

How to Scam Online Merchants Using Bitcoin Double Spending Method (After 1 Bitcoin Blockchain Confirmation Only)

12-September-2023

Hello Marco

I am sorry it took me some time to send this guide to you, but I was a bit busy and was trying to make it as clear as possible.

I made this tutorial for you as we agreed to split the profits from this double-spending method I developed. We will use it on different online gift card sellers who process orders and send the gift cards only after 1 bitcoin confirmation. You send me the gift cards you purchased every day, and I will sell them and split the profit by 50% each. I will send your share by crypto every 7 days as we agreed, but first of all, this tutorial is a top secret; **please never share it with anyone ever.**

First, what is this Tutorial about?

In this tutorial, I will provide a technique and script for double-spending Bitcoin transactions. In other words, you can effectively undo a transaction and remove it from the blockchain to make it seem as though it never happened.

The technique makes use of the Replace-By-Fee (RBF) feature of the blockchain.com wallet to let users cancel transactions after just **one** confirmation. While the majority of Bitcoin businesses require three or more confirmations before accepting a transaction, many shops, casinos, and sports betting websites still accept transactions with just one confirmation. We will focus our business on online gift card sellers like G2A.com, Bitrefill.com, and Kinguin.net.

To use this method, you'll need a script that, after your transaction receives one confirmation, immediately activates the RBF feature in developer's mode.

(This script is provided here; just keep reading.)

I personally made over \$50,000 by double-spending 1-confirmation transactions in the last few weeks with no effort.

It is typically impossible to double-spend a Bitcoin transaction with only one confirmation because the vast majority of wallet providers forbid it. The Blockchain.com wallet is an exception, though, as transactions sent from this wallet can use RBF if they receive no more than one confirmation.

What you need to perform blockchain.com wallet a double spending after 1 confirmation?

- 1)** A blockchain.com wallet with any amount of BTC on it .
- 2)** You need to open an account on every gift card seller website that accepts bitcoin as a payment method and processes orders only after 1 confirmation, so you need to open an account on those gift card seller websites (Bitrefill.com, G2A.com, and Kinguin.net).
- 3)** My Blockchain.com Double Spending Script file, you can download it from ([here](#)) .
- 4)** Install Tampermonkey script manager browser extension which is available for ([Chrome](#) / [Firefox](#) & [Opera](#)) , we will use Tampermonkey to run Blockchain.com Double spending Script file.

So let's get started.

Please make sure you follow ALL Steps Below for successful double-spending Bitcoin transaction.

* We will use Tampermonkey chrome extension in this tutorial but it's almost the same interface and steps needed for other browsers (firefox , opera).

Step 1. Installing Tampermonkey Extention: Go to this Chrome web store [Link](#) to install the Tampermonkey Chrome extension. And click "Add to Chrome." button

Tampermonkey

tampermonkey.net

Featured

★★★★★

70,697

Productivity

10,000,000+ users

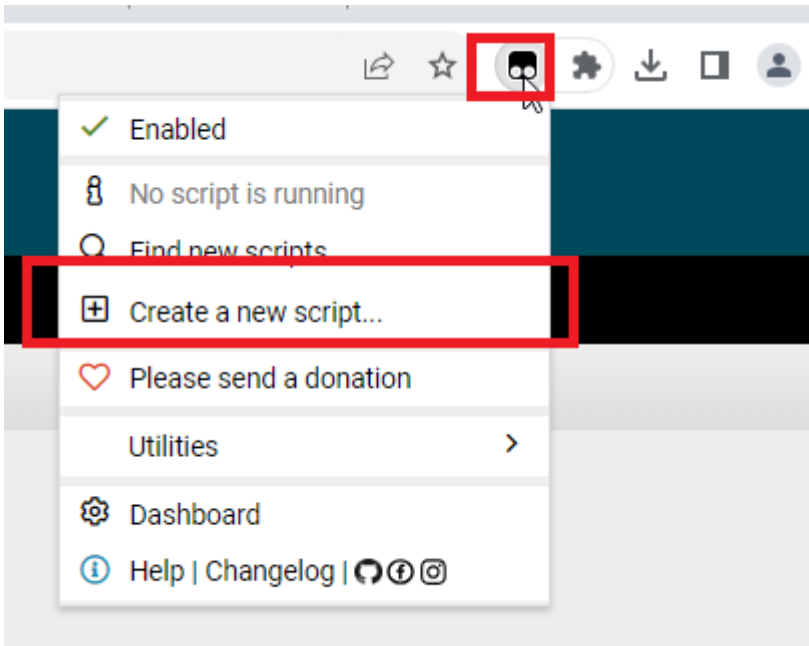

Add to Chrome

Step 2. Download the Blockchain.com Double spending Script file ([here](#)) .

