The ideal dosage of Anavar for men is 100 mg per day and women can expect dramatic results with just 3-10 mg per day since virilization is not a concern with Anavar because of its very mildly androgenic behavior. This steroid could be best used in bridges between cycles at low doses of 10-15 mg.

Since the last week of the course, it is recommended to buy Tamoxifen (or buy Nolvadex), use it at the rate of 10 mg per day, to resume Testosterone production, within 2-3 weeks. You can take the drug with other steroids (for example, you can buy Sustanon or buy Testosterone or buy Primobolan) to increase the effectiveness of weight gain courses.
