Users have often reported that their PC screen has got the flickering issue. However, this is usually caused by a display driver issue or an incompatible app. Well, all of these issues can be easily troubleshoot on your own. But in the event, if you are unable to do so, then you can always contact the [Computer technical support](#) and get assistance on fixing the screen flickering issue. Moreover, read further to know about the simple methods to resolve the screen flickering issue.

Methods to Fix Screen Flickering Issue In Windows 10 PC

Reinstall the display driver

- Go to the taskbar's search bar, then enter the device manager, and open it.
- Select the arrow to expand the Display adapters section, and then right-click on the adapter, and then select Properties.
- Go to the Driver tab, then select Roll Back Driver, then select yes, and then reboot PC.

Update the Display Driver

- Navigate to the Device Manager, then click on the arrow to expand Display adapters.
- Next, right-click the adapter, then select Update, and then let the update finish.

Uninstall Your Display Driver

- Open Device Manager, and then expand the Display adapters section, and then right-click on the adapter.
- Select Properties, then click on Delete the driver software for this device check box, then click on OK, and then reboot the PC so that the Windows can reinstall the driver itself.

In case, if you can't reinstall the driver, then contact the experts at online computer tech support and get relevant help.

Uninstall an Application

Sometimes, a particular app's compatibility issue can cause a screen flickering issue. Hence, uninstall it, and then reinstall it.

- Go to Start, select Settings, and then Apps.
- Navigate to Apps & features, wait until your apps show up, and then scroll down to the list and find the app that you want to uninstall.
- Now, select the app, and then click on Uninstall and again click on it to confirm the uninstallation.
