

Title: Educational activities on organic waste usage

GLEN combines mutual learning in the Global North and Global South with inner-European exchange. Seminars of several days offer space for mutual and peer-to-peer learning and experience exchange. The European tandems foster this change of perspective by a three-month internship in the Global South. The GLEN cycle focuses on methods and contents of Global Learning which can be acquired and tested during the seminars and put into practice after the internship phase by organising an action or other initiatives linked to global issues.

Please note that this internship is part of the *GLEN Anglo seminar group* with English being the working language.

Would you like to work with children and teach them about the environment? Are you experienced in gardening and organic waste management? This could be an interesting internship for you. Ideally, you have a background in environmental studies or a similar field and you have some research and IT skills. Having previously engaged in raising environmental awareness is an asset. You are ready to move between two locations during your internship.

The “Embracing Hidden Talents” Network Ghana (EHT) offers educational activities to support children, especially girls, and to combat child labour. Among other things, they support a community library and a school-partnering project between Ghanaian and European schools. They also raise awareness on the topic of environmental pollution. The organisation strives to strengthen understanding among people from different backgrounds through educational TV programmes. EHT is active in two parts of Ghana: in Adusah in the Weija Constituency and in Azani in the Ahanta West District. The organisation has two employees whose work is supported by community volunteers.

As a GLEN intern with the EHT Network, you will take part in their “environmental watchdog” programme for children. You will visit schools and motivate the children promote environmental protection within their communities by starting to separate waste, setting up compost heaps or through gardening activities. Prior to your internship and during your first weeks in Ghana, you will do research on the benefits of organic waste.

The scheduled time for the internship is three months between July and September 2016.

Training and seminars prior to the internship will be held in English.

The GLEN team will be formed by French, a Slovene and a German participant.

Program component: GLEN Anglo

Language(s): English

Topic / area(s) of interest: Ecology/Environment, Education

Vocational field(s)/field(s) of study: Agriculture, Environmental Studies, Food nutritionist

Period of the internship: 3 months between July and September

Country: Ghana

Number of Participants: 3

Proposed by: Ebenezer Parity (CEO – EHT Network)

Classification of the internship in the development fields (Numbers): 1, 2, 5, 8, and 13

Number of the internship (*to be filled in later on*):
