and spread of the knowledge to complete and manage the centres will be largely dependent upon the money made available from the onset.

This is a flat organisation. Everyone receives the same rate of pay and are paid for their productivity or hours worked. Each centre would manage its affairs to agreed budgets

It will be understood that this initial period is merely a pre-cursor to the huge wealth disbursements that will manifest as this shift develops. However, the foundation will be liberating a huge and highly intelligent workforce who has basically been withholding their labour from the slave system and also through social pressures unable to talk freely about their beliefs.

With the sense of confidence that each light worker would feel to be finally among kindred's there would be an immediate health and well being benefit. It would also naturally instigate the conversation with family and friends and show tangible evidence of this hidden truth.

The light community in general comprise of intelligent and articulate beings with a wide range of skills, knowledge and wisdom and the communication skills and leadership qualities to easily accomplish and convey the purpose of these buildings.

Each centre would become an interconnected node point in a global network of spiritual fellowship. Their presence would accelerate change due to the concentrated spiritual power of the light workers now working within them, who would now be free of almost all 3D issues and able to fully embrace the philosophies of 5D.
