Testosterone enanthate is a long lasting single ester steroid. It is 7 carbons in length. What this means, is that more of the weight of the steroid is testosterone as opposed to ester weight. When taking a quantity of an esterified steroid, the total weight is a combination of both the ester weight and the steroid. Testosterone enanthate, a derivative of the primary endogenous androgen testosterone, for intramuscular administration. DRUG CLASS. Anabolic/androgenic steroids. INDICATION MALES. Testosterone Enanthate is indicated for replacement therapy in conditions associated with a deficiency or absence of endogenous testosterone.

We had to change hospitals so I could deliver closer to home, the pandemic meant no family member could be with us. The both of us were on our own and we had to now be monitored by a new gynaec. She was relaxed, confident and conversed with my gynaec to ensure I was comfortable.
