

# Minecraft: Will The RTX Beta Be Available On Java Edition?

Minecraft Java Edition players want to know if they'll be able to enjoy the beauty of the RTX beta, but Realism Mats' textures are a great alternative.

Nvidia's Minecraft RTX beta has been made available to the Windows 10 edition. Everyone seems to agree that it's stunning beauty makes Mojang's title look like an entirely new game. Java Edition loyalists, however, are left in the dark wondering when and if they'll be able to see the graphical improvements. While it's annoying for original owners that they can't enjoy Nvidia's beta, there are fantastic alternatives available such as stunningly realistic textures by Realism Mats.

Microsoft recently showcased the ray tracing capabilities on their next-generation console with Minecraft. The showcase gave Minecraft a completely new look and almost unrecognizable feel. PC gamers can now enjoy the graphical improvements of soft and hard shadows, as well as global illumination, but your machine must first meet very specific requirements.

You must also have the Windows 10 version, and not the Java edition. Java owners can still get the Nvidia Beta, but only for the above edition.

Is Minecraft RTX available in Java Edition?

The Minecraft RTX beta version from Nvidia isn't available for the Java Edition.

Mojang has released the RTX beta for Minecraft for Windows 10:

"The Minecraft Nvidia FAQ says that modders from the Java community have made some amazing modifications to the textures, lighting, and other aspects of the Java Edition game."

"This is a source for inspiration for our new work with NVIDIA/Render Dragon. While Java Edition does not natively support ray tracing, this beta introduces native DirectX ray tracing support into Bedrock.

We hope to give the Bedrock community the same spark and similar abilities to see their own point-of-view and express themselves through raytracing and HD textures.

Windows Central reports the RTX beta for Windows 10 is now available, but not Java. Windows Central also reports that original owners have a limited-time upgrade program to obtain the required version for free.

You can still experience RTX if you don't have the Windows 10 edition, but you can depend on the community to get it.

How to get ray-tracing for Minecraft Java Edition

Downloading community textures from Realism Mats can help you get RTX in Minecraft Java Edition.

MINECRAFT

The Java Edition does not have the RTX beta, but the Realism Mats textures are a stunning alternative to allow you to experience ray tracing.

The available textures can only be downloaded by joining Patreon's \$8 tier. You can also sign up for \$30 to get a neat shirt. You will also need SEUS PTGI from Sonic Ether as well as OptiFine.