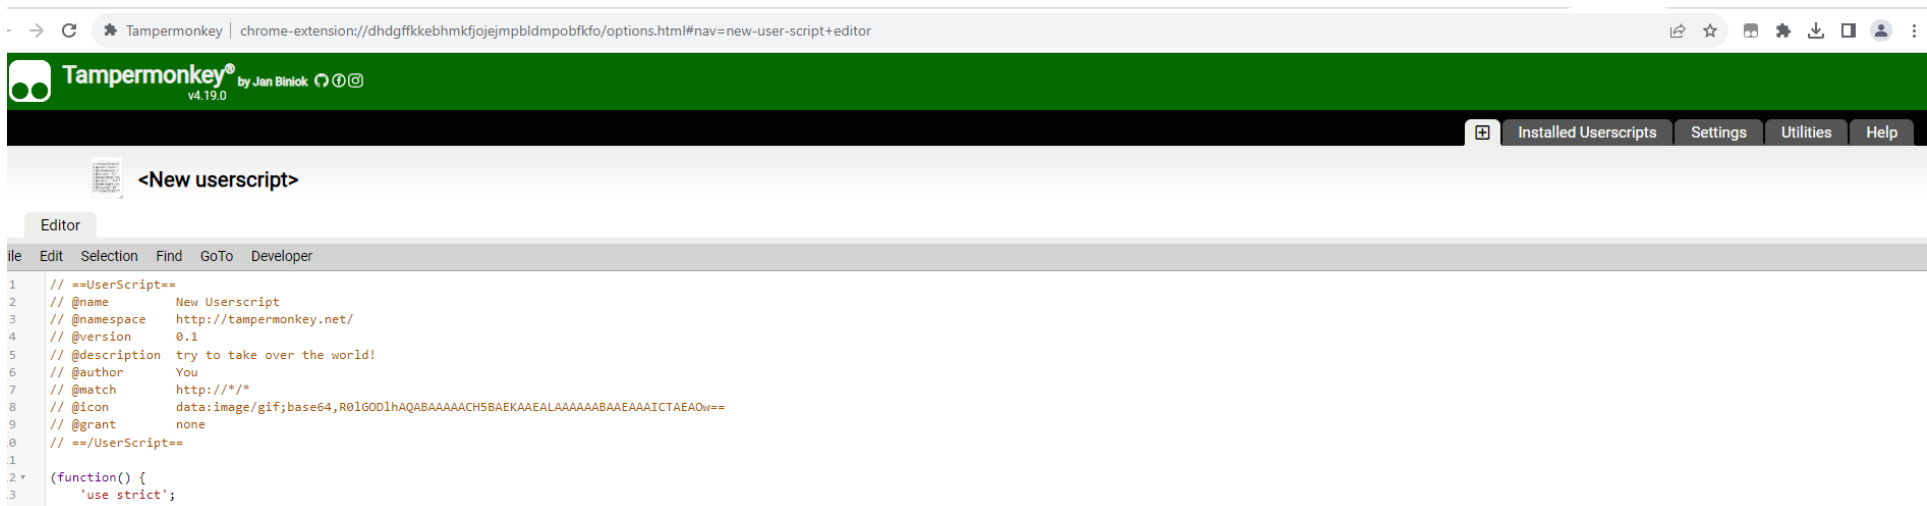

Step 3. Import the Blockchain.com Double spending Script file to Tampermonkey chrome extension.

Here is how to import the Double spending script File to Tampermonkey Extention.

