Foreword

This document started because I wanted to look at and compare player's performance at the conclusion of the 2020/2021 season of the A-League. I was curious about how each player fared throughout the season and so started this project that led to the creation of this document. If any particular statistic chosen or excluded seems odd please contact me on Twitter ([@ComeFromALeague](https://twitter.com/ComeFromALeague)) so I can update this document as I hope for this project to evolve with the involvement of the A-League community. Some errors may have occurred during this process as I am relatively new to data analysis and coding, so please note any errors you find as I strive for this document to be as accurate as possible.

Thank you for taking the time to read this report.

- Jack Stewart

Definition of Basic Stats

Name:

The name of the player might have an asterisk next to it and appear in italics instead of bold. This is to indicate the player completed less than 500 minutes of game time for this season. **Having played less than 500 minutes might skew the data of a player either positively or negatively. It does not mean we cannot use this information but rather it should be taken with a grain of salt.**

Club:

The club that the player played their last game of the season for.

Age:

Age of the player at the end of the season.

Position(s) (Category):

A list of positions played by the player during the season and a grouped category of the positions so this player can be compared to others in a similar position. **Grouping players into categories will help compare players better as a comparison between a striker and a defender will give a skewed impression of their abilities.**

Note: Positional Categories are skewed defensively - if the player plays any amount of minutes in a defensive position they will be labeled a defender regardless of how many minutes they played in midfield or attack. Similarly they will be labeled a midfielder instead of an attacker if they many any minutes in midfield and only labeled as an attacker if that is the only position they played that season.

Minutes Played (Full Game Equivalent):

Total number of minutes played over the season and that number divided by 90 to give a rough equivalence of a number of “full games” the player would make. **Given that players don’t always play a full 90 minutes in each game comparing players on a per game basis can give a skewed result. Also comparing players on raw numbers without accounting for the number of minutes played in the season will skew the data to favour those who played every minute of the season, which is an important metric to note but not always what we want.**

Note: Players with less than 150 minutes played in this season were omitted from this document.

Goals and Assists per 90:

An assumed understanding of goals and assists is expected of the reader but a per 90 (minutes) metric is given for a better comparison of player’s goals and assists.

Definition of Advanced Stats

npxG:

Non-penalty xG looks at the expected goals of non-penalty shots. xG is a measure of the likelihood of any shot resulting in a goal. **Looking at a player's npxG per 90 gives insight into how many goals in the long run a player is likely to score every 90 minutes.**

xA:

Expected assists is the cousin to xG and looks at the likelihood of a given pass to result in a goal. **This stat is included due to the lack of control an 'assister' has over whether a potential assist results in a goal or not**

Receptions:

Receptions are the number of touches of the ball a player makes in the opposition's box per 90 minutes.

Shot Volume:

Shot Volume is the number of shots a player makes per 90 minutes.

Ball Retention:

Ball retention is the number of times per 90 minutes a player successfully retains possession of the ball when an opposition tries to dispossess the player. The percentage in brackets after the stat is the success rate of this given stat.

Progressive Passes:

Progressive Passes is the number of successful passes per 90 minutes that a player makes that "progresses" the ball towards the opponent's goal. Wyscout counts this as any pass over 30m completely in the player's own half, any pass over 15m that crosses the halfway line or any pass over 10m completely in the opponent's half. The percentage in brackets after the stat is the success rate of this given stat.

Penetrative Passes:

Penetrative Passes is the number of successful passes per 90 minutes that a player makes that begin outside the opposition's box and end into the opposition's box. The percentage in brackets after the stat is the success rate of this given stat.

Progressive Runs:

A progressive run is a dribble that finishes closer to the opponent's goal than it started. Progressive Runs tracks the number of successful dribbles per 90 minutes. The percentage in brackets after the stat is the success rate of this given stat.

Interceptions:

Interceptions tracks the number of interceptions and shots blocked per 90 minutes.

Aerial Duels:

Aerial Duels tracks the number of successful aerial duels a player makes per 90 minutes. The percentage in brackets after the stat is the success rate of this given stat.

Defensive Duels: Defensive Duels tracks the number of successful duels per 90 minutes where possession begins with the opposition and ends up with this player. The percentage in brackets after the stat is the success rate of this given stat.

Definition of Goalkeeping Stats

Goals Prevented:

Goals prevented is the difference between xG against and the number of goals conceded by the goalkeeper.

Shots Against:

Shots against is the number of shots faced per 90 minutes. The percentage in brackets after the stat is the save rate for the goalkeeper.

Short Passes:

The number of successful passes under 45m per 90 minutes. The percentage in brackets after the stat is the success rate of this given stat.

Long Passes:

The number of successful passes over 45m per 90 minutes. The percentage in brackets after the stat is the success rate of this given stat.

Definition of Comparison Stats

The third and fourth columns of each table contains a number ranging from 0 to 100 which represents the percentage of the league that this player is better than for this particular stat. The third column titled **Entire League Comparison** compares the given stat against all players (including goalkeepers) in the league regardless of their position. The fourth column titled **Positional Comparison** compares the given stat against only other players in this player's given positional grouping (i.e. Goalkeeper, Defender, Midfielder or Attacker) giving a different comparison for some stats as comparing attacking abilities of non-attackers to attackers will result in a skewed number.

91-100
61-90
41-60
21-40
0-20
N/A

Above is the colour gradient to help easily gleam how good a player is compared to others.

Adelaide United

J. Delianov

Club: Adelaide United

Age: 21
