

### ***Proof of JT's Insider Trading***

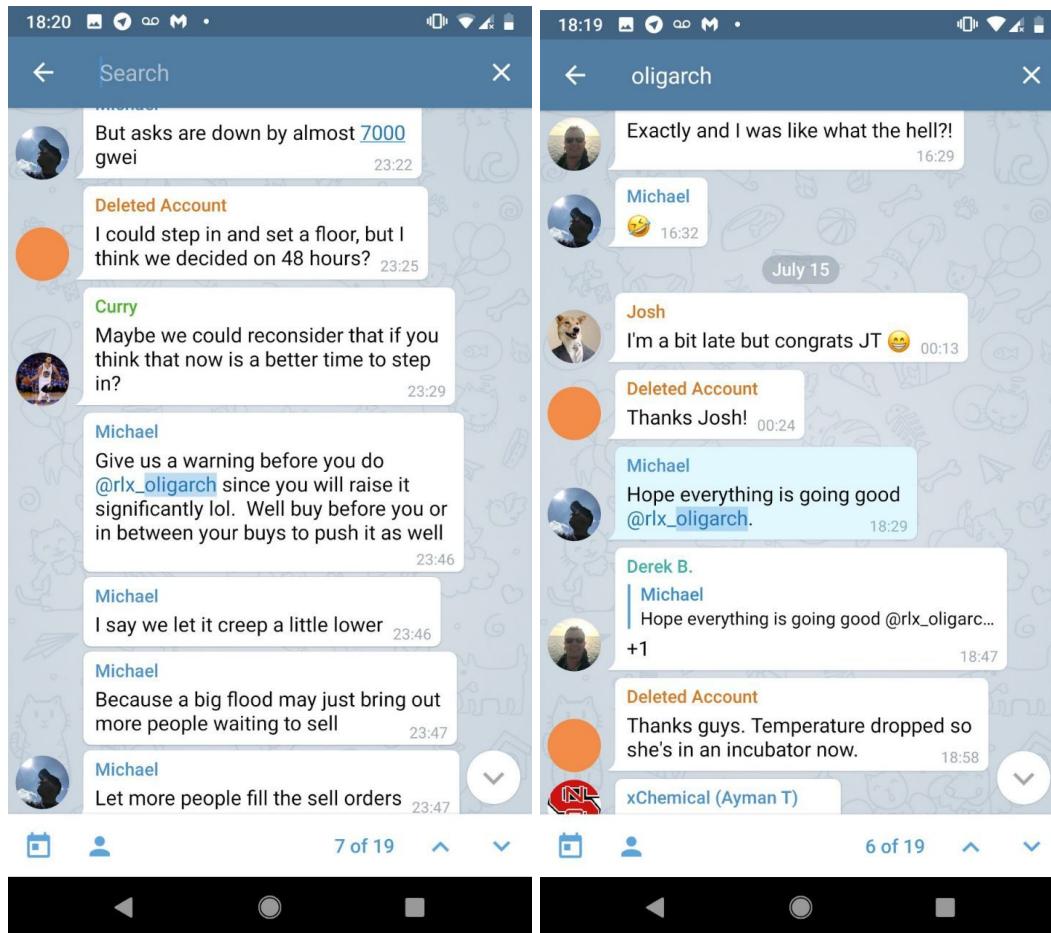

*Claim: A member of the Relex team, JT, has been involved in insider trading.*

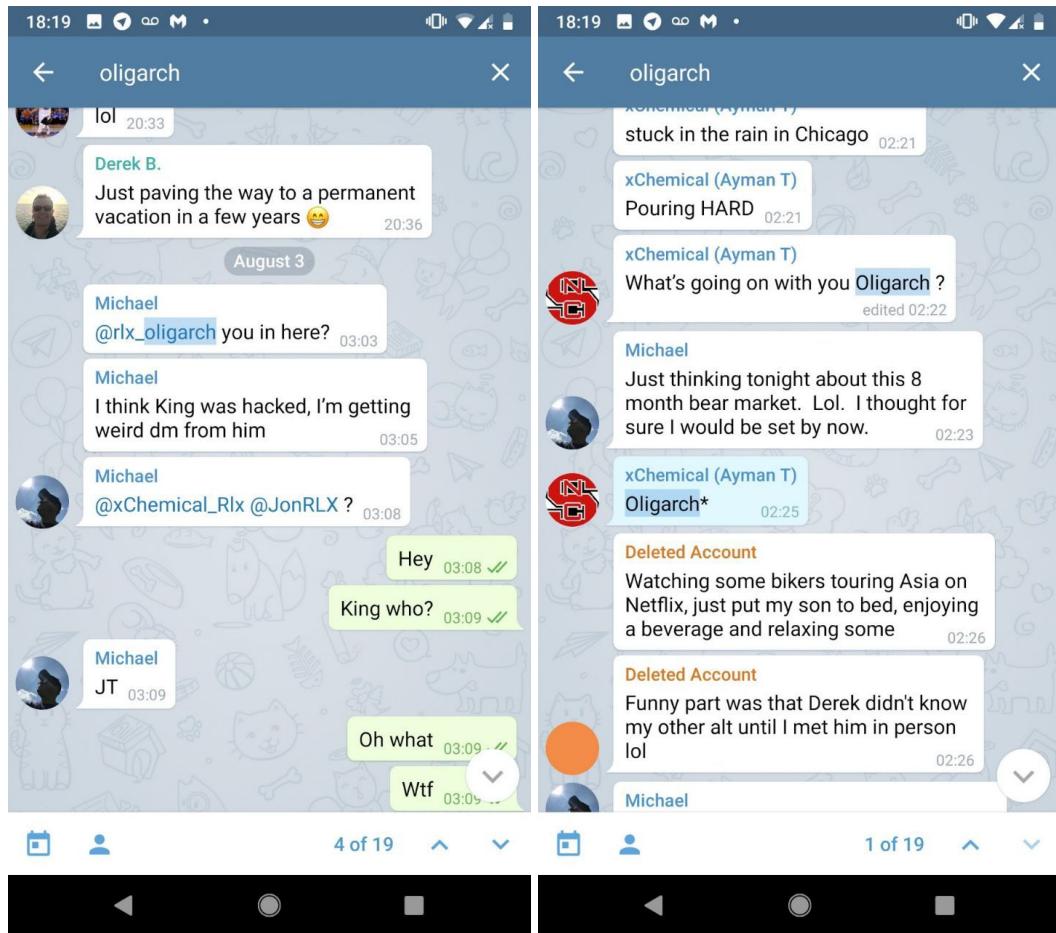

There is reason to believe that the CMO of the project RLX has been involved in insider trading between July 2018 and September 2018. He did this by purchasing large amounts of RLX in the beginning of August after suppressing the price at the end of July down to his low buy order. Two weeks after a purchase for 78 ETH worth of RLX at a very cheap price, RLX gets listed on LAToken, which was part of JT's responsibilities. Furthermore, he continued buying/selling until the start of RLX's 30 days straight of announcements, which again JT was in charge of. While the price was running up during this time, JT was slowly selling at a profit and on September 10th he was dumped into by the team selling (how coincidental) for a total of ~136 ETH worth of RLX at the same price he bought in at the end of August. He then took these RLX tokens and dumped them on September 16th. He also did this through manipulating the community using alt accounts to "scare people" into selling or using these alt accounts to talk good about the project to entice users to buy. He directly and indirectly manipulated the RLX price with his knowledge of future announcements to accumulate more RLX.

All of the trades, transactions, and screenshots are listed below.

