

**Important:** For long lasting dispensing time, the liquid volume should be around **500ml**. If the liquid in tank is too much, the air storage volume will be decreased, and the foam spraying time will be reduced accordingly.

**Trouble Shooting:**

1. *Abnormal sound inside tank, when pump the handle to increase the pressure.*

**Root cause:** The seals inside pump is worn, or the grease inside pump is cleaned up.

- Solution:**
- a. Replace the seal (Replacement seal is supplied with the product).
  - b. Giving grease/ oil to the pump.

2. *No foam generated.*

**Root cause:** Mesh Filter / Inlet Filter / Air Hole may be blocked by dried chemicals.

**Solution:** Clean the Mesh Filter/ Inlet Filter / Air Hole.

**Please note:** This product can freeze at 5 degrees. To correct, place in a bucket of warm water until consistency returns to normal.