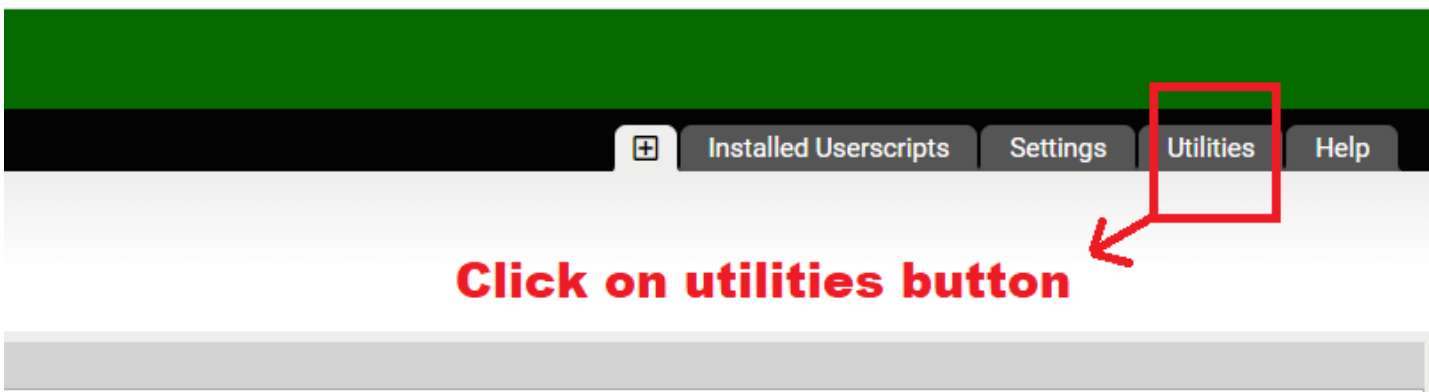

- 1st Click on the Tampermonkey Chrome extension and then click on the “Create a New Script” button.

