

Alien Invasion

Written by Meti Ruka

Human race is the most unique species ever existed, we lived for a very long time to witness a lot of things, We made great things on god technological advance , We thought that we are the only species on the whole universe but we were wrong. NASA after many years of research they tell us that we are not alone in this universe, saying that there are more then one planet with life, and as many generation pass away so as the technology with it, Medical become much better we finally found cure for the cancar, we made the world much safer place at least thats what we thought, it made us clear that we are not the only species who had much more advanced technology. After a while we detect a signal in our radar telling us that there is a space ship slowly closing to the moon. We prepared the first space ship to the moon and took off. We stood in contact with our 2 astronauts, when we got informed that the unknown spaceship has landed. Our astronauts step off the space ship and go outside into the moon to get in the space ship which they belive it looked nothing like a battle ship, more like a one man pilot. When they got in they were amused of the technology they had, its described as pure tech like something that there never seen before. What they saw inside was one creature, Half human and half alien form, it was out of consciousness, so the astronauts took in into there space ship and took of to earth. US and citizens couldent wait to see the Alien for the first time in there lifes. Everyone was cheering while others prepared for interrogation on the creature, to know the truth why is he here, whats its purpose. For some people the creature was just a piece of meat but for others it was a creature no eyes have seen before and that what made that specie special, and it had a language never spoken before, it took them 2 months to understand and learn its language after we discovered how they speak, it decided to start talking and telling them that there species are no threat to earth, that they are peaceful but he keeps talking about a species known zartan. They are really dangerous what the do is there are like cocorouches they find a planet, they invade and take all resources, they have powerful weapons and have a strong army, which is impossible to defeat. The only key to destroying them acording to the creature is the bomb in spaceship located in the moon where they founded the alien, it says that Zartan and his army destroyed his planet and killd all his people, and he escaped through the black hole trying to warn other planets, he says that Zartan is coming to earth because of the creature cause only he knows the end of Zartan and he will do whats necessary to eliminate any threat of him and his army. Little thing that they know the war between Aliens and human is still the same as humans vs humans, some country's wanted to get there hands on that ship, for to do research on them and make powerfull weapons out of it, for scientist it was to know how to travel in speed of light.
