Zatímco je Stanozolol znám pro zlepšování atletických výkonů, vaše svaly neovlivní pokud se bere v dávkách 20 mg až 15 mg denně od 2 do 4 týdnů. Eventuelně jedna dávka 50 mg nebo víc v 6 až 8 týdenních cyklu zpevní vaše svaly a přidá jim objem pokud ne velký tak alespoň viditelný.

Schoenfeld et al 2018 investigated this. They recruited 30 untrained college-aged men to be randomly assigned to either of the following groups: "internal focus" or "external focus". The Internal group was told to focus on "contracting the muscle" during the movement (mind-muscle connection) while the external group was told to focus on "getting the weight up" ☺☐

If you want it you gotta eat healthy on a regular basis and you gotta consistently train hard. There are no shortcuts and there can't be any excuses. [1]

Stanozolol 10 mg je anabolický steroid doporučený pro zlepšení fyzické síly a rychlosti bez větších zisků svalové hmoty. Má pozitivní účinky na regeneraci, což jej činí jedním z nejoblíbenějších steroidů pro vícebojové sporty. A co vy, koupili jste si už Stanozolol 10 mg nebo Winstrol 10 mg? Dejte nám vědět o ...
