How To Run A Minecraft Server From Your Android Smartphone Or Tablet

This will download the 1.15.2 Minecraft server JAR. Minecraft server list can also download the JAR here. After downloading the JAR then run this command: chmod +x mincraft_server.jar

And then:echo "eula=true" > eula.txt

Then, run: java --Xmx1024M -Xms minecraft_server.jar nogui. This will start the Minecraft server with 1GB (1024MB). If you wish to give it more or less RAM alter the "1024M" number in the -Xmx argument.

Let it begin to run.

If everything goes as planned then you'll now have the Vanilla Minecraft server on your Android device.

You can find more in-depth instructions on how to connect to your server, install Forge, and then make it publicly accessible in the original Reddit thread.

XDA >> News in-DepthHere's a step-by-step guide on how to run an Minecraft Server using your Android phone.

After beginning to root and installing custom Roms I then began to modify Android apps using Smali and later developing various utility and customization apps for Android like

SystemUI Tuner. Check me out on Twitter: https://twitter.com/wander1236.
