

Low-cost Provera Sweden for Every Pocket

Medroxyprogesterone Characteristics. A white or off-white crystalline powder, unscented, stable in air. dissolves in acetone and dioxane, partially - in ethanol and methanol, it is tough - in ether, insoluble in water. Pharmacological action - contraceptive, antitumor, progestogenic. Prevents the release of gonadotropins by the anterior pituitary gland, stops follicle growth and ovulation, advances thinning of the endometrium. In high dosage amounts with normal estrogen content, it causes the transformation of the proliferative endometrium into the secretory endometrium. The manifestation of androgenic and anabolic effects is possible. When taken for contraceptive, it cuts down on the potential risk of -inflammatory conditions of the genital bodily organs, vulvovaginal infections. Considering the high birth control efficacy and the peculiarities of the effect on hormone-dependent internal organs, the use in women of late reproductive system and older age is more effective, specially in the presence of hyperplastic processes of the endometrium, uterine fibroids, endometriosis. Most women with endometrial hyperplastic processes have partial or complete regression. In breast cancers, there is a correlation between the usefulness of therapy and the concentration of estrogen and progesterone receptors in tumour tissues. Discover best place to purchase Medroxyprogesterone without doctor's prescription on-line: <http://setablett.com/> Medroxyprogesterone is utilized as contraceptive means, specially in females of late reproductive age; inoperable, recurrent and metastatic carcinomas of the endometrium and kidney (additional palliative treatment), hormone-dependent varieties of persistent cancers of the breast in postmenopausal women, prevention and treatment of osteoporosis in the postmenopausal interval (in combination with estrogens and calcium preparations), protection against endometrial changes through replacement therapy estrogens in postmenopausal ladies.