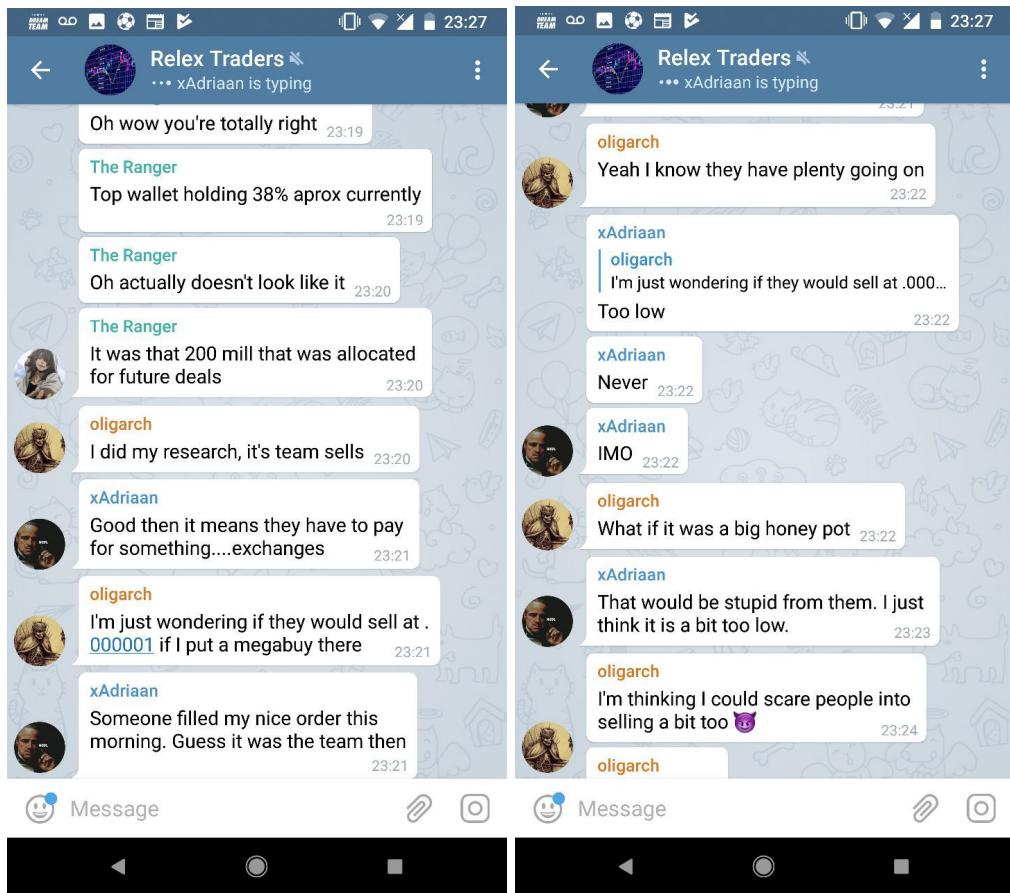

First we need to establish that Oligarch is in fact JT. This is seen below:

