

When uranium in American soil breaks down, it creates radon. This is bad news for households when the gas seeps in through the fractures of your basement and floorboards. Excessive direct exposure can cause lung cancer, and radon is accountable for more than 20,000 lung cancer deaths in the U.S. Yearly.

Before you employ a radon testing company to act with their radon removal procedure, consider the things you can do yourself initially. If you can reduce the levels below 4pCi/L yourself, you're guaranteed to conserve hundreds of dollars. Below 4pCi/L is thought about safe by the EPA. Often times you can get the levels lower than 4pCi/L. This is possible to achieve without setting up an active radon testing system, depending on how high the levels are, and a couple of other variables also.

Seal your sump pit - This is another location of enormous reduce radon entry due to the basic fact that it a direct hole into the <http://www.businesslistify.com/business/professional-services/radon-1> ground and has perimeter drain tile looping around your whole basement ending inside your sump pit. This allows radon to freely float through the drain tile and into your basement through your sump pit.

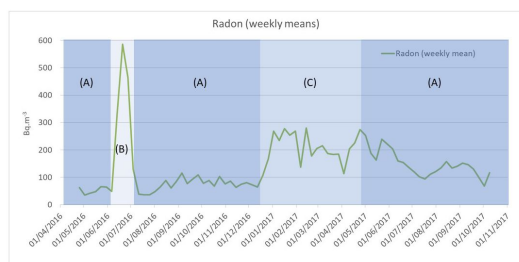

Radon Risk If You've Never Smoked

Radon Level	If 1,000 people who never smoked were exposed to this level over a lifetime*...	The risk of cancer from radon exposure compares to**...	WHAT TO DO:
20 pCi/L	About 36 people could get lung cancer	35 times the risk of drowning	Fix your home
10 pCi/L	About 18 people could get lung cancer	20 times the risk of dying in a home fire	Fix your home
8 pCi/L	About 15 people could get lung cancer	4 times the risk of dying in a fall	Fix your home
4 pCi/L	About 7 people could get lung cancer	The risk of dying in a car crash	Fix your home
2 pCi/L	About 4 people could get lung cancer	The risk of dying from poison	Consider fixing between 2 and 4 pCi/L
1.3 pCi/L	About 2 people could get lung cancer	(Average indoor radon level)	(Reducing radon levels below 2 pCi/L is difficult.)
0.4 pCi/L		(Average outdoor radon level)	

Note: If you are a former smoker, your risk may be higher.
 * Lifetime risk of lung cancer deaths from EPA Assessment of Risks from Radon in Homes (EPA 402-R-03-003).
 ** Comparison data calculated using the Centers for Disease Control and Prevention's 1999-2001 National Center for Injury Prevention and Control Reports.

After cigarette smoking, Radon Facts is the second most typical cause of lung cancer in America. The United States Epa estimates that about 21,000 deaths are triggered every year by radon truths.
