

# Minecraft Players Spend 400 Hours Building Genshin Impact's Mondstadt At 1:1 Scale

Members of German Minecraft build group Skyblock Squad have spent a combined total of 400 hours building Genshin Impact's city of Mondstadt at 1:1 scale. Well, actually, it's at an even larger 1:1.15 scale, as Minecraft has "limited ways of getting detail into your builds". BALONIUM.COM The project started in August and was then spread over five months.

The build is absolutely gorgeous, and some of the important buildings even have full interiors to boot. Scroll down to view the timelapse video and other images from Planet Minecraft. You can download the map to use for your own exploration.

It's not the first time we've seen Genshin Impact rebuilt in Minecraft. In November, we were amazed to see Albedo's Campsite faithfully recreated - it's still a stunning creation, but perhaps slightly less impressive after seeing all of Mondstadt recreated in the block-builder.
