

Would You Like To Offer Us Your Opinion?

Minecraft Server is basically a free alternative to Minecraft Realms with which you'll be able to create your own server inside Minecraft's open world, so as to play with your mates on-line and craft collaboratively.

Complete management over your Minecraft world.

If you are fed up of playing alone on this sandbox game, with this software for Windows you possibly can generate a completely customizable server, where you select the foundations and to which you'll invite any user in your same native or home community.

What things are you able to configure with Minecraft Server

From the server.properties file that installs in the folder where you have launched the Minecraft Server .exe file, you possibly can configure totally different choices to create the server, nevertheless you want, with full management over banned, allowed and penalized players, in addition to having the ability to ship group messages to all of them directly:

- Maximum quantity of gamers per server.
- Maximum peak of the buildings.
- Sport mode.
- Level sort.
- Problem degree.
- Map size.
- Server title, IP and port.
- Requires Minecraft.
- Requires Windows XP or above.
- Requires Java 1.6.0.
- To have the ability to run the server, it's a must to open the EULA text file and accept the user circumstances, altering the sphere false to true.
