

What Are The 4 Areas Of Finance?

The four main areas of finance are venture capital, private capital, investment banking, and real estate. Venture capital is the term used for financing companies to obtain start up capital. Private capital is money made available for smaller companies by individual investors.

International finance refers to the processes involved in managing the monetary supply, use, and exchange of internationally traded commodities. It includes: importation and exportation, trade deficit, foreign direct investment, foreign direct deposit, currency exchange, and central bank interest rates. The last three areas of finance have cross-overs and overlapping characteristics. Finance that is dealt with locally, such as microeconomics, tends to be more localized and short term than that which is global in scope and involves long-term planning and execution. Cross-overs occur when there is interchange of techniques and systems used in different locations.

The main article continues to include risk management, which includes: identifying, analyzing, and controlling risks. In order to understand how the various types of risk management relate to one another and how they affect an organization, it is necessary to have a basic understanding of the four areas of finance mentioned above. This main article briefly covers the topics in areas of financial economics.

Private money is raised, used, and lent by businesses, individuals, corporations, and institutions. There are three interrelated areas of finance that relate to private money.
