

Battle royale games have existed for quite a while. Battle royale games are likely the ultimate example of a harmonious fusion between action, exploration, material and equipment scavenging for survival. Though the battle royale genre had probably existed as early as the 90s, the concept was widened when the cult classic Japanese film Battle Royale was released in 2000. Due to the movie, the model of what a battle royale game would be was eventually formed.

Today, the genre has persisted and has become probably the most popular games in recent history. Garena Free Fire is one such game that was able to capitalize the intense popularity of the game style which resulted to it being the most downloaded game in 2019. This is even though the market is overcome with heavy-named games of identical category.

Garena International, a gaming giant, developed Garena Free Fire - an online battle arena game using third person shooting perspective. The game launched its beta on September 30, 2017 exclusively for mobile use. Despite being an almost three year old game, Garena Free Fire has maintained its stronghold. A proof of achievement is its 500 million downloads and over a billion dollars in revenue. By incorporating distinct characteristics, the game was able to fully rise in ranks.

The game modes of Garena Free Fire is probably the epitome of a truly exhilarating battle royale third person shooter game. The first difference is the speed by which the game finishes. Since the players for the classic mode would only be 50 people and the map is smaller, the games would naturally be shorter and more intense. Players can also choose among three different maps. Clash Squad is one other game mode where two teams with 4 players each can battle it out within seven rounds. The last relevant mode is rampage pass that allows players to select between two factions to be able to complete missions.

The multiple characters which can be played in Garena Free Fire is one of its most significant attributes. Usually in other battle royale games, players may only modify their characters up to a degree. These are commonly in terms of gender or cosmetics. However, in Garena Free Fire, there are a total of 24 characters that players can choose from. Each one of these characters have their own special skills that is best used in parties.

For fulfillment do happen, it does not necessarily have to be super unique. Sometimes, you need to simply re-invent yourself in such a way that anyone would choose your product over all its other competitors. Garena Free Fire used this process to ensure its success. The game found the best recipe of excitement, trendiness, and expert mobile game development that enables easy playing, addictiveness, and full immersion.
