

# The Best VPNs For Unblocking HBO Max From The UK

There is no such thing as too many streaming sites. Sure, you might already be subscribed to Netflix and Prime Video, but there might be hit shows and newly-releases movies still out of reach. We're not suggesting you subscribe to everything out there, but one more subscription couldn't hurt.

If you're looking to expand your content options, you might have considered HBO Max. This popular streaming platform bundles all of HBO together with TV favourites, blockbuster movies, and new Max originals. It also hosts Euphoria, which alone is a massive reason to consider signing up to the service. So what's stopping you? Well, despite HBO Max expanding into Europe in 2021, the UK is still not on the list. Try and visit the platform from the UK, and you'll be greeted with "Sorry, HBO Max isn't available in your region yet."

We know this is tough news to take, but you still have the ability to stream on HBO Max in the UK. All you need is a VPN.

Virtual Private Networks (VPNs) provide protection for your data and identity when you're online. They create a private network that hides your real IP address, which boosts your online privacy and anonymity, and makes sure that your activity is untraceable and secure.

It's not the easiest concept to grasp, so it can be helpful to think about a VPN like an encrypted tunnel. All of your online traffic passes through this tunnel, and nobody can see inside. Everything inside the tunnel is protected against online threats like viruses, hackers, and malware.

Why should you consider investing in a VPN?

VPNs are designed to provide protection for your sensitive information, which is obviously a major reason to consider investing in a service. Cybersecurity is an absolutely vital part of existing online these days, and VPNs offer the features needed to secure your online world against the worst of the web. It's not all about online security and privacy though, because an increasing number of subscribers are looking to boost their content options.

VPNs can be also be used to watch content that is normally blocked in your location. By hiding your real IP address and connecting you to a server in another country, you can watch all your favourite content from that location. VPNs can bypass the geo-restrictions of the most popular streaming sites, including HBO Max.

How do you access HBO Max with a VPN?

The process of accessing HBO Max with a VPN is actually really simple. All you need to do is open up your preferred VPN, select an American server in order to spoof your IP to a U.S. address, and then head to HBO Max. Server List makes HBO think you're in the U.S. when you're actually in the UK, so you can watch all those shows and movies that are normally

unavailable.

What should you consider before investing in a VPN?

Rather than listing off every feature offered by the best VPNs, we have highlighted a selection of the most important things to think about if you're planning on streaming with a VPN. You should look out for connection speed, server network, number of simultaneous logins, and other important features:

**Connection speed:** Using a VPN is likely to produce a drop in your connection speed, but you shouldn't accept anything significant. This will result in buffering, which is going to make it difficult to stream without frustration.

**Number of simultaneous connections:** The best VPNs let you connect an unlimited number of devices with the same account. You should seek out services that offers multiple simultaneous connections, so you can stream on all your devices at the same time.

**Server network:** Some VPNs provide access to literally thousands of geographically diverse servers. The best services offer access to a lot of servers in key locations, so you should always be able to find a stable and speedy connection for streaming.

**Privacy policy:** It's worth paying attention to the data-handling, storage, and usage practices of the VPN you are planning on using to stream, because access to extra content shouldn't come at the expense of your online privacy and anonymity.

**Security:** We know you're here to find a VPN for streaming, but you shouldn't forget about security. The best services will let you unblock top streaming sites whilst offering powerful protection for your data.

There are other things to consider, like price and subscription plans, but these features are a good place to start.

What is the best VPN for HBO Max?

We've lined up a selection of the very best streaming-friendly VPNs for unlocking HBO Max, including popular services like ExpressVPN and CyberGhost VPN. You just need to consider all of these options, and pick out the service that best suits you and your lifestyle.