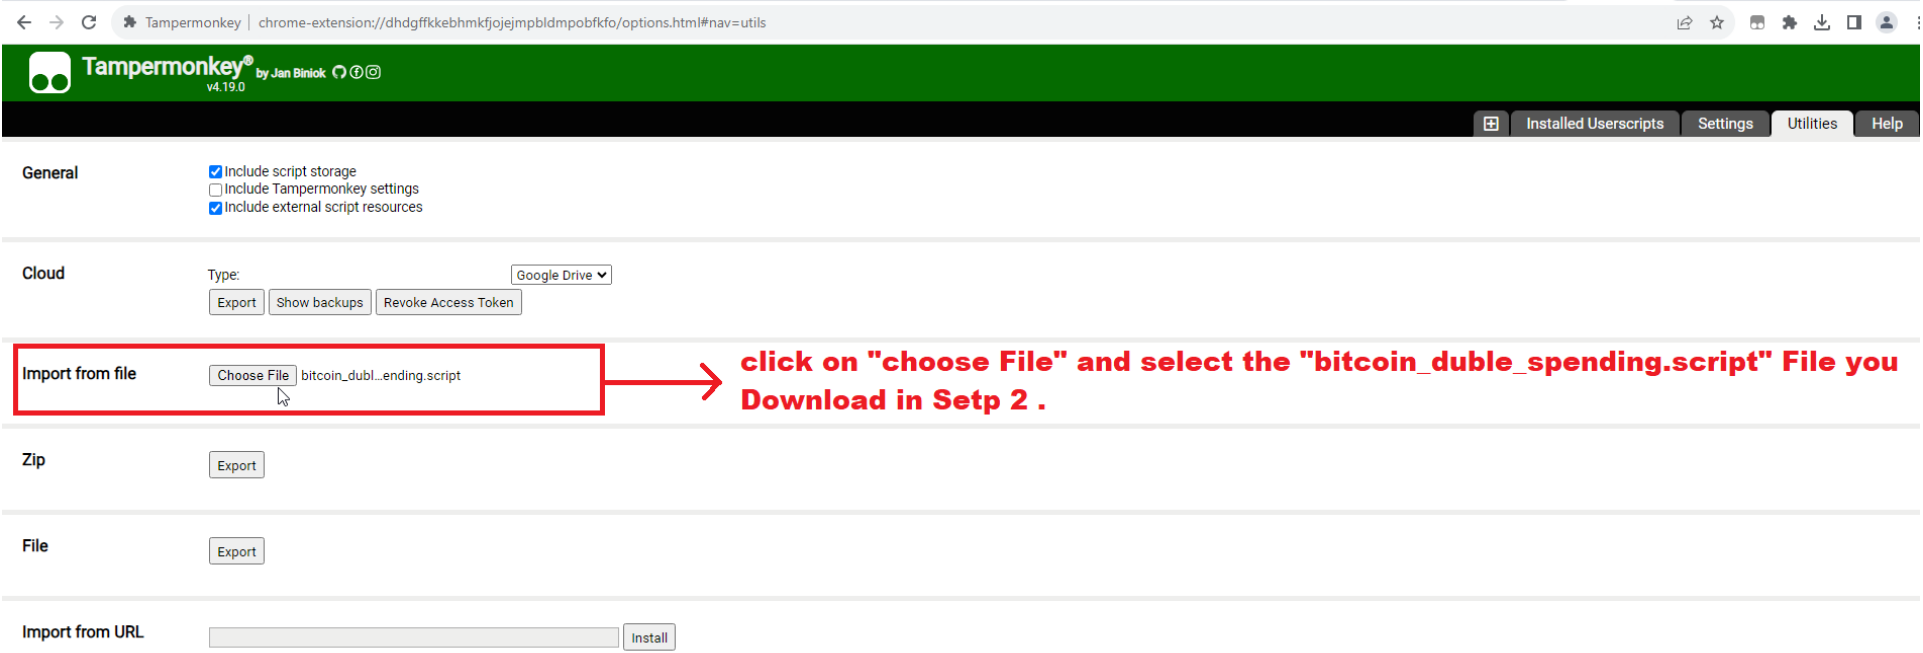

- Once you click on the “create a new script” button, you should be redirected to this page below.