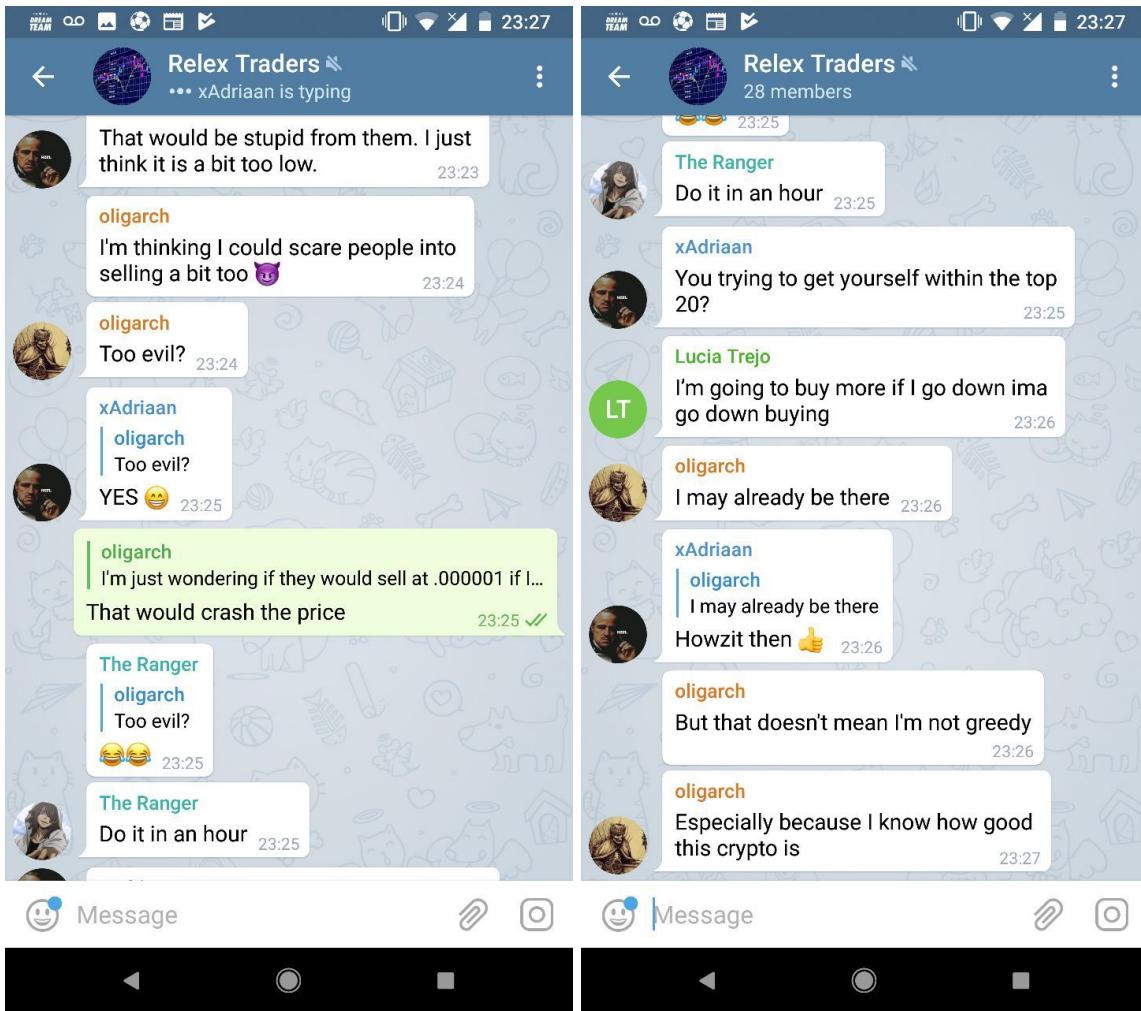

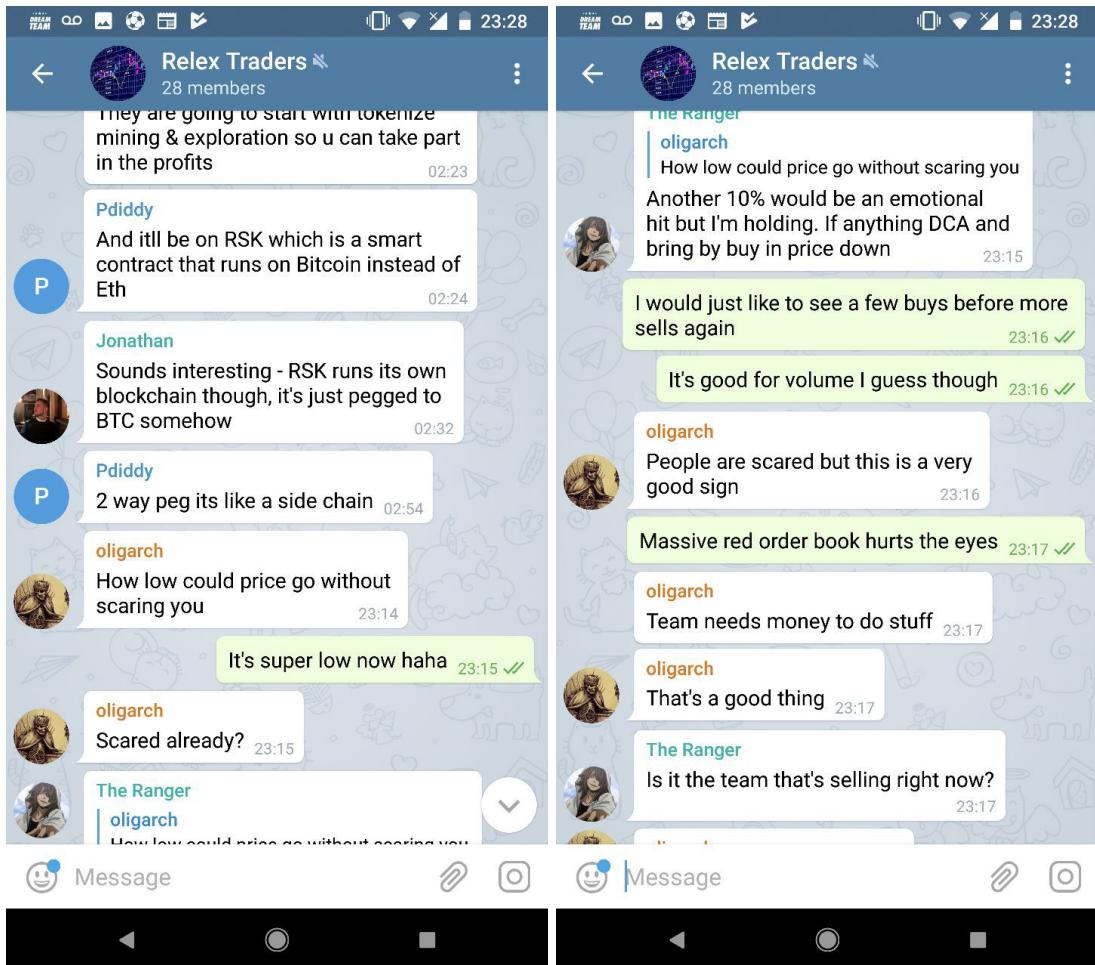

Now we will see him trying to get cheap buys by scaring people and pushing the price down:

In the days leading up to August 5th, the price was being suppressed by the wallet belonging to Oligarch, which was JT's wallet. Finally, on August 5th, JT got a 78 ETH buy order filled for RLX. This is just 2 weeks before being listed on LAToken, which at the time was big news. JT is the one who handles the exchange listings, so he would know this information weeks in advance.