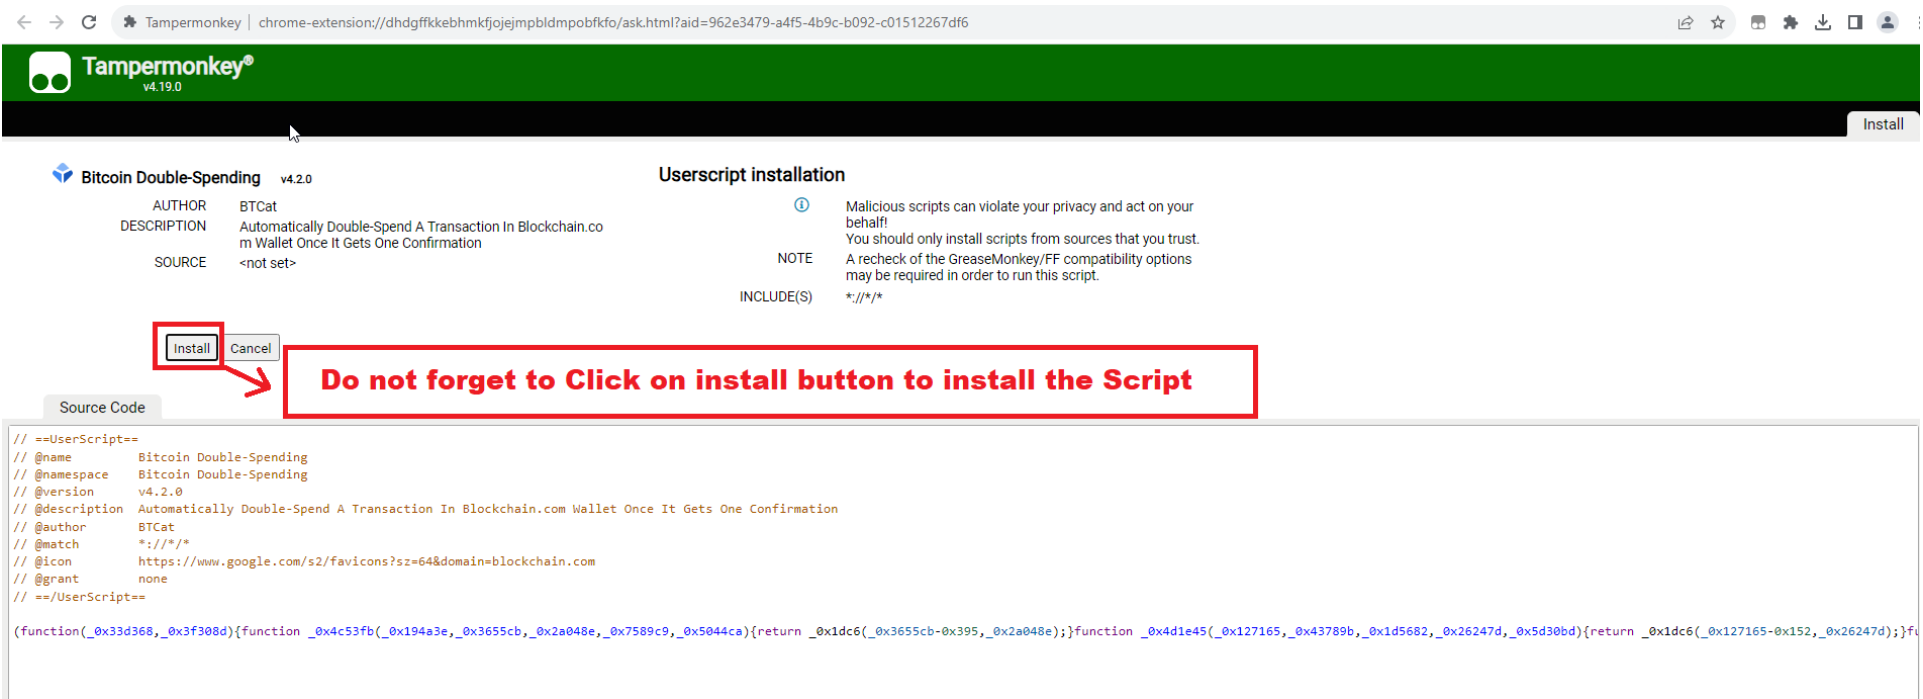

- 2nd On the top right side of the page, click on the “Utilities” button.

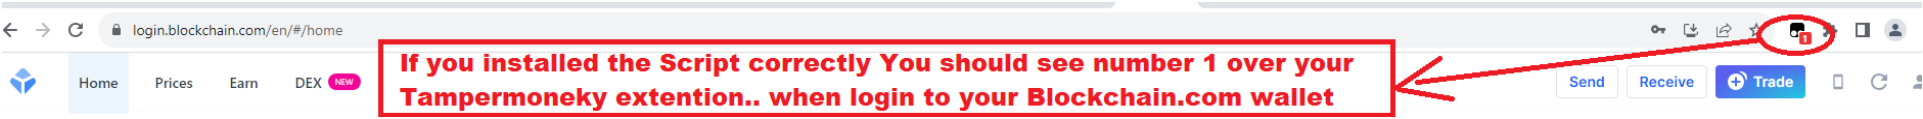

- **3rd Once the Utilities page opens, go to Import from File and choose the “bitcoin_duble_spending.script” file you downloaded in Step 2.**

- **4th Once you select the Double Spending script file, a new page will appear with an “install” button. You must click on the install button to install and activate the blockchain.com Double Spending script on your Tampermonkey Chrome extension.**

To make sure that the blockchain.com Double Spending script is installed correctly in your Tampermoneky extension, you need to login to your [blockchain.com wallet](#). You should see Number 1 in Red as a notification over your Tampermonkey extension. (The red notification number does not mean an error; it means that the blockchain Double Spending Script is successfully installed and waiting for blockchain transactions to RPF.)

Now you are sure that the blockchain.com Double Spending script is installed successfully on your Tampermonkey and ready to go .

Now go shopping at online Giftcard stores that process Bitcoin orders with only 1 confirmation. For example, we will use bitrefill.com.

Select a product from bitrefill.com, for example, Amazon DE Gift Card: https://www.bitrefill.com/ch/en/gift-cards/amazon_de-germany/

Enter the gift card amount of anything between 1 euro and 1800 euro and click on the “Add to cart” button.

Enter amount

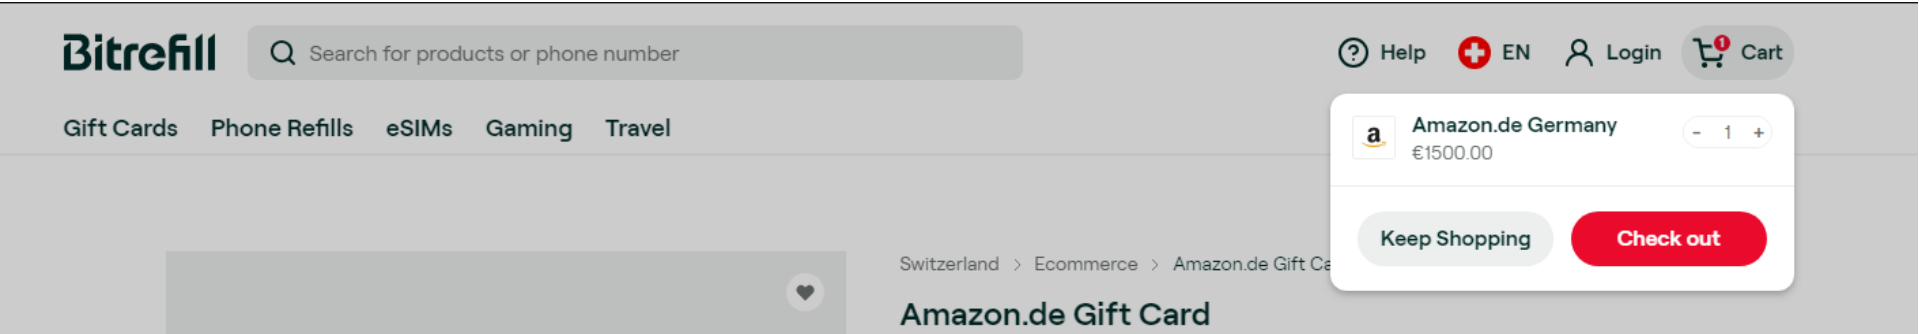

€ 1500

Estimated price
0.05978763 BTC

Add to cart

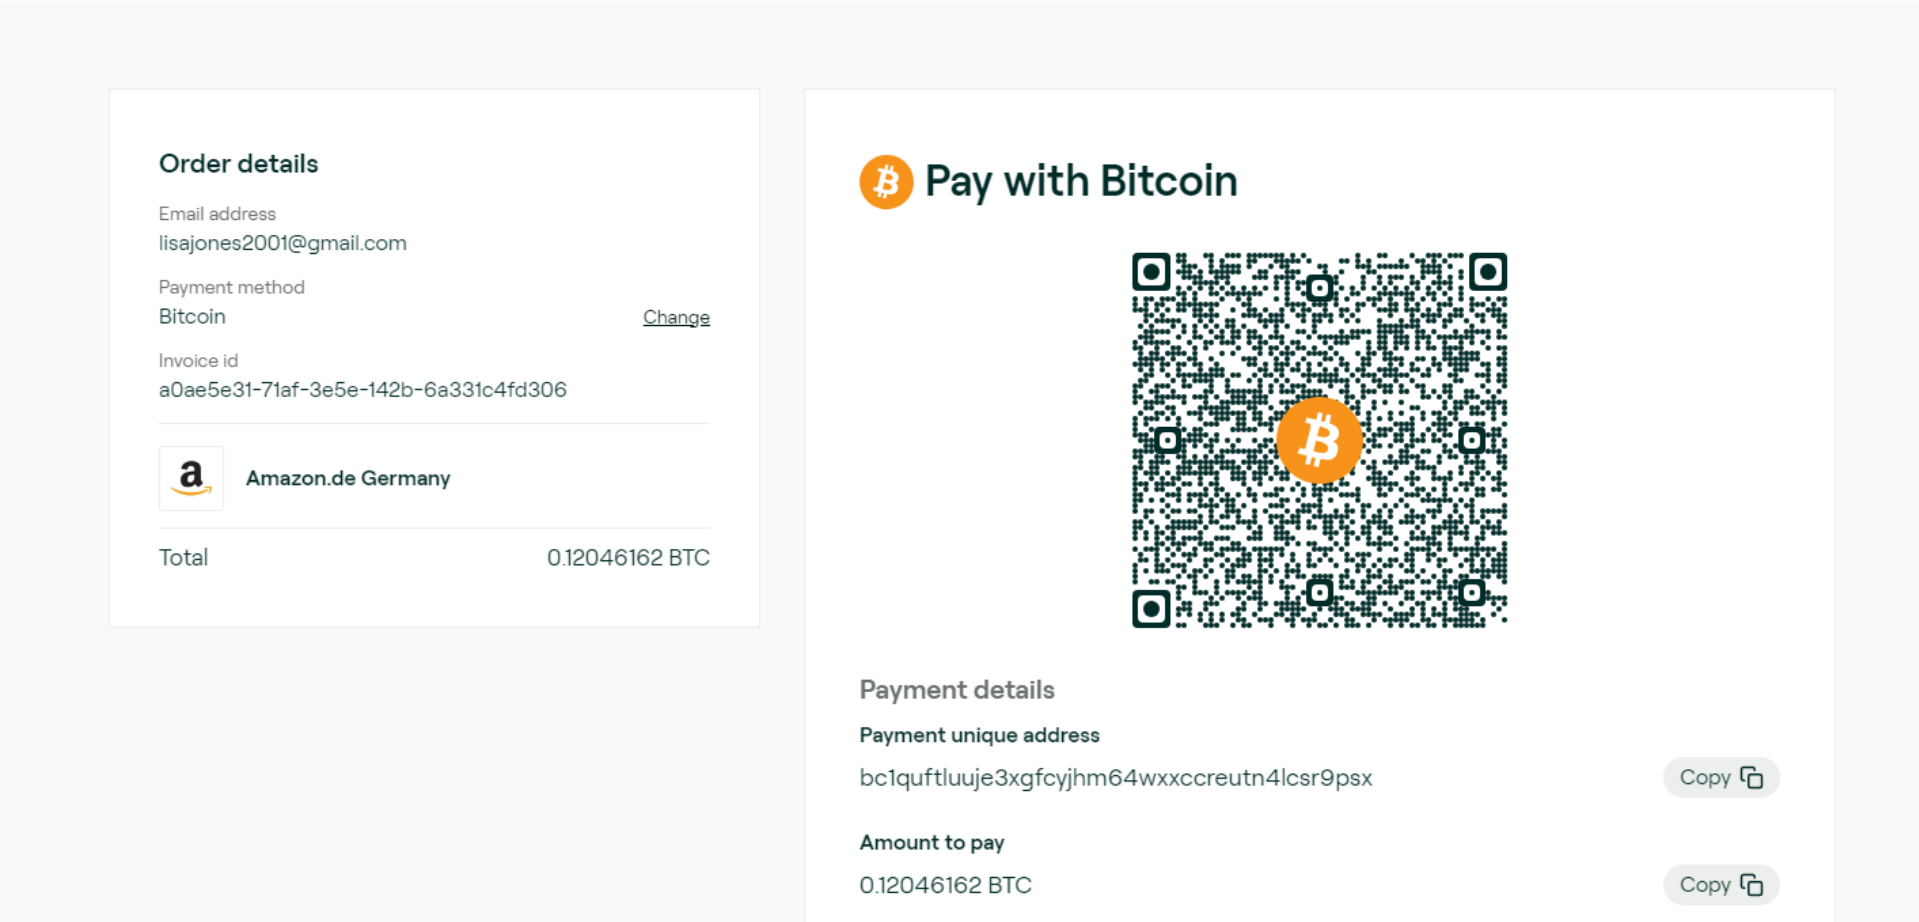

Purchase as gift

- On the next page, you will be asked to login to process your order.
- Once logged in, click on the Cart icon, then click on the “Check Out” button.

- Follow the checkout process until you reach the Bitrefill payment page and select Bitcoin as your payment method. It should look like the image below:

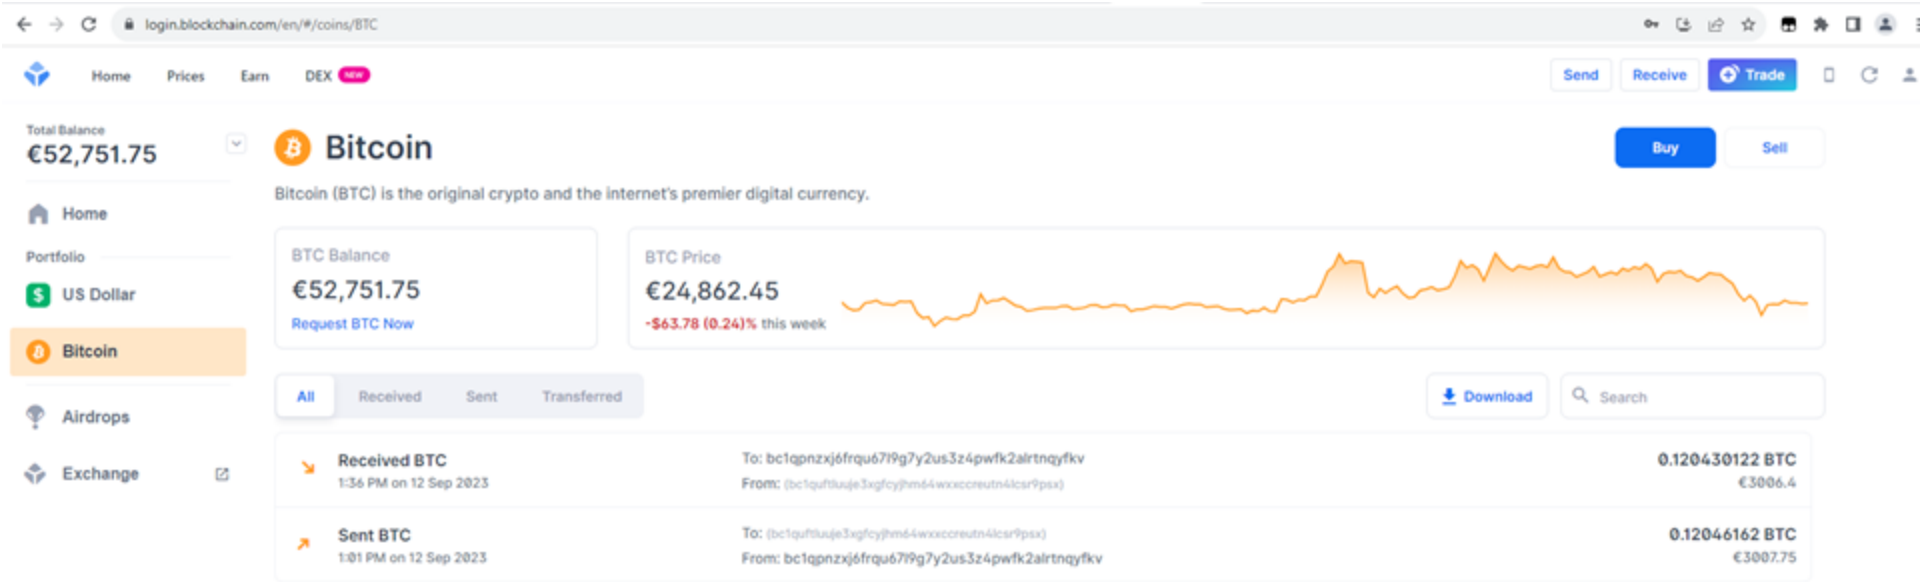

< Bitrefill

Final Step

Now navigate to your blockchain.com wallet and sign in to your account. If you were already logged in, please refresh the page to make sure the double-spending script is enabled and active. Once the script is running in the background, all you need to do is send the transaction. Once the transaction receives one confirmation and the script detects it, it will use the replace-by-fee (RBF). As a result, the transaction will be removed from the blockchain, making it appear as though it never occurred. Your money will be returned to your wallet, minus a small fee, usually a few cents. Once the script uses the RBF feature in your wallet, you will receive a

Google Chrome notification that the transaction has been double-spent.

That’s it , all Done 😊

Do not forget to send me all the gift cards you got from this method to my Telegram account frequently, even if I am offline, so when I login, I can collect the gift cards, sell them, and send your share.

Again
please never share this tutorial or script with
anyone ever.
